APPENDICES TO EVIDENCE	335
APPENDICES TO MINORITY REPORT	431

ROYAL COMMISSION ON THE ADMINISTRATION OF THE EXPENDITURE OF INDIA.

INDEX OF EVIDENCE.

ABOLITION OF PURCHASE. *See* MILITARY FINANCE, 3. f.

ABYSSINIAN EXPEDITION.
Payment of troops borrowed for, *Collen*, 6117–50. *Northbrook*, 14,114–20.

ACCOUNT.
In India. *See* AUDIT. (*See also* APP. 3, p. 2, Vol. II., First Report.)
In the India Office. *See* INDIA OFFICE.
Accounting Officer. *See* AUDIT B. 1.

ACCOUNTS DEPARTMENT. MILITARY. *See* MILITARY ACCOUNTS DEPARTMENT.

ACCOUNTANT-GENERAL.

1. IN ENGLAND.

The Accountant-General in the India Office.
Duties, *Waterfield and Cave-Browne*, 2416.
Evidence given by. *See* WATERFIELD AND CAVE-BROWNE. *See also* INDIA OFFICE d.

The Accountant-General of the Army.
Evidence given by. *See* KNOX.

The Accountant-General of the General Post Office.
Evidence given by. *See* CARDIN.

2. IN INDIA.

a. *Provincial Accountants-General and Comptrollers.*
They are officers of the Central Government under the Comptroller-General (the Accountants-General are attached to the larger Provinces, and the Comptrollers to the smaller) they act as the advisers to the Provincial Governments rather as to whether financial Regulations are complied with than as to questions of financial Administration, *Waterfield*, 122–34, 863–71.
Detailed list of their duties, *Waterfield*, 866–71.
Their duties as regards Audit, *Waterfield*, 504–18, 917–29.

b. *Military Accountant-General.*
He corresponds to the Accountant-General of the Army in England, *Waterfield*, 401–3.
He is head of the Account Branch of the Military Department; he is, so to speak, a Deputy Financial Secretary in the Military Department, and is responsible for the orderly conduct of Military Finance, *Newmarch*, 1173–9, *Collen*, 3342–6. His functions are, therefore, dual, *Collen*, 3349–51. He reviews and compiles military estimates, *Newmarch*, 1215–27, *Collen*, 3360–3. From the various statements he receives he is cognisant of the state of Military Finance, *Newmarch*, 1397–9.
His staff, *Collen*, 3352–9. He is overworked and his office undermanned; his position as second officer under the Military Member should be defined, *Collen*, 3368–72.
He controls the Accounts Branch of the Marine Department, *Waterfield*, 501–2.
His position and status, *Waterfield*, 15,494–6. *See also* APP. No. 73, p. 348, Vol. III.

c. *Public Works Accountant-General.*
Is the head of the Public Works Account Branch, he has a Deputy under him, *Becher*, 1490, 1501.
He controls the Accounts Branch of the Telegraph Department, *Waterfield*, 501–2.
Evidence given by the Deputy Accountant-General of the Public Works Department. *See* BECHER.

ACCOUNT CODES.
The Account Codes seem as simple as they can be made, *Waterfield*, 216–22.
The paper "System of Account" (p. 3, Vol. II., First Report) is an epitome of the Civil Account Code; there are also the Military Public Works and Postal Account Codes; the Comptroller-General is responsible for any alterations in the Civil Account Code, subject to higher sanction where necessary; for alterations in the Public Works and Military Codes the Public Works and Military Departments are responsible, *Waterfield*, 334–9.
The Military Code is as simple and intelligible as circumstances admit, and is understood in practice, *Newmarch*. 1246–9; but it might be further simplified, *Collen*, 3394–7.
The Public Works Account Code is generally understood and works smoothly, *Becher*, 1709.

ADEN.
Proportion of expenditure defrayed by England and India, *Collen*, 6523–9—35, 6543–5, 6695–700, *Waterfield*, 12,502, 15,000–14. For the ordinary administration England pays nothing, *Waterfield*, 14,990–4.
Aden is rather of Imperial than Indian importance, *Collen*, 6536–40 (*but see* 6693–4), *Hext*, 9297–307, *Waterfield*, 12,513, therefore India should not defray the whole cost, *Collen*, 6541–2, *Jacob*, 14,995–9, though it should pay a part, *Collen*, 6692. England should bear half the cost of Aden, *Roberts*, 15,765.
Gibraltar is in no way a set-off to it, *Collen*, 6546–9, *Waterfield*, 12,514–9. Neither Gibraltar nor Malta can be regarded as a counterpoise to Aden, *Roberts*, 15,708–17.
Arrangements made as to the cost of the works and armaments, *Waterfield*, 12,503–12.
The arrangements should remain as they now are, *Ripon*, 16,399.
The arrangements are fair, except in regard to the administration of the Somali Coast, *Lansdowne*, 16,103.
Aden and the Somali Coast must be taken together; India's payment should be revised, *Brackenbury*, 14,879. The charge should be fairly divided between England, India, and the Colonies, *Wacha*, 17,821.

ADMINISTRATION, FINANCIAL.
1. IN ENGLAND. *See* INDIA OFFICE.
2. IN INDIA. *See* FINANCIAL MEMBER OF COUNCIL and FINANCIAL OFFICERS.
Faults in the Financial Administration and Machinery. *See* FINANCIAL MACHINERY, 2.
3. PROVINCIAL ADMINISTRATION. *See* PROVINCIAL SYSTEM.

ADMIRALTY.
Representatives. *See* CUMING and KENNEDY.
Criticism of Evidence. *See* HEXT.

ADMINISTRATION, GENERAL. *See* GENERAL ADMINISTRATION.

AFGHAN WAR ESTIMATES.
Payment of troops, *Collen*, 6117–50. System of District Treasuries, *Barbour*, 2033–7, 2044–5, 2329–30, *Cromer*, 13,603–6.

AGES.
Of non-commissioned officers and men. *See* APP. 57, p. 387, Vol. II., First Report.

APPENDICES.
Nos. 1–65, Vol. II.; Nos. 66–92, Vol. III.

APPORTIONMENT OF EXPENDITURE IN WHICH BOTH GREAT BRITAIN AND INDIA ARE INTERESTED.
The Financial relations between Great Britain and India should not be those of master and slave, the apportionment should be based on the extent of interest and the capacity to pay; India should defray all charges for which she would pay if British rule did not exist, but she should not pay for the maintenance of British supremacy (*Naoroji*, 17,056–7). Apportionment of payment for details *Naoroji*, 17,014–9. *See also Wacha*, 17,821.
The analogy of partnership is not suitable to the connexion between England and India, *Ripon*, 16,274–82.
Question of the mutual interests of India and England, *Knox*, 12,795–804, *Collen*, 6618–23, *Ripon*, 16,283–9. The danger of India being involved in the foreign complications of England is not a sufficient argument for reduction of her share of the cost of her defence, *Ripon*, 16,290–304.

1 98000. Wt. 5366.

There is a general desire in England that India should be fairly and generously dealt with, but the impression exists in India that the English view is advocated more successfully than the Indian. It is therefore most desirable that a permanent Board, constituted by Act of Parliament, should be appointed, to which either party disputing a charge might refer; points involving political considerations are, however, matters for Parliament. This proposed Board should be overruled by Parliament only; the Judicial Committee of the Privy Council would not be suitable, *Cromer*, 13,641–74. *See also Lansdowne*, 16,030–9, 16,079; *Northbrook*, 14,238–44, *Ripon*, 16,354–70, 16,548–98.
Views as to certain details of apportionment. *Gokhale*, 18,508–29, *Wacha*, 17,821.
As regards Military Charges, *see* MILITARY FINANCE, 3.
As regards Aden, *see* ADEN.
As regards the Royal Naval Squadron serving in Indian waters, *see* NAVAL SERVICES.
As regards the Eastern Mail Contracts, *see* EASTERN MAIL SERVICE.
As regards the Zanzibar and Mauritius Telegraph, *see* ZANZIBAR AND MAURITIUS TELEGRAPH.
As regards Diplomatic Charges in Persia, *see* PERSIA.
As regards China Consulates, *see* CHINA.
As regards Euphrates, Tigris, and Karun River subsidies, *see* EUPHRATES, &c.
As regards the charges for expeditions outside the boundaries of India, *see* MILITARY FINANCE, 3 c.
As regards Miscellaneous Expenditure, *Waterfield*, 12,495–500.
See also APP. 45, 48, and 49, pp. 261, 362 and 372, Vol. II., First Report.

APPROPRIATION REPORT. *See also* REPORTS.
The Indian Appropriation Audit Report is in the nature of a review, and not a report of irregularities like that of the English Auditor-General, *Waterfield*, 521–9, 948–56, 1107–26. It is not of much practical value, *Barbour*, 2156–61. A critical Appropriation Report would not be the best means of giving information to Parliament, *Barbour*, 2252. Possible value of a Select Committee of the House of Commons to examine the Indian accounts, *Ripon*, 16,478–87. The Indian Report is made to the Government of India, the authority granting the supplies, just as the English one is made to Parliament, *Waterfield*, 956–65. A Report in India, similar to the English Report, would be of political rather than practical value, *Colvin*, 3100–14. There could be no objection to, but not much advantage, in submitting a Report by the Comptroller and Auditor-General of India, drawn up in the shape of an Appropriation Report, to a Committee of the Council of India in this country with one or two independent members, *Cromer*, 13,627–40.

Military.
Drawn up and furnished by the four Military Controllers to the Military Accountant-General. From the Controllers' Reports the latter compiles his own report, and forwards them with it to the Comptroller-General, *Newmarch*, 1381–3, *Waterfield*, 396–400, 419–30, *Collen*, 3434–6. These reports are in the nature of reviews, they do not report irregularities, *Collen*, 3437–40. It would be advantageous to insert the irregularities; as it is, they are now only shown in the Departmental Reviews, *Collen*, 3441–57, 3562–5. The report on the Controllers' inspections might be inserted in the Appropriation Report, *Collen*, 3458–9.

Public Works.
The Public Works Department also prepares an Appropriation Report, *Jacob*, 4321.

ARMY.
Numbers of the British and Native troops 1875–6 and 1893–4, *Jacob*, 4846–55, *Waterfield*, 15,383–4. (*See also* APP. 15, p. 185, Vol. II., First Report.) Possible reduction of the Native Army as the reserve grows, *Collen*, 6554. Necessary proportion of British to Native troops, *Collen*, 6555–6, 6627–30, 6686–7, 6631–50, *Ripon*, 16,327–34. Relative merits of European and Native troops, *Collen*, 6641–7, *Wolseley*, 13,186–246, *Roberts*, 15,689. There is no possibility of replacing British by Native forces, *Wolseley*, 13,346–73 *and see* 13,374–81, *Roberts*, 15,774–5, 15,807–9. The value of Eurasian troops, *Wolseley*, 13,382–3. *See also* MILITARY FINANCE, 2.
Invaliding, Mortality, *see* HEALTH, &c.
Recruiting, *see* RECRUITING.
Short Service, *see* SHORT SERVICE.
Pay, *see* APP. 18, 22 and 23, Vol. II., First Report.
Ages of Non-commissioned Officers and Men, *see* APP. 57, p. 387, Vol. II., First Report.
ADMINISTRATION OF THE ARMY, *see* MILITARY MEMBER OF THE COUNCIL and COMMANDER-IN-CHIEF, *see also* FINANCIAL OFFICERS, b.
EXPENDITURE ON THE ARMY, *see* MILITARY FINANCE.

ARMY AND GARRISON STAFF EXPENDITURE, *see* MILITARY FINANCE, 2, a.

ASSAM.
Marine charges in, *Jacob*, 9814–5.
Political charges, *Jacob*, 10,137.
Increase in Land Revenue, *Bernard*, 1747–50.

ASSESSED TAXES, *see* TAXES.

AUDIT AND ACCOUNT.
A. IN THE INDIA OFFICE, *see* INDIA OFFICE.
B. IN INDIA.
1. AUDITING OFFICERS.
2. THE SYSTEM AND MACHINERY OF AUDIT AND ACCOUNT.

1. AUDITING OFFICERS.
The Comptroller and Auditor-General, *Waterfield*, 79–81, 113–21.
Deputy Auditors-General, *Waterfield*, 97, 533–7.
The Provincial Accountants-General or Comptrollers, *Waterfield*, 505–18, 917–29.
The Military Accountant-General, *Newmarch*, 1173–9, 1215–27, 1381–3, 1397–9.
The Controllers of Military Accounts, *Newmarch*, 1180–8, 1376–83; *Waterfield*, 396–400. Their special assistants, *Newmarch*, 1400–5.
The Examiners (Military), *Newmarch*, 1180–8, 1324–38, 1413–24.
The Accountant-General (Public Works Department), *Becher*, 1490–1501.
The Examiners (Public Works Department), *Becher*, 1493; *Waterfield*, 498–500.
The Examiner of Military Works Accounts, *Becher*, 1679–1712.
Audit and Account Departments of the Forest Department, the Post Office, the Marine Department, and the Telegraph Department, *Waterfield*, 501–2.
Further description of the above officers, *see* under their several titles.
The cost of the Civil Account and Audit Department and the Public Works Account and Audit Department, *Jacob*, 9184, 9227–9.

2. THE SYSTEM AND MACHINERY OF AUDIT AND ACCOUNT.
See also APP. 2 and 3, pp. 2 and 6, Vol. II., First Report.
a. Civil.
All civil expenditure (whether Imperial or Provincial, *Waterfield*, 902) is audited by the Provincial Accountants-General or Comptrollers and their subordinates, *Waterfield*, 906–27. These officers are entirely independent of the Provincial Governments; they have the power to disallow any payments even made on the authority of the Provincial Government, if irregular, subject to ultimate reference to the Government of India, *Waterfield*, 917–29; it would be impossible to refer all disallowances to a Central Officer, *Barbour*, 2145–54, but a return of serious cases might be a good thing, *Barbour*, 2155.
Though the Revenue officers are primarily responsible for the accounts of the Treasury officers, these accounts are audited by the subordinates of the Accountant-General, who enter objections in a book, to which the Accountant-General is directed to pay constant attention, *Waterfield*, 510. These objections, if necessary, but very rarely, are referred to the Comptroller-General, *Waterfield*, 504–18.
To check the action of his subordinates, the Comptroller-General sends round his Deputy Auditors-General to every office in India to test the accounts for two or three months, *Waterfield*, 514. Their test audit reports are submitted *in extenso* to the Government of India with the Comptroller-

General's comments; he relies on these test audit reports for assurance that items are not passed which ought not to be passed, *Waterfield*, 533–7; these test audits have an excellent moral effect, *Barbour*, 2338–40, and are a sufficient check, *Colvin*, 3097–9. There is also an annual report on outstanding objections, *Jacob*, 2864.

The decision of the Comptroller and Auditor-General is, in audit cases, final, subject, of course, to appeal to the Government of India, and, if necessary, to the Secretary of State; instances of such references, *Waterfield*, 538–44. The independence of the Comptroller-General, *Barbour*, 2141–4, *Colvin*, 3072–94. *See also Barbour*, 2324A, *Colvin*, 3095–6.

Misappropriation of money must, in any case, be discovered within a month, *Waterfield*, 545–60.

The Comptroller-General is, from his position, an absolutely independent officer, *Waterfield*, 969–72. Position fairly satisfactory, *Barbour*, 2134. He may be relied upon to act with independence; *Colvin*, 3084. If he is hampered by any want of independence he should be made independent; *Cromer*, 13,627–9. It is not part of his duty to check expenditure authorised by the Secretary of State, nor would he go behind the orders of the Government of India except in matters which require the sanction of the Secretary of State, *Jacob*, 1033–40. The instructions of 1889 to Audit Officers to bring to notice cases in which the sanction of the Secretary of State, though necessary, has not been obtained, have been successfully carried out, *Waterfield*, 1120–8. The Comptroller-General's Report, as a matter of course, goes to the Secretary of State, and is published in the "Gazette of India," *Jacob*, 1041–3.

A critical Appropriation Report would not be the best means of giving Parliament information on Indian Finance; a committee appointed from time to time to inquire into Indian finance would be preferable, *Barbour*, 2252.

There is a weakness, in that the Military and Public Works Auditors are appointed and promoted by the authorities of their respective departments, and also in so far as the Comptroller-General audits expenditure, for which he is personally responsible; but the weakness is not serious, *Barbour*, 2135. The real audit is made by officers who have no executive functions, *Barbour*, 2132–4. The suggestion accepted by the Government of India in 1882, that a more detailed system of audit, by an absolutely independent auditor, should be carried out, was set aside by the Secretary of State on the score of expense, *Waterfield*, 1001–9, 1133. The modified system now in force was considered sufficient, *Waterfield*, 1010–6. The efficiency of the system, *Cromer*, 13,603–6, 13,627–38. The Accounts Department, and the Comptroller-General especially, is always regarded in India as being outside the executive, *Colvin*, 3094. A perfectly independent auditor appointed by Parliament might be more satisfactory, but not worth the expense, *Barbour*, 2158.

b. In the Military Department.

The principles of control, pre-audit and post audit, *Collen*, 3390–405. The Military Accountant-General is head of the Accounts branch, *Collen*, 3349–51. He is not an auditor in the ordinary sense of the word, but he compiles the audit reports of the Controllers, *Collen*, 3360–3.

The Controller and the Examiners under him, in each command, conduct the examination of the whole of the military expenditure, *Newmarch*, 1180–8, 1324–38, 1413–24. In matters of account the Controllers are subordinate to the Comptroller-General, *Collen*, 3467–8, but the Military Accountant-General is informed of what they report to him and of his criticisms on their reports, *Collen*, 3463–9. The Examiners examine the accounts of the Disbursing Officers, who must make payments according to the regulations, and are required to furnish vouchers for every payment, *Waterfield*, 462–77. For example, a Commissariat Officer draws on his assignment; his accounts are first examined by a special officer in the office of the Chief Commissariat Officer in the Command, they are then sent for audit to the Examiner of Commissariat Accounts, who is an officer of the Military Accounts Department at the headquarters of the Command, *Collen*, 3406–17. The Examiners are on the Staff of the Military Controller, who compiles their audited accounts monthly into a general account of receipts and charges, *Waterfield*, 478–87, which ultimately form part of the Finance and Revenue Accounts of the Year, *Newmarch*, 1376.

The Examiners either disallow payments not properly authorised, or, in doubtful cases, refer to the Controller, whose decision is final unless appealed against; any want of necessary sanction of the Secretary of State would be brought to notice by the Controller, *Waterfield*, 488–92, *Collen*, 3484–91, 3593–4, *see also Newmarch*, 1352–69, 1370–5. No statement of disallowances is rendered by the examiners to the Controller, *Newmarch*, 1378. The Examiners are extremely independent in their judgment, and carry out the principles of audit satisfactorily, *Collen*, 3419–21. They are guided by the Account Code, *Collen*, 3484–91.

The Controllers constantly conduct test-audits, either personally or through their representatives, *Collen*, 3422–30. The Accountant-General also makes annual tours of inspection, *Collen*, 3460–1.

As regards the payment of troops, the audit officers are satisfied with the statement of the Company paymaster, and do not require to see the receipt of every soldier, *Newmarch*, 1343–51, 1431–7.

The Military Accounts Department, see FINANCIAL OFFICERS b. viii.

The Military Appropriation Report, see APPROPRIATION REPORT.

c. Public Works.

The details of testing and watching Public Works expenditure, *Waterfield*, 345–7.

There is a special Examiner of Military Works Accounts attached to the Public Works Accounts Branch, *Becher*, 1709.

The Accounts of the several engineers are examined monthly, on behalf of the Provincial Examiner, who disallows irregular items, subject to appeal to higher authority, and reports the most important irregularities to the Accountant-General, who is thus kept informed of the action of his subordinates, *Becher*, 1561–3. The Audited Accounts are compiled by Examiners monthly, and forwarded to the Accountant-General, *Waterfield*, 498–500, *Becher*, 1561–93. Disallowances would only come to the Central Government on reference, *Becher*, 1611–2. Any gross irregularity would be reported immediately, *Becher*, 1580–2. The bulk of the irregularities are merely questions of interpretation, rules, &c., *Becher*, 1579. The Examiners also carry out a test audit, *Becher*, 1598–601.

The Central Public Works Accounts Branch compiles a monthly statement of the Provincial Accounts for the Comptroller-General; the Public Works chapter of the Finance and Revenue Accounts is also compiled in the Public Works Accounts Branch, and a review of the accounts of each branch of the Department, showing special irregularities, which have still to be remedied, *Becher*, 1602–3.

d. Other Departments.

The Forest Department and Post Office have separate Account Departments, under the immediate control of the Comptroller-General; the Marine Department under the Military Accountant-General, the Telegraph Department under the Public Works Accountant-General. The audited accounts of all these Departments are sent to the Comptroller-General or Accountant-General, *Waterfield*, 501–2.

e. Test Audits.

To check the action of his subordinates, the Comptroller-General sends round his Deputy Auditors-General to every office in India to test the accounts for two or three months, *Waterfield*, 514. Public Works Test Audits, *Becher*, 598–601, 1613–9. Military, *Newmarch*, 1390–6, 1400–5. Their test audit reports are submitted *in extenso* to the Government of India with the Comptroller-General's comments; he relies on these test audit reports for assurance that items are not passed which ought not to be passed, *Waterfield*, 533–7; these test audits have an excellent moral effect, *Barbour*, 2338–40, and are a sufficient check, *Colvin*, 3097–9. There is also an annual report on outstanding objections, *Jacob*, 2864.

The Controllers of Military Accounts constantly conduct test-audits, either personally or through their representatives, *Collen*, 3422–30. The Accountant-General also makes annual tours of inspection, *Collen*, 3460–1.

Regulations for inspecting and auditing store accounts, *Waterfield*, 493–7, *Collen*, 3472–83. There is no second audit on behalf of the Comptroller and Auditor-General; but he may, at any time, have a test audit performed on his behalf, *Newmarch*, 1390–6, 1404, *Collen*, 3500–4.

The Comptroller-General makes no second audit of the Public Works Accounts, except his test audit, which is fitted in with that of the Public Works Accountant-General, *Becher*, 1613–9.

Example of working a test audit, *Jacob*, 9845–68.

f. Account Codes, *see* ACCOUNT CODES.

BALANCES.

A. IN ENGLAND.

The Accountant-General at the India Office invests the cash balances subject to the approval of the Secretary of State in Council and to general regulations, *Waterfield and Cave-Browne*, 2425–9, 2435–42. Temporary borrowings are rarely necessary, the balances being usually maintained by the sale of bills, *Waterfield* and *Cave Browne*, 2430–4.

B. IN INDIA.

The whole of the money at the central stations is not invariably banked, but, in the Presidency towns, for instance, a part is kept as a reserve to secure the speedy transfer from a treasury with a large balance to one in need, *Waterfield*, 164–72, 177–82. *See also Barbour*, 1994–2011.

The District Treasury regulations work very satisfactorily, *Colvin*, 2988–91, *Barbour*, 1987.

The Government uses banks to the full extent advisable, *Barbour*, 1988–9, *Colvin*, 3015–8.

The Government works by its own balances, not by borrowing from the banks, *Barbour*, 2012–28.

It keeps cash in reserve over and above the floating balances in the District Treasuries, *Colvin*, 3214.

The question of the balance to be maintained as a reserve has been fully considered; it has been decided that balances cannot safely be reduced below 8 crores, and that of this a minimum balance should be kept at the Presidency banks, interest being paid by Government on the deficit should the balance fall below that minimum, *Jacob*, 2805–30.

Minimum balances to be reserved, *Jacob*, 2826–7, *Barbour*, 2012–28, *Colvin*, 3209–15.

The reason for maintaining a proportion of these reserves in the hands of Government, is that the banks may not always be able to meet Government demands with sufficient rapidity (instances of this), for in India the Government balance forms a very large proportion of the total funds of the country, *Waterfield*, 173–5.

Balances kept by the Provincial Governments, *see* PROVINCIAL SYSTEM, 4.

BALUCHISTAN.

Increase in Police expenditure due to the annexation of, *Jacob*, 7674–6, 7625.

BANERJEA, MR. SURENDRANATH, Member of the Bengal Legislative Council.

Evidence given by, *see* p. 266, Analysis of Evidence, p. xlv., and App. 91, p. 420 of this Vol.

BANKS.

The use of Banks by the Government of India. *See* BALANCES.

List of Presidency Banks, *Waterfield*, 561 (APPENDIX 5, *see* p. 51, Vol. II., First Report.)

Payments to Presidency Banks, *Jacob*, 9184. Services for which these payments are made, *Jacob*, 9196–8.

The part played by the Banks of England and Ireland in the Management of the Indian Debt in England, *see* DEBT SERVICES, *Management, &c.*

BARBOUR, SIR DAVID MILLER, K.C.S.I. Formerly Financial Member of the Council of the Governor-General of India. Evidence given by, *see* p. 17, and Analysis of Evidence, p. xviii., Vol. I., First Report.

BARRACK ESTABLISHMENTS, expenditure, *see* MILITARY FINANCE, 2, a.

BECHER, MR. A. R. Deputy Accountant-General, Public Works Department of the Government of India. Evidence given by, *see* p. 58, and Analysis of Evidence, p. xvii., Vol. I., First Report..

BENGAL.

Bank of, *Barbour*, 2012–28.

Increase in the provincial expenditure in the last quinquennium as compared with the first has been about 25 per cent., *Jacob*, 19,969. Provincial and Local Expenditure, *see* APP. No. 83, p. 369, Vol. III.

Police expenditure, *Jacob*, 7608–10, Irrigation works, *see* Irrigation, 1 and 2, *c*. Marine charges, *Jacob*, 9814–5.

Opium manufacture, &c., *see* OPIUM. Salt Revenue, *Jacob*, 11,082–4. Land Revenue, *Jacob*, 10,835–44.

BERNARD, SIR CHARLES, K.C.S.I. Secretary in the Revenue Department of the India Office.

Evidence given by, *see* p. 55, and Analysis of Evidence, p. xviii., Vol. I., First Report.

BOARDS OF REVENUE AND FINANCIAL COMMISSIONERS.

Description and charge for, *Jacob*, 9178–84.

BOMBAY.

The style of the Government of the Presidency of Bombay is the "Governor in Council," *Waterfield*, 10–15.

Figures including all provincial and local charges, except (1) Direct demands on revenues, (2) Commercial Services, (3) Ecclesiastical and other charges, *Jacob*, 19,915–24. Increase of the 4th quinquennium over the 1st is 30·9 per cent., *ib.*, 19,924–33. Civil departments 22 per cent., *ib.*, 19,955, and Public Works 23·6 per cent., *ib.*, 19,968. The increase in the provincial share of the total revenues of the Province, *ib.*, 19,959. Provincial and Local Expenditure, *see* APP. No. 80–3, pp. 366–9, Vol. III.

Police expenditure, *Jacob*, 7610–3.

Land Revenue charges, *Jacob*, 10,873–9, 10,880–9, *Bernard*, 1747–50.

Excise Revenue charges, *Jacob*, 11,149.

Bombay Customs charges are Imperial, *Jacob*, 11,203–4.

Criticisms on the Civil Departments in the Bombay Presidency, *Gokhale*, 18,465–507.

Irrigation. *See* Irrigation, 1, *d*.

BRACKENBURY, LIEUT.-GENERAL SIR HENRY, K.C.B., K.C.S.I. Formerly Military Member of the Governor-General's Council. Evidence, pp. 39 and 55, and Analysis of Evidence, p. xxxv.

BUDGET, THE.

1. *Generally.*

The Finance Member is amply informed of proposed expenditure, *Barbour*, 1872–6, 1954–5, *Colvin*, 2962–4. Means by which he gains information bearing on Revenue questions as regards Departments directly under him, *Barbour*, 1975–8, *Colvin*, 2965–7, *Waterfield*, 447–52, and as regards other Departments, *Barbour*, 1957–74. *Colvin*, 2965–73, *Cromer*, 13,594–604, *Waterfield*, 452–60. Accounts of revenue and expenditure furnished to the Financial Member by the Comptroller-General, *Waterfield*, 432*a*–46. These are sufficient, *Barbour*, 2033–7. *Colvin*, 3031–5. The presence of an expert head of each Revenue Department at headquarters might be convenient to the Financial Member, but would be a mistake, because he could not manage details throughout India. *Barbour*, 1964; the advantage would not balance the cost, *Colvin*, 2974, 2978–81.

The cost of having officers analogous to the French Inspectors-General of Finance would not be compensated by the advantage, *Colvin*, 2975–7. Any special inquiry into Revenue questions would be made by the Financial Member or his representative through the Provincial Governments, *Barbour*, 1975–8.

It is not possible for the Finance Department to make a close estimate of revenue for any particular year, *Barbour*, 2038–43. The Budget Statement cannot give an actual account of the revenue and expenditure of the expiring year; it deals with estimates as to about two months, *Barbour*, 2051–64; this causes some inconvenience, but the system is inseparable from the circumstances of India, *Colvin*, 3044–6. The Budget estimate provides only for receipts and expenditure actually expected to be received or paid within the year, *Waterfield*, 333.

The Budget is presented to the Legislative Council in the last week in March, *Waterfield*, 303; this date, which is just at the close of the financial year, is determined chiefly by climatic considerations, *Colvin*, 3040–5. It is also desirable that the estimates should be sanctioned and distributed before the close of the year, *Barbour*, 2065–6. The criticisms passed by the Legislative Council are useful, but it would not be desirable to allow amendments to be passed by non-official members,

Lansdowne, 16,125–32. Proposal to give non-official members power to move the reduction of expenditure, *Banerjea*, 19,090–6.
Proposed facilities for criticising the Budget, *Wacha*, 17,150–94. *See also* LEGISLATIVE COUNCILS.
See also Jacob, 20,186.
There would be an inconvenience, and no great advantage, in making up the Budget after the close of the financial year, *Cromer*, 13,607–20.
Reasons for the close of the financial year in March, *Waterfield*, 16,898–901.
2. *Process of Framing the Budget.*
The various District and Departmental Offices prepare their estimates in October, these the respective Departments combine and send to the Provincial Governments, for whom the Accountants-General combine them into a Budget by about the middle of January, *Waterfield*, 304–7, 887–8. The Civil Budgets are submitted to the Finance Department of the Government of India by the 15th January, the Military and Public Works Budget towards the end of February; the Financial Member has thus about three weeks to consider the latter, *Waterfield*, 308–15.
The process of the examination of the Budget by the Finance Department, *Waterfield*, 321. The estimates of the expenditure by the Provincial Governments are framed on the basis of the revenue of the current year, *Waterfield*, 1069–77, and are subject to revision by the Central authority, *Barbour*, 1946–53. Excess of expenditure over Budget grant must be sanctioned by the Central Government, and met from Provincial balances, *Waterfield*, 808–12. New expenditure must coincide with the new financial year, and the insertion in the Budget of a charge requiring special authority is not a sanction for incurring expenditure, *Waterfield*, 821–2.
3. *Revised Estimates.*
Details of information on which the revised estimate is framed, *Waterfield*, 413–8. The revised estimate deals with expenditure as admitted, and not with Treasury issues, *Barbour*, 2046–7. The revised estimates invariably exceed the Budget Estimates, *Wacha*, 17,220, 17,785–803.
Budget Estimates compared with Revised Estimates and Accounts. *See* APP. 76, p. 360, Vol. III.
4. *The Military Budget.*
Every Military Disbursing Officer, by a fixed date, sends to the Controller of his Command the estimate of his requirements for the ensuing year, based on existing facts; the Controller compiles these estimates, and sends them to the Military Accountant-General, who consolidates them into one estimate for all India (making any alterations he thinks fit), which he submits to the Military Member by the 25th January, *Newmarch*, 1215–27; *Waterfield*, 316–20; *Collen*, 3514–8, 3571–3 (12th February, *Collen*, 3515). The Government of India has thus two months to consider it; *Newmarch*, 1229–30, and during these two months consultations take place between the Commander-in-Chief, the Military, and Financial Members of Council, *Newmarch*, 1209–28. The Financial Department has opportunities of criticising the estimate, *Brackenbury*, 14,463–70. Considerable modifications are often made at headquarters, *Newmarch*, 450–5; *Collen*, 3552–3, and during their upward course the estimates become much altered, advantage being taken of the latest information, *Collen*, 3530, 3546A–51.
There is no formal decision arrived at annually on the Budget as to the Military Policy, the establishment being fixed, *Waterfield*, 322–32.
The Budget as a whole is finally accepted by the Governor-General in Council, *Newmarch*, 1231–7.
Necessity for the Secretary of State's sanction in cases of large contemplated increases, *Newmarch*, 1406–10. The estimates for services in England are received from the Secretary of State, and are occasionally revised on the representation of the Governor-General. *Newmarch*, 1461–6. Accounts of Military expenditure rendered to the Military Member. *Waterfield*, 362, 384–95.
A large part of the charges are fixed, subject to great variations in the price of victualling stores, and in the rates for labour and material, *Collen*, 3519–29. The sums available for proposed improvements are discussed between the Military and Financial Authorities before they are placed on the Estimates, *Collen*, 3583–6. The Military Department receives reports on the cash issues from the Treasuries, by which their own reports on the progress of expenditure are checked, *Collen*, 3532–43. Method of dealing with proposals involving expenditure, *Brackenbury*, 14,471–8.
Demands arising too late for insertion in one year's budget are carried forward at the head of the list for next year, *Collen*, 3578–80. Large immediate demands, as for an expedition, must be sanctioned by the Financial Department, *Collen*, 3652–61.
5. *The Public Works Budget.*
The Public Works Budget is primarily prepared by the Provincial Governments, who, together with the Managers of State Railways, furnish the Public Works Accountant-General with their estimates, *Waterfield*, 316–20.
The amounts which can be found from Provincial and Local Funds, and from Imperial Funds for Public Works, are settled by the Provincial and Imperial Governments respectively, and the latter informs the Provincial Governments what works it proposes to carry out within their provinces; the Provincial Governments send their Budget estimates in on the 15th January to the central Public Works Department; they are then revised and criticised, and the combined estimate is submitted to the Governor-General in Council by about the 15th February. There is thus at this stage only about a month for consideration, *Becher*, 1509–19.
In the previous October, however, a preliminary forecast of proposed expenditure has been submitted by the Provincial Governments, and the Budget is prepared for the amount then arranged, *Becher*, 1519.
The Provincial Governments practically settle the amounts available for their own wants, *Becher*, 1649–50; their powers of sanction without superior authority are limited in respect of expenditure for any individual work, *Becher*, 1667–71.
There is a similar restriction upon the Government of India, *Becher*, 1672–3.
Small alterations are frequent, but large alterations are rare, in the final stages of the Budget, *Becher*, 1519–20, 1633–41.
The Financial Department informs the Public Works Department what money can be provided for Imperial Works, and the latter distributes the money in the manner it thinks best, providing for works in progress and for necessary repairs in preference to new works, *Becher*, 1521–7.
Proposals to pay for works out of borrowed money must be sanctioned by the Secretary of State, and such works must be of the "productive" class (definition of "productive," *Becher*, 1532); these are usually Railways and Irrigation Works, *Becher*, 1528–36. Building and Roads would be entirely provided for out of revenue, *Becher*, 1542. Military Works having only been transferred to the Military Works Department of recent years from the Public Works Department, for convenience, the estimate, though prepared by the Director-General of Military Works, is included in the Public Works Estimates, *Becher*, 1543–52, 1674–1711.
6. *Estimate for Services in England.*
These are prepared in November on the Indian system, *Waterfield and Cave-Browne*, 2585.
They are sent to India in a despatch, and revised figures are telegraphed in March, *Waterfield* and *Cave-Browne*, 2587. Representations by the Government of India are at this stage confined to the most important questions, *e.g.*, the issue of a loan, &c., *Waterfield* and *Cave-Browne*, 2588–94.
7. *Provincial Budgets.*
Provincial estimates are framed on the basis of the revenues of the current year (*Waterfield*, 1069–77), subject to revision by the Central Financial Department, *Barbour*, 1946–53.
Excess of expenditure over budget grant must be sanctioned by the Central Government and met from provincial balances, *Waterfield*, 808–12.
New expenditure must coincide with the new financial year, and the insertion in the Budget of a charge requiring special authority is not a sanction for incurring such a charge, *Waterfield*, 821–2.
The Estimates of each District or Departmental office (*Waterfield*, 305) are revised and corrected by the head of the Department, who sends them to the Accountant-General. He, after seeing whether the proposed expenditure is regular, passes them

on to the Provincial Government, which makes any alteration it thinks fit and returns them to he Accountant-General for compilation. The compiled Budget is then submitted by him to the Provincial Government with his observations thereon, and at the same time forwarded to the Comptroller-General; the Provincial Governments, by 16th January, submit their Budgets to the Government of India in the Financial Department; this leaves about two months for correspondence on disputed points, *Waterfield*, 887–8.

Once the provincial budgets have been accepted by the Supreme Government there are no means of amending them, *Banerjea*, 19,097–100.

BUILDINGS AND ROADS. CIVIL.

The Administration is generally Provincial, *Jacob*, 10,684–5. The works are carried out by the Public Works Department, *Jacob*, 10,707–11.

Expenditure.

Net expenditure 1875–6, Rx. 2,753,511, and 1893–4, Rx. 3,898,531; charges in England 76,884*l.* and 2,583*l.*, *Jacob*, 10,704–6. The bulk is for main communications Rx. 2,000,000 in 1893–4, *Jacob*, 10,688–703.

There is room for almost unlimited increase under this head, *Jacob*, 19,995–20,002.

BURMA.

Cost of Burma, *Waterfield*, 12,216.

Increase of Police expenditure due to acquisition of, *Jacob*, 7601–2. Diminution expected, *Jacob*, 7605–7. Actual expenditure, *ib.*, 7642–9. Exception to the rule that the Police Administration is Provincial, *ib.*, 7654–6.

Increase in expenditure under Secretariats due to annexation of Burma, *Jacob*, 9172–7, 9253.

Increase in Land Revenue, *Bernard*, 1747–50.

Increase under the head of General Administration due to Burma, *Jacob*, 9223–38.

The cost of General Administration in Burma, 1875–6 and present time, *Jacob*, 9244–52.

Marine charges in Burma, *Jacob*, 9814–5, 9822–3, 9837–41. Political charges, *Jacob*, 10,137. Territorial and Political Pensions, *Jacob*, 10,205–7. Expenditure on Buildings and Roads, *Jacob*, 10,867, 10,704–6. Land Revenue charges, *Jacob*, 10,867. Forest Revenue, *Jacob*, 11,008–14. Exemption of Burma from Income Tax, *Jacob*, 11,217–8. Increase of Military force absorbed by Burma, *Collen*, 6651–4.

CALCUTTA.

Police expenditure, *Jacob*, 7608–10. Arrangements under which the city is policed, *Jacob*, 7614–6.

Usefulness of an unofficial check on expenditure, *Banerjea*, 19,142–51.

CANALS, *see* IRRIGATION.

CAPITATION RATE. *See* MILITARY FINANCE, 3 *b*, p. xxi.

CARDIN, MR. JAMES, Receiver and Accountant-General of the General Post Office. Evidence given by, *see* p. 477, and Analysis of Evidence, p. ii., Vol. I., First Report.

CAVE-BROWNE, MR. EDWARD RABAN, C.S.I., Accountant-General in the India Office. Evidence given by, *see* p. 96, and Analysis of Evidence, p. xvi., Vol. I., First Report.

CEYLON.

Unofficial check on expenditure, *Banerjea*, 19,152–9.

Expense of conquest should be refunded to India, *Gokhale*, 18,528.

CHANCELLOR OF THE EXCHEQUER.

Comparison of his powers and duties with those of the Financial Member of Council, *Barbour*, 1823–32, 1957–2043, *Colvin*, 2881*a*, 2962–88, *Waterfield*, 19–29, *Cromer*, 13,508–10. The support afforded to the Chancellor by Parliament, *Cromer*, 13,511–7.

CHAPLAINS.

Of all denominations, *see* ECCLESIASTICAL.

CHELSEA AND KILMAINHAM HOSPITALS, *see* MILITARY FINANCE, 3 *c*. 6.

CHIEF COMMISSIONER.

The minor provinces (Assam and the Central Provinces) are administered by Chief Commissioners, *Waterfield*, 10–5.

CHINA CONSULATES.

Now that the trade is no longer the monopoly of the East India Company, the Colonies should share the cost, *Waterfield*, 14,978–85.

The Secretary of State for India having protested against the high amount of India's contribution, an annual amount of 15,000*l.* was agreed upon, finally reduced by the Foreign Office Conference to 12,500*l.*, *Waterfield*, 12,415. Variations due to fall of rupee, *ib.*, 12,416. Heaviness of the burden on India, *Waterfield*, 12,450. Question of assessing payments in rupees, *Waterfield*, 12,459–78. Basis of the protest of the Government of India, *Waterfield*, 12,417–30. Imperial interest in the trade, *Waterfield*, 12,431. Question of the relative interest in China of India and the rest of the British Empire in proportion to trade, *Waterfield*, 12,438–9, 12,455–6.

CHITRAL.

Expenditure, *Waterfield*, 12,161–83, and *see* APP. 41, p. 246, Vol. II., First Report. Deficit caused by the Chitral Expedition, *Brackenbury*, 14,395–7.

CIVIL BUILDINGS AND ROADS, *see* BUILDINGS AND ROADS.

CIVIL SERVICE IN INDIA, *see* PENSIONS.

CLOTHING. Expenditure in India, *see* MILITARY FINANCE, 2 *a*.

COLLEN, MAJOR-GENERAL, SIR EDWIN H., K.C.I.E. Military Member of the Council of the Governor-General. Evidence given by, *see* pp. 136, 201, 221, 385, 405, and Analysis of Evidence, pp. xxi., xxvii., xxviii., xliv., and xlv., Vol. I., First Report.

COLONELS' ALLOWANCES.

Reasons for the increased charge; the charge will soon decrease, *Jacob*, 10,712–5.

COLVIN, SIR AUCKLAND, K.C.S.I., formerly Financial Member of the Council of the Governor-General. Evidence given by, *see* p. 117, and Analysis of Evidence, p. xx., Vol. I., First Report.

COMPENSATION ALLOWANCE.

Partly paid by Provincial Governments, *Waterfield*, 840–6, *see also* EXCHANGE.

Compensation to Military Officers, *Brackenbury*, 14,737–67.

COMMANDER-IN-CHIEF, THE.

1. IN ENGLAND.

Evidence given by, *see* WOLSELEY.

Comparison between the offices of Commander-in-Chief in England and in India, *Collen*, 3329–35.

2. IN INDIA.

Evidence given by former Commander-in-Chief, *see* ROBERTS.

He is an Extraordinary Member of the Executive Council of the Governor-General, *Colvin*, 3216–8, *Collen*, 3329; but he is not necessarily a member of Council, *Waterfield*, 14,923–7; he is not a regular attendant, *Roberts*, 15,526–32. Value of the Commander-in-Chief's presence in Council, *Brackenbury*, 14,557–9. The relative positions of the Military Member of Council and the Commander-in-Chief, *see* MILITARY MEMBER. The Commander-in-Chief has no power of sanctioning expenditure, but only a power of spending Rs. 2,500 in any one case up to a limit of Rs. 10,000 in any month, on certain conditions, *Collen*, 3581–2. Generally, it is his duty to see to the welfare and the efficiency of the Army, and to see that money is properly expended on those objects, *Roberts*, 15,535. In matters other than Military, the Commander-in-Chief would usually support the Viceroy and the Finance Member of Council, *Roberts*, 15,537–44, 15,559.

He is the chief adviser of Government in all matters connected with the organisation of the Army, but not necessarily in regard to policy, *Roberts*, 15,561–2.

The Commander-in-Chief may appeal against the decisions of the Military Member of Council, *Brackenbury*, 14,514–6. The settlement of differences between the two, *ib.*, 14,517–22, 14,479–83.

See also GOVERNMENT OF INDIA, 6.

COMMERCIAL SERVICES, *see* POST OFFICE, TELEGRAPH, RAILWAYS AND IRRIGATION.

Amongst the reproductive public works undertaken by the State in India, are some collieries and petroleum wells, but they are comparatively small, *Jacob*, 7700–7.

COMMISSARIAT, Expenditure on, *see* MILITARY FINANCE, 2 *a*.

Disbursing Officers, *see* DISBURSING OFFICERS, *b*.

COMPTROLLER AND AUDITOR GENERAL, THE.
Detailed list of his duties, *Waterfield*, 76–9. He is generally responsible for keeping the Financial Department supplied with all financial facts and figures, *Waterfield*, 107.
In any crisis he would be the first to know the general state of the reserves of the treasuries, and would communicate it instantly to the Government of India, *Waterfield*, 104–13. He is not charged with discussing the propriety of new expenditure, *Waterfield*, 15,497–8.
His executive duties nearly correspond to those of the Assistant Secretary of the Treasury, the Controller of the National Debt Office, and the Deputy Master of the Mint; he is also chief Auditor of the accounts, *Waterfield*, 79–92, 102–3, 113–21.
When the Government is at Simla he is the representative of the Treasury at Calcutta; he is, however, outside the Financial Department proper, *Waterfield*, 93–6.
His staff, at headquarters, which is entirely distinct from that of the Financial Department proper, includes three Deputies, one of whom is his assistant in executive functions, and two in audit functions, four assistant Comptrollers-General, and subordinate officers, *Waterfield*, 97–101*b*. His staff as Head Commissioner of paper currency, *Waterfield*, 101.
He is the first officer who focusses all the accounts of the different spending departments throughout India, *Waterfield*, 76–8.
Descriptions of the several accounts rendered to the Comptroller and Auditor-General, *Waterfield*, 113, 406–12, 2844–5, *Becher*, 1602.
He is the unofficial adviser of the Financial Member, *Jacob*, 2842, *Barbour*, 2141–4.
He is, however, quite outside the Financial Department, *Barbour*, 2141–4, *Colvin*, 3072–94.
The independence of the Comptroller and Auditor-General, *Barbour*, 2141–4, 2334*a*, *Colvin*, 3072–94, *Waterfield*, 969–72. His decision on audit questions is subject only to the Government of India; he may insist on a reference to the Secretary of State, *Waterfield*, 538–44.
Test audits carried out on his behalf, *Becher*, 1613–9, *Newmarch*, 1390–6, 1400–5, *Collen*, 3500–4, *Waterfield*, 514, 533–7.
For Duties and Functions as regards Audit, *see* AUDIT.
Evidence given by the Comptroller and Auditor-General, *see* JACOB.

COMPTROLLER, PROVINCIAL. *See* ACCOUNTANT-GENERAL 2.

CONSULATES IN CHINA. *See* CHINA.

CONTROLLERS OF MILITARY EXPENDITURE.
There is one Controller for each Command, *Newmarch*, 1172*a*. They are the head Account and Audit Officers in each Command, *Newmarch*, 1180–8. They consolidate the monthly audited amounts of their subordinates into a general statement for each Command, *Newmarch*, 1376–8. They draw up Appropriation Reports, *Waterfield*, 396–400, *Newmarch*, 1383–3; and compile the estimates, *Newmarch*, 1215–27. A test audit is conducted by a special officer under their orders, *Newmarch*, 1400–5. They are responsible for the distribution of assignments to the disbursing officers, *Newmarch*, 1238–41, 1250–77, 1441–3. Their duty of suggesting economies should receive more attention, *Collen*, 3401–3.

COUNCIL.
The Executive Council of the Governor-General of India. *See* GOVERNMENT OF INDIA.
The Council of the Secretary of State for India. *See* INDIA OFFICE.
The Legislative Council, *see* LEGISLATIVE COUNCIL.
Charge for the Executive and Legislative Councils in India, *Jacob*, 9161–7, 9210–1.

CROMER, THE LORD, G.C.B., &c. Formerly Financial Member of the Council of the Governor-General. Evidence given by, *see* p. 153, and Analysis of Evidence, p. xxii., VOL. I., First Report.

CUMING, MR. WILLIAMS, of the Admiralty. Evidence given by, *see* p. 441 and Analysis of Evidence, p. xlvii, VOL. I., First Report.

CUSTOMS.

1. ADMINISTRATION.
The Financial Department in India is responsible for the general administration of the Customs. In each province the Customs Department is under the Provincial Government, *Waterfield*, 225–8. There is one Act for the whole of India, subject to which the Provincial Governments have considerable power in regard to details, *Waterfield*, 231–5, local considerations rendering absolute uniformity impracticable, *Waterfield*, 266; but to secure harmony of administration all Customs orders of general application are published in the Gazette of India, *Waterfield*, 229–30. Appeal against the action of Customs officials is to the Provincial Government, but there is in practice appeal from the Provincial to the Imperial Government, (almost entirely on questions of principle, *Colvin*, 2982–8.) which also occasionally reviews the action of the Provincial Governments on its own initiative, *Waterfield*, 230–6. As a general rule Customs officers pay the gross revenue collected into the district treasuries, on which they draw for their expenditure; accounts are rendered to the departmental controlling officers, *Waterfield*, 236–9.

2. REVENUE AND CHARGE.
Variation in recent years, *Jacob*, 11,180–2. Duties on liquor, 1883–4 to 1893–4, *Jacob*, 11,183–4. Total revenue in 1875–6 and 1893–4, estimated revenue of the present time, charges of the same years, the estimated charge being about 4 per cent. of the revenue, *Jacob*, 11,186–95. The charges include the whole cost of collection, *Jacob*, 11,196–201. The charges are Provincial except in Bombay, the revenue is everywhere Imperial, *Jacob*, 11,203–4.

DEBT.
No sinking fund for rupee debt in India; small sinking fund in England for the general debt merely to replace the discount, *Jacob*, 7186–91, 8772–3. Sinking funds in connection with Guaranteed Railways, *Jacob*, 7192. The Debt is classified as Ordinary Debt and Public Works Debt, definition of Public Works Debt, *Jacob*, 7202–7.
In 1895–6 the interest charged to the Public Works Department exceeded the total interest on rupee debt in India, *Jacob*, 7192–7. Part of the Public Works Debt is due to the investment of the balances of the Government of India, *Jacob*, 7208–13.
Prices and rates of interest of various loans, *Jacob*, 7228–36–43.
Total debt in India and England in 1875 and 1895, *Jacob*, 7244–8. Interest on debt in India and England in 1875 and 1895, *Jacob*, 7249–50. The fall in the rate of interest would rather more than counterbalances the increased payment due to fall in exchange, *Jacob*, 7254–76. The reductions both in the ordinary debt and the cost of it are considerable and satisfactory, *Jacob*, 7277–98.
The Public Works Debt now stands at about 150 million pounds, *Jacob*, 7299–306. The productive debt does not pay its charges, *Jacob*, 7307–27–35–54.
Mode of treating debt so as to show the effect of exchange, *Waterfield*, 12,238, 12,244–58, 14,931–4.
As far as possible money should be borrowed in India, *Wacha*, 17,416–35.
Afterwards resource should be had to England, *Wacha*, 17,550–65.
English and Indian rates of interest, *Wacha*, 17,566–73; *Jacob*, 20,205–6.

Conversions.
Conversion in India in 1878–9, 1890–2–3, and in 1894–5, *Jacob*, 7355–9.
Conversion in England, *Jacob*, 7360–73.

Other Obligations besides the Debt.
Amount about Rx. 13,000,000, and interest charge Rx. 550,000, *Jacob*, 7381–3.

Debt Receipts.
The investment of the Paper Currency Reserve brings in about 300,000*l*. a year, *Jacob*, 7388–90. Loans to Corporations and Municipalities, *Jacob*, 7391–401, and Native States, *Jacob*, 7402.

The Discharge of Debt.
Generally in the shape of conversion, large purchase of stock in 1876–7, *Jacob*, 7403–7. Appropriation of Famine Insurance Allotment to reduction of Debt, *Jacob*, 7408–15. Debt discharged in England, *Jacob*, 7416–19.

The policy of the Government as to borrowing, *Jacob*, 7432–42. Loans raised in England, *Jacob*, 7447 7459. Difficulty of borrowing in India, *Jacob*, 7465, 7484, 7507–16. If it were not for the difference in standard, money could be raised in England much more cheaply, *Jacob*, 7485–9.

Comparative credit of the Indian and Imperial Governments, *Jacob*, 7502–6.

Amount lent by natives in India; amount of capital in India, *Jacob*, 7507–82, 7526–38.

Transfer of debt to the category of Productive Public Works Debt, *Waterfield*, 12,239–40.

The Management of Debt in England. (*See* APP. 36 and 37, pp. 241 and 242, Vol. II., First Report.)

Sums paid to the Banks of England and Ireland for management, *Waterfield*, 11,747–8. Details, *Waterfield*, 11,880–902. Rates paid at different periods, *Waterfield*, 11,847–50. Total amount of stock managed by each Bank, *Waterfield*, 11,851–2. Explanation of payments to the Banks, *Waterfield*, 11,853–9. Other charges, *Waterfield*, 11,860–75. Means of making good the difference between the amount of stock and the price paid for it, *Waterfield*, 11,911–5.

There are no sinking funds for loans, *Waterfield*, 11,916–7. Policy of sinking funds, *Waterfield*, 11,918–38.

DECENTRALISATION, *see* PROVINCIAL SYSTEM.

DEFERRED PAY, *see* MILITARY FINANCE 3 d.

DEPOT CHARGES, *see* MILITARY FINANCE 3 b.

DIPLOMATIC CHARGES IN PERSIA, *see* PERSIA.

DISBURSING OFFICERS.

Civil.

The Treasury Officers are bound by certain general rules applying to the various classes of expenditure, *Waterfield*, 194.

Military Disbursing Officers include District and Regimental Paymasters, Officers Commanding Native Regiments or Batteries, Commissariat Officers, the Superintendents of Family Pensions, Pension Pay Officers, Remount and Clothing Officers, Ordnance Officers, and, at small stations, the Officer in Command, *Newmarch*, 1190–208, 1250–4, *Wace*, 3772–6, 3781.

See also EXPENDITURE.

Public Works Disbursing Officers are the Executive Engineers in charge of works, *Waterfield*, 194–7, 340–4. *See also Becher*, 1503–4, 1554–7, 1558–60.

DISSENT.

In the Council of the Secretary of State, *Colvin*, 3175–8.

In the Council of the Governor-General, *Waterfield*, 27, *Barbour*, 2352–5, *Brackenbury*, 14,493–4, *Colvin*, 2937–40. Value of the power of recording a dissent, *Lansdowne*, 16,140.

There was a disinclination to record a formal dissent, because it became a public document; opinions might be recorded confidentially and not necessarily for publication, *Cromer*, 13,548–62.

Any member of the Council may appeal against the decision of any other member, *Brackenbury*, 14,411–48.

DISTRICT TREASURIES.

i. *Generally.*

There are 266 district treasuries, not including the sub-treasuries (a sub-treasury is an outlying post in an extensive district), *Waterfield*, 152–62; into which the revenue is paid, *Waterfield*, 224.

In the smaller districts cash balances are kept in strong rooms, in the larger in the branch Presidency Banks, *Waterfield*, 135–51, 156–8, 190.

Losses are very rare, *Barbour*, 1990–3, *Waterfield*, 185–9, *Colvin*, 2989.

Almost all the district treasuries are in telegraphic communication with the Accountant-General of their province, *Waterfield*, 223. Any money that is not wanted at the District Treasury is remitted to a central station, where the bulk of the payments are made and from which funds can easily be removed by drafts, *Waterfield*, 164. The Provincial Accountants-General receive monthly estimates for the current and two succeeding months from each treasury and thus are able to order remittances from surplus to deficit treasuries, *Waterfield*, 404–5. The movement of funds from the district treasuries is now a source of profit owing to the premium on bills, *Jacob*, 2832.

The whole of the money at the central stations is not invariably banked, but, in the Presidency towns, for instance, a part is kept in the reserve treasury for the transfer of funds, *Jacob*, 164–72; 177–82, *see Barbour*, 1994–2011.

The reason for maintaining Reserve Treasuries, *Waterfield*, 173–5; *Jacob*, 9199–200.

Minimum balances to be reserved, *Jacob*, 2805–30; *see also Barbour*, 2012–28, and *Colvin*, 3209–15.

The Government uses banks to the full extent desirable, *Barbour*, 1988–9, *Colvin*, 3015–8.

The District Treasury regulations work very satisfactorily, *Barbour*, 1987; *Colvin*, 2988–91.

Reserve Treasury. Cost of Administration, *Jacob*, 9184.

Cost, *see* APP. 4, p. 49, Vol. II., First Report.

ii. *Treasury Officers.*

The Treasury Officer is subordinate to the Accountant-General, but is also one of the assistants of the Collector of each district, and in that capacity is a subordinate of the Provincial Government (he is practically district paymaster, *Waterfield*, 190); he is assisted by a Treasurer (usually a native banker, *Barbour*, 1995), an accountant and staff, *Waterfield*, 135–7.

The Treasurer is in actual charge of the cash, and gives security; the balance in his hands is tested at intervals by the District Collector, *Waterfield*, 183–4.

Duties of the Treasury Officer as regards demands by military disbursing officers, *Waterfield*, 349–50, *Newmarch*, 1313–23; he is bound not to issue funds beyond the fixed assignment, *Newmarch*, 1237, *Becher*, 1558–60, except by special authority, *Waterfield*, 355–9, *Newmarch*, 1238–41, 1441–3, 1250–77; payment of pensioners, now conducted by Treasury Officers, *Newmarch*, 1242–9*a*.

Issue of funds to Public Works disbursing officers, *Becher*, 1503–4, *Waterfield*, 194–7, 340–4.

The accounts of the Treasury Officers are audited on behalf of the Accountants-General, *Waterfield*, 504–18.

EASTERN MAIL SERVICE.

Present contract with the P. & O. Co., *Waterfield*, 12,269.

Terms of the contract, *Jacob*, 11,404–14.

The controversy between the Post Office and India Office was settled by Viscount Halifax's award. The main point of the controversy was the apportionment of charge for the Mediterranean section, *Waterfield*, 12,270–1. Percentage paid by India as decided by the award, *Waterfield*, 12,272–4. Charge on the United Kingdom, *Forman and Cardin*, 12,347. Recent arrangements, *ib.*, 12,275–7, *Forman and Cardin*, 12,334–6. Reduction in postage was estimated to cost India Rx. 38,000 a year, *Waterfield*, 12,286–96, *Forman and Cardin*, 12,376–80. It has actually cost India Rx. 475,000, *Waterfield*, 15,915–6. Contentions of the India Office with regard to the Contract, *Forman and Cardin*, 12,297–8.

Disputed point now being examined by a Committee, *Forman and Cardin*, 12,337–46. The principle of the award was not affected by the separation of the Australian contract, *Forman and Cardin*, 12,348–9. Criticism of India Office objection, *ib.*, 12,354. Principle of the award, *ib.*, 12,354–67. Possible alteration in the proportions of charge due to East African and Egyptian Correspondence, *Forman and Cardin*, 12,381–93. *See also* APP. 63, p. 394, Vol. II., First Report.

EAST INDIA AND MADRAS IRRIGATION AND CANAL COMPANIES WORKS. *Jacob*, 8783–90, 8809.

EAST INDIA IRRIGATION COMPANY. *See* Irrigation, 1, *d*.

ECCLESIASTICAL ESTABLISHMENTS.

Distribution of the chaplains, *Jacob*, 10,003–5, 10,016–8. Their numbers, *Jacob*, 10,055, 10,007, 10,011–2. Pay, *Jacob*, 10,005–10. The supply of Church of Scotland chaplains, 10,019–20, 10,029. Allowance made to Roman Catholic chaplains, *Jacob*, 10,023–4, and to Wesleyan ministers, *ib.*, 10,028.

The pay of Roman Catholic and Scotch chaplains attached to regiments is treated as military expenditure, *Jacob*, 10,023–4, 10,030–2. Church of England chaplains are not divided into military and civil, *Jacob*, 10,050–1; they are appointed to stations to minister to both the civil and military population, *ib.*, 10,039–41. Method of providing stipends for Bishops, *Jacob*, 10,056–7; all Church of England chaplains are under their control, *Jacob*, 10,036. The necessity for the seemingly large proportion of chaplains to population, *Jacob*, 10,042; the civil population is too unsettled to support its own clergy, *Jacob*, 10,043–9, 10,052–4.

The increase in the ecclesiastical expenditure, *Jacob*, 9999. Details of the charge for 1893–4, *ib.* 10,001–3.

Allowances made for Hindoo and Mahommedan religious purposes, *Jacob*, 10,058–61.

EDUCATION IN INDIA.

1. ADMINISTRATION.

Educational system in India generally controlled by Home Department of the Government of India, *Jacob*, 9869–81. There is a Director of Public Instruction in each province, *Jacob*, 9874, and each province has its own code or system, *Jacob*, 9884. Administration entirely provincial, subject to the control of the Home Department, *Jacob*, 9882–4. Education not compulsory, *Jacob*, 9969.

2. EXPENDITURE.

The charge from provincial revenues and local rates, 1875–6, 1893–4, and 1894–5, *Jacob*, 9885, 9896–9. The only Imperial charge is for small states directly administered by the Government, *Jacob*, 9889–95, 9928–31. Details of the expenditure, *Jacob*, 9900. The main charge is for payments to Government schools, *ib.*, 9901–2, the next for Grants in aid, *Jacob*, 9903–4. Expenditure from municipal funds, *Jacob*, 9907–8. Gross charge, *Jacob*, 9936–9, and net charge on general revenues, *Jacob*, 9940–1. The charge for Universities, *Jacob*, 9945–9. The total expenditure is expected to increase, though the burden will not fall on the Imperial or provincial taxpayer, *Jacob*, 9950–2, 9995. Private enterprise is encouraged by grants in aid, *Jacob*, 9953–61; amount of grants, *Jacob*, 9962; the demand exceeds the supply, *Jacob*, 9970–4, 9986–9. Conditions under which grants are given, *Jacob*, 9976–82, 9992–4.

Alleged meagreness of the Government assistance to education, *Gokhale*, 18,365–6–83, 18,530–9. *Wacha*, 17,691–704.

The increase of expenditure in Bombay has been 58 per cent., in Madras 45 per cent., and in Bengal 44 per cent.; the expenditure is not supposed to be adequate, but only proportionate to the means available; it is in advance of what the expenditure was in England before the adoption of the system of general education, *Jacob*, 19,973–90.

The whole expenditure is very small compared to the population, *Jacob*, 9983–5. *See also* App. 29, p. 226, Vol. II., First Report.

Military Expenditure on Education. *See* MILITARY FINANCE, 2 a.

The employment of Natives in the Education Department, *Jacob*, 10,718–23.

Military Educational Establishments in England. *See* MILITARY FINANCE, 3 c.

EGYPTIAN EXPEDITION.

Payment of troops borrowed for, *Collen*, 6117–50. *Northbrook*, 14,124–41.

ENGINEERING COLLEGE, ROYAL INDIAN, *see* INDIA OFFICE, J.

ESTIMATES, *see* BUDGET.

EUPHRATES-TIGRIS AND KARUN SUBSIDIES.

Euphrates-Tigris Subsidy, Rs. 24,000 for 10 years, Karun River 2,000*l.* a year, shares of British and Indian Governments. Alterations proposed by the Indian Government. *Waterfield*, 12,479–83. Reasons for the Karun Subsidy, *Waterfield*, 12,484–8. Indian interests are not so great on the Karun as on the Euphrates and Tigris, *Waterfield*, 12,489–92. *See also* App. 49, p. 375, Vol. II. First Report, *and* App. 48, p. 371.

EURASIANS.

Volunteers and regular regiments, *Collen*, 6655–8, 6663–7. Admittance to the Royal Indian Marine and Royal Navy, *Hext*, 7130–41, 7144–92. Value of Eurasian troops, *Wolseley*, 13,382–3.

EUROPEANS IN INDIA.

Their employment is necessary for the maintenance of British Rule in India. *Ripon*, 16,488–94.

Question of the relative employment of natives of India and Europeans, see NATIVES, EMPLOYMENT OF, *and* FINANCIAL MACHINERY B.

EXAMINERS.

1. *Of Military Accounts.*

The Controller of each of the four Commands has under him three Examiners, viz., the Examiner of Commissariat, Remount and Medical Accounts, the Pay Examiner, and the Examiner of Ordnance and Clothing Accounts, *Newmarch*, 1180–8. With the exception of the Pay Examiner, who is to some extent a disbursing officer, *Newmarch*, 1182, they act purely as auditors, *Newmarch*, 1324–38, 1413–24.

2. *Of Public Works Accounts.*

There is an Examiner of Public Works Accounts in each province and it is on his requisition that the Civil Accountant-General gives orders to the Treasury Officers to issue money to the Executive Engineers, *Becher*, 1501–8.

There is a special Examiner of Military Works Accounts attached to the Public Works Accounts Branch, *Becher*, 1543–52, 1679–1712.

The Examiners are purely audit officers, *Becher*, 1493; though they are also advisers to the Provincial Government, *Becher*, 1502.

They compile the Estimates of the Executive Branch for the Budget, *Becher*, 1894–5, 1496.

3. *Examiner of Military Works Accounts.*

See MILITARY WORKS.

EXCHANGE.

Mode of stating the charge for exchange in the explanatory Memorandum of the Secretary of State, *Waterfield and Cave-Browne*, 2362–76, 2377–89.

The average rate of exchange for the year is obtained by taking the amount of rupee bills sold throughout the year, and dividing that by the sterling amount received for those bills, and on this average the rupee equivalent of the sterling payment is calculated, *Waterfield and Cave-Browne*, 2611–20*a*. (*See also* App. 40, p. 245, Vol. II., First Report.)

Loss by exchange is an Imperial charge, except a part of the special allowance given to officers as compensation, which is Provincial, *Waterfield*, 810–6.

Provincial governments should bear a share of cost of exchange, *Morgan-Browne*, 13,866–76.

The Government is not legally bound to grant any compensation for loss by exchange, *Jacob*, 10,276–80.

Argument against compensation allowances, *Gokhale*, 18,351–64. *Wacha*, 17,742. *See Jacob*, 20,178 and 20,187–9.

Increased charge due to exchange on Military Pay and Furlough Charges. *See* MILITARY FINANCE 2, b., iv., and FURLOUGH.

Deficit on Railways due to fall in exchange. *See* RAILWAYS B.

Post Office Revenue diminished by loss by exchange, *Jacob*, 11,264.

Increase of Expenditure due to Loss by Exchange. *See* EXPENDITURE, 2.

EXCISE.

The Excise Department is under the several Provincial Governments, subject to the ultimate control of the Government of India in the Financial Department; when a proposal is made (usually at the instance of the Provincial Governments, *Waterfield*, 249) for the alteration of the excise law, the Provincial Governments, who would take advice from their chief excise authorities (*Waterfield*, 254) are consulted by the Imperial Government, and a Bill is drafted and circulated, not only to the Provincial Governments, but for the information of the general public, and upon the consequent recommendations the project of law is finally brought into shape, *Waterfield*, 240–50, 255–7. There are separate local Excise Acts for Bombay, Madras, and Bengal respectively; for the rest of India there is a general Act, *Waterfield*, 251–3. In regard to modifications of the law, the Financial Member of Council would consult the Provincial Governments, who would take advice from their chief excise authorities, *Waterfield*, 254–9, possibly also the Revenue Member of

Council, *Colvin*, 2965–73. The excise revenue is paid into the District Treasuries, subject to the same conditions as the customs revenue, *Waterfield*, 260. Increase in the Excise Revenue, reasons for it, *Waterfield*, 689–97, *Bernard*, 1720–1816, *Barbour*, 2115–22, *Colvin*, 3066–7. *See* APP.

The Revenue is confined to duties on intoxicants, *Jacob*, 11,151–60.

Difficulty of comparing past and present taxation, *Jacob*, 14,911–4.

Increase in the revenue and charges since 1875–6, *Jacob*, 11,141–2. Percentage of cost to collection, *Jacob*, 11,143–6. Increase in assignments and refunds, *Jacob*, 11,149. The revenue and charges are three-fourths provincial, *Jacob*, 11,150.

Alteration of Excise Duties, *see* App. 65, p. 403, Vol. II.

EXPEDITIONS.

Frontier Expeditions.

Expenditure due to frontier expeditions and defence, *Waterfield*, 12,153–85. The increase in expenditure has been mainly due to considerations affecting the north-west frontier, *Northbrook*, 14,094–6. Past and present policy with regard to the frontier tribes, *Lansdowne*, 15,885–910. Frontier expeditions are objectionable, *Ripon*, 16,237–46. The new Military policy will probably reduce the number of expeditions in the future, *Roberts*, 15,606–27, *Brackenbury*, 14,771–5. The wisdom of the past expeditions, *Brackenbury*, 14,538–45. The responsibility rests with Government of India, *Brackenbury*, 14,546–57. England should share the cost of frontier wars since the second Afghan war, *Wacha*, 17,821.

Expeditions where troops were lent by India to England and *vice versa*. *See* MILITARY FINANCE, 3, *c*.

EXPENDITURE.

1. RULES APPLIED TO EXPENDITURE.
2. INCREASE OF EXPENDITURE.

1. RULES APPLIED TO EXPENDITURE.

Enumeration of Spending Authorities in India, *Gokhale*, 17,834–58.

a. In the case of Civil Departments.

The Treasury officers are bound by certain general rules applying to the various classes of expenditure, *Waterfield*, 194.

b. In the Military Department.

The Commander-in-Chief has a limited power of spending money, *Collen*, 3581–2. Such expenditure is reported to the Controller and by him to the Accountant-General, *Collen*, 3684–51, 3662–4. Similar, but more limited, powers of Lieutenant-Generals, *Collen*. 3665, and of officers in command of districts, Commissaries-General, and heads of departments, *Collen*, 3672.

Funds are placed at the disposal of Military Disbursing officers by annual assignment in their favour issued to Treasury officers by the Provincial Accountant-General on the application of the Military Controllers, *Waterfield*, 349–50; these assignments are subdivided into monthly assignments, the Treasury officer being informed up to what limit each Disbursing officer may draw in each month, *Newmarch*, 1237.

Money is drawn by the Disbursing officers by cheques against their assignments, ordinarily representing their exact requirements; Disbursing officers draw cheques on the Treasuries as on a bank, *Newmarch*, 1313–23, *Collen*, 3470–1. Except during military expeditions, balances in their hands are very small, *Waterfield*, 198–215.

In case of emergency, where the delay involved in procuring formal sanction would cause public inconvenience, a supplementary assignment may be made to a Disbursing officer, on the authority of a station or district order, without limit; such advances must be at once brought to the notice of the military authorities, *Waterfield*, 355–9; *see also Newmarch*, 1238–41, 1441–3, 1250–77.

The Controllers may sanction extraordinary expenditure to the limit of Rs. 1,000 a month, in order to avoid petty references for formal sanction, *Waterfield*, 381–2.

Ordnance officers alone receive no cash assignment, their bills are paid by the Commissariat officers, on the authority of the Inspector-General of Ordnance, and they receive only a petty cash allowance, *Newmarch*, 1425–31, 1450–77.

Commissariat accounts are furnished to the Controllers monthly, *Newmarch*, 1339–42.

Paymasters of Native and of British Regiments draw pay for the troops once and four times a month respectively, *Newmarch*, 1278–89.

Pensioners are now paid through the Civil Treasuries, *Newmarch*, 1290–313, 1,467–70.

c. In the Public Works Department.

The Provincial Governments are informed when the Budgets have been approved; the Provincial Public Works Secretariat apportions the assignment to the Superintendents of Circles, who in turn allot to their subordinates, *Becher*, 1553. The Treasury officers are informed of the Public Works assignments by the Provincial Accountant-General on the requisition of the Examiners, *Becher*, 1503–4, *Waterfield*, 194–7, 340–4, who receive a monthly statement from each Executive Engineer of the amount he wishes to spend in the month; these monthly statements are compiled and sent to the Provincial Accountant-General, *Becher*, 1554–7.

A Treasury officer would refuse to honour a cheque in excess of the monthly assignment in the absence of a supplementary letter of credit, *Becher*, 1558–60.

The yearly expenditure of the Department was Rx. 34,000,000 in 1893–4, *Waterfield*, 343.

2. INCREASE OF EXPENDITURE.

Continuous increase of expenditure since the assumption of Government by the Crown has retarded material progress, weakened natural defences and imposed indefinite financial responsiblities, *Gokhale*, 18,139–84. The Indian Government has no resources to spend on domestic reforms, *ib.*, 18,185–8. Domestic expenditure has increased in an even larger ratio than military expenditure, *Jacob*, 20,174–6.

See also FINANCIAL MACHINERY B.

1. *Explanation of Notes dealing with Increase.*

"Increase of Expenditure," paper handed in by Sir Henry Waterfield, *see* APP. 9, p. 59, Vol. II., First Report. Note on Sir Henry's paper, *see* APP. 10, p. 80.

Reasons for the form of the previous paper, *Waterfield*, 12,005; further explanations, *Waterfield*, 12,069–70.

Sir Wm. Wedderburn's method of stating Provincial and Imperial expenditure, *Waterfield*, 12,058, 12,094–7, 12,145–51.

The impossibility of debiting Provincial Governments with exchange, *Waterfield*, 12,059–62. Exclusion of furlough pay and military stores from effective service, *Waterfield*, 12,221–2.

Expenditure on Civil Administration is not curtailed in order to meet military demands, *Lansdowne*, 15,925–42, *but see Ripon*, 16,156.

Objection to reducing the figures of Indian expenditure to sterling in order to compare results, *Morgan-Browne*, 13,740–1, and to the form in which accounts are rendered to Parliament, *ib.*, 13,742–9.

2. *Question of the Increase of Expenditure due to loss by Exchange.*

"Automatic" and "voluntary" loss by exchange, *Waterfield*, 12,083–9, 12,227–31, *Morgan-Browne*, 13,751–85. The separation of exchange into different classes, *ib.*, 13,786–96. The certainty of loss by exchange, *Morgan-Browne*, 13,797–804. Increase in expenditure on the services, and that due to exchange in the last seven years, *ib.*, 13,805–8, 13,813; decrease in other expenditure apart from exchange, 13,809–12. Civil and military expenditure as apart from that in other departments of Government, *Morgan-Browne*, 13,838–46. Increase during 10 years from 1884–5; *Wacha*, 17,324–33–45, due to increased military and civil expenditure, *ib.*, 17,346–7. Effect of the increase in expenditure on the civil and military services, *ib.*, 13,847–61. Provincial Governments should bear a share of the cost of exchange, *Morgan-Browne*, 13,866–76. Under heads of expenditure other than military and civil, the burden of exchange has been more than compensated by decreased expenditure, *ib.*, 13,886. Increase in military and civil expenditure exclusive of exchange in 1884–96 and 1875–85, *ib.*, 13,902–7. Civil and military expenditure compared to "other" expenditure, *Morgan-Browne*, 13,908, 13,921. Probability of economy in "other" expenditure recurring, *ib.*, 13,922–35. Aggravation of the burden of exchange by sterling expenditure, *ib.*, 13,946–61. Increase in military and extraordinary expenditure, *ib.*, 13,962–5.

The increased civil and military charge has been a more disturbing factor than exchange, *Morgan-Browne*, 13,966–7. *See also Wacha*, 17,756–84.
It is misleading to state accounts in pounds and Rx. mixed, *Morgan-Browne*, 13,968–14,009.
Increase of taxation, 1884–95, 6½ millions; increase of civil and military expenditure, 9 millions, *ib.*, 14,010–16. Expenditure due to fall of rupee, 11 millions, to recent rise in exchange 9 millions, *ib.*, 14,017–20. Proposed treatment of Exchange in the Accounts, *Wacha*, 17,220–59.

FAMINE RELIEF AND INSURANCE.

Circumstances in which assistance is given by the Central to the Provincial Governments in case of distress from Famine, *Waterfield*, 896.
Appropriation of Famine Insurance Allotment to redemption of Debt, *Jacob*, 7408–15.
The charge of major irrigation works to "Famine Relief and Insurance," *Jacob*, 8751–6.
Famine protective works, *Jacob*, 8906–9.
See APP. 39, p. 245, Vol. II., First Report.

Expenditure.
The amount to be set aside was at first Rx. 1,500,000, *Jacob*, 10,636–9. The full amount has not always been available, *Jacob*, 10,640. Actual charges, *Jacob*, 10,641–4. Application of surplus after providing for famine relief, *Jacob*, 10,651–9.
One million Rx. will be allotted in future years, *Jacob*, 10,660–9. Total expenditure, 1881–2 to 1893–4, Rx. 7,196,000, *Jacob*, 10,670–83.
Method of accounting for the grant, *Waterfield*, 12,098–139.
Railway expenditure charged to the grant, *Waterfield*, 12,188. The Fund has been employed beyond those purposes for which it was established, *Gokhale*, 18,418–30–51. *Wacha*; 17,706–41.

FINANCE AND REVENUE ACCOUNTS.

The General Finance and Revenue Accounts are compiled by the Comptroller-General, *Waterfield*, 76.
The Military Chapter, *Newmarch*, 1376–89.
The Public Works Chapter, *Becker*, 1602–3.

FINANCIAL DEPARTMENT, THE.

1. IN THE INDIA OFFICE. *See* INDIA OFFICE, b. ii

2. IN INDIA.

Comparative importance of the Financial Department in India and the Treasury in England, *Cromer*, 13,508–10, 13,511–7.

FINANCIAL MACHINERY.

A. IN ENGLAND. *See* INDIA OFFICE.
B. IN INDIA.
See FINANCIAL MEMBER, FINANCIAL OFFICERS, BUDGET, REVENUE, EXPENDITURE, and AUDIT.
The Separate Governments. See PROVINCIAL GOVERNMENTS.
Faults in the Administration.
In India the standing claims of British Supremacy entail a vast expenditure, the benefits of which goes to others than the taxpayers. *Gokhale*, 17,826–9. Waste due to inefficient control, *ib.*, 17,833. *See also Wacha*, 17,360–75. Suggestions for the promotion of greater economy, *Wacha*, 17,376–97. Indian revenues have not been so efficiently protected as in the time of the East India Company, *Gokhale*, 17,865–9. Comparison between period of government by the Company and at the present time, *Jacob*, 20,177. Comparative economy of administration is due to the personalities concerned, and to current events, *Lansdowne*, 10,820–2. Concentration of power in the hands of a member of the Imperial Government liable to be swayed by English influence, *Gokhale*, 17,870–5, 17,893. Money has been spent on objects which have not advanced the interests of the Indian people, *ib.*, 17,876–92. Alterations suggested in the constitution of the Council of the Secretary of State, *ib.*, 17,894–978. Means by which the check of public opinion might be brought to bear on expenditure, *Gokhale*, 18,008–15. Without this no retrenchment can be hoped for, *Wacha*, 17,078–90. Increasing poverty of India, *Gokhale*, 18,225–330, 18,452–64.

FINANCIAL MEMBER OF THE COUNCIL OF THE GOVERNOR-GENERAL.

Evidence given by former Financial Members of Council, *see* BARBOUR, COLVIN, and CROMER.

POSITION OF THE FINANCIAL MEMBER.
The normal term of office is five years, but this has been occasionally extended, *Waterfield*, 17–18.
He is the head of the Central Treasury, *Waterfield*, 16.
Theoretically his position corresponds to that of the Chancellor of the Exchequer in England, *Barbour*, 1823–4, *Colvin*, 2881*a*, *Waterfield*, 19–24, *Ripon*, 16,172–6, *Northbrook*, 14,028–31; but the Finance Department in India does not occupy the predominant position in India which the Treasury does in England, *Cromer*, 13,508–10. In England the Chancellor of the Exchequer is selected by the Premier as a man of the same political convictions as himself. In India, the Finance Minister may have been selected by a different government from that which chose the Viceroy, *Ripon*, 16,177–81. The Financial Member has not got behind him the control of anybody corresponding to Parliament, *Barbour*, 1823–32, *Cromer*, 13,511–7. The control of the Secretary of State has not produced any sensible economy, *Brackenbury*, 14,612–5, 14,056–71; but it would not be desirable to make Parliament a final Court of Appeal, *Brackenbury*, 14,612–43, 14,687–8. Every measure requiring his sanction is really brought to his notice, *Colvin*, 2882–5, in sufficient time, so far as, when a policy is formed, its results can be foreseen, *Colvin*, 2901, 2962–4, *Barbour*, 1954–5; the audit system (and the practice of recording proceedings, *Colvin*, 2823–4) is a complete guarantee of this, *Barbour*, 1841, 1850–1, *Colvin*, 2891–2. He would refer any question as to the legality of expenditure to the Legal Member, *Colvin*, 3190–6.
The checks on the Financial Member are, primarily, the Viceroy, the Viceroy in Council, then the Secretary of State (and, in the remote distance, Parliament), *Barbour*, 1845–9, *Colvin*, 2896–8. Value of the control of Parliament over the Secretary of State, *Banerjea*, 19,067–89.
Proposed Parliamentary inquiry every 10 or 20 years, *Banerjea*, 19,163–85–99. *See also Wacha*, 17,146–9.
Should the Viceroy agree with the Financial Member in differing from a decision of the majority of the Council on a question involving finance, he may suspend action pending a reference to the Secretary of State (this rule is practically a dead letter, *Barbour*, 1892, 1900, 1910–21, *and see Northbrook*, 14,070–7, 14,093); otherwise the Finance Member can only record his dissent, which is forwarded to the Secretary of State, *Waterfield*, 25–35 (*see Northbrook*, 14,055–65). He may have his views stated in a despatch to the Secretary of State, and eve

in a secret despatch *Lansdowne*, 16,140, *but see Northbrook*, 14,066-9; his present power is more efficacious than a private memorandum would be, *Ripon*, 16,207-24 (*see* APP. 6, First Report, Vol. II., "Dissents of the Financial Member of Council").

2. THE POSITION OF THE FINANCIAL MEMBER IN THE COUNCIL, AS OPPOSED TO SPENDING DEPARTMENTS.

The inelasticity of the revenue and the difficulty of increasing taxation must render finance difficult in India, *Ripon*, 16,187-8.

The Financial Member is practically the only member interested in economy, *Gokhale*, 17,979-18,007.

Though the Financial Member can record his dissent, there is a want of touch between him and the Home authorities, *Barbour*, 1887-91; it would not be desirable to give him power of suspending action pending a reference to the Secretary of State, *Colvin*, 3248-50, or of corresponding directly with the Secretary of State, *Colvin*, 2941-51; nor should he be given a special power of appeal, *Roberts*, 15,592-8; his means of communication with the Secretary of State should not be increased, *Lansdowne*, 15,831-58.

There is no weakness in the position of the Finance Member, *Brackenbury*, 14,593-602, *Northbrook*, 14,047-8, 14,088-91.

Directions in which it would be desirable to strengthen the power of the Finance Member, *Colvin*, 2899-900, 3292-7, 3115-34.

No improvement in his powers is required as far as rules go, but greater weight should be attached to financial considerations, *Barbour*, 1833, 1928-42, *Colvin*, 2909-11. *Banerjea*, 19,060-6.

Both theoretically and practically his powers are as complete as it is possible to make them, *Lansdowne*, 15,812-5, *Ripon*, 16,172-6. He is well informed as to measures like to disturb the finances, *Lansdowne*, 15,823-30. Members of Council in general are not unmindful of financial interests, *Lansdowne*, 15,816-9.

The Financial Member has ample means of impressing his views on his colleagues, *Colvin*, 2901-8, and on the Secretary of State, but in the latter case they are of little use without the support of the Viceroy, *Colvin*, 2937-40; he would probably not find much support in the Secretary of State, *Ripon*, 16,203-6.

No proposal for expenditure could survive the opposition of the Viceroy and the Financial Member, *Northbrook*, 14,225-6.

The influence of the Secretary of State is not always exercised in the direction of economy, *Brackenbury*, 14,603-11.

The military policy which has been in vogue since 1885 combined with the Decentralisation System, which has directed the attention of the Viceroy from internal affairs to the more costly Military and Public Works Departments, have brought about the weakening of the Finance Member's influence, *Colvin*, 2912-28, 2957. Causes which may have brought a weakening of power, *Ripon*, 16,189-95, 16,229-36.

Value of comparisons of economy of financial administration in different years, *Lansdowne*, 15,820.

When each member is the head of a Department, and at the same time a member of a Government collectively responsible for its own acts, financial considerations should be of the utmost importance, *Cromer*, 13,518-9. It is the case that the practical control of the Finance Minister depends much on the idiosyncracy of the Viceroy, still it would not be desirable to impair in any way the power of the Viceroy, *Cromer*, 13,525-42. The Finance Member's powers of checking military and other expenditure depends largely on his personal influence and on that of the Viceroy, *Roberts*, 15,563-79, *Brackenbury*, 14,603-7. The Viceroy would consult his colleagues, who are quite alive to financial conditions, *Roberts*, 15,580-9. *See also Ripon*, 16,182-6, 16,225-8. The Financial Department is strong enough to secure due consideration of financial danger, but much depends upon the personality of the Financial Member, *Brackenbury*, 14,776-7. The tendency of spending Departments to spend freely in times of surplus and not to lay by for bad years may cause great inconvenience to the Financial Member, *Cromer*, 13,520-4. Dual Military representation is theoretically too strong, but the arrangement is the best; military men are not necessarily blind to financial considerations, *Cromer*, 13,563-70. *See also* Government of India, 6.

The danger in attempting to strengthen the financial element, *Cromer*, 13,571-9. The idea of attaching a small committee to the Financial Member would not be advisable, *Cromer*, 13,580-3.

The only remedy for any weakness is to improve the selection, *Cromer*, 13,584-5, *Lansdowne*, 16,112-24. *See also Wacha*, 17,398-414.

He would ordinarily have sufficiently early information of the intention to adopt a policy involving expenditure, *Ripon*, 16,196-202. He has free access to the Viceroy, and is fully informed of any measures likely to disturb the finances, *Lansdowne*, 15,823-30, *Northbrook*, 14,032-46.

POSSIBLE PREPONDERANCE OF MILITARY OVER FINANCIAL INTERESTS IN THE COUNCIL. *See* GOVERNMENT OF INDIA.

Channels through which the Financial Member would gain his information on revenue questions, *Barbour*, 1957-88, *Colvin*, 2965-7.

The difficulty of estimating the Revenue closely, *Barbour*, 2038-43.

Monthly accounts of the progress of revenue and expenditure are submitted to the Financial Member, *Waterfield*, 432*a*-46; *Barbour*, 3033-7; *Colvin*, 2933-3014, 3031-5.

FINANCIAL OFFICERS.

a. CIVIL. IN INDIA.

The Chief Financial Officers of the Central Government are the Financial Member of Council, the Financial Secretary, and the Comptroller and Auditor General; of the Presidencies of Bombay and Madras, the Financial Member of Council, assisted by the heads of branches, and by the advice of the Accountants-General; of the larger provinces, the Lieutenant-Governor; and of the minor provinces, the Chief Commissioner, *Waterfield*, 10-15.

i. *The Financial Member of Council, see* FINANCIAL MEMBER.
ii. *The Financial Secretary, see* FINANCIAL SECRETARY.
iii. *The Comptroller and Auditor-General, see* COMPTROLLER AND AUDITOR-GENERAL.
iv. *Provincial Accountants-General, see* ACCOUNTANT-GENERAL.
v. *Treasury Officers, see* DISTRICT TREASURERS.
vi. *Disbursing Officer, see* DISBURSING OFFICER.

b. MILITARY.

The Military Financial Officers are, the Military Member of Council, the Military Secretary, the Military Accountant-General, the Military Controllers in each Command (who are the auditors of Military Expenditure), *Waterfield*, 352; and the Military Examiners, who are purely audit and account officers on the staff of the Military Controllers, *Waterfield*, 352-4, 462-87; besides the foregoing there are the Commander-in-Chief and the Disbursing Officers, *Newmarch*, 1149-72*a*.

i. *The Military Member of Council, see* MILITARY MEMBER.
ii. *The Commander-in-Chief, see* COMMANDER-IN-CHIEF.
iii. *The Military Secretary, see* MILITARY SECRETARY.
iv. *The Military Accountant-General, see* ACCOUNTANT-GENERAL.
v. *The Controllers, see* CONTROLLERS.
vi. *The Examiners, see* EXAMINERS.
vii. *The Disbursing Officers, see* DISBURSING OFFICERS.
viii. *The Military Accounts Department, see* MILITARY ACCOUNTS DEPARTMENT.

c. PUBLIC WORKS.

The strength of the staff of the Central Accounts Branch of the Public Works Department is 84 officers, including an Accountant-General and a Deputy Accountant-General; so far as concerns the headquarters staff, it is the Finance as well as the Audit Branch of the Department, *Becher*, 1490-501. The Public Works Accountant-General has control over the accounts of the Telegraph Department, *Waterfield*, 501-2.

The Accounts Department compiles the estimates of the Executive Branch for the Budget, *Becher*, 1494-6.

Examiners, see EXAMINERS. *Public Works.*

Disbursing Officers, see DISBURSING OFFICERS.

FINANCIAL REVIEWS. *See* REPORTS.

FINANCIAL SECRETARY.

Financial Secretary in the India Office.

Evidence given by the Financial Secretary in the India Office, *see* WATERFIELD.

In India.

Corresponds generally to the Secretary of the Treasury at home; he is a member of the Indian Civil Service, and holds office till promotion or retirement; it is his duty to see generally that financial regularity is observed, *Waterfield*, 71–3.

His staff consists of a Deputy Secretary and under Secretary, an Assistant Secretary, a Registrar, and subordinates, *Waterfield*, 74–5.

FOREIGN OFFICE CONFERENCE.

As to apportionment of Naval charges, *see* NAVAL SERVICES, B.

Apportionment of Persian charges, *Waterfield*, 12,398–414, and of China Consulate Charges, *Waterfield*, 12,415.

FOREIGN DEPARTMENT OF THE GOVERNMENT OF INDIA.

The management of this Department is generally reserved for the Viceroy, *Colvin*, 3145–7, 3216–8.

FOREST DEPARTMENT.

Forests are worked by the Government primarily to improve the country, but they produce a net revenue, *Jacob*, 11,004–5. Net revenue and charges, 1875–6, and 1893–4, *Jacob*, 11,008–14. Even excluding Burma, the revenue has increased faster than the charges, *Jacob*, 11,015–9. Establishment charges have increased almost 200 per cent., due to increased numbers, *Jacob*, 10,020–3. Exception of the Central Provinces to the general improvement, *Jacob*, 11,038. The revenue is handicapped by the allowances to the people; such as fuel, *Jacob*, 10,040–1.

See also Jacob, 20,179–83.

FORMAN, MR. H. BUXTON, Assistant Secretary, and Controller of the Packet Services, of the General Post Office.

Evidence given by, *see* p. 477, and Analysis of Evidence, p. li, Vol. I., First Report.

FRONTIER EXPEDITIONS. *See* MILITARY FINANCE 2.

FULELI CANAL.

Shown in Finance Accounts to work at a loss, *Jacob*, 9090–7.

FURLOUGH AND FURLOUGH ALLOWANCES.

The increase in Military Furlough Pay, *Jacob*, 5487–90.

Civil.

Half-pay is given to officers on furlough out of India, subject to certain maxima and minima, and converted at 1*s.* 6*d.* the rupee, *Jacob*, 10,214–7, 10,225–6. Under the present rules, an officer's inclusive leave might amount to one-fourth of his service, *Jacob*, 10,230. Comparison of furlough granted to the Indian Civil Service, Diplomatic, Colonial, and Consular services, *Jacob*, 10,220–53. It is advantageous to the Service that an officer should take leave to England, *Jacob*, 10,254–5. The leave rules are satisfactory, *Jacob*, 10,260–2. Rules for the Native Civil Servants, *Jacob*, 10,275. The civil furlough charges from 1875–6 to 1893–4, have been, apart from exchange, almost stationary, *Jacob*, 10,267.

GEOLOGICAL SURVEY DEPARTMENT. *See* SCIENTIFIC AND MINOR DEPARTMENTS.

GODSELL, MR. WILLIAM, Auditor of the Accounts of the Secretary of State in Council.

Evidence given by, *see* p. 108, and Analysis of Evidence, p. xix, Vol. I., First Report.

GOVERNMENT OF INDIA.

Evidence given on behalf of the Government of India, *see* JACOB, WATERFIELD, HENT, COLLEN and BECHER, CAVE-BROWNE, GODSELL and WACE.

1. *Departments of the Government.*

The principal Departments of the Government of India are the Foreign, the Finance and Commerce, the Military, the Home, Revenue and Agricultural, the Public Works, and the Legislative Department, *Waterfield*, 36–42. Formerly all business was referred by the Secretaries of each Department to the Council as a whole, but now each member is in charge of a Department; he acts as a Minister in that Department subject to certain limitations. *Brackenbury*, 14,495–6.

2. *The Executive Council.*

There are seven members of the Executive Council, including the Viceroy and the Commander-in-Chief (*see also* COMMANDER-IN-CHIEF); one member in charge of the Finance Department, another of the Military (*see also* MILITARY MEMBER), another of the Home, Revenue, and Agricultural Departments, another of the Public Works Department, and another of the Legal Department, the charge of the Foreign Department being reserved for the Viceroy, *Colvin*, 3216–8.

The selection and duties of the Viceroy, *Gokhale*, 18,028–35.

The Provincial Governments are charged with the internal administration of India, and are only indirectly represented in the Council by the Home Member, *Colvin*, 2929.

As regards the composition of the Council, there is no difficulty about getting the best men from the Indian Service, but the English element should not be excluded, and some amelioration of the position of members appointed from England might be advisable; there would be a difficulty in making a distinction in the pay and emoluments of the two classes, *Cromer*, 13,543–7. Only two members can be appointed who have not served for 10 years in India, *Waterfield*, 14,928–30.

Rules of business in the Council, *Waterfield*, 15,489–93.

The decision of any Member of Council can be appealed against by his colleagues, *Brackenbury*, 14,411–18. Members of Council are Ministers in their Departments, subject to certain limitations, *Brackenbury*, 14,495–9. Members have free access to the Viceroy, *Lansdowne*, 15,823–30. No improvement is needed in the channels of communication between Members of Council and the Secretary of State, *Lansdowne* 15,831–58. A system of confidential Minutes for the information of the Secretary of State, but not for publication, might be useful, *Cromer*, 13,548–62.

3. *The Influence of the Viceroy in Council.*

The Viceroy is very powerful in India; he secures unity of action in the different Departments; the transference of any of his power to England should be avoided; if he is inclined to economy the Government is economical, if to liberality, it is liberal, *Barbour*, 1856–69, *Cromer*, 13,525–42.

The power of the Viceroy to overrule his Council, *Waterfield*, 579; *Barbour*, 1900–14.

4. *Dissent in the Council. See* DISSENT.

5. *Financial Considerations in the Council. See* FINANCIAL MEMBER OF COUNCIL.

6. *Possible Preponderance of the Military Element in the Council.*

From a broad point of view the presence of two Military Members in so small a Council is excessive; but no better arrangement can be suggested, *Cromer*, 13,563–70. The preponderance is not too strong, the Military Member is a distinct check on expenditure, *Roberts*, 15,547; *Lansdowne*, 15,920–2. The Commander-in-Chief is not a regular attendant, *Roberts*, 15,526–32. He is often away on tour for long periods, *Roberts*, 15,791–5; *Northbrook*, 14,227; and in his absence there must be a Military Member with the Council, *Ripon*, 16,247–55. The Viceroy and Finance Member would have great influence on the Commander-in-Chief, *Roberts*, 15,537–44, 15,559.

The Viceroy, both personally and in Council, exercises control over Military expenditure, *Brackenbury*, 14,603–7. Perseverance of the Commander-in-Chief in military proposals unsupported by the Viceroy, *Roberts*, 15,559. The Finance Member's power of checking military expenditure must depend on his own influence and on that of the Viceroy, *Roberts*, 15,562–79; *Brackenbury*, 14,500–13. Differences between the Finance and Military Members would be settled in Council, *Brackenbury*, 14,484–92. Position of the Viceroy when the two Military Members are opposed to the Financial Member, *Brackenbury*, 14,523. The Viceroy would always consult the Finance Member before committing himself to any change of military policy, *Brackenbury*, 15,509–603. The intervention of the Secretary of State during witness's service, *Brackenbury*, 14,614. His province lies with greater questions of policy, matters

of detail should be left to those on the spot, *Brackenbury*, 14,654–55.

' *See also* FINANCIAL MEMBER.

The relative positions of the Military Member and the Commander-in-Chief, *see* MILITARY MEMBER and COMMANDER-IN-CHIEF.

GENERAL ADMINISTRATION.

Alleged inefficiency of Administration in India due to the employment of Europeans, &c. *See* FINANCIAL MACHINERY 2, and NATIVES, EMPLOYMENT OF.

Heads of the Charge.

Salaries, &c. included under this head, *Jacob*, 9146–53. Total cost, 1875–6, was Rx. 1,464,000, and 1895–96, Rx. 2,032,000, *Jacob*, 9154.

The charges for the Governor-General, Governors, Chief Commissioners, staff, &c., *Jacob*, 9154–60. Tour charges should be curtailed, *Wacha*, 17,645–73. Executive and Legislative Councils, *ib.*, 9161–7, 9210–1. Secretariats and tour charges, *ib.*, 9168–75. Boards of Revenue and Financial Commissioners, *Jacob*, 9178–84. The Civil Account and Audit Department, the Public Works Accounts Audit, the Paper Currency Department, Reserve Treasuries and Presidency Banks, *ib.*, 9184. Local Funds, *ib.*, 9185, 9201–2. Miscellaneous Charges, *ib.*, 9186.

The charges in England include the expenses of the India Office, the Auditor, &c., the management of debt, law charges, passage and outfit allowance, and the cost of currency forms, *ib.*, 9191–3. *See* APP. No. 67, p. 339, Vol. III.

Increase or Decrease, 1875–6 to 1893–4.

Increase in 10 years, *Wacha*, 17,622–44.

Civil Secretariats, increase Rx. 109,000, *Jacob*, 9206–7, and 9215–22. Due to increase of staff, *ib.*, 9172–7, 9253. Local Funds, General Establishments, increase, Rx. 95,000; Civil Account and Audit, increase, Rx. 45,000; Commissioners, &c., increase, Rx. 28,000, *Jacob*, 9254–5. Inspectors-General of Stamps, Registration, and Excise, increase, Rx. 23,000, *ib.*, 9227–9. Revenue and Financial Commissioners, increase, Rx. 24,000, *ib.*, 9205, 9223–6. Increase of expenditure due to Burma, *ib.*, 9223–6, 9228–9, 9230–8, 9244–52. Reduction in Tour charges, *ib.*, 9256–7. The transference of certain charges from Imperial to Provincial, *ib.*, 9258–64.

The increase under General Administration is one of the largest in the Indian Accounts, *ib.*, 9239–43.

GIBRALTAR.

Relative importance of Gibraltar and Aden. *See* Aden.

GILGIT AGENCY COST, *Waterfield*, 12,216, and *see* APP. 38, p. 243, Vol. II., First Report.

GOKHALE, MR. GOPAL KRISHNA.

Evidence, *see* p. 205, Analysis of Evidence p. xliii., and APP. 90, p. 415 of this Vol.

GOVERNOR-GENERAL. *See* GOVERNMENT OF INDIA.

Evidence given by former Governors-General. *See* NORTHBROOK, LANSDOWNE, and RIPON.

The charge for the Governor-General, *Jacob*, 9155–8.

HEALTH OF BRITISH TROOPS IN INDIA.

Decrease in invaliding due to better sanitation, *Collen*, 6240–7, and possibly to the Temperance movement, *Collen*, 6673–6.

The "constantly sick" in Indian Military Hospitals, *Knox*, 12,810–20.

Decrease in mortality, *Collen*, 6288–92.

More than half the invalids come from those men over 25 years of age, *Collen*, 6248–61.

Possible efficient system of protecting the Army from venereal disease, *Brackenbury*, 14,851–3.

Rate of mortality and invaliding. *See* APP. 54 and 58, pp. 385 and 387, Vol. II, First Report.

HEXT, CAPTAIN JOHN, R.N., C.I.E., Director of the Royal Indian Marine.

Evidence given by, *see* pp. 426 and 460, and Analysis of Evidence, pp. xlvi. and xlix., Vol. I., First Report.

HOME EXPENDITURE.

Manner of stating the figures in the Explanatory Memorandum of the Secretary of State, *Waterfield and Cave-Browne*, 2362–89.

Services for which payment is made in the India Office, *Waterfield and Cave-Browne*, 2360. Except as regards stores, home expenditure is not under the control of the Government of India, *Brackenbury*, 14,717–24. Payments are not made under Code. *ib.*, 2477–8, but under the authority of the Secretary of State in Council, *ib.*, 2391, whose authority is complete except in regard to addition to his own establishment, *ib.*, 2483. Different heads of account, *ib.*, 2479–2584. Authority of the Secretary of State as regards expenditure, *ib.*, 2485–9. Procedure as regards increase of expenditure in England, *ib.*, 2490–3. Reference of questions to the Government of India, *ib.*, 2494–522. Supervision of expenditure in India, *ib.*, 2447–52.

Details of payments in England, 1875–6 and 1893, *Waterfield*, 11,563–4. Tendency towards a decrease in the latest accounts, *Waterfield*, 11,570–3.

The whole expenditure of the Government of India in England, Civil and Military, has increased by 3,000,000*l.* since 1875, *Jacob*, 5431–42. Expenditure on Home Charges chargeable to General Administration, *Jacob*, 9191–3. Marine Charges in England, *Jacob*, 9823–7. Medical Home Charges, *Jacob*, 10,106–9. Political Charges in England, *Jacob*, 10,162–3. Pensions payable in England, *Jacob*, 10,418. Stationery stores, *Jacob*, 10,522–3, 10,543–4, 10,566–8. Stores for buildings and roads, *Jacob*, 10,687, 10,704–6, 10,697. Post Office Stores *Jacob*, 11,401–2, 11,415–28, and *see* APP. No. 67, p. 339, Vol. III.

[*See* APP. 43 and 51, pp. 256 and 378, Vol. II., First Report. *See* APP. 44, p. 258].

England should share the cost of the charge for the India Office, *Gokhale*, 18,508–29, and of Home charges generally, *Wacha*, 17,821.

INCOME TAX. *See* TAXATION.

INCREASE OF EXPENDITURE. *See* EXPENDITURE.

INDIAN MEDICAL SERVICE. *See* MEDICAL DEPARTMENT.

INDIA OFFICE.

India Office Procedure, *Waterfield and Cave-Browne*, 2394–5, 2465–78, branches and division of business, *ib.* 2396–2415. The establishment is regulated by Order in Council, *ib.* 2482–4.

a. THE COUNCIL OF THE SECRETARY OF STATE.

Gradual reduction of the number of members. *Waterfield*, 11,574–5. Members do not now earn pensions, *Waterfield*, 11,576–89. The power to appoint professional members, *Waterfield*, 11,590–3. No inconvenience has resulted from the reduction in numbers, *Waterfield*, 11,595–605. Committees of the Council, *Waterfield*, 11,606–7.

Suggested alterations in the constitution of the Council, *see Banerjea*, 19,160–3; *Gokhale*, 17,894–975; *Wacha*, 17,822–3.

b. CORRESPONDENCE DEPARTMENT.

Divided into six departments including the Financial Department, *Waterfield*, 11,636–52.

Reduction in number, *Waterfield*, 11,608–15. Value of services after 60 years, *ib.* 11,632–5. Age for retiring, *Waterfield*, 11,616–20. Fall in the charge for salaries has been about 11½ per cent., *Waterfield*, 11,621–4. The proportion of higher to lower division clerks, *Waterfield*, 11,625–6. Work done by the Registry Department on behalf of the Correspondence and other Departments, *Waterfield*, 11,625–6. Arrangement of rooms, *ib.*, 11,627–31, 11,649–52.

Financial procedure, *Waterfield and Cave-Browne*, 2454–64. The financial advisers of the Secretary of State, *ib.*, 2443. All measures involving expenditure go before the Secretary of State personally, *ib.*, 2444–6, and he sees all important papers, *ib.*, 2476. Criticism of financial proceedings in India, *ib.*, 2447–53. Method of dealing with the policy of imposing fresh taxation, *ib.*, 2469–73. Amalgamation of the Financial and Revenue Departments desirable, *Colvin*, 3292–7. Strengthening of financial interests in the India Office desirable, *Barbour*, 2190–1; *Colvin*, 3284–93.

c. FUNDS DEPARTMENT.

Deals with the Indian Family Pension Funds and Civil Funds; Staff, *Waterfield*, 11,653–62. Receipts from the Funds; Accounts dealt with in England, *Waterfield*, 11,663–9. Questions referred to the Finance Committee, *Waterfield*, 11,670–1. The

System of the Indian Family Pension Funds, *Waterfield*, 11,950–76. Circumstances in which they were taken over by the Government, *Waterfield*, 11,950–93.

d. ACCOUNTS DEPARTMENT.
Formerly subordinate to the Financial Secretary, former and present normal staff, *Waterfield*, 11,672–3. Reference of questions to the Financial Secretary and Committee, *Waterfield*, 11,674–82. Duties of the Accountant-General, *Waterfield and Cave-Browne*, 2416. Management of balances, *ib.*, 2430–42.

e. STORES DEPARTMENT.
The Director-General and Staff is established in the India Office, the Superintendent and Staff in the depôt at Lambeth, *Waterfield*, 11,683, *Cave-Browne*, 3529–33. Director-General's Staff, *Waterfield*, 11,684–90. The Superintendent's Staff, *Waterfield*, 11,691–2.
Method of procuring stores for India, *Cave-Browne*, 2523–7. Classes of stores and mode of supply, *ib.*, 2534–61, 2621–37. Method of payment for stores for guaranteed railways, *ib.* 2574. The policy pursued in obtaining stores, *Waterfield*, 11,695–6. Charge for general stores nearly stationary, 1877–88, *Waterfield*, 11,697–706. Large increase due to railway stores, *Waterfield*, 11,707–8. Percentage of the cost of the Department on the value of stores. *Waterfield*, 11,709–26. Fall in prices neutralises the effect of the fall of the rupee, *Waterfield*, 11,727–44. Inspection charges, *Waterfield*, 11,745–53–5. Supply of stamps, *Waterfield*, 11,757–73. Local supply in India of malt liquor, *Waterfield*, 11,774. Amount of stores supplied does not decrease, importance of keeping the charge as small as possible fully recognised, *Waterfield*, 11,774–83. Wages and rent, *Waterfield*, 11,811–4. *See also* STORES.

f. REGISTRY DEPARTMENT.
Registrar's Staff, *Waterfield*, 11,794–7.

g. AUDIT DEPARTMENT.
Strength of the Department and cost, *Godsell*, 2661–3, *Waterfield*, 11,803–4. Question raised by the Auditor as to the means of properly checking the Army effective accounts, *Waterfield*, 11,805–9.
The independence of the Auditor, *Godsell*, 2650–7, duties, *ib.*, 2658–60.
His report, with a statement of action taken thereon, is presented to the Secretary of State, but the Report only is laid before Parliament, *Godsell*, 2664–6. Powers limited to expressing disapproval, *ib.*, 2667–93. Instance of questioning a payment sanctioned by Council, *Godsell*, 2681. Opinions as to the limits of the Auditor's power, *Godsell*, 2682–95. He has no control over the actions of the Government in India, *Godsell*, 2703–17, 2727–43, 2747–9. Means of information, *Godsell*, 2718–9, 2720–4.

h. MISCELLANEOUS OFFICES, &c.
Increase in the number of miscellaneous officers, *Waterfield*, 11,798–9. Messengers, *Waterfield*, 11,800–2. Telegrams, postage, and contingencies, *Waterfield*, 11,815–20. Library grant, *Waterfield*, 11,821–33. Rent and taxes, India Office, &c., *Waterfield*, 18,834–46. Allowance to Civil Service Probationers, *Waterfield*, 12,019–21. Outfit allowances, *ib.*, 12,022.

i. MANAGEMENT OF DEBT, *see* DEBT SERVICES.

j. ROYAL INDIAN ENGINEERING COLLEGE.
Not possible to hand the college over to a private body; it is now nearly self-supporting, *Waterfield*, 11,940–7; but has in the past been a source of loss, *ib.*, 13,035–8.

k. HOME CHARGES, *see* HOME EXPENDITURE.

l. THE HOME ESTIMATES, *see* BUDGET, 6.

INDIAN MARINE, *see* NAVAL SERVICES.

INEPECTOR-GENERAL OF FINANCE.
Analogy of French Government, *Colvin*, 2975–7; *Cromer*, 13,594–602.

INVALIDING OF TROOPS, *see* SHORT SERVICE.

IRRIGATION.
General policy, *Waterfield*, 14,935–6. Irrigation works are classified as major and minor works. *Jacob*, 8724, 9055–6. The works are administered by officers of the Public Works Department, under the general control of the Provincial Governments, *Jacob*, 8725–7. In regard to a new work the initiative rests with the chief of the Provincial Irrigation Departments, *Jacob*, 8730–7, 9053–4. Circumstances in which productive and protective works are undertaken respectively, *Jacob*, 8728–9. Definition of protective works, *Jacob*, 8906–7. Classification of protective works as major works. *Waterfield*, 14,942–52. The sum set apart annually for major works would be about Rx. 800,000, *Jacob*, 8738–41, 9026–7, of this Rx. 50,000, or more, is appropriated out of revenue. *Jacob*, 9058–61. The cost of construction of major works, now charged to loan funds, or to Famine Relief, *ib.*, 8751–6. The charge for repairs and depreciation, *ib.*, 8774–82.
Up to a certain limit minor works are carried out by Provincial Governments, *Jacob*, 8742–4. Local contributions are very small, *Jacob*, 8745–50.
Outlay in England for purchase of East India and Madras Irrigation and Canal Companies Works, *Jacob*, 8783–90—809. The value of irrigation varies with the soil, *Jacob*, 8898–903. Harmful effect of irrigation in one part of the country, *ib.*, 9018–22, 9785–6. On the whole the results expected have been realised, *Waterfield*, 14,937–40.
Direction in which extension of works should be made, *Wacha*, 17,590–621.

1. MAJOR WORKS.

a. *Increase of Expenditure.*
Total capital expenditure up to 1875–6, Rx. 12,897,901; 1894–5, Rx. 30,343,404; estimated capital expenditure up to 1896–7, Rx. 31,921,000, *Jacob*, 8759–60. About 22 millions of the total for 1894–5 has been incurred from loan funds, *Jacob*, 8766–71.

b. *Receipts.*
Major works produce a small revenue, *Jacob*, 8810, which fluctuates according to the rainfall, 8810–4. 8821–2, 8842–7. The irrigation revenue is mainly made up of direct receipts from purchase of water, *Jacob*, 8815–7. Receipts small for the supply of water to municipalities, *Jacob*, 9119–21. Another class of irrigation receipts is the land revenue credited to irrigation, *Jacob*, 8818–20, 8823–5. Land revenue credited to irrigation from 1892–3 to 1896–7, *Jacob*, 8840–1. In some cases the direct purchase of water is credited to this head, *Jacob*, 8833–4. The assessment of land on the resettlement, *Jacob*, 8825–30, 8835–8, 9138–42. Details of the direct receipts in 1894–5, *Jacob*, 8977–8. Assessment of occupiers' rate, *Jacob*, 8982–6, 9128. Amount of occupiers' rate in Punjab, North-West Provinces, and the whole of India, *Jacob*, 8984–94. Receipts from owners' rate are small, *Jacob*, 8987–8. No protective irrigation rate is levied in any part of India; in Madras all the irrigation revenue is collected as land revenue, *Jacob*, 9787–8. Protective works will never be productive, *Jacob*, 8891–5. There are no owners' rates in Bengal, *Jacob*, 8933–4.

c. *Net Receipts.*
Proportion of receipts to charges, *Jacob*, 8848–55, 9074. Increase in the interest charge from 1875–6 to 1896–7, *Jacob*, 8856–62. The net receipts in 1884–5 and 1895–6, estimated receipts, 1896–7, *Jacob*, 8863–70. From 1884–5, after covering all charges, there has been a clear surplus of 1 per cent., *Jacob*, 8871–6–8, 8888–90. The net revenue increases with the gross receipts, as the working expenses are stationary, *Jacob*, 8879–82. Financial result very satisfactory, *Jacob*, 9017. The older works pay better than the newer, *ib.*, 9023–5.

d. *Individual Irrigation Works.*
Revenue only comes in from direct receipts in Bengal, *Jacob*, 8916–20. The Orissa and Sone projects in Bengal were started by companies and taken over by Government, *Jacob*, 8929–30, 8995–9016. Small demand for irrigation in Bengal, *ib.*, 8931–2. Receipts and expenditure in Bengal, 1893–4, *Jacob*, 8935–45, 8954. Capital outlay in Bengal and the North-West Provinces, receipts, &c., *ib.*, 8946–50. Bengal and Bombay works still show losses, probably because they are protective works, *Wacha*, 17,583–9. Expenditure, receipts, and net revenue in Madras, *Jacob*, 8958–9. Irrigation works before the advent of the British Government, *Jacob*, 8970–6. Enumeration of several old irrigation works constructed by native Governments, *Jacob*, 9645–50. The cost of reconstructing these old works brings a fair charge against capital, *ib.*, 8960–9.
Assistance given by the Government to the East India Irrigation Company on formation, *Jacob*,

9651–61. Terms on which the works were taken over, *ib.*, 9652–83, 9789–99, 9714. The Government is making nothing out of these works, but they are in the course of development, *ib.*, 9664–8. Arrangements under which the Company's water was distributed, *ib.*, 9710–11, *see* APP. 25 and 30, pp. 222 and 226, Vol. II., First Report. Terms on which the Madras Irrigation Company's works were taken over, *Jacob*, 9714–33, *see* APP. 31, p. 226, Vol. II., First Report. There is practically no return from these works, but they are of value as protective works, *ib.*, 9751–4.

2. MINOR WORKS.

Definition and manner of charging, *Jacob*, 9038–47. Revenue, expenditure, and net charge, 1892 to 1897, *Jacob*, 9075. In the Finance Accounts these works show a loss, but with the addition of the land revenue due to irrigation they would show a net revenue, *ib.*, 9090–7. Suggested alterations in the mode of accounting for minor works, *Jacob*, 9098–114, 9124–5. There is no accurate information as to the cost of those works of which no capital account is kept, *Jacob*, 9789–95.

INSPECTORS-GENERAL.

Of Stamps, Registration and Excise, charge for, *Jacob*, 9178–89.

Of Finance, *Colvin*, 2975–7.

IYER, MR. SUBRAMANIA.

Representing the Mahajana Sabha of Madras. Evidence, pp. 245 and 292, and Analysis of Evidence, p. xlvi., *also* App. 92, Vol. III., p. 428.

JACOB, MR. STEPHEN, C.S.I., Comptroller and Auditor-General to the Government of India. Evidence given by, *see* pp. 1, 24, 114, 186, 201, 221, 385, 234, 247, 266, 284, 300, 317, and 333, and Analysis of Evidence, pp. xii, xxv, xxvi, xxix, xxx, xxxi, xxxii, xxxiii, xxxiv, xxxvi, xxxviii, xxxix, Vol. I., First Report, *also* pp. 313, xlvii of this Vol.

JUDICIAL OFFICERS. *See* LAW AND JUSTICE.

KARUN RIVER. *See* EUPHRATES—TIGRIS.

KENNEDY, VICE-ADMIRAL WILLIAM R. Evidence given by, *see* p. 441, Vol. I., First Report, and Analysis of Evidence, p. xlvii.

KILMAINHAM HOSPITAL. *See* MILITARY FINANCE, 3. b. c. 6.

KNOX, SIR RALPH, K.C.B. Accountant-General of the Army, and Member of the Royal Commission. Evidence given by, *see* pp. 485 and 503, and Analysis of Evidence, p. li., Vol. I., First Report.

LAING, MR. SAMUEL (formerly Financial Member of Council).

First mooted the idea of permitting Provincial Governments to raise Revenue for Provincial and Local purposes, *Waterfield*, 633.

LAND REVENUE.

1. ADMINISTRATION.

The Provincial Revenue is generally subject to the control of the Revenue and Agricultural Department of the Government of India, *Waterfield*, 270–4. Staff of the Central Department, *Waterfield*, 275. Its functions, *Waterfield*, 276–80. The Finance Department must be consulted as to alterations of the law involving a loss of revenue or an increase of charge, *Waterfield*, 281. The Revenue Collection is under the immediate control of the Provincial Governments, and the systems varying greatly in the different provinces, and even in the various districts, this Revenue could not be directly administered by a Central Department, *Bernard*, 1760, *Waterfield*, 270–4. It forms about 28 per cent. of the whole revenue of India, *Jacob*, 10,734–9.

2. RECEIPTS. *See* PROVINCIAL SYSTEM, 3 b. Receipts credited to Irrigation. *See* IRRIGATION, 1 b.

3. CHARGES FOR COLLECTION.

This head comprises charges for the whole District Administration, *Jacob*, 10,740–1. Sub-heads, *ib.*, 10,742–3. From 1875–6 to 1893–4 the charges have increased by over 38 per cent. (in the same years the gross and net revenue increased by 22¼ and 19¾ per cent. respectively), *Jacob*, 10,744–51. The charges continue to increase, *Jacob*, 10,752. Of the increase of 50 per cent. of charges in Madras, all but 10 per cent. is due to services recently undertakers by the Government, *Jacob*, 10,755–7. Were the charges for the services assumed by Government since 1875–6 deducted in order to make a fair comparison, the increase since that date in receipts and charges would be almost proportionate, *Jacob*, 10,758–835. Increases in the Central Provinces, Lower Burma, and Bengal, *Jacob*, 10,836–44. The charge for "Land Records and Agriculture," *Jacob*, 10,845–61. The increase under the head of Administration is entirely due to the subordinate service, *Jacob*, 10,862–6. Increase of the whole charge due to increased territory, *Jacob*, 10,867–72. Bombay charges have remained very stationary, *Jacob*, 10,873–9, 10,880–9. Method of payment to hereditary collectors of revenue by commission, *Jacob*, 10,890–1. Estates which have come into possession of the Government in default of payment of Land Revenue by the owners, *Jacob*, 10,892–900.

The percentages of charge to collection in various districts, *Jacob*, 10,925–37–44. The charge for the whole of India works out at about 15 per cent. of the receipts, *Jacob*, 10,945–8. The results vary with the systems in the different Provinces, *Jacob*, 10,949–51. The general principles of the systems are much the same, *Jacob*, 10,951–65. The employment of Natives, *Jacob*, 10,966–11,003.

The cost of collecting Provincial Rates. *See* PROVINCIAL RATES.

4. DEDUCTIONS FROM LAND REVENUE.

Explanations of "Assignments," and "Compensasations," *Jacob*, 10,901–3. Increase in grants of 27 per cent. since 1875–6, *Jacob*, 10,904–8. "Refunds," *ib.*, 10,909–11. There is no system of buying-up perpetual grants, *Jacob*, 10,912–14.

LANSDOWNE, THE MOST HON. THE MARQUIS OF, K.G., &c., formerly Governor-General of India. Evidence, p. 118, and Analysis of Evidence, p. xxxix.

LAW AND JUSTICE.

Population and areas for which Legal Establishments were provided at different periods, *Jacob*, 4209–13.

CRIMINAL COURTS.

The Magisterial work is done by the District Magistrates, aided by Assistant and Deputy Collectors and Magistrates, and by sub-divisional officers, *Jacob*, 4478. The District and Assistant Magistrates are chiefly Europeans, the others are natives; powers of punishment; appeal to the Sessions Judge, *Jacob*, 4478–96. Honorary magistrates, 4542–4.

There is one sessions judge for each district, sometimes one for two districts; powers of capital punishment and summary sentence; appeals to the High Court, *Jacob*, 4497–514, 4508.

Pay of the foregoing magistrates and judges. *Jacob*, 4549–51. The authority of the High Court over these subordinate Courts, *Jacob*, 4510–8.

CIVIL COURTS.

The lowest grade judge is the Munsif, next are the Subordinate Judges, then the District and Sessions Judges; powers of the foregoing and appeals from their judgments, *Jacob*, 4519–200. Pay of the Civil Judges, *Jacob*, 4545–7. The tendency of the number of Courts is to increase, *Jacob*, 4537–41. *See* APP. 16, p. 185, Vol. II., First Report.

SUPREME COURTS.

Over all these are the High or Chief Courts, *Jacob*, 4521–9, or, in some Provinces, Judicial Commissioners, *Jacob*, 4530–6. *See* APP. 33, p. 229, Vol. II., First Report.

COMPARISON OF EXPENDITURE.

Total increase 1875–6 to 1895–6, Rx. 851,000, of which Rx. 100,000 is due to the extension of territory, *Jacob*, 4222–33. The increase of expenditure to that of population is in the proportion of 33 to 17, *Jacob*, 4239–43. Non-effective and other charges to be added, *Jacob*, 4567–602.

Except in Bombay expenditure on courts of law has kept pace with the requirements of the increasing population, *Jacob*, 19.991–4.

See APP. 14, p. 184, Vol. II., First Report.

Distribution of the Increase.
Main heads—Civil Courts, Rx. 463,000, Criminal Courts, Rx. 291,000; Miscellaneous heads, Rx. 100,000, *Jacob*, 4244–50.
The Civil Court expenditure is split up between Superior and Subordinate Courts, Establishments, contingent expenses, Witnesses and Process Service, *Jacob*, 4251–64, 4155–51. Explanation of the increase under these sub-heads, *Jacob*, 4314–58. The Criminal Court Expenditure is split up between Superior and Subordinate Courts, Cantonment Magistrates, &c., Courts, Establishments, Allowances, Witnesses, Process Service, and other charges, *Jacob*, 4265–73, 4462–77. Explanations of the decreases or increases, *Jacob*, 4274–309.
The Separation of Judicial and Executive Functions as a Factor of the Increase.
The separation, so far as the higher Courts are concerned, is complete in the Regulation Provinces, it has caused an increase of Rx. 58,000, *Jacob*, 4339–41. In 1875–6, when Revenue and Judicial functions were performed by the same men no part of the cost would have been charged to Law and Justice, *Jacob*, 4342–6. All the magisterial work is now performed by executive officers, *Jacob*, 4406–11, 4371–7. Any separation must cause a large increase of expenditure, *Jacob*, 4378–93.
The Net Cost.
In 1885, *Jacob*, 4604–15. Deficit in 1875–6, Surplus in 1893–4, *Jacob*, 4616–36*a*; and in 1895–6, *Jacob*, 4637–8. Though the expenditure must increase, it will be balanced by the receipts, *Jacob*, 4644–5. The Courts are practically self-supporting, *Jacob*, 4646–50.
The question of saving effected by employing natives, *Jacob*, 4551–7. Comparison of cost of Europeans and Natives, *Jacob*, 4664–9. The employment of natives has increased in recent years, all original Civil Jurisdiction is in their hands, *Jacob*, 4671–2.

POLICE AND JAILS. *See* POLICE AND JAILS.

LEGISLATIVE COUNCIL.
1. *The Viceregal and other Legislative Councils.*
Presentation of the Budget to, *Waterfield*, 303. Criticisms passed on the budget in the Council, *Lansdowne*, 16,125–32, *Brackenbury*, 14,675–86.
Question of giving independent or unofficial members more power, *Ripon*, 16,474–9, and *see Banerjea*, 19,090–6, 19,186–99; but *see Lansdowne*, 16,125–32, and *Ripon*, 16,468–74. Insufficiency of their powers, *Wacha*, 17,194–219.
There are now five such Councils, *Jacob*, 9214.
The practice in Legislative Councils should be assimilated to that of Parliament, *Banerjea*, 19,101–5–33. The Government has a standing majority in the Councils, and there is no sort of check on behalf of the taxpayers, *ib.*, 19,134–41; *Wacha*, 17,091–145. Usefulness of such checks, *ib.*, 19,142–51. Position of the unofficial members in Ceylon, *ib.*, 19,152–9. Proposal to elect members of the Secretary of State's Council by the unofficial members of the Viceregal Legislative Councils, *ib.*, 19,160–3. *See also Gokhale*, 17,894–978; *and Wacha*, 17,822–3. The controlling authorities are practically the same as the spending authorities; there is no real popular control notwithstanding the Legislative Councils, *Gokhale*, 17,859–64. Each Provincial Legislative Council should return a member to Parliament, *Gokhale*, 18,017–27.

LIEUTENANT-GOVERNOR.
Is the head of the Provinces of Bengal, North-West Provinces, Burma and Punjab, *Waterfield*, 8.

LIGHTHOUSES AND LIGHTSHIPS. *See* MARINE CHARGES.

LOANS.
To Municipal Bodies, *Jacob*, 7391–401.
See also DEBT.

LOCAL BOARDS. *See* LOCAL SELF-GOVERNMENT.

LOCAL SELF-GOVERNMENT.
The system under which Provincial Governments delegate part of their authority to local bodies, the powers, duties, and sources of income of such bodies, *Waterfield*, 930–5; local taxes levied by these bodies, *Waterfield*, 634.
Before developing popular institutions, an examination should be made into their past administration; if the result were satisfactory a further voice in the affairs of the country should be given to the natives of India, in a gradual and tentative manner, *Cromer*, 13,691–702.
Loans to Municipal Bodies, *Jacob*, 7391–401, and Native States, *ib.*, 7402.
Police arrangements between Municipalities and the Government, *Jacob*, 7617–23. *See also* CALCUTTA.
Educational Expenditure charged to Local Rates and Municipal Funds. *See* EDUCATION, 2.

MACFARLANE, SIR D.
Return of Military Expenditure, *Collen*, 4753–69, 5053.

MADRAS.
This Province came under the extended Provincial system later than the other Provinces, *Jacob*, 19,956. Increase in provincial expenditure in the last as compared with the second quinquennium, *ib.*, 19,970. Increase in Civil Departments 26·8 per cent., *ib.*, 19,965; Public Works 22·6 per cent., *ib.*, 19,968. Provincial and local expenditure, *see* APP. 82, p. 368, Vol. III.
Police Expenditure, *Jacob*, 7628–9. Irrigation Revenue and Works. *See* IRRIGATION, Land Revenue Charges, *Jacob*, 10,755–7.

MADRAS IRRIGATION COMPANY. *See* IRRIGATION, 1 d.

MAGISTRATES. *See* LAW AND JUSTICE.

MAIL SERVICE. *See* EASTERN MAIL SERVICE.

MALTA.
Relative importance of Malta and Aden. *See* ADEN. EXPEDITION, Payment of troops for, *Collen*, 6117–50.

MARINE, THE ROYAL INDIAN. *See* NAVAL SERVICES.

MARINE CHARGES.
Enumeration of the Provincial Marine Charges, *Jacob*, 9804–12, 9829–30. Net charge 1893–4, Rx. 76,293, *Jacob*, 9814. Items, *ib.*, 9814–5.
Gross Provincial charge including the Upper Burma charge (which is Imperial), *Jacob*, 9822–3. Charges in England, including stores, *Jacob*, 9823–7.
The charge for purchase and hire of Provincial steamers, establishments and shipping offices, *Jacob*, 9828, 9831–3. Subsidies to Steamers, *ib.*, 9834–6.
The light dues more than cover lighthouse and lightship expenses, *Jacob*, 9837–41. Pilotage receipts more than cover the charges, *ib.*, 9842–4.

MARINE DEPARTMENT.
Under the Military Department, *Waterfield*, 501–2. *See also* NAVAL SERVICES.

MARTIAL LAW Expenditure in India, *see* Military Finance, 2, a.

MAURITIUS TELEGRAPH. *See* Zanzibar and Mauritius Telegraph.

MAYO, THE EARL OF.
Inception of the Provincial System in Lord Mayo's Vice-royalty, *Waterfield*, 582–7.

MEDICAL DEPARTMENT.
The necessity for supplying Medical Attention to Civilians, *Jacob*, 10,062–3. The actual administration is with the Provincial Governments, under the control of the Home Department of the Government of India, *Jacob*, 10,068–71. The pay of Commissioned Medical Officers in charge of Civil Districts, *Jacob*, 10,083. Contemplated increase, *Waterfield*, 15,066–79. Such Officers have no Military duties, though they are looked on as a reserve for the army, *Jacob*, 10,085–90. Allowance given to Military doctors for performing Civil duties in addition to their Military duties, *Jacob*, 10,091–6.
Expenditure.
Net charge 1893–4, Rx. 904,000, *Jacob*, 10,064. Heads of the charge, *ib.*, 10,075. The increase in the charge for establishments, *Jacob*, 10,065–7, 10,079–80, 10,084. The charge for Medical Schools, *ib.*, 10,076–8, 10,102–5. Increase under the head of Hospitals and Dispensaries, *Jacob*, 10,072–4, 10,097–8. Increase in the charge for sanitation and vaccination, *Jacob*, 10,099–100. Charges in England, the maintenance of lunatics, *Jacob*, 10,106–9.
Proposed Reorganisation of the Medical Services.
Suggestion of a more economical system, *Banerjea*, 19,342–9.
An amalgamation of the British and Indian Services would conduce to efficiency as well as to economy, *Bahadurji*, 13,409–24, *Collen*, 6473–84. The administrative branch, but not the executive, has already

undergone amalgamation, *Bahadurji*, 13,425–33. The advantages of the Station Hospital system, *Bahadurji*, 13,434–54. As regards natives, *Bahadurji*, 13,455–61. The rejection of the Station Hospital system, *Bahadurji*, 13,464–6. Proposed abolition of superfluous establishments; the substitution of an Indian training for the Netley course, *Bahadurji*, 13,462–3. Military Medical Officers serving in the Civil Department, *Bahadurji*, 13,474, inconvenience of this practice, *Bahadurji*, 13,475–82. Proposed reconstitution of the Civil Department, *Bahadurji*, 13,482–97. Economies to be effected by these reforms, *Bahadurji*, 13,498–502.

The charge for Recruiting the Indian Medical Service. *See* MILITARY FINANCE, 3, c.

MEMBER OF COUNCIL:

Member of the Council of the Secretary of State for India, *see* INDIA OFFICE. Member of the Council of the Governor-General of India, *see* GOVERNMENT OF INDIA.

METEOROLOGICAL DEPARTMENT. *See* SCIENTIFIC AND MINOR DEPARTMENTS.

MILITARY ACCOUNTANT-GENERAL. *See* ACCOUNTANT-GENERAL, 2, *b*.

MILITARY ACCOUNTS DEPARTMENT.

The Department, in each Command under the Controller, is divided into:—1. The Central Branch. 2. The Accounts Branch. 3. The Pay Branch. 4. The Commissariat Branch. 5. The Ordnance and Clothing Branch. 6. The Special Branches. And besides these, a certain number of Military Accountants are detailed for inspection and special services, *Collen*, 3373.

There are three grades of officers: i. Commissioned Officers; ii. The Subordinate Accountants Service, being either civilians or non-commissioned officers; and iii. The Clerical Service, chiefly natives, *Collen*, 3606–11.

The Commissioned Officers are seconded, in the first instance, from their regiments for five years, they then either return to regimental duty or enter the Department permanently, *Collen*, 3374–80, 3384–9. They have a prospect of promotion to the rank of Controller, or, possibly, Accountant-General, *Collen*, 3612–23.

There is no inconvenience in this system of employing Military Officers, *Collen*, 3381–3.

MILITARY FINANCE.

1. ADMINISTRATION.

Administration—Military Financial Officers in India. *See* FINANCIAL OFFICERS. The Military Budget in India, *see* BUDGET, and AUDIT, *see* AUDIT.

Procedure in the Military Department, *Collen*, 3567.

In later years the check on military expenditure has become more severe, *Collen*, 2305–11. Steps taken by Sir Henry Brackenbury in that direction, *Brackenbury*, 14,591–2. The Military Member has more complete financial information than formerly, *Collen*, 3312–28. The presence of two Military representatives in the Council does not create an unfair Military predominance, *Collen*, 3569–605 (*see* GOVERNMENT OF INDIA). It is the special duty of the Military Member to check expenditure, *Collen*, 3623–32; *see also Cromer*, 13,563–70, and, though he is not a trained financier, his opinion is valuable, *Collen*, 3615. The function of the Military Department is to check expenditure proposed by the Military authorities, *Collen*, 3554–9. The Department frequently negatives proposals for fresh expenditure, *Collen*, 3596–9, 3634–5.

Power of the Military Department to transfer savings under any grant from one command to another, *Collen*, 3496–9.

Manner in which proposals arise in the Military Department, *Brackenbury*, 14,449. Sources of their origin, *ib.*, 14,450–62.

2. MILITARY EXPENDITURE—INCREASE OR DECREASE.

The Military Department study economy consistently with efficiency, *Northbrook*, 14,097.

Military expenditure is too high, *Banerjea*, 19,234–58.

Expenditure previous to the meeting and at subsequent dates, *Gokhale*, 18,192–222. Facts in connection with military expenditure; excessive force of British troops, the short service system, natives excluded from the higher prizes of a military career, *Gokhale*, 18,200–21. The organisation of the Indian Staff Corps is wasteful, *Gokhale*, 18,221–4. Indian public opinion on unnecessary increase of military expenditure, *Wacha*, 17,348–59; *Jacob*, 20,193–202.

No large reduction can be expected, *Collen*, 6550–3. No great variation from the present standard of Military expenditure is to be expected, *Brackenbury*, 14,714–6, 14,768–70. Probable further expenditure on Military railways, *Roberts*, 15,604–5.

Sources of probable increase in Military expenditure, *Lansdowne*, 15,866–84, 15,911–9. It would be an advantage if more money could be spent at once on water supply, *Brackenbury*, 14,742. Possible reduction of the native army as the reserve grows, *ib.*, 6554. Numbers of the British and native troops 1875–6 and 1893–4, *Jacob*, 4846–55. Necessary proportion of British and native forces, *ib.*, 6555–6, 6627–30, 6686–7, 6631–50. An increase is desirable in the number of British officers with native regiments, in the Garrison Artillery, and in the Camel Transport, *Brackenbury*, 14,725–34.

Necessity for the formation of a reserve of British officers for native regiments, *Roberts*, 15,718–30. Native officers would not fill the want, *Roberts*, 15,748–51. The British cavalry in India must not be reduced, *Roberts*, 15,807–9. The present establishment of the Indian army should not be reduced, *Roberts*, 15,774–5. External danger to India has increased rather than decreased, *Roberts*, 15,731–4. No change in the rate of officers' pay is expected, *Brackenbury*, 14,737–67.

Figures given by Sir Henry Waterfield in his table (App. 9, Vol. II., First Report), *Jacob*, 4751–81. Army Organisation Committee proposals and savings. *See* APP. 20 and 21, pp. 191 and 196, Vol. II., First Report.

Thirty per cent. of the revenue would cover the military charges, *Jacob*, 4782–802.

Comparison of expenditure of 1893–4 and previous years, excluding extraordinary expenditure, *Jacob*, 4829–45.

Comparison of revenue and military expenditure in 1875–6 and 1893–4, *Jacob*, 4856–61.

Steps taken by Sir Henry Brackenbury to check the growth of Military expenditure, *Brackenbury*, 14,591–2. The control of the Secretary of State has not produced any sensible economy in military expenditure, *Brackenbury*, 14,056–71, 14,612–15. In the last decade there has been a net increase of a quarter of a million, *Wacha*, 17,436–43, *and see* 17,444–55. The cost of a soldier in India compares unfavourably with other countries, *Wacha*, 17,457–66.

No large expenditure on fortifications is to be expected, *Roberts*, 15,735–8. Systems of accounting for expeditions, defence works, and special operations, *Waterfield*, 15,223–27.

Since 1885–6 the increase has been nearly entirely due to exchange, *Brackenbury*, 14,358–62. Between that time and 1895–6 the increase has been trifling, *Brackenbury*, 14,372–85. (Comparison between increase apart from exchange and increased loss due to exchange, *see* EXPENDITURE, 2, 1.) Increase in 1884–5, *ib.*, 14,363–7, 14,408–10. Excess over the estimates caused by the Chitral expedition, *Brackenbury*, 14,395–7. The increase in ordinary Military expenditure during the last 10 years has been about 30 lakhs, *Brackenbury*, 14,403–7–19.

Increased cost due to increased strength, *Waterfield*, 15,159–64.

Expenditure on Frontier Expeditions. *See* EXPEDITIONS.

Military Expenditure as bearing on the relations between the Military and Financial Members. *See* GOVERNMENT OF INDIA, 6.

2 a. HEADS OF MILITARY EXPENDITURE.

The Indian Army Establishments are divided into 20 grants, the two largest being Nos. III. "Regimental Pay, &c." and IV. "Commissariat."

Increase or decrease of expenditure in the two periods 1875–6 to 1883–4 and 1884–5 to 1893–4 under the following heads:—

Grant I. Army and Garrison Staff, *Collen*, 4877–84, 4999–500.

,, II. Administrative Staff, *ib.*, 4885, 5008–11.

,, III. Regimental Pay and Allowances, *ib.*, 4964–87, 5091–184. (*See* APP. 18, p. 187, Vol. II., First Report.) (*See Jacob*, 15,095–114.)

,, IV. Commissariat Establishments, *Collen*, 4988–94, 5112–92. (*See* APP. 18, p. 187, Vol. II., First Report.)

Reasons for increase, *Jacob*, 15,115–25, in the case of Native troops, *Jacob*, 15,126–31, decrease of forage and provisions, *ib.*, 15,132–50, local supply of malt liquor, *ib.*, 15,151–2.

Grant V. Remount and Veterinary Department, *Collen*, 4886–90, 5012–6. (Detailed charges, 1884–5 and 1893–4, *Waterfield*, 15,042–5. Increased prices, *ib.*, 15,046–8.)
,, VI. Clothing Establishments, *Collen*, 4891–7, 5017–26. (*See* APP. 18, p. 190, Vol. II., First Report.) Details, *Waterfield*, 15,054–8 and *Jacob*, 15,153–8.
,, VII. Barrack Establishments, *Collen*, 4898–900, 5027–30. (*See Waterfield*, 15,059.)
,, VIII. Administration of Martial Law, *Collen*, 4900, 5051–9. (*See Waterfield*, 15,060.)
,, IX. Medical Establishments, *Collen*, 4901, 5040–6. (*See Jacob*, 15,064–5.)
,, X. Ordnance Establishments, *Collen*, 4912–26, 5069–70, 5047–64. (*See Jacob*, 15,080–8.) (Question of the inclusion in the cost to India of ordnance stores of interest on the capital invested in the ordnance factories. *See* APP. No. 85, p. 374, Vol. III.)
,, XI. Ecclesiastical, *Collen*, 4927, 5074.
,, XII. Education, *ib.*, 4928, 5074.
,, XIII. Sea Transport, *ib.*, 4929–31, 5075.
,, XIV. Miscellaneous Services, *ib.*, 4933–8, 5932, 5076–7.
,, XV. Volunteer Corps, *ib.*, 4939–40, 5078–80.

Non-Effective Services—
Grant XVI. Rewards for Military Services, *ib.*, 4941–3, 5081–2.
,, XVII. Military Pensions to Europeans, *ib.*, 4944–6, 5083–5. (Pensions payable in India, Officers, *Jacob*, 15,089.)
,, XVIII. Military Pensions to Natives, *Collen*, 4947–60, 5086–8. (*See Jacob*, 15,090–3.)
,, XIX. Widows' Pensions, Compassionate Allowances, *ib.*, 4961, 5089.
,, XX. Departmental Pensions, *ib.*, 4962–3, 5090–2.

2 b. MILITARY EXPENDITURE IN ENGLAND.

The whole military and civil expenditure in England has increased by 3,000,000*l.* since 1875, *Jacob*, 5431–42, of which the Military portion is about 1,000,000*l.* (*see* APP. 9). Military charges recoverable from India, *see* APP. 50, p. 376, Vol. II., First Report, and APP. No. 75, p. 358, Vol. III.

i. *Army Effective Charges.*

Payments to War Office have increased by 430,000*l.*; this is due partly to an increase in the British Army in India, and partly to the enhanced capitation rate, and partly to deferred pay, *Jacob*, 5442–3. Variations in the transport charges, this charge is not likely to increase, *Collen and Jacob*, 5465–74. Other effective charges, *Jacob*, 5475–86. The increase in furlough pay, *Jacob*, 5487–90. Low charge in 1875–6, *Waterfield*, 15,171.

Home charges, *see* APP. 51, p. 378, Vol. II., First Report.

ii. *Army Non-Effective Charges.*

Division of charges into those for officers and men, *Waterfield*, 15,188–99.

This head is divided into two sub-heads, British and Indian, *Jacob*, 5491–5. Up to 1885 India paid a capitalised charge for each pension, but after 1885 she paid her share of the actual pension charge actuarially calculated, each year, *Jacob*, 5496–512, 5672–82; thus the charge was for the time very much reduced, *Waterfield*, 12,223–6, *Jacob*, 5641. *See also Knox*, 12,883–924. Decrease due to short service, *Waterfield*, 15,200–20. Fluctuations of the charge on India, *Knox*, 12,925. Maximum payments under the old and new systems, *Knox*, 12,925–53. Saving to India from short service even after deducting the charge for trooping and charge for deferred pay, *Knox*, 12,954–70.

No comparison can be made with the expenditure of previous years, *Jacob*, 5639–84. Under the Indian sub-head the increase is due to increased number of pensioners, *Collen*, 5512–9. The charge for colonels' allowances is expected to decrease after 1895, *Collen*, 5526; *Jacob*, 10,712–5. The maximum charge for pensions in general will be reached in 1901, *Collen*, 5527–30. One cause of the general increase has been the increased rate of pensions granted to Staff Corps and Artillery and Engineer Officers, *Jacob*, 10,716. Medical pensions have also increased, *Jacob*, 10,717. Officers' pensions, *Knox*, 12,989–13,003. Increase of pensions under the Henley Clause of the Act for the better government of India, *Waterfield*, 15,172*a*–185.

(*See also* APP. 24 and 59, pp. 221 and 337, Vol. II., First Report.)

iii. *Stores.*

More stores purchased locally than formerly, *Jacob*, 5530–1; consequently the growth of the charge for stores from England has been reduced, *Collen*, 5533. 5537, 5542. Charge for clothing, *Jacob*, 5532–5. Decreased charge for ordnance and miscellaneous stores, due to local supply, *Jacob*, 5536–7. Heavy charges in certain years due to changes in equipment, *Collen*, 5537–8. Decreased charge for other stores due to local purchase, *Collen and Jacob*, 5539–41. Stores for Special Operations, *Collen and Jacob*, 5542–56.

iv. *Exchange.*

The British soldier's pay is reckoned in sterling; since 1883–4 he has been paid at the official rate of exchange, *Jacob*, 5557–61, *Collen*, 5685–90. Method of fixing the rate of conversion of soldiers' pay, *Brackenbury*, 14,386–94.

Amount of exchange compensation paid to officers since 1893–4 and 1895–6, *Collen and Jacob*, 5584.

The privilege of remitting money home at official rates ceased when the exchange compensation allowance was granted, *Collen and Jacob*, 5693–702.

3. THE APPORTIONMENT OF MILITARY CHARGES.

(*See* Appendix 45, p. 261, Vol. II., First Report.)

It is imperative that these charges should be determined, *Northbrook*, 14,257.

India should in principle pay for every charge connected with the army and defence, and she really has a good bargain, *Wolseley*, 131,309–11, 13,186–246.

The Government of India consider that the advantage to England of the possession of India should be taken into consideration, *Collen*, 5768.

Each country should pay for her own defence, *Roberts*, 15,665. India should pay for the native army required for the maintenance of public peace, but England should contribute a share for that of the European army, *Banerjea*, 19,432–8. The fair charge against India for men actually supplied should be calculated, then the circumstances of India should be considered with a view to abatement, *Lansdowne*, 15,949–54, consideration should be given to the dependence of Indian Foreign policy on Imperial circumstances, the Imperial purposes of the Indian Army, rather than technical and necessarily restricted pleas, *Lansdowne*, 15,975–82.

Proposed substitution of an increased payment for the Navy for the detailed payments for the Army, *Brackenbury*, 14,828–30, value of such a proposal, *Lansdowne*, 15,986–94; *Ripon*, 16,325–6. Generally speaking, India pays England for everything for which England would not pay did not Indian requirements exist; this is wrong, because India keeps up a powerful field army in addition to her garrison, *Brackenbury*, 14,875–85, because of political considerations, *ib.*, 14,794–9, because of the Imperial value of India, *ib.*, 14,886–95. India is poor and should be dealt generously with by the country arbitrarily governing her, *Brackenbury*, 14,800–26. Drafts sent out in excess of Indian requirements, *Brackenbury*, 14,854–74. The Indian Army is not greater than is required, *Ripon*, 16,327–34.

In settling the accounts of the two countries equitable consideration should be given to India, *Ripon*, 16,418–29. As regards details the finding of the Northbrook Committee should be accepted, *Northbrook*, 14,295. Settlement of disputed points by submission to a judge, *Northbrook*, 14,305–12, *and see also* paragraph *c.* of this heading (*Cost of Expeditions, &c.*)

a. *The Capitation Rate* for each man of all arms supplied to India has been 4*l.* 12*s.* 6*d.*, 5*l.* 12*s.* 6*d.*, and is at present 7*l.* 10*l.*, *Jacob*, 5444–50, 5451–6. The present rate of 7*l.* 10*s.*, settled by Lord Northbrook's Commission, is excessive in the opinion of the Government of India, *Collen*, 5710–9, but *see Northbrook*, 14,269 *et seq.* Charges included in the rate, *Collen*, 5720–2. Question of the permanency of this charge, which is a fair one to India, *Northbrook*, 14,267, 14,313–8. Limits of the work of Lord Northbrook's Commission, *Northbrook*, 14,267–71. Changes in the rate since the assumption by the

Crown, *Collen*, 5731–5, *Jacob*, 5444–56. History of the charge, *Northbrook*, 14,258–63; *Knox*, 12,616–65. Burden on the Military Home charges caused by the various rates, *Jacob*, 5457–65. The various committees that have considered the question, *Collen*, 5748–66.

Force required in England to fulfil the requirements of India, estimated total charge to the British Exchequer (1,100,000*l.*), *Knox*, 12,736–41. This would be saved if establishments maintained solely for Indian purposes were dispensed with; the 7*l.* 10*s.* capitation rate brings in about 600,000*l.*, *Knox*, 12,742–6, *but see Northbrook*, 14,296–300, 14,340–53, *see also Wolseley*, 13,247–94. The force in India is quite supernumerary to that required by England, and no part of it would be retained by England if India dispensed with it, *Lansdowne*, 15,996–16,015, 16,023–8. If it were not for the numbers required by India, England could get a better class of recruits at a lesser rate, *Wolseley*, 13,120–4. If India did not belong to England, any saving that might accrue from reduction of recruiting would be shared between the two Governments; therefore, India should only be charged with half the present cost of recruiting, *Waterfield*, 15,403–6. If India were a foreign power that would necessitate a large British naval force being stationed there, *Waterfield*, 15,407–15.

Sir R. Knox's figures and those on which the 7*l.* 10*s.* rate was based, *Northbrook*, 14,333–9. Extraordinary items of charge included in the 10*l.* rates, *Knox*, 12,520–32. Difficulty of comparison, *Knox*, 12,539–45. Recommendations of the Bouverie Committee, *Knox*, 12,642–5. Items of charge included in this rate, *Knox*, 12,520–8. Calculations by which the present rate was arrived at; a settlement as to its duration is desirable, *Knox*, 12,691–709, 13,051. It is based on a normal establishment, and the War Office would not consent to the rate if it were to be affected by fluctuations in the course of the year, *Knox*, 12,747–53, *Waterfield*, 15,165–70.

The Government of India objects both to the calculations and to the basis of the calculations, *Collen*, 5767–80; because they consider the system of recruiting to be expensive, *Collen*, 5781–99, 5593–8–605. Any system of having localised regiments in India would be retrograde, *Wolseley*, 13,316–7.

Comparison between the payments from 1834 to 1857 and those of the present day. The Government of India objects to the present payment because no allowance is made for the service of the men before they leave England, *Collen*, 5846–81. Value of the recruits to England, *Knox*, 12,598–603, 13,054–5, *Wolseley*, 13,095, 13,096–109, *Lansdowne*, 15,971–3. The additional strength due to the existence of the Indian Army would only be of use to England in the improbable event of an invasion, *Wolseley*, 13,125–7. The Indian Army might be of assistance to England even in a European campaign, *Roberts*, 15,689, but it must not be looked upon as a reserve for England, *Ripon*, 16,335–8, *see also Northbrook*, 14,278–9. No claim can be made against India on account of the reserve, *Northbrook*, 14,301–4. Rebate allowed to India on account of service in the reserve, *Knox*, 12,666–9. The rebate is unduly large, *Knox*, 13,052–60. Necessity for a reserve in England, *Lansdowne*, 15,966–9. Value of India as a training ground, *Wolseley*, 13,133–5, *Roberts*, 15,656–8, *Lansdowne*, 15,970.

Proposed rate of 5*l.*, *Collen*, 6045–6.

The sufficiency of the British force in India, *Brackenbury*, 14,800–26.

b. Depôt Charges and Training of Recruits.

Difficulty of comparing the past and present system of recruiting, and the cost, *Roberts*, 15,628–33.

The difficulty of meeting India's requirements; the Home Authorities should be the best judges of the necessary methods, *Wolseley*, 13,063–70, *and see ib.*, 13,313–5. Question of exceeding the requirements of India, *Northbrook*, 14,272–3.

The depôt system of the present day is more expensive than one which would suffice for purely Indian wants; under the old Warley system the cost of each man of the Indian establishment was a little over 3*l.*; some of the training might be gone through in India, *Collen*, 5882–922, 6306–9, 6404–15–26. The machinery of recruiting is not more costly than it was, *Lansdowne*, 15,957–8.

Average cost at Warley 30*l.*, *Knox*, 12,554–70. Cost at present time 32*l.* or 33*l.*, which includes improved services and better pay, *Knox*, 12,571–81 The present charge compares favourably with all previous charges, *Knox*, 12,754–5; *Wolseley*, 13,085–9. Comparison of the Warley cost and the present charge, items of both, *Knox*, 12,675–90.

British forces in India at various times, *Knox*, 12,583, 12,604–8. Number of British forces in India before the Mutiny, and how recruited, *Collen*, 6293–8. Training, *Collen*, 6299–305, 6313–4. Numbers after the Mutiny, *Collen*, 6317–27. Present strength, *Collen*, 5700–4. Authority by which it is regulated. *Collen*, 6577–85. India should not make a claim on account of the extra recruits due to that service, *Northbrook*, 14,274–7.

The advantages of the linked battalion system, *Collen*, 6416–22, 6457–72, 6433–5.

The average training before going out is about 18 months, and the age at the time of recruitment about 18 years, *Wolseley*, 13,086–94, *Knox*, 12,597–8, 12,788–90. Whilst the average man receives from one to two years' training, India is only charged for six months, *Collen*, 6396–403; *Knox*, 12,666–9. But the recruiting is not especially for India, *Waterfield*, 15,377–82.

The supply of cavalry from the Canterbury depôt, *Collen*, 6429–35, question as to whether the depôt is too expensively organised for the needs of India, *Collen*, 6435–45 Nominal cost of each cavalry man, *Collen*, 6488–92.

Inconvenience of large central cavalry depôts, *Wolseley*, 13,399–406. Possible cheaper organisation of the horse artillery depôt, *Collen*, 6451–5. Present system of training cavalry and artillery recruits. *Knox*, 12,710–2.

True inclusive cost of each infantryman, 33*l.*, cavalryman, 71*l.* 11*s.*, field artilleryman, 81*l.* 3*s.*, and horse artilleryman, 84*l.* 12*s.*, or 44*l.* for each man of all arms, *Knox*, 12,821–6.

Before the Mutiny each regiment in India had its depôt at home, and the whole actual cost was charged to India, *Knox*, 12,546–53. Average cost 8*l.* per man, *Knox*, 12,533–8. Difficulty of comparison with present charge, *Waterfield*, 15,236–73. The War Office considers the depôt charges liberal to India, *Knox*, 12,793–4. Indian service is not distasteful, *Knox*, 12,791–2.

The results of the present system are better than those of the former system, *Wolseley*, 13,071–83. The object is to send out a seasoned soldier ready to take the field, *Wolseley*, 13,084.

c. Heads of Charge to which objection is taken by the Government of India.

I. Charges for men who desert or die before embarkation—this charge should be covered by the capitation rate, *Collen*, 5925–35.

II. Maintenance of young officers previous to embarkation, *Collen*, 5936–53.

III. Training of young officers of Royal Engineers for service in India, *Collen*, 5954–64. (The value of their service to England, *Knox*, 12,857–77.)

IV. Veterinary surgeons in training for India, *Collen*, 5968–70.

Allowance should be made for service in England in the above three cases.

V. Examination for the Indian Medical Service; this charge is only an estimate, but is too high, *Collen*, 5971–2.

VI. Chelsea and Kilmainham hospitals; the charge was formerly regarded as the basis of a fair claim against India; but when the 3*l.* 10*s.* capitation rate was fixed the War Office did not press the claim, the Treasury, however, decided to press the claim, now the balance of Indian prize money is regarded as a fair off-set. Subsequent attempted arrangements, *Knox*, 13,030–48. The balance of Indian prize money was taken as though it belonged entirely to the British Government, *Waterfield*, 15,393–402. (*See* APP. 50, 52, and 53, Vol. II., First Report.)

VII. Educational establishments: a great number of Indian officers never passed through Sandhurst at all, India formerly maintained its own establishments: many Staff College officers do not spend all their subsequent time in India. *Collen*, 5973–94.

Objection to the charge for Netley Hospital and to the School of Gunnery, the School of Military Engineering, and the Artillery College, *Collen*, 5995–6014.

VIII. Charge for men awaiting discharge, &c., the period of detention is longer than is necessary,

Collen, 6016–22. It is not the arithmetical data, but the principles on which they are founded, which are objected to, *ib.*, 6024–40.

IX. Rebate on men returning from India, the allowance is inadequate, *Collen*, 6041–4, 6093–116; India pays the full value for services received, *Waterfield*, 15,385–9.

Question of soldiers' and officers' pensions, *Northbrook*, 14,290–91.

d. *Deferred Pay.*

Reason for introducing deferred pay, extra burden of 200,000*l.* a year on India, *Knox*, 12,726–9.

The maximum burden was estimated to be about 165,000*l.* or 220,000*l.*, the charge in 1895 was 230,000*l.*, *Collen*, 6049–74.

e. *Cost of Expeditions, Loan of Troops, &c.*

Terms upon which troops have been or should be lent to England, instances of Malta and Egypt and Abyssinia; cases in which India should pay her share, *Collen*, 6117–50, *see also Northbrook*, 14,251–3. Except in the case of actual or threatened invasion, the revenues of India should not be used beyond the frontiers of India, *Gokhale*, 18,015–7, *Wacha*, 17,821. Actual payments made both by England and India, *Waterfield*, 15,354–70. Apportionment of the expenses of the Perak Expedition, and of the Mutiny, *Waterfield*, 15,322–3, 15,338–40, 15,506–14. Necessity of sanction of Parliament for payment of these charges, *Waterfield*, 15,515–23. The propriety of the charge in the case of the Abyssinian War, *Northbrook*, 14,114–20, and of the Perak Expedition, *ib.*, 14,121–3, and the Egyptian Expedition, *ib.*, 14,124–41. Repayments that should be made to India, *Northbrook*, 14,166. Comparison of the treatment of India in the case of the Mutiny with cases where England borrows troops, *Knox*, 12,765–87; *Wolseley*, 13,183–5. Indian Contingent sent to Egypt in 1882, *Waterfield*, 15,499–503. There is a want of reciprocity, but no opportunity for reciprocity has occurred for 40 years, *Waterfield*, 15,324–37. In the case of troops lent by India no charge is made for training, *Waterfield*, 15,344–53.

Some definite terms should be decided on which troops should be lent by one country to the other, *Lansdowne*, 16,029; the expense of the employment of Indian troops should be borne by the British Exchequer, except where the objects of the expedition are common to both countries, *Naoroji*, 17,072–4. The question of the interest of India should be referred to an arbitrator unconnected either with the War Office or India Office, *Roberts*, 15,690–707, *see also Ripon*, 16,349–53. Expeditions in which India might be said to be interested, *Roberts*, 15,777–90. Primary payments might be made within fixed areas by the English and India Exchequers respectively, *Northbrook*, 14,228–35, but subject to general definitions and statutory powers, the country lending troops should be the one to decide whether its interests are concerned, *Northbrook*, 14,249–50, 14,167–89, *but see Lansdowne*, 16,086–3. This arrangement could not be made by an Act of Parliament, *Northbrook*, 14,190–203. Arbitration should settle the point, *Lansdowne*, 16,030–9, 16,088–95; *Ripon*, 16,354–70, 16,430–57. Constitution and powers of a proposed Commission of arbitrators, *Lansdowne*, 16,079, 16,035–47–68. Preference for independent arbitration rather than a judicial committee, *Ripon*, 16,445, 16,458–60, 16,548–98, *and Northbrook*, 14,238–40, 14,241–4. Differences regarding administrative charges might be more easily referred to legal arbitration, *Lansdowne*, 16,099–102. Question of the refusal to lend troops, *Northbrook*, 14,204–21.

f. *Specific Complaints of the Government of India.*

The expense to which the Government of India is put by the changes of organisation at the War Office, from which they reap no benefit, *Collen*, 5808–37. For instance, the abolition of purchase, *Collen*, 5841–4. Actual effect of the abolition of purchase on India, *Knox*, 12,713–25. The necessity for the abolition, *Knox*, 12,971–88, *Wolseley*, 13,295–308. The abolition was to the interest both of England and India, *Lansdowne*, 15,974. Consultations of the wishes of the Government of India, *Wolseley*, 13,323–54, *Knox*, 13,004–24, *Collen*, 6565–8, *Lansdowne*, 16,104–8.

Charges laid upon India by petty changes in organization, *Ripon*, 16,400–17. System of purchase in the old local army, *Waterfield*, 15,227–35. Reference to the India Office is sufficient as far as the War Office is concerned. India must pay her share of the increased cost due to progress of military science, *Roberts*, 15,669–88, *see Northbrook*, 14,292–4. India should at least be consulted in time to make the necessary alterations in the estimates, *Brackenbury*, 14,588–67–90. The fact that the Government of India is not consulted constitutes another claim for favourable consideration, *Ripon*, 16,400–17. The Indian Government have no control over the organisation of Queen's troops, and they cannot refuse to pay under the Queen's Regulations, *Northbrook*, 14,103–6.

MILITARY MEMBER OF THE COUNCIL OF THE GOVERNOR-GENERAL, THE.

He roughly corresponds to the Secretary of State for War in England; the relative positions of the Military Member and the Commander-in-Chief, the former cannot overrule the latter without reference to the Governor-General, *Newmarch*, 1158–66. *See also Collen*, 3329–35, and *Colvin*, 3228–34. The Commander-in-Chief may appeal to the Viceroy against the Military Member's decision, *Brackenbury*, 14,514–16. His position is generally analogous to that of the old Secretary at War, *Roberts*, 15,546; *Brackenbury*, 11,440–8.

The Military Member is the Military Financial Officer, and is the adviser of the Viceroy, the Commander-in-Chief is the executive Military Officer of the Government, *Newmarch*, 1158–66; *Collen*, 3329–35. Limitations on the powers of the Military Member, *Brackenbury*, 14,495–6. His powers are limited with respect of transfers from one head of the Budget to another, *Brackenbury*, 14,411–40. He acts as a check on the Commander-in-Chief, *Cromer*, 13,563–70; *Colvin*, 3228–35; *Roberts*, 15,547. His control over expenditure is generally limited to questions of organisation; his influence, and that of the Commander-in-Chief, was opposed to expeditions, *Brackenbury*, 14,528–37.

He is invariably, *Collen*, 3560–1, and always should be, a Military officer, *Collen*, 3647; *Brackenbury*, 14,495–6; because, in the frequent absence of the Commander-in-Chief, there should be a soldier in the Council, *Roberts*, 15,791–5; *Lansdowne*, 15,923–34. It is his especial duty to check expenditure, *Collen*, 3623–32. Though his instincts are probably rather Military than Financial, his opinion is usually a valuable one from the Financial point of view, *Collen*, 3615. He has power to record a dissent, *Brackenbury*, 14,493–4.

The check on Military expenditure, though always strict, has of late years become more severe; this has caused more concentration of power in the hands of the Military Member, *Collen*, 2305–11. He has more complete financial information than formerly, *Collen*, 3312–28.

Possible preponderance of the Military element in Council. *See* GOVERNMENT OF INDIA, 6.

MILITARY POLICE. *See* POLICE.

MILITARY RAILWAYS. *See* RAILWAYS, A. 2.

MILITARY SECRETARY, THE.

He is the officer responsible for laying the business of the Department before the Military Member and the Governor-General; with such financial reports as he thinks necessary, *Collen*, 3339–41. It is his especial duty to promote economy consistently with efficiency, *Collen*, 3596–9, 3634–5.

MILITARY WORKS DEPARTMENT.

Carries out Military works, including special defence works, under the control of the Military Department, *Becher*, 1543–4.

Military works having only been transferred of recent years from the Public Works Department, for convenience sake the accounts continue to be rendered through that department, and the estimate, though prepared by the Director-General of Military Works, is included in the Public Works estimate, *Becher*, 1543–52, 1674–1711; *Waterfield*, 343–48.

MINT.

Some of the functions of the Comptroller-General correspond to those of the Deputy Master of the Mint in England, *Waterfield*, 74–92.

Mints at Calcutta and Bombay are subordinate to the Comptroller-General and the Finance Department, *Jacob*, 10,592–8. Copper is the only metal now

bought, *Jacob*, 10,596-603, and is the only source of receipt, *ib.*, 10,604-7. Net receipts 1875-6, Rx. 83, 1893-4 Rx. 136,275, *Jacob*, 10,610. Total charge 1896-7, Rx. 53,000, 1893-4, Rx. 91,000; the closing of the mints for coining silver has been followed by a reduction of establishments, *Jacob*, 10,611-3, 10,618-22. Actual charge for establishments, 1893-4, Rx. 54,000, *Jacob*, 10,614-7. Coins sent to England to be assayed, *Jacob*, 10,608-9.

Native State coinage is not legal tender outside the States, *Jacob*, 10,628-35.

MISCELLANEOUS EXPENDITURE.

Heads of charge, *Jacob*, 10,581-4. Charges and receipts 1893-4 and 1884-5, *Jacob*, 10,585-8, 10,589-90. Increase, *Wacha*, 17,705.

MORGAN-BROWNE, MR. H.

Formerly Secretary of the British Committee of the Indian National Congress. Analysis of Evidence, *see* p. xxxiii., and Evidence, p. 1, Vol. III.

MORTALITY OF TROOPS IN INDIA. *See* HEALTH OF BRITISH TROOPS, &c.

MUIR, SIR WILLIAM. *See Colvin*, 3183-5.

MUNICIPALITIES. *See* LOCAL SELF-GOVERNMENT.

NAOROJI, MR. DADABHAI. A Member of the Royal Commission. Evidence p. 149, and analysis of evidence p. 1, Vol. III.

NATIVES, EMPLOYMENT OF.

The Question of the employment of Natives in various capacities.

The administration is not conducted in accordance with the principles of the Act of 1833 and the Queen's proclamation of 1858, which conferred on natives of India claim to a full share in the administration of their own revenues, *Naoroji*, 16,499. Costliness of British Administration, *ib.*, 16,502-4, remedies suggested, replacement of alien by native labour, and share of the cost of foreign labour (necessary for the maintenance of British rule) by the British Government, *ib.*, 16,505, *see also Wacha*, 17,819; the 18 or 20 millions Rx. paid to Europeans are a dead loss to India, *Naoroji*, 16,505-27. Natives are excluded from the greater administrative offices, *ib.*, 16,529-35, *see also Gokhale*, 18,331-2. The extent of the employment of natives depends upon the extent to which they qualify themselves; the growth of the admission of natives has increased in greater proportion than the growth of the departments, *Jacob*, 20,143-68. The proportion of natives in the highest executive and judical posts must not exceed one-sixth, *Jacob*, 20,169-70. If India were allowed to keep her own resources, she would be quite able to raise the money necessary for as great comparative efficiency as in England, *ib.*, 16,536-59. There should only be an irreducible minimum of Europeans in India for the maintenance of British rule, *ib.*, 15,566, and England should contribute towards the cost of this minimum, *Gokhale*, 18,508-29, *Wacha*, 17,821. The salaries of the European railway officials are a heavy drain on India, *Wacha*, 17,580-2. Salaries of Europeans and Natives, *ib.*, 16,594-637, *see also Banerjea*, 19,415-20, 19,421-47, *see also Jacob*, 20,132-42. Native rule in Mysore, *ib.*, 16,567-74. The benefits of a number of small and well governed native states, *ib.*, 17,039-55.

History of the question of extended employment of natives, *Banerjea*, 19,320; recommendations of the Public Service Commission, *ib.*, 19,320-24-41.

Full effect to the orders of the Government of India in the direction of giving employment to natives can only be gradually given, *Jacob*, 20,054.

Employment in the Executive and Judicial Departments, *Jacob*, 20,055-107. Forest Department, *Banerjea*, 19,349-65, *Jacob*, 20,110. Education, *Banerjea*, 19,366-72, 19,373-408, *Jacob*, 20,123-5. Opium Department, *Jacob*, 20,108-10. Survey Department, *Banerjea*, 19,409; *Jacob*, 20,130. Telegraph Department, *Banerjea*, 19,410; *Jacob*, 20,129. Post office, *Banerjea*, 19,411-3; *Jacob*, 20,112. Civil service, *Banerjea*, 19,414. Financial Departments, *Jacob*, 20,113-21. Public Works Department, *Gokhale*, 18,333-50; *Jacob*, 20,126. Public Works accounts, *Jacob*, 20,127-8. Police, *Wacha*, 17,674-89; *Barbour*, 2293-2317; *Jacob*, 20,122. Minor departments, *Jacob*, 23,131.

And see also Becher, 1642-8; *Jacob*, 4551-72, 8161-202, 10,718-33, 10,966-11,003; *Waterfield*, 1019-25, 2638-49, 12,023-34.

The admittance of Natives to the Military and Naval Services.

Colvin, 6668-72; *Hext*, 7130-41, 7144-92; *Kennedy and Cuming*, 8365-710; *Naoroji*, 17,020-38.

Proportion and comparison of Native and European troops. *See* MILITARY FINANCE, 2.

Proportion of Natives and Europeans in the Civil Service, *Waterfield*, 14,955-62.

NATIVES OF INDIA.

Evidence given by Indian native gentlemen. *See* BANERJEA, GOKHALE, NAOROJI, and WACHA.

The influence of the Indian taxpayer can be brought to bear on expenditure through the non-official members of the Legislative Council and through the Press, *Brackenbury*, 14,675-86. *See also* LEGISLATIVE COUNCIL. Share taken by Natives in the Government of India, *Collen*, 6577-617, 6714. Contribution of native capital towards the construction of lines in India, *Jacob*, 8179-89, 8203-7. The value and importance of Native criticisms expressed in the Legislative Council and through the Press, *Ripon*, 16,468-74.

Average income of the Indian taxpayer, *Wacha*, 17,808-15.

NATIVE STATES.

Loans to, *Jacob*, 7402.

NAVAL SERVICES.

A. THE ROYAL INDIAN MARINE.

B. ROYAL NAVY SHIPS IN INDIAN WATERS

A.—THE ROYAL INDIAN MARINE.

1. *History of the Service.*

Former heads of the Department, *Hext*, 6768-74, 6777-8. The old Indian navy was subordinate rather to the Government of Bombay than the Government of India, *Hext*, 6772-4; its duties were the police duties of the Indian seas, *Hext*, 6922, 6951-8, 6959-64-8; it assisted in the New Zealand and China wars, *Hext*, 6923-6. Its duties on the high seas were comparatively, if not entirely, nil, *Hext*, 9267-78. Definition of its duties by Sir Charles Wood, *Kennedy and Cuming*, 8236, *Waterfield*, 15,469-75. The two services, the Bengal and Bombay Marines, replaced the old Indian navy, and, being amalgamated, formed the present Royal Indian Marine, *Hext*, 6775-6. Relative duties of the Royal and Indian Navies, *Waterfield*, 15,435-45.

2. *Duties and Administration.*

Appointment, &c., of the Director, and position, *Hext*, 6759-67. The duties and discipline of the Marine are regulated by the Act of 1884, *Hext*, 6772, 6776, 6999-7004, 6789, 7106. Its main duty at present is home transport; possible economy if difficulty as to status, which prevents its carrying troops to and from England, were overcome, *Kennedy and Cuming*, 8639-54. Headquarters at Bombay, *Hext*, 6780-1. Distribution of vessels, *Hext*, 6782-8.

3. *Expenditure.*

Indian Marine Budget; estimate greatly affected by recoveries on account of stores supplied to other departments, *Hext*, 5816-73.

"Accounts and Estimates of the Royal Indian Marine," *see* APP. 60 and 61, pp. 383 and 389, Vol. II., First Report.

B.—ROYAL NAVY SHIPS IN INDIAN WATERS (*see* APP. 46 and 47, pp. 309 and 359, Vol. II., First Report).

Non-effective charges and cost of Repairs, *see* APP. 50 and 62, pp. 377 and 390 respectively, Vol. II., First Report.

Four of the eight ships of the East Indian squadron are kept in Indian waters, for which India pays 100,000*l.* a year, besides this, India pays 60,000*l.* for the crews of a defence squadron provided by India herself, *Hext*, 6878-86; *Kennedy and Cuming*, 6247-53. The Admiralty maintains that the subsidy does not cover the cost, *Kennedy and Cuming*, 8254-9; *Hext*, 9588. Method of computing the charge, *ib.*, 8260. The charge on India for repairs to the "Sphinx," built for Persian Gulf service, *Kennedy and Cuming*, 8261-6. *See Hext*, 9308-21, 9496-7-503. Distribution of these ships, *Kennedy and Cuming*, 8341-2. Number of men, *ib.*, 8306-7. Part of the defence squadron is kept in reserve, *Hext*, 6887-90. The defence of India is conducted on the same lines as that of England, viz., by the defence of ports by batteries and flotillas, and by

the Royal Navy, *Kennedy and Cuming*, 8275–83. Constitution and organisation of the defence flotilla, *Kennedy and Cuming*, 8390*a*–5.

The Admiralty undertook the duties of the Indian Navy (on its abolition) except in the Persian Gulf, without charge, *Hext*, 6976–80. Reasons for undertaking these duties and making no charge, *Kennedy and Cuming*, 8285–6. The taking over of the duties did not for all time preclude the Admiralty from being assisted with the cost, *ib.*, 8711–6. *But see Hext*, 9322–7, 9409–10.

Financially India has benefitted, *Kennedy and Cuming*, 8286–74, 8430. Probable cost to India had the old Indian Navy been continued, *Kennedy and Cuming*, 8418–25; *Hext*, 6910–8, 9411–7. The whole Indian effective expenditure on the Royal Indian Marine and subsidies amounts to about Rx. 490,000, *Hext*, 6908.

On a request for a more efficient service in 1869, India paid a subsidy of 70,000*l.* for six ships, to perform all duties except those in the Persian Gulf, calculated at 70*l.* per man, *Hext*, 6976–95, 9599–605, 9339–44, 9580–3; to act as maritime police, and for the repression of piracy and the local slave trade, *Waterfield*, 15,452, *Kennedy and Cuming*, 8284–305.

The Royal Indian Marine steamer "Lawrence" was built for service in the Gulf, *Hext*, 6996–7013. Later the force was reduced to four ships, and the subsidy to 38,500*l.* on the same basis, *Kennedy and Cuming*, 8308–13.

Superiority of the present four ships, *Kennedy and Cuming*, 8314–5, 8361–2. Neither the Treasury nor the Admiralty considered the subsidy sufficient, *Kennedy and Cuming*, 8308–13, 8358–9, 8313–20. Then arose a discussion, leading to the Foreign Office Conference, *Hext*, 7014–5, which failed to settle the question, *Hext*, 7015–26, 7045–8. No mutual agreement could be arrived at as to the meaning of "Indian Purposes," *Kennedy and Cuming*, 8324–7, 9527. Actual decision arrived at by the Conference, *Kennedy and Cuming*, 8321–3, 8334–40. The Government of India consider that three Royal Navy gunboats are sufficient for "Indian Purposes"; the Admiralty thought larger vessels necessary, *Hext*, 7122–9, 7158–82; *Kennedy and Cuming*, 8328–33, 8353–8, 8363–75, 8717; *Hext*, 9286–9; and that they are the best judges of the requirements of "Indian Purposes," *Kennedy and Cuming*, 8576–85; *but see Hext*, 9374–6. The question was subsequently referred to Lord Rosebery, whose award decided the principle on which the present subsidy of 100,000*l.* is based, defining the words "Indian Purposes" as the general protection of trade on the high seas, *Hext*, 9036, 9519; *Kennedy and Cuming*, 8375, 8589–90.

The Government of India contend that they are more hardly dealt with by the terms of the award than the Australian Colonies, *Hext*, 7032–7, 9377–97, 9398–401.

Comparison of the Australian and Indian cases; no analogy exists, *Kennedy and Cuming*, 8377–90, 8396–403, 8404–9, 8410–2; *but see Hext*, 9561–3, 9584–7.

Expenditure by India on dockyards chiefly for the benefit of Royal Navy ships, on harbour defence ships, crews, and fortifications; India provides its own Survey Department (as compared with Australia, *Hext*, 9401–6), and renders other services to the Royal Navy which should be considered in determining the subsidy, *Hext*, 7048–84, 9481–2, 9544–51; *Collen*, 6744.

The use of the docks by Royal Navy ships, *Kennedy and Cuming*, 8607–17, 8634–8. The arrangements as to docking are reciprocal, but now have become one-sided, *ib.*, 8596–607, 8620; *Hext*, 9484–5; *Waterfield*, 15,417–34. Dock charges, *Kennedy and Cuming*, 8618–26. Comparison of Plymouth and Bombay charges, *ib.*, 1630–1; *Hext*, 9487–93.

The Government of India considers that it pays too much and has insufficient control over the squadron, *Collen*, 6744. The extent to which the ships are at the service of the Government of India, *Kennedy and Cuming*, 8841–60.

India needs a larger fleet than she did between 1832 and 1867, *Kennedy and Cuming*, 8267, the three vessels, considered sufficient by the Government of India, would not be capable of performing the duties, *Kennedy and Cuming*, 8413; *but see Hext*, 9328–32.

Were the "Lawrence" permitted to be armed, she would take the place of the Royal Navy gunboat in the Persian Gulf. *Hext*, 6796–813, 7142–3, 9434–6, 9452–4, 9465–8. In the same way a Royal Navy gunboat could be dispensed with at Aden, *Hext*, 9569–71. Possibility of employing the "Lawrence" if armed, *Kennedy and Cuming*, 8530–9, 8456; but no rebate should be made on her account, *ib.*, 8527–9. Purposes for which the "Lawrence" and "Sphinx" were provided; the former is sufficiently armed for self-defence, *Kennedy and Cuming*, 8460–71, 8480, 8514–5, 8531–3; *Hext*, 9515; *Waterfield*, 15,415–6.

The Royal Indian Marine ships, if armed, could perform all the duties laid down in the Act, *Hext*, 7088–109, 9428–32; *Collen*, 6744–53; *see Kennedy and Cuming*, 8431–55. But they cannot at present undertake the protection of coasting trade and the suppression of piracy, being unarmed, *Hext*, 9274–85, 9427.

The armaments of the Royal Indian Marine ships, *Kennedy and Cuming*, 8473, 8481–3, 8494–6, *Hext*, 9426; Status of the ships if armed, *Kennedy and Cuming*, 8510–5, 8457–60, 8472; *Hext*, 9443–4–57. Admiralty opinion, *Kennedy and Cuming*, 8478–9. The employment of the ships though they are not armed, *ib.*, 8484–93, 8497–8509*a*, 8516–23. Only three of them are troopships, *Hext*, 9438.

Protection afforded to trade by the Royal Naval squadron, *Kennedy and Cuming*, 8683–710, which is an Imperial concern, *Hext*, 9418–24, 9533–43.

The duties of the Persian Gulf should be undertaken by the Admiralty without payment, *Hext*, 7142–3, 7150–7; it must be considered as within Indian waters, *Kennedy and Cuming*, 8343–52; but *see Hext*, 9354–9. The boundaries of the East Indian Station, *Kennedy and Cuming*, 8220–4, beyond which the four ships are not employed, *ib.*, 8561–9. The duties on the high seas are an Imperial concern, *Hext*, 9346.

Aden is of Imperial interest, *Hext*, 9290–6, 9572–9, 9297–307.

Question of the usefulness of the "Marathon," *Hext*, 9347–54; *Kennedy and Cuming*, 8524–6.

Comparison of Royal Indian Marine ships to the subsidised "P. and O." vessels, *Kennedy and Cuming*, 8632–3; *Hext*, 9441; *Waterfield*, 15,468.

The subsidy will be reconsidered in 1901, *Hext*, 9592–8. No change is necessary, *Ripon*, 16,339–48.

India should pay a fair share for the East Indian Squadron, and have a fair share in the benefits of the service, *Naoroji*, 17,062–3.

The employment of Natives and Eurasians in the Royal Indian Marine or Royal Navy, *Hext*, 7130–41, 7144–92, 9606–12; *Kennedy and Cuming*, 8665–710.

NORTHBROOK, THE RT. HON. THE EARL OF, G.C.S.I., &c.

Formerly Governor-General of India, &c. Evidence, p. 13, and Analysis of Evidence, p. xxxiii, Vol. III. Lord Northbrook's Committee on the Apportionment of Military Charges, *see* MILITARY FINANCE, 3.

NORTH-WEST PROVINCES AND OUDH.

Police expenditure, *Jacob*, 7628–9. Irrigation works. *See* IRRIGATION, 1 and 2.

OPIUM.

The Opium Department is directly under the Government of India in the Finance Department. In Bengal the Government pays a fixed price to a limited number of cultivators, manufactures the opium, and derives its revenue from sale by auction, *Waterfield*, 282. The price paid to the cultivator is settled at the beginning of the year irrespective of the quality of the crop, *Jacob*, 11,051–7. In Bombay it is manufactured in the Native States, and a transit duty is levied. The revenue is wholly Imperial, *Waterfield*, 282–3.

The Financial Member has ample means of learning the causes of variations in Opium Revenue, *Colvin*, 2965–73, and is thus able to make a close estimate, *Barbour*, 2038–43.

Owing to many circumstances the revenue and expenditure in any given year are not very closely connected, *Jacob*, 11,044–50.

Gross revenue and charge 1875–6 and 1893–4, *Jacob*, 11,043. Items of expenditure, *Jacob*, 13,058–61.

No advantage to be gained by transferring the administration from Bengal to the Central Government, *Jacob*, 11,062–7.

ORDNANCE DEPARTMENT, THE.
See ANALYSIS OF EVIDENCE given by COL. WAGE, Vol. I., First Report, p. xxiv.
Expenditure on Ordnance Stores, *see* MILITARY FINANCE, 2 a.
See also APP. 18. p. 189, Vol. II., First Report.

ORISSA CANAL.
Jacob, 8929–30, 8995–9016.

PAPER CURRENCY.
The Comptroller General is the Chief Commissioner of paper currency, *Waterfield*, 76. His staff as such, *Waterfield*, 101.
The investment of the Paper Currency Reserve, *Jacob*, 7388–90. The cost of administration, *Jacob*, 9184.

PARLIAMENT.
Possible means of giving Parliament information on Indian finance, *Barbour*, 2252. The advisability of increased control by Parliament, *Colvin*, 3132–4, 3180. Parliament is a check, in the remote distance, on the financial administration of India, *Barbour*, 1445–9, *Colvin*, 2896–8.

PAY.
Indian Civil Service, *see* PENSIONS, 1.
Judicial officers, *see* LAW AND JUSTICE.
Regimental, *see* APP. 22 and 23, pp. 202 and 208, Vol. II., First Report.
Chaplains, &c., *see* ECCLESIASTICAL.
Native cavalry and infantry, *Collen*, 5427–9.
DEFERRED PAY *see* MILITARY FINANCE, 3 D.

PAYMASTERS, REGIMENTAL. *See* FINANCIAL MACHINERY, B, 2, *b*, vi.

PENSIONS.
Pensions and Superannuation. Increase of charges, *see* APP. 34, p. 230, Vol. II., First Report.
1. CIVIL SERVICES.
Amount, 3,853,000*l*., of which 900,000*l*. is paid in India, *Jacob*, 10,390–1. 4 per cent. is deducted from the pay of an Indian civil servant whilst he serves in India, and a pension of 1,000*l*. a year is given him after 25 years' service, *Jacob*, 10,281–4, 10,372, *see also Waterfield*, 14,952–4. Natives who enter the service by examination are treated in every respect as Europeans, *Jacob*, 10,488–9. The cost of the non-effective service is calculated as 25 per cent. of the cost of an officer's active service, and the Government bears that portion which is not covered by the officer's contribution, *Jacob*, 10,285–24. Comparison of service and pension in the English and Indian Civil Service, *Jacob*, 10,298–324, *Waterfield*, 11,994–12,018. The pension is not increased with service longer than 25 years, *ib.*, 10,325–32. The amount of pension has not acted as an inducement to early retirement, *Jacob*, 10,482–4, 10,496–7. Pensions of uncovenanted officers, *Jacob*, 10,361–71.
Judges' pensions have been increased, while their pay has decreased, *Jacob*, 10,347–9; the relation of their pensions to their salaries, *Jacob*, 10,352–3 (*see* APP. 33, p. 229, Vol. II., First Report). Pensions of other judicial officers, *ib.*, 10,354–60. Military and uncovenanted officers do not contribute to their pension, *Jacob*, 10,490–5. In addition to the Indian Civil Service Judges of the High Court, certain Judicial Officers, Military men in Civil employ, and chaplains receive pensions in sterling, *ib.*, 10,346. Chaplains' pensions, *ib.*, 10,375. Pensions of Engineers, *ib.*, 10,376.
The increase in the net charge due to increase of staff, *Jacob*, 10,305–401. The increase is in proportion to the increase in numbers, *ib.*, 10,410–7. The increase in the English net charge, *Jacob*, 10,419–20, 10,421. The gross charges have not increased in the same proportion as the net charges, *Jacob*, 10,422–30, 10,441–7. The increase in pensions other than family pensions, *Jacob*, 10,440–64. Pensions formerly chargeable to the Annuity Funds, *Jacob*, 10,441–6. *See also Funds Department.* INDIA OFFICE. Proportion of non-effective to effective charges, *see* APP. 32, p. 228, Vol. II., First Report.
2. MILITARY.
Expenditure on military pensions, *see* MILITARY FINANCE, 2 a; in England, *see* MILITARY FINANCE, 2, b, ii.
Details of military pension charges, *Jacob*, 10,481 (*see also* APP. 24, p. 221, Vol II., First Report).
Permanent and temporary pensions, warrant officers, non-commissioned officers and men, *see* APP. 59, p. 387, Vol. II., First Report.
3. TERRITORIAL AND POLITICAL PENSIONS.
Enumeration, for the most part they are purely personal, *Jacob*, 10,191–2, and nearly all are gradually expiring, *ib.*, 10,193–4, 10,196. Decrease since 1875–6, *Jacob*, 10,195. Pensions that have fallen through, *ib.*, 10,197. Pensions on account of Burma, *ib.*, 10,205–7. Pensions payable in England. *ib.*, 10,208–13.

PERAK EXPEDITION.
Waterfield, 15,322–3, 15,396–14, *Northbrook*, 14,121–3.

PERSIA, DIPLOMATIC CHARGES IN.
Apportionment of charges in 1891. Contributions of England and India, *Waterfield*, 12,398–414. *See* APP. 65, p. 403, Vol. II., First Report. India pays more than half, *Waterfield*, 14,986–9. Charges should be borne wholly by England, *Wacha*, 17,821.

PILOTAGE. *See* MARINE CHARGES.

POLICE AND JAILS.
1. ADMINISTRATION OF POLICE AND JAILS.
Except in Upper Burma and the smaller provinces, the charge for and the administration of the police is provincial, *Jacob*, 7654–61.
Each Provincial Government has power to charge a district with the cost of special police, *Jacob*, 7690–2.
The rates of pay are not the same in all provinces; they are controlled by the central Government, *Jacob*, 7695–8.
Police force, former and present, *see* APP. 17, p. 186. Vol. II., First Report.
2. EXPENDITURE ON JAILS.
Expenditure on jails, 1875–6, Rx. 826,304; 1895–6, Rx. 924,000, *Jacob*, 4688. Receipts, Rx. 36,000, *ib.*, 4688–94. The average cost of each prisoner has increased, chiefly in the central jails, *ib.*, 4695–701. Death rate, *ib.*, 4781–2.
3. EXPENDITURE ON POLICE.
The increase of expenditure on police from 1875–6 to 1893–4 has been Rx. 1,446,000, and receipts Rx. 182,795, nearly 50 per cent. of the increase being due to the acquisition of Upper Burma, *Jacob*, 7601–2. Receipts in 1875–6 and 1896–7, *Jacob*, 7664–6. Deducting the Upper Burma charge, the increase from 1875–6 to 1895–6 has been Rx. 700,000; items of this increase, *Jacob*, 7642–9. Diminution expected in police expenditure in Burma, *ib.*, 7605–7. Reorganisations of the police resulting in increased expenditure, *Jacob*, 4702–7, 7603–4, 7650–1. Employment of Military Police, the scale of pay is higher, *Jacob*, 7667–73; Increase due to the annexation of Baluchistan, *Jacob*, 7671–6*a*. Increase in the charge for Bengal, *Jacob*, 7608–10. Police arrangements with the Calcutta municipality, *Jacob*, 7614–6. Police expenditure in Bombay, *Jacob*, 7610–3. North-West Provinces and Oudh, Punjab, and Madras, *Jacob*, 7628–9. Arrangements with municipalities, *Jacob*, 7617–23.
Increase due rather to increased force than increased pay, *Jacob*, 7630–3; the increased cost is proportionate to the increased force, *ib.*, 7636–42.
An increase in force and some increase in the rates of pay has occurred, but in the lower grades, *Jacob*, 7650–8.
The cost of police must increase; some increase of rates of pay will be necessary to secure efficiency, *Jacob*, 7683–9, 7693–4. Need for a better class of men, *ib.*, 7684–6. Pay of constables as compared with current rate of wages, *ib.*, 4708–15. Charges brought on the police account since 1875–6, *ib.*, 4716–21.
Police charges, *see* APP. 14, p. 184, Vol. II., First Report.
The employment of natives in the police force, *Jacob*, 4727–40. The employment of natives as a means of promoting efficiency, *Wacha*, 17,674–704.
See also NATIVES, EMPLOYMENT OF.

POLITICAL PENSIONS. *See* PENSIONS, 3.

POST OFFICE.
1. POST OFFICE.
a. *Administration.*
The Post Office is under the control of its Director-General (in subordination to the Finance Department), he has under him a Postmaster-General, or

Deputy Postmasters-General in each Province, *Jacob*, 11,256-8, *Waterfield*, 284-6, 292-3.
The receipts are paid in to the district treasuries, *Waterfield*, 287.
The staff, *Jacob*, 11,272-3. Increase of business has necessitated an increase of superintending staff, the Money Order and Savings Bank business has been taken over since 1875-6, *Jacob*, 11,265-9. Amount and growth of the Money Order and Savings Bank business, *Jacob*, 11,265-9, 11,275-88, 11,289-93, 11,294-6, 11,445-58.
Question of inclusion of the District Post Accounts in the General Post Office Accounts, Rent of Buildings, &c., *Jacob*, 11,297-313. Question of crediting the Post Office with certain local rates, *Jacob*, 11,314-28-34.
Number of postal articles dealt with 1875-6 to 1893-4, *Jacob*, 11,344 5.
Method of checking number of letters, *Jacob*, 11,351-3.
Parcel Post supposed to pay its way, *ib.*, 11,346-50.
Collection of Government dues by means of the Post Office, *Jacob*, 11,354-60, (*Waterfield*, 656, 781).
Sale of quinine by the Post Office, *Jacob*, 11,365-7. The Post Office being a Commercial Department pays for its own stationery and printing, *Jacob*, 11,393-400.
Discount allowed to Postmasters on the sale of stamps, *Jacob*, 11,391-2.
Precautions against fraud, *Jacob*, 11,361-4. Probable expansion of the Post Office, *Waterfield*, 291-8.
Postal rates, *Jacob*, 11,437-44. The charge to Government Departments, *ib.*, 11,513-8.

b. *Revenue and Expenditure.*
The Post Office is not looked upon as a revenue-producing Department, *Waterfield*, 287-8.
1875-6 net deficit Imperial Post, Rx. 66,000; District Post, Rx. 79,000; total Rx. 145,000. 1893-4, net revenue Imperial Post, Rx. 118,000; net deficit, District Post, Rx. 114,000; total revenue, Rx. 4,000. Estimated revenue for 1895-6, *Jacob*, 11,259-62. Details of charges, *ib.*, 11,263. Diminution of the revenue due to loss by exchange, *Jacob*, 11,264. Charges for Presidency and District Offices, *Jacob*, 11,335-6. The charge for salaries and establishment, *Jacob*, 11,337-43. Charges in England, *Jacob*, 11,401-2. Stores supplied from England, *Jacob*, 11,415-28. Pension charge, *Jacob*, 11,463-4.

c. *District Post Office.*
Description, *Jacob*, 11,429, 11,446-53. Mode of accounting, *Jacob*, 11,430-6.
See also EASTERN MAIL SERVICE.

POLITICAL EXPENDITURE.
The Political Department is under the Foreign Department, and comprises the political residents at Native Courts, *Jacob*, 10,127-30.
Increase in charges, 1875-6 to 1893-4, *Jacob*, 10,131. Details, *ib.*, 10,132-3. The increase in the political agent's charges, *Jacob*, 10,134-7. Burma and Assam, *ib.*, 10,137. Punjab, *ib.*, 10,138-9. Political Subsidies, *ib.*, 10,141-5. The charge for refugees and State prisoners, *Jacob*, 10,146. Special Political Expenditure, *ib.*, 10,147-8. Imperial Service troops, organising and superintending staff, *ib*, 10,149-50. The administration of lands in the Somali country, receipts cover charges, *Jacob*, 10,151-3, 10,156-61. Miscellaneous charges, *ib.*, 10,154-5. Home charges, *ib.*, 10,162-3.

POLITICAL PENSIONS. *See* PENSIONS.

PRESIDENCIES OF MADRAS AND BOMBAY.
Compared with the lesser provinces, *Waterfield*, 10-5.

PRESIDENCY BANKS. *See* BANKS.

PRINTING. *See* STATIONERY AND PRINTING.

PRODUCTIVE WORKS.
Definition, *Becher*, 1532. *See also* IRRIGATION.

PROTECTIVE WORKS. *See* IRRIGATION AND FAMINE.

PROVINCIAL COMPTROLLERS, *See* ACCOUNTANT-GENERAL, 2 A.

PROVINCIAL CONTRACTS. *See* PROVINCIAL SYSTEM, 3 *a*.

PROVINCIAL FINANCE. *See* PROVINCIAL SYSTEM.

PROVINCIAL EXPENDITURE. *See* PROVINCIAL SYSTEM, 2 *a*.

PROVINCIAL GOVERNMENTS.
Definition of Provincial Governments, *Waterfield*, 856.
Enumeration of the eight Provincial Governments, each of which is a separate centre of Financial Administration, *Waterfield*, 8-9.
The style of the Governments of Madras and Bombay, the larger provinces, is "The Governor in Council," and of the minor provinces "The Lieutenant Governor", or the "Chief Commissioner," *Waterfield*, 10-5.

PROVINCIAL RATES.
Levied on land for special local purposes, *Jacob*, 11,161-5. Cost of collection charged to Land Revenue, *Jacob*, 11,166, 11,175-7. Nature of the charges in each province, *Jacob*, 11,178. The charges are both provincial and local, *Jacob*, 11,179.
Revenue in 1875-6 and 1893-4, *Jacob*, 11,173.
There has been practically no increase, *Waterfield*, 14,915-8.
Alteration of duties. *See* App. 65, p. 403, Vol. II.

PROVINCIAL SYSTEM.
1. THE SEPARATE GOVERNMENTS.
See PROVINCIAL GOVERNMENTS.

2 ADMINISTRATION.
Provincial Finance. *See* APP. 3 and 7, pp. 44 and 52, Vol. II., First Report.
The chief Financial Officers of the Presidencies of Bombay and Madras are the Financial Members of the Governor's Council, assisted by the heads of branches, and by the advice of the Accountants-General; of the larger provinces, the Lieutenant-Governor; and of the minor provinces, the Chief Commissioner, *Waterfield*, 10-5.
The Provincial Accountants-General are officers of the Central Government, but act as the *advisers* of the Provincial Government, *Waterfield*, 122-34. *See also* ACCOUNTANT-GENERAL.
The Treasury Officers are assistants of the district Collector, and as such subordinate to the Provincial Governments, *Waterfield*, 135-7. *See also* DISTRICT TREASURERS.
Method of communication between the Provincial and Central Governments, *Waterfield*, 857-62, 874-8.
Military Administration does not concern the Provincial Governments, it is wholly Imperial, *Waterfield*, 872-3. Provincial Councils should be deprived of the military element, *Roberts*, 15,743-4.
With the exception of Salt Revenue in Northern India, *Waterfield*, 657-67, and certain Departmental Receipts (*see Waterfield*, 656 and 781), the whole of the Revenue is collected by officers of the Provincial Governments, *Waterfield*, 672.
The officers charged with the collection of purely Imperial heads of revenue are independent of the Provincial Governments, *Waterfield*, 668-70.

a. Yearly average of provincial and local expenditure in all the provinces together in each of the last four quinquenniums, and average population for the same periods; comparison of the increase in provincial expenditure with that of the Imperial expenditure. The Provincial Governments have had their fair share of the increase in the revenue, *Jacob*, 19,873-902. Excluding expenditure for special purposes the Imperial expenditure has not increased, but the provincial expenditure has increased 20 per cent., *Jacob*, 19,903-8. Even if the provincial expenditure does not cover the requirements of the Provinces, it is a fair share of the available resources, *Jacob*, 19,909-12. The Government of India aims rather at equality of advantage than at uniformity, *Jacob*, 19,971-2.

b. *Expenditure in particular provinces, see* BOMBAY, MADRAS, and BENGAL.

c. *Provincial and local net expenditure, see* App. 80, 81, 82, 83, pp. 366-9, Vol. III.

e. *Provincial expenditure under particular headings, see* EDUCATION, LAW AND JUSTICE, and BUILDINGS AND ROADS, CIVIL

3. THE SYSTEM OF DECENTRALISATION.

a.
The germ of the provincial system was a suggestion made in 1861 by Mr. Laing, Financial Member of Council, to establish local taxes for certain minor public works; these were, however, never imposed, *Waterfield*, 633-40. Sketch of the growth of the existing system, *Banerjea*, 19,206-7.
The policy of transferring to the Provincial Governments, with a view to administrative as well as financial improvement, the responsibility for the administration of a large portion of their own

revenues was introduced by Lord Mayo in 1871, in the shape of fixed grants. In 1877, in lieu of a portion of the fixed grant, certain heads of revenue were assigned to the Provincial Governments; a further step in this direction was made with respect to Burma and Assam in 1879, and the amended system was generally applied in 1882, *Waterfield*, 582–7.

The Provincial Governments had always been responsible for the collection of revenues, but till 1877 derived no direct benefit from careful collection, *Waterfield*, 584.

The Provincial Governments defray fixed proportions of the expenditure under various heads in consideration of fixed assignments under each head. No attempt is made to arrive at equilibrium under each separate head transferred; the equilibrium is arrived at by general adjustments, *Waterfield*, 923–37. Administration charges are provincial, but offices of Account and Audit are mainly Imperial, *Waterfield*, 648–55, 1108–11.

The Provincial Governments make all payments out of the general cash balances, and an adjustment between the Central and Provincial Governments is afterwards made, *Waterfield*, 671–2.

Whilst giving the Provincial Governments considerable freedom in details, the Central Government generally supervises and controls their expenditure and revenue management; in the latter no change can be made without the consent of the Central Government, *Waterfield*, 673–8, 789–803.

Practically the same provisions, excepting as regards receipts from provincial railways and land revenue, now apply to all Provinces alike, *Waterfield*, 598–600.

Those Provinces which have Legislative Councils may, with the consent of the Government of India, levy a provincial or local rate, which is a further tax on land—in addition to the Land Revenue proper—to meet local expenditure, *Waterfield*, 605–32, 936–7.

Every five years an examination is made of the circumstances of the several Provinces, in order, on the one hand, to ensure to the Imperial Government a due share of any improvement in the revenues; and, on the other hand, while giving the Provincial Governments a fair proportion of any increase, to lessen the chance of their being called upon to render abnormal assistance to the Imperial Government. Fixed proportions of the various heads of Revenue are assigned to the Provincial Governments, and the principle on which the revision is based is that of establishing equilibrium of provincial revenues and expenditure, the necessary adjustments being effected by additions to or subtractions from the normal proportion (25 per cent.) of Land Revenue assigned to the Province, *Waterfield*, 642–4, 770–1. On revision any surplus of future estimated receipts goes to the Central Government, *Colvin*, 3049–56; therefore it has an interest in keeping down the provincial expenditure, *Colvin*, 3057–64, 3202–8. The constant revisions and absorptions by the Central Government of increased revenue are at present a necessary evil, *Barbour*, 2085–94. The provincial contracts might with advantage run for 10 years; the system is successful, *Lansdowne*, 15,943–8. This revision is conducted by the Financial Department in correspondence with the Provincial Governments. In 1886 a special Finance Committee was appointed to consider Provincial Finance and to advise the Financial Department in carrying on the revision. *Waterfield*, 588–97, 601–4.

The agreements assure to the Provincial Governments a normal income, the Central Government taking the risks of war and of fall in exchange, except as regards compensation allowance to Provincial officers, *Waterfield*, 840–6; but it may claim contributions from the Provincial Governments in times of pressure (*instances*), *Waterfield*, 847–55.

Under the Agreement of 1882 the Provincial Governments had an interest, more or less direct, in the collection of 42 crores of Revenue and administered about 16 crores of expenditure. In 1887—the first revision under the new system—and again in 1892 the Revenue and expenditure of the Provincial Governments were re-estimated and the assignments refixed with a view to equilibrium, the Imperial Government taking practically the whole of the net increase, *Waterfield*, 689–709.

The original contracts were made on the basis of existing facts with a view of gradual development of provincial resources and expansion of provincial expenditure on useful subjects, *Jacob*, 20,050–3.

b. The Effect of the System.

A large increase in the Provincial Revenues has followed the introduction of the system; this may be ascribed partly to more careful administration, *Waterfield*, 679–98. The Excise Revenue has increased 85 per cent. without appreciable increase in rates of taxation, *Waterfield*, 689–97.

There has been a considerable increase in the rates of taxation, *Barbour*, 2115–20. *See also Barbour*, 2121–2.

The increase in the Excise Revenue is partly due to enhanced prosperity and partly to a decided increase in taxation, *Bernard*, 1720–6; increase of receipts under different heads of Excise and of duty on liquor. *Bernard*, 1739, 1740–3. The increased attention paid to Excise questions is not to be attributed to the decentralisation system, *Bernard*, 1805–16.

The total increase (22 per cent. in Provincial Revenues) may be ascribed rather to more careful collection and improvement in the condition of the people than to increase of taxation, *Waterfield*, 710–805.

The improvement is due not only to better administration, but to increased power of consumption, owing to favourable seasons, *Colvin*, 3066–71.

It may rather be ascribed to the greater latitude in administration allowed to the Provincial Governments than to increased zeal, *Barbour*, 2110–4. *See also* EXCISE.

As regards prosperity, taxation and land revenue have increased in late years, but the average income is low; on the other hand, the cost of necessaries is also low, *Barbour*, 2276–95.

The increase in the Land Revenue is caused by resettlements on expiration of existing contracts; the assessments are in a great part of India a proportion of the rental value of the land, and the increased return must be ascribed to increased agricultural prosperity, *Waterfield*, 721–29, 748–55; but the increase is not due to better collection, *Bernard*, 1747–51. Actual increase 1875–6 to 1893–4, *Jacob*, 10,744–51. A limit has been placed upon the enhancement of individual assessments by the Secretary of State, *Waterfield*, 733–47; the enhancements on revision are due to increased prices on opening up fresh markets for produce, *Bernard*, 1752–9; there is no increased inducement under the Provincial system to settlement officers to increase rates, *Bernard*, 1784. Recommendations for revised assessments must have the approval of (1) the Provincial Government, (2) the Government of India, and (3) the Secretary of State, *Waterfield*, 764–70. Increased Land Revenue does not necessarily mean an increased strain on the people, *Waterfield*, 12,078–81. *See also* LAND REVENUE *and* TAXATION.

The Provincial system may have been a factor in the weakening of the Finance Member, *Colvin*, 2957.

It has done away with a vast amount of correspondence, *Waterfield*, 884–7.

c. Possible further development and improvement of the system.

The system should be developed as soon as possible into complete financial independence, and the controlling power of the Central Government used as little as possible, *Barbour*, 1947, 2083–4, 2127; the Provincial Governments should be allowed great discretion, *Colvin*, 3047–8; the system has been carried nearly as far as it can go, *Colvin*, 3135–9; it has a certain tendency towards encouraging local expenditure, but not to a higher standard of permanent expenditure, *Barbour*, 2095–9; *Waterfield*, 12,063–8. The system of Provincial responsibility should be carried as far as it will go, *Ripon*, 16,157–73; *see also Gokhale*, 18,036–43.

Revisions of provincial contracts by Lord Ripon's Government, *Jacob*, 20,173.

A reasonable share of the revenues should be permanently assigned to the Provinces, *Barbour*, 2104; *see* PROVINCIAL SYSTEM, 2*a*. It would be preferable that the terms of the contract should be lengthened, say, to 10 years, and that a smaller share of receipts should be given to the Provincial Governments, rather than abolish the revisions, *Colvin*, 3065.

The revisions and special contributions levied on the Provincial assignments are a necessary evil, *Barbour*, 2104*a*–6; and they have been more severe than was contemplated, *Barbour*, 2129; they must

be levied with respect to the circumstances of each Province, *Barbour*, 2131.
The Provincial system is a most admirable one, but it is necessary to retain the power of withdrawing portions of the Provincial allotments in the case of Imperial emergency, though the power should be very sparingly used, *Cromer*, 13,586–93.
The term of the contracts is too short, and the resources placed at the disposal of the Provincial Governments are inadequate; proposed remedies, *Banerjea*, 19,208-10–28.
Largeness of the share appropriated by the Central Government, *Banerjea*, 19,229–34. *See* PROVINCIAL SYSTEM, 2*a*.
The Provincial Governments do not get their fair share of the expenses of revenue, *Banerjea*, 19,260–78, 19,309–18. *See* PROVINCIAL SYSTEM, 2*a*. It is an evil that the Supreme Government should be able to demand special contributions, *ib.*, 19,279–82. Dissatisfaction due to the system, *ib.*, 19,283–307. If revisions are necessary, the terms should be extended to 10 years, and proposals should be submitted to the Provincial Legislative Councils, *ib.*, 19,318–9. The Provincial share should be 50 per cent. of the revenue, *see* PROVINCIAL SYSTEM, 2*a*, *Gokhale*, 18,094–104. A proposed correct system of levying provincial contributions, *Gokhale*, 18,105–38.
Responsibility for Provincial Financial Administration should be left principally to the Provincial Governments; the Supreme Government receiving a fixed equitable percentage to be distributed only in case of dire emergency, *Wacha*, 17,260–312.
Arguments in favour of the existing system, which is expedient for administrative purposes, and a matter of financial principle. The Government is considering the separation of certain classes of expenditure and making for them a fixed and permanent grant. Constant pressure is brought to bear on the Provincial Governments to undertake fresh expenditure. The increase in the assignments has been in excess of the ratio of the increase of the provincial revenues, *Jacob*, 20,003–43. There is a slight tendency to excessive expenditure in the last year of the quinquennium, for the purpose of getting better terms under the next contract, 20,044–9.

4. BALANCES.
The Provincial Governments are bound to budget for a minimum cash balance at the close of the year, *Waterfield*, 891–2 (APP. 8, p. 55., Vol. II., First Report), unless with the previous sanction of the Government of India, *Waterfield*, 895. These balances are designed to meet purely local emergencies; they are not ear-marked, but form part of the general balances, for the location and management of which the Comptroller-General is responsible, *Waterfield*, 890–900.
A balance reduced below the prescribed minimum would be re-created by the Central Government, and the Province would not be allowed to use its spare revenues until the balance had been replaced, *Waterfield*, 813–20.
Circumstances in which assistance is given by the Central to the Provincial Governments in case of distress from famine, *Waterfield*, 806.
Explanation of the decrease of the Provincial balances, *Waterfield*, 12,241–3.
5. PROVINCIAL BUDGETS, *see* BUDGET 7.

PUBLIC DEBT OFFICE.
The Comptroller and Auditor General is responsible for the management of the Public Debt Office, *Waterfield*, 76–9. His position corresponds to that of the Controller of the National Debt Office in England, *Waterfield*, 83–4.

PUBLIC WORKS.
ADMINISTRATION.
Officers of the Central Accounts Branch, Public Works Department, *see* FINANCIAL OFFICERS, c., and AUDIT and ACCOUNT, B. 1.
Examiners, *see* EXAMINERS, 2.

Irrigation Works. *See* IRRIGATION, 1 and 2.
Political charges, *Jacob*, 10,138–9.

PURCHASE.
Abolition of the system of, *see* MILITARY FINANCE, 3, *f*.

RAILWAYS.
A. ADMINISTRATION.
The Administration rests with one of the branches of the Public Works Department, *Becher*, 1475–83. Construction is for the most part carried out by the Provincial Public Works Staff, *ib.*, 1537–41.
The first step taken in Railway policy was the guarantee of interest by Government on Companies' capital, *Jacob*, 7709. Subsequently the Government constructed lines itself, *ib.*, 7710; and a third class of lines are those constructed privately, but, being the property of the Government, are leased by it to companies for a term, *ib.*, 7709–35, 7712–21; the fourth class include lines where the Government only pays a subsidy either in money or land, *ib.*, 7789–99.
The policy of encouraging private companies to construct feeder lines, *Waterfield*, 12,189–95. Terms for construction of railways in India by Companies, *see* APP. 42, p. 246, Vol II., First Report.
Mileage, capital outlay, gross earnings, working expenses, and net earnings in 1876 and 1894, *Jacob*, 8123–35. Military and unproductive railways make the total result lower than it would otherwise have been, *ib.*, 8136-41. The working of the lines has, on the whole, resulted in a loss to the Government, *ib.*, 8142–9. There is no return coming in for 11,000,000*l.* of the expenditure on unopened lines, *ib.*, 8150–1. Apart from a further fall in exchange a profit may be expected in the future, *ib.*, 8157.
Indian railways are not worked cheaply according to Indian ideas, *Gokhale*, 18,340–417. The profits of Indian lines, built with English capital, must go out of India, *Wacha*, 17,502, 17,536–49; but it is difficult to gauge the benefits they may have conferred on India, *ib.*, 17,503–35.
1. *Guaranteed Lines.*
Explanation of the guarantee system, *Jacob*, 7952–74. Of the old guaranteed lines only the Madras Railway now earns insufficient to pay the guaranteed interest, but none have recouped the Government for excess interest paid in the past, *ib.*, 7736–75. By exercising the option of purchase the State has reduced the number of lines from eight to three, *ib.*, 7808–10. Sums paid for the purchase of the lines, *ib.*, 8082–101. Power to purchase the remaining three, *ib.*, 8108–17.
Question of possible loss to Government through the non-purchase of some guaranteed lines when opportunities occurred, *Waterfield*, 12,202.
2. *State Lines.*
For the most part State railways are under the control of the Government of India in the Public Works Department: some are provincial: there are the same regulations for all, *Waterfield*, 301. The revenue from railways (and irrigation works) would usually be paid into the most convenient Central Treasury, *Waterfield*, 299–300.
As a rule each Railway Administration settles its rates between a maximum and minimum, prescribed by the Public Works Department; but any alteration involving a loss of revenue must be sanctioned by the Financial Department, and, in case of difference of opinion between the Departments, by the Governor-General in Council, *Waterfield*, 301–2.
Expenditure in 1875–6 and 1893–4 on State-constructed lines, *Jacob*, 7821–4. Means of judging the financial success of these lines, *Waterfield*, 12,187–8. The whole expenditure may be said to have been met by borrowing, *ib.*, 7848–51, though a considerable amount was charged to revenue in 1893–4, *ib.*, 7902–15. These lines include Military lines and lines built for famine relief; the latter must always be unproductive, though the former may possibly in time show a profit, *ib.*, 7854–97. The Military lines are constructed out of borrowed money, as commercial lines, *ib.*, 7916–26. Probable increased expenditure on Military railways, *Roberts*, 15,604–5. Military lines should be treated as Military expenditure, *Wacha*, 17,486. Lines for famine protection, *Jacob*, 8208–17. Lines charged to the Famine Relief Grant, *ib.*, 8718–23. Gross earnings and working expenses of the Military sections of the North-Western Railway, *Jacob*, 9614–21. (APP. 26,

p. 224, Vol. II.. First Report.) Proportion of the earnings from Military and public traffic, *ib.*, 9631. The construction of railways out of borrowed money is limited to the productive class, *Becher*, 1528–36. The policy of the Government in regard to the construction of railways, *ib.*, 8043–68. The results of productive and unproductive lines are not separated in the Finance and Revenue accounts, *Jacob*, 9625.

3. *Leased Lines.*
Total capital liability of Government at the end of 1893–4, was 25,143,000*l.*, *Jacob*, 7933.

Subsidised Lines.
Capital, *Jacob*, 7947. The method of paying subsidise to the Companies, *ib.*, 7975–8.

B. REVENUE AND EXPENDITURE.
Net charge, *see* APP. 28, p. 225, Vol. II., First Report.
There was a deficit of Rx. 1,750,000 in 1875–6, and of Rx. 1,170,000 in 1895–6, but this would have been a surplus if exchange had remained as in 1875–6, *Jacob*, 7979–97.
There was no charge for subsidised lines in 1875–6, there was a net receipt in 1895–6, *Jacob*, 7998–8000.
There was a net charge of Rx. 337,000 in 1875–6 on State railways, and there would have been a net receipt in 1895-6 of Rx. 1,700,000, but for loss by exchange, which converted it into a deficit of Rx. 970,000, *Jacob*, 8007–28.
Loss on Guaranteed and State lines has been about a million and a half a year, *Wacha*, 17,473–4, 14,487–501.
The Indian Midland and Bengal-Nagpur Railways, *Jacob*, 20,207, *and see* 20,203–4.
The net charge for railways on revenue account, *Jacob*, 9631*a*–9. *See* APP. 27, p. 224, Vol II., First Report.
The capital for constructing lines is raised in India, and for purchasing lines in England, *Jacob*, 8029–31. Contribution of native capital, *Jacob*, 8179–89, 8203–7.
Amounts borrowed for the construction of lines, *ib.*, 8048–9–50–9, 8069–72.
Employment of natives on railway lines, *Jacob*, 8161–202.
History of the Bengal Central Railway Company, *Waterfield*, 12,203–4.
Railway receipts deducted from expenditure. *See* App. 77, p. 360, Vol. III.

RATES, PROVINCIAL. *See* PROVINCIAL RATES.

RECRUITING.
IN INDIA. System of recruiting native soldiers, *Collen*, 5373–95, 5397–401. Cavalry recruits. *Collen*, 5402–6, 5407–17. Cavalry and Infantry pay, *ib.*, 5427–9. The infantry need a year's training before they are fit to join the ranks, the cavalry somewhat longer, *Collen*, 5418–20.
Recruiting in England. *See* MILITARY FINANCE, 3, a and b.

RED SEA AND INDIA TELEGRAPH COMPANY.
Agreement made between the Government and Company, *Waterfield*, 12.314–8.

REGISTRATION DEPARTMENT.
Net Revenue 1875–6, and 1893–4. Though not intended to be a revenue-producing Department, it more than pays its way, *Jacob*, 11,242–5. There has practically been no increase, *Waterfield*, 14,915–8.
Alteration of duties, *see* App. 66, p. 403, Vol. II.

REMOUNT AND VETERINARY DEPARTMENT. *See* MILITARY FINANCE, 2, a.

REPORT OF THE ROYAL COMMISSION.
First Report, Vol. I, p. x.
Second Report, Vol. IV.

REPORTS.
Appropriation Reports. *See* APPROPRIATION REPORTS.
Financial Reviews and other Reports.
The Financial Reviews report in the year's work from a financial point of view, *Collen*, 3566–9. These, together with the Administration Reports, amply review the work from every point, *Collen*, 3573. These reviews are a means of giving the Government information as regards the progress of expenditure, *Collen*, 3574–7.

REVENUE.
THE COLLECTION OF REVENUE.
i. *The Collection and Custody.*
There are 266 district treasuries, not including the sub-treasuries (a sub-treasury is an outlying post is an extensive district), *Waterfield*, 152–62. The revenue collected within a district is paid into the district treasury, *Waterfield*, 224; in the smaller districts the money balances are kept in strong rooms, in the larger at the branch Presidency Banks, *Waterfield*, 135–51, 156–8, 190.
Losses are very rare, *Waterfield*, 185–9; *Barbour*, 1990–3.
All the district treasuries are in telegraphic communication with the Accountants-General of their province, *Waterfield*, 223.
Any money that is not wanted at the District Treasury is remitted to a central station, where the bulk of the payments are made and from which funds can easily be removed by drafts, *Waterfield*, 164–70.
The Provincial Accountants-General receive monthly estimates for the current and two succeeding months from the several treasuries, and thus are able to order remittances from surplus to deficit treasuries, *Waterfield*, 404–5.
The movement of Funds from the District Treasuries is now a source of profit, owing to the premium on Bills, *Jacob*, 2832.
Elasticity of Revenue, *see* App. No. 72, p. 348, Vol. III.
Deposit of Balances in Banks, and the use of the Banks by Government. *See* BALANCES.
ii. *Revenue Departments.*
The organisation of the Revenue Departments is not perfect, but satisfactory and improving, *Barbour*, 1979–85. Means by which the Financial Member is brought into touch with the Revenue Departments, *Barbour*, 1957–85, 2038–43.
With the exception of the Salt Revenue in Northern India, where, for the sake of convenience, the revenue is collected by officers of the Central Government, *Waterfield*, 657–67, and certain Departmental Receipts (Post Office, Telegraph, Mint, Army, and Military Works, *Waterfield*, 656, 781), the whole of the Revenue is collected by officers of the Provincial Governments, *Waterfield*, 668–70.
Increase in the revenues falling upon the policy of decentralisation, *Waterfield*, 679–88, 710–805. Increase in gross revenues 1883–4 to 1893–4, *Waterfield*, 14,963–77.
See also PROVINCIAL FINANCE and BERNARD, (Analysis of Evidence.

RETIRED PAY.
Colonels' allowances, *Jacob*, 10,712–17.

REVENUE AND AGRICULTURAL DEPARTMENT OF GOVERNMENT OF INDIA.
Control of Land Revenue, *see* LAND REVENUE ADMINISTRATION.

RIPON, THE MOST HONOURABLE THE MARQUIS OF, K.G., &c.

ROSEBERY AWARD. *See* NAVAL SERVICES, B.

ROYAL INDIAN MARINE, THE. *See* NAVAL SERVICES, A.

ROYAL NAVY SHIPS SERVING IN INDIAN WATERS. *See* NAVAL SERVICES, B.

SALT DEPARTMENT.
Organization, *Jacob*, 11,079–81. Sources of Revenue in Bengal, *Jacob*, 11,082–4. The revenue chiefly derived from excise and customs duties, *Jacob*, 11,085–94. Rates of duty, *Jacob*, 11,095–11,101.
Deducting certain exceptional charges, the cost has increased by Rx. 36,000 since 1875–6, *Jacob*, 11,068–72. The charge is mainly Imperial, *ib.*, 11,073–4. The increase in the assignments since 1875–6 due to the abolition of customs line, and the introduction of fixed payments to Native States, *Jacob*, 11,075–8.

SAVINGS BANK.
Receipts applicable for all loan purposes, *Jacob*, 7192–7–200. Interest allowed on deposits, *Jacob*, 7214–7, 7221–7. Limits of deposits and total in 1895, *Jacob*, 7210–7218–21. *See also* POST OFFICE, 1, *a*.

SCHOOLS.
Government, Municipal, and Private Schools. *See* EDUCATION.

SCIENTIFIC AND MINOR DEPARTMENTS OF THE GOVERNMENT OF INDIA.
Enumeration of the Departments for which the charge is made, *Jacob*, 10,168-70.
Decreased charge for the survey of India, *ib.*, 10,177-7.
Increased charge for the Meteorological Department, *ib.*, 10,178.
Decreased charge for the Geological Survey Department, *ib.*, 10.179-80.

SECRETARY OF STATE FOR WAR.
As compared with the Indian Military Member of Council, *Newmarch*, 1158-66; *Collen*, 3329-35.

SECRETARY OF STATE IN COUNCIL. *See* INDIA OFFICE.

SHORT SERVICE.
Average service in India, *Waterfield*, 15,281-319.
Short service was necessitated by the breakdown of the long service system, it has been successful in supplying the required number of men, *Lansdowne*, 15,959-65.
The view of the Government of India in 1890, *Collen*, 6229-32. Opinion against the short service system, the Government of India desire allowance to be made financially for the disadvantages of the system, *Collen*, 6233-4. Objection to 10 years service, *Wolseley*, 13,167-70. The average service is now four years and five months: seven years perhaps satisfactory, *Collen*, 6235-7. But this would entail a pension, *Wolseley*, 13,171-6. Objection to the youth of the men, *Collen*, 6238, 6389-94. Short service and invaliding, *Collen*, 6262-5. Though invaliding has decreased it is due to better sanitation, *Collen*, 6240-7; and possibly to the temperance movement, *Collen*, 6673-6. Question as to "Constantly Sick" in Indian Military Hospitals, *Knox*, 12,810-20. Mortality has also decreased, *Collen*, 6288-92. It is also due to the new system, *Wolseley*, 13,136-50.
Two-thirds of the soldiers in India are under 25, more than half of the invalids come from those over 25, *Collen*, 6248-61. The best service is given over 25 years, *Collen*, 6224-82. Re-engagement of older men, *Collen*, 6765-8. Ages at present time, *Collen*, 6266-73. Age at enlistment, *Collen*, 6350-8.
Terms of enlistment before and at different periods after the Mutiny, *Knox*, 12,384, 12,609-15.
Steps which led up to the introduction of short service, *Collen*, 6328-35-49-6359. The cause was probably the difficulty of recruiting rather than the wish for a reserve, *Roberts*, 15,654-5.
Past service of non-commissioned officers and men. *See* APP. 55 & 56, pp. 386 and 387, Vol. II., First Report.
Financial effect of the change, *Collen*, 6049-74, 6367-82. Changes subsequently made which reduced the charge, *Collen*, 6383-8, 6492. The short service system increases the recruiting and transport charges, but decreases the pension charge, *Knox*, 12,670-3, *Wolseley*, 13,151-5, *Waterfield*, 15,320-1, *Roberts*, 15,634-45. Though the number of men sent out has of a necessity increased the transport charge has not increased proportionately; the value of the Reserve to India, *Knox*, 12,756-64. India should not contribute toward the cost of the reserve, which is of no use to her, *Roberts*, 15,646-53.
The necessity for a reserve in England, *Lansdowne*, 15,966-9.
Saving in the pension charge. *See* MILITARY FINANCE, 2, b, ii.
The short service men under the present system are better and more effective soldiers, *Wolseley*, 13,156-66.
Comparison of the Company's and Queen's troops, *Wolseley*, 13,177-82.

SOMALI COAST.
Administration of, *see* ADEN.

SPECIAL DEFENCE WORKS. *See* MILITARY WORKS.

STAMP REVENUE.
The Stamp Revenue is under the management of Provincial Governments, large questions and general regulations being under the control of the Central Government. Stamps are sold at treasuries and sub-treasuries, which receive directly the bulk of the revenue, including fines, *Waterfield*, 261-3.
Revenue and charges, 1875-6 and 1893-4, *Jacob*, 11,102-6.
Increased charge chiefly due to discount on sale of stamps, *Jacob*, 11,107. Percentage of cost to collection, *Jacob*, 11,108. Three-fourths of revenue and charges are provincial, *Jacob*, 11,112. Details of revenue, *Jacob*, 11,114-28.
There has practically been no increase, *Waterfield*, 14,915-8.
Alteration of Stamp Duties. *See* App. 65, p. 403, Vol. II.

STATE RAILWAYS. *See* RAILWAYS, No. 2.

STATIONERY AND PRINTING.
1. ADMINISTRATION.
There are three Central Stationery Offices, *Jacob*, 10,498-9; quite independent of each other, *Jacob*, 10,512-3. The offices at Calcutta, Bombay, and Madras, are under the Provincial Governments, subject to the control of the Financial Department, Government of India, *Jacob*, 10,503-4. But the charge is Imperial, the Government of India gets credit for stationery supplied to Provincial Governments, *ib.*, 10,515-6. The offices are large stores upon which the Governments drew, *ib.*, 10,520-1, 10,515-6. Limited power of Departments to order their own stationery, *Jacob*, 10,506. Government does all its printing except form printing, *Jacob*, 10,506-7. The permanent printing staff is kept as small as possible, *Jacob*, 10,573-6. Powers of the Superintendent of Stationery to make contracts, *ib.*, 10,508-11. Area of supply, *Jacob*, 10,514.
2. EXPENDITURE.
Total charge for stationery and printing in 1893-4, Rx. 683,181, *Jacob*, 10,505-6. Purchase of stationery in India, Rx. 294,000, or, together with the amounts spent in England, Rx. 345,000, *ib.*, 10,522-3, 10,543-4. The value of stationery supplied from central stores, Rx. 209,000, *Jacob*, 10,525-40, and of this Rx. 193,238 represents issues to the Provincial Governments, *ib.*, 10,540-56. Increase since 1875-6, Rx. 172,347, *Jacob*, 10,564-5. The increase for stationery has been Rx. 107,000, printing Rx. 64,000, *Jacob*, 10,569. There must still be a general increase due to increased supply, not to enhanced prices, *Jacob*, 10,570-2.

STORES. Local Supply of Stores. *See* APP. 35, p. 238.
Regulations for inspecting and auditing store accounts in India, *Waterfield*, 493-7.
Method of procuring stores for India, *Waterfield*, *Clare-Browne*, 2523-7. Stores Department, India Office, *ib.*, 3529-33. Classes of stores and method of supply, *ib.*, 2534-61, 2621-37. Payment for stores for guaranteed railways, *ib.*, 2574.
Audit and account of stores in the Military Department, *Collen*, 3472-83.
Powers to write off loss on stores of the Director-General of Ordnance, *Collen*, 3505-10. Of other Departments, *ib.*, 3672-5.
Post Office stores procured in England, *Jacob*, 11,415-28. *See also Stores Department*, INDIA OFFICE.
Increase of expenditure in the purchase of Military stores. *See* MILITARY FINANCE, 2, b, iii.
Stores for the Royal Indian Marine. *See* NAVAL SERVICES, A. *Expenditure.*
India is treated in the same way as the Colonies with regard to military stores, and, as regards naval stores, as an Imperial Department, *Knox*, 12,805-9, 12,877-92.

STRACHEY, SIR JOHN. *See Colvin*, 8183-5.

SUB-TREASURY.
Definition of, *Waterfield*, 154. *See also* DISTRICT TREASURIES.

SURVEY OF INDIA. *See* SCIENTIFIC AND MINOR DEPARTMENTS.

SYSTEM OF ACCOUNT IN INDIA.
See AUDIT (and APP. 3, p. 2, Vol. II., First Report).

TAXATION.
Difficulty of taxation in India, *Lansdowne*, 15,859-66, *Brackenbury*, 14,689-712.
1. Suggestion that the increase of revenue is due to increased prosperity and not to increased taxation. *See* PROVINCIAL SYSTEM 3, *b.*
Taxation imposed since 1884-5, *Waterfield*, 12,071-3, 12,074-7.
Increase in taxation, *Wacha*, 17,744-55, *Jacob*, 20,190-2.

2. *Assessed Taxes.*
Include only the income tax and a similar tax of very small amount in the Central Provinces, *Jacob*, 11,205–10. Description of the Income Tax, *ib.*, 11,211. Revenue in 1875–6 and 1893–4, cost of collection in the same years; it is collected by the Land Revenue Establishment, *Jacob*, 11,212–6. The income tax is general except in Burma, *Jacob*, 11,217–8. Apportionment of receipts between Imperial and Provincial, *Jacob*, 11,220–2. Exemptions, *ib.*, 11,224–31. The increase of Provincial taxation has been for the purpose of better administration, *Waterfield*, 14,902–11. (*See* APP. No. 66, p. 337, Vol. III.)
Relations of Provincial and Central Governments as regards alterations of rates, *Waterfield and Jacob*, 14,919–22.

TELEGRAPH SERVICE.
The Department is under the Director-General of Telegraphs in subordination to the Public Works Department, *Waterfield*, 284–6, 292–3. Comparison with the Post Office as a revenue-producing Department, *Waterfield*, 287–8.
There are two branches, the Indian Telegraph, and the Indo-European Telegraph, *Jacob*, 11,465–6. The accounts of the first showed a deficit in 1875–6 and a surplus in 1893–4, the second a surplus both in 1875–6 and 1893–4, *Jacob*, 11,463–70. Charges in the two years, *Jacob*, 11,474. The whole system resulted in a deficit in 1875–6, and a surplus in 1893–4, *Jacob*, 11,475–6. Charge for buildings, and stationery, *Jacob*, 11,477–8. Account of the capital expenditure, *Jacob*, 11,479–80.

a. Indian Telegraph Department.
Mileage, 1875–6 and 1893–4, *Jacob*, 11,481. Net capital charge, *Jacob*, 11,481–3. Results shown by adding interest on capital to annual expenditure and deducting therefrom the annual capital expenditure, *Jacob*, 11,484–507. Effect of official telegrams on the revenue, *Jacob*, 11,508–13. Comparative increase of expenditure on revenue account and mileage, *Jacob*, 11,520–6. Reduction of the superior establishment, *Jacob*, 11,527–8. Expenditure on establishments, &c., *Jacob*, 11,529–32. Total number of messages, *Jacob*, 11,533–9. Other charges, *Jacob*, 11,540–50.

b. Indo-European Telegraph Department.
Arrangements under which it is worked, *Jacob*, 11,551–2. Capital outlay and revenue, *Jacob*, 11,553–5. Charges, *ib.*, 11,556–7.
Ceylon telegraphs, *Jacob*, 11,558. Zanzibar and Mauritius cable, *Jacob*, 11,559.

ANALYSIS OF EVIDENCE.

31ST DAY.

MORGAN-BROWNE, MR. H., LATE SECRETARY OF THE BRITISH COMMITTEE OF THE INDIAN NATIONAL CONGRESS. —ANALYSIS OF EVIDENCE OF.

Witness prepared certain notes, analysing the Indian expenditure, and arriving at certain conclusions, 13,725–36. In the first paragraph of the second note on Sir J. Westland's Budget statement explanations are given of criticisms by Sir J. Westland of the first note; in the second note every form of exchange has been separated and shown separately, 13,737–8. The year 1888–9 was selected for purposes of comparison in the second note as being a fair year for normal comparison with reference to the increase of troops, 13,739. Objection to the method of reducing the figures of Indian Expenditure to sterling in order to compare results in a series of years, 13,740–1. Objection to form in which the accounts are presented to Parliament, 13,742–9. Comparison of expenditure in 1888–9 with estimate for 1895–6, 13,750. Distinction between *automatic* and *voluntary* loss by Exchange. This is not altogether a question of book-keeping, as the Government of India contend that their difficulties are caused by Exchange alone, 13,751–85. Table 3 in Note 2 was prepared to show the effect of separating exchange into different classes. This table shows that, whereas in Military and Civil Administrative Expenditure there was a total increase, including Exchange, of 10⅞ millions, in the other expenditure of the Government of India there was, notwithstanding loss by Exchange, a net saving of nearly 2½ millions, thus reducing the total increase to about 8 millions. Moreover, it appears from this table that in the "other expenditure" the savings more than covered the increased loss by Exchange, 13,786–96. Loss by Exchange has in the last 10 years become so certain an item, that the Government of India must and do provide for it, 13,797–804. During the seven years 1888–9—1895–6 the cost of the services has risen by Rx. 6,277,803 (including Exchange on increased sterling charges), besides Rx. 4,195,628 due to the automatic fall in Exchange; this is stated as a fact, not a criticism, 13,805–8. "Other Expenditure" has in the same time, apart from Exchange, fallen by Rx. 5,750,000, 13,809–12. It appears, therefore, that in the case of the services, instead of introducing economies to meet the 4 millions of additional burden due to Exchange, expenditure has actually been increased by over 6 millions, 13,813. The item of Exchange on increased sterling charges is included, because the Government voluntarily incurred that loss by borrowing in sterling, 13,816–37. The division in this table is arbitrary, but is intended to show the cost of the Civil and Military administration as apart from the other departments of Government, 13,838–46. The heavy increase in the Civil and Military Services has consumed (1) the natural increase in the revenue; (2) the decrease in "other" expenditure; (3) necessitated Rx. 3,000,000 of fresh taxation; moreover, it has caused other useful services to be starved, 13,847–61. A criticism upon the division of expenditure into Imperial and Provincial is that the Provincial Governments should bear a share of the cost of Exchange, 13,863–76. During the last 20 years the increase of net expenditure on the Civil and Military Services, apart from Exchange, has exceeded the increased cost of the sterling charges due to fall in Exchange; while under other heads of expenditure the burden of Exchange has been more than compensated by decreased expenditure, 13,886. (There is no essential difference as to figures between Sir H. Waterfield and witness, 13,887–901. But they are stated in a different form, 13,909–16.) Excluding Exchange, the increase in the Civil and Military Expenditure of 1895–6 over that in 1884–5 was more than double the increase in the period 1875–6 to 1884–5 (*chart in illustration put in*), 13,902. Description of variations, 13,903–7. Relation of Civil and Military Expenditure to total expenditure at various periods, 13,908. Description of chart (*put in*) illustrating variations of Civil and Military and "Other" Expenditure, 13,921. Part of the economy in "Other" Expenditure is not likely to recur, *e.g.*, reduction of debt and special defences; other items, *e.g.*, returns from railways, are likely to continue, 13,922–35. Further explanation of charts, 13,936–45. Since 1884–5 the burden of Exchange has been aggravated by sterling expenditure not automatic in its nature; and, therefore, the increased burden cannot be attributed to Exchange, 13,946–61. From 1875–6 to 1884–5 the ordinary military expenditure was almost stationary; since that time it has increased by 4½ millions, 13,962–3. In the later period, moreover, further special and extraordinary expenditure has been incurred aggregating 12 millions, 13,964–5. Though fall in Exchange has been a disturbing factor, increase of expenditure on Civil and Military Services has been a more important source of financial difficulty, 13,966–7. The increase of taxation from 1884–5 to 1894–5 is 5⅓ millions, or, including provincial taxation, 6½ millions, while the increase of Civil and Military Expenditure is 9 millions, 14,010–16. The expenditure due to the fall in the rupee is about 11 millions up to last year, and about 9 millions owing to the recent rise in Exchange, 14,017–20.

MORGAN-BROWNE, MR. H.—*cont.*

Some of the statements relating to debt in the Indian accounts are misleading, *e.g.*, the adding together of sterling and Rx.; the proper way would be to take the debt either wholly in Rx. or £ calculated at the rate of the time which you have in contemplation. Such a method would show a small increase in the ordinary debt, 13,968–14,009.

32ND DAY.

NORTHBROOK, THE EARL OF, G.C.S.I.—ANALYSIS OF EVIDENCE OF:

FINANCIAL ADMINISTRATION:

Experience, 14,021–2. The Financial Member has sufficient weight in the Indian Council, which is really a cabinet looking to the general interests of Government, 14,023–7. Both theoretically and practically, his position resembles that of the English Chancellor of the Exchequer, but the fact that the English budget has to be voted by Parliament constitutes a difference in the principle on which the two Governments are conducted, 14,028–31. Within witness's experience no case occurred in which the Financial Member had not ample knowledge beforehand of measures affecting finance. If he has not fore-knowledge, it must be because he has not asked for information. As regards questions of policy, he has the same opportunities of information as his colleagues, with whom his relations are very similar to those of the Chancellor of the Exchequer with his colleagues, 14,032–46. In witness's experience, the views of the Finance Member carried also sufficient weight, nor was any increase in his powers required, 14,047–8, 14,088–91. If a change has since occurred, it must be due to a change in policy, 14,049–54. The Governor-General's power is very great, not only his statutory power, but his influence, and no doubt his opinion would be likely to prevail; and, of course, if the Governor-General in Council did not agree with the Finance Member, the latter would have to give way; but such a difference could hardly occur except in a great question of policy, which would probably have been settled by the Home Government; and in that case, the Finance Member has the power of recording his dissent, which must come before the Secretary of State, 14,055–65. These dissents are no doubt liable to publication, and cannot, therefore, be expressed with perfect freedom; although, therefore, the analogy of the Diplomatic Service, referred to by Lord Cromer, is not exact, still there are probably

NORTHBROOK, the EARL OF—*cont.*
many cases in which the Viceroy would forward a confidential memorandum to the Secretary of State, either from the Finance, or any other member of his Council; but this should be done in rare cases, 14,066–9. The regulation permitting the Viceroy and Finance Member to suspend action, if outvoted, is valueless, objectionable (14,093), and unconstitutional, if not absolutely illegal, 14,070–7. The Viceroy has important powers in regard to financial questions, but with respect to his statutory powers of overruling, he must use his own discretion, 14,078–86. No expenditure initiated by any Member of Council could be carried through if the Finance Member and the Viceroy opposed it, 14,225–6.

The Commander-in-Chief is often absent from the Council, and is not in charge of any Department, 14,227.

PROGRESS OF EXPENDITURE:

Speaking generally, the increase in military expenditure during the last 20 years has mainly arisen from considerations affecting the North-west Frontier, 14,094–6. The Military Department used to be very economical, though no pains were spared to maintain efficiency, 14,097. The Military Department worked out the financial effect of proposals originating with the Commander-in-Chief, and the Finance Member would accept their calculations, 14,098–102. The Government of India have no control over the organisation of Queen's troops, and it would be impossible to allow it to refuse to pay rates laid down in the War Office regulations, 14,103–6.

APPORTIONMENT:

In the case of the Abyssinian War, it was not right to charge India with even the ordinary expenditure on her troops, 14,114. The question was not one of money, but of principle. The sum in question was only one-tenth of the total expense, but it is difficult to see what special interest India had in Abyssinia; and in fact, the Treasury recently gave away the case of Abyssinia by their decision respecting the payment for Mombassa, 14,115–20. In the case of the Perak expedition, India was undoubtedly hardly treated, and even the statutory address from Parliament was omitted, 14,121–3. In regard to Egypt, India has undoubtedly a direct interest in the Suez Canal, and she had to pay Rx. 734,000 out of Rx. 1,410,000 for the 1882 expedition. This arrangement was accepted by the Government of India under protest, and it would have been better to make them pay only half the expenses. In 1885, in regard to the Suakin expedition, though the address from Parliament was insufficient to authorise expenditure from Indian revenues after the 15th May, and therefore any such expenditure was illegal, yet, notwithstanding the remonstrance of the Government of India, India had to bear the ordinary expenses of its troops and ships. India has no interest in the Soudan, and payment by India for such expeditions, unless on an address from both Houses, is illegal. The same reasoning applies to the recent Suakin expedition, 14,124–41. The argument that no extra expense is thrown on Indian revenues would be valid if the arrangement were reciprocal; even in the Mutiny for some time at least the English Government was relieved of the cost of a large number of troops; reciprocity certainly does not exist at present in this matter, 14,142–64. Cases might arise, not only in regard to Egypt, in which Indian interests might be sufficiently involved to make it fair that India should pay half of the total charge, 14,251–3. No question of comparative wealth should be taken into consideration, 14,254. To sum up, India should be repaid her payments (600,000*l.*) on account of the Abyssinian War, the ordinary charges of the troops sent to Perak and Suakim; also 350,000*l.* in respect of the Egyptian Expedition in 1882, 14,166. Witness agrees in the main with the principle enunciated in Lord George Hamilton's Despatch of June 1896, and considers that the Government of India should be made, by a Treasury Minute, the judges of whether their interests are or are not concerned, as the questions are not of first-rate financial importance, subject perhaps to a general definition being laid down, and to the statutory power of the Secretary of State and Parliament

NORTHBROOK, the EARL OF—*cont.*
remaining intact; if this were done, the Government of India might be trusted to deal with the question in a proper spirit, 14,249–50; the same principle would apply in the case of England lending troops to India, 14,167–89. It might be possible to fix areas within which the primary payments should be made by the English and Indian exchequers respectively, leaving the ultimate adjustment according to Lord George Hamilton's principles to be settled subsequently, 14,228–35. The reciprocal arrangement would probably in practice be rather favourable to India, 14,236–7. There would be a difficulty in making a body like the Judicial Committee of the Privy Council the interpreter of the principles proposed to be laid down in the Treasury Minute, because the ultimate authority of the Secretary of State and Parliament must be left intact, 14,238–40. The question as to what expeditions are or are not beyond the Indian frontier is a matter for lawyers to decide, 14,241–4. It would not be possible to make such an agreement by Act of Parliament; and, although it need not be said that the Government of India Act has failed, yet the East India Company were better protectors of Indian revenues than the Secretary of State in Council can be, because the Secretary of State is an individual member of the Cabinet by whose decisions he is bound. Still it would not be advisable to alter the provisions of the present Act, 14,190–203. The failure to use Section 55 of the Act in the cases of Perak and Egypt would not come within the cognisance of the Indian Comptroller and Auditor-General, 14,204–17. Nor could the Viceroy have refused to send troops in the absence of such sanction of Parliament, 14,218–21. The Board of Control had the supreme direction of policy, which might involve heavy expenditure, *e.g.*, the first Afghan War, but the Board of Directors had strong Parliamentary influence which made itself felt in the financial relations of the Home and Indian Governments, 14,222–3.

With regard to the settlement of the standing charges for British troops in India, it is a matter of the utmost importance that these controversies should be determined, and some arrangement of the subject is almost a political necessity, 14,257. The capitation charge, History of the question, 14,258–63. The Commission over which witness presided, reduced the claims against India by about 1,000,000*l.* and fixed a capitation grant of 7*l.* 10*s.*, 14,269–6. The Commission did not go into the question of permanency, but the decision might hold good till some alteration is made in the establishment, or, say, for 10 years, 14,313, or till some definite change of circumstances arises, 14,316–8; the rate is arithmetically a fair one for India to pay, 14,267. The Commission did not go farther because the Government of India raised questions which the Treasury could not accept, and which could hardly have been settled by a departmental commission, 14,267–71. With regard to the plea that India should not bear the cost of a recruiting system beyond what is needed for her special purposes, no stress should in present circumstances be laid on that point, nor, so far as the effective charges are concerned, has India now strong reason for complaint, 14,272–3. As regards short service, the system, as originally proposed, was excellent, and it would not be fair for the Government of India to found a claim on extra number of recruits required, provided a reasonably economical system of recruiting is adopted, 14,274–7. Some fair allowance might be made to India on account of her being utilised as a reserve for England, 14,278–9. Some of these points might fairly be considered in view to a reduction of the 7*l.* 10*s.* rate, especially the consideration that India has spent millions for the purpose of securing British ascendency in the East, 14,285–9. By an Act of George IV. a bargain was made that the non-effective charge should be about 3*l.* per man, and this bargain should have been considered when the rates for soldiers' pensions were revised in 1861; and as regards officers' pensions in consequence of the abolition of purchase, it was very hard to charge India with the whole cost, 14,290–91. No doubt the War Office always desire to consult the Government of India about charges, but this desire is not always carried into effect. To obtain the

NORTHBROOK, the EARL OF—*cont.*
opinion of the Secretary of State would represent a consultation of the Government of India, 14,292–4. So far as details of the charges made against India go, the question has been thoroughly thrashed out by the Northbrook Commission, and their finding should be accepted, 14,295. Sir Ralph Knox argues as against equitable—as opposed to arithmetical—considerations, that the real cost to England of the troops to India is nearly half a million more than India pays under the present arrangement. But of the charges amounting to over 1,000,000*l.* sterling, which he calculates to be the real cost, over 800,000*l.* are the very charges on which the 7*l.* 10*s.* rate is based, and the remainder, consisting of departmental charges, cannot reasonably be put forward by the War Office. The latter question arose in 1874, and was abandoned, 14,296–300, 14,340–53. Explanation of differences between the figures in Sir R. Knox's memorandum and those on which the 7*l.* 10*s.* rate was based, 14,333–9. No claim can be brought against India on account of the reserves. The system is an economical one to England; and India would have to pay for any reserve men she might require, 14,301–4. For the decision of disputed points it might be well to submit a case to a Judge whose decision would probably be accepted, 14,305–12.

33RD AND 34TH DAYS.

BRACKENBURY, LIEUT.-GENERAL SIR HENRY, K.C.B., FORMERLY MILITARY MEMBER OF THE GOVERNOR-GENERAL'S COUNCIL.—ANALYSIS OF EVIDENCE OF.

Experience, 14,354–7.

MILITARY ADMINISTRATION.

Every act of any member of the Government of India is the act of the whole Government. Formerly business was referred by the secretaries in each Department to the Council as a whole; more recently, for convenience, different branches have been allotted to individual Members of Council, the growing tendency being to make each member a minister in his own Department. The Military Member is in charge of the Military and Marine Departments; he is not necessarily a soldier, though, as a matter of fact, he always has been one, because, if you want to make an army, you naturally employ a soldier. He is minister in that Department, subject to the limitations, (1) That the secretary may refer any question to the Viceroy. As a matter of fact, this power of the secretary should never be exercised, if the Military Member has any tact, 14,495–6; (2) That he may not overrule any Provincial Government without reference to the Viceroy; (3) Certain limitations imposed on all Members of Council with reference to questions involving finance. It is the special duty of the Military Accountant-General to see that these are observed, 14,496; though in very unimportant matters coming up from Controllers he is not informed, 14,497–502; (4) That the Commander-in-Chief, being also a Member of Council, may appeal against his decisions to the Viceroy in Council. This right was only exercised in one case in witness' experience, 14,514–6; generally differences are settled either by the Viceroy referring them to Council or by official correspondence, or privately, 14,517–22; (5) In common with other members, his decisions may be appealed against by any of his colleagues. With reference to the Commander-in-Chief, the Military Member's position corresponds very much with that of the old Secretary at War in England or the German Minister of War. In matters of finance, his power is peculiarly limited in respect of transfers from one head of the Budget to another, 14,411–48. All proposals for any kind of change in the Army must come to the Military Department; description of routine, 14,449. Small proposals for increased expenditure come from the Controllers in the various commands to the Military Secretary, and not to the Accountant-General, to whom they are not even referred, unless for advice. Important proposals usually emanate from the Commander-in-Chief, or possibly from the Military Member himself, and are discussed in Council, an estimate of their cost being furnished by the Accountant-General, 14,450–62. The Financial Department

BRACKENBURY, Lieut.-General Sir HENRY—*cont.*
would have an opportunity of criticising the Accountant-General's estimate, 14,463–70. All proposals involving expenditure, if adopted by the Military Member, must be referred to the Financial Department for concurrence. If the Financial Department objects, the proposal either drops or a conference takes place between the Military Member and the Finance Member, or the matter is referred to the Viceroy for submission to Council, but the latter case is rare, 14,471–8. The Viceroy acts as an arbitrator in case of disagreement between the Military Member and the Commander-in-Chief, though the final appeal would be to Council, 14,479–83. There are no parties in Council, and cases are decided on their merits. If a difference arose between the Military and Finance Members, and the former would not give way, it would be settled in Council; in witness' experience no case was carried in favour of the military view by the vote of the Commander-in-Chief, 14,484–92. In the case of the Military Member and the Commander-in-Chief opposing the Finance Member, the Viceroy would use his judgment, 14,523. The presence in Council of the Commander-in-Chief is most valuable, both in respect of military questions and questions of general administration, 14,557–9.

The Military Member, like other members, may record a dissent, and he communicates demi-officially with the India Office, 14,493–4. Generally speaking, the relations of the Military and Finance Departments depend on the personalities of the Military and Financial Members, 14,500–13. The Viceroy exercises discretion as to what matters are referred to Council, but would always so refer, if the initiating member wished it, 14,524–8. The Military Member should be a thoroughly independent critic of military expenditure; and, on the other hand, in witness' experience the Finance Department were thoroughly alive to the necessity of maintaining the efficiency of the Army; but the scale of military expenditure is really an Imperial question and in the hands of the Home Government, and is largely affected by considerations over which the Military Member has no control. His control is limited to questions of organisation. In regard to policy, in so far as it affected military expenditure, in witness' experience the influence of the Military Member has been opposed to frontier expeditions, which injuriously affect his budget. So, too, has that of the Commander-in-Chief, 14,528–37. Witness' opinion as to the unwisdom of the frontier expeditions on the north-west frontier in recent years, 14,538–45. The responsibility for expeditions, and therefore for the expenditure involved, rests primarily with the Government of India, 14,546–57. With regard to changes in the organisation of the British Army, there is no doubt but that India practically must accept them, but India might be consulted, and at least informed in time to make provision for them in the estimates. But practically, *e.g.*, in the case of abolition of purchase, India must pay for the British troops according to their conditions of service, whatever they may be, 14,558–67. Still, as a matter of courtesy at least, India should be consulted beforehand. There was one particular case in which India, without previous consultation, was obliged to accept a change in the system of drafts, which threw a considerable charge on Indian revenues for additional men, whom the Government of India did not want. The Government of India strongly disapproved and protested. The Secretary of State did not altogether concur in the protest, 14,568–90. The fact that drafts in excess of the requisitions by the Government of India were sent out unexpectedly, overcrowded the barracks in India and saddled India with expenditure of several thousand pounds a month, relieving the English estimates of the expense of men raised for general service in the Army, 14,854–74. With regard to checks on the growth of military expenditure, there was formerly a somewhat lax system as regards: (1) Spending money in the current year not provided in the Estimates; (2) Saddling future Estimates with new expenditure; (3) Want of knowledge of the Estimates on the part of the Military Member; (4) Want of knowledge by the Military Member of the effect at any given moment of expenditure sanctioned in the current year not provided in the Estimates. Steps were taken by witness to put a stop to the sanction of any new expenditure,

BRACKENBURY, Lieut.-General Sir HENRY—*cont.*
however small, without his knowledge; and also to have lists prepared, and constantly kept up, showing exactly under different categories how expenditure was progressing; copies of these lists were furnished to the Finance Department. Description of procedure under the new system. Further, a new check was imposed in regard to indents on England for stores. These improvements in the system were strongly approved by the Finance Department, 14,591-2.
With reference to Sir A. Colvin's and Sir D. Barbour's remarks about a weakness in the position of the Financial Member, Sir James Westland was unable to admit the correctness of their veiw, 14,593-602.
The Financial Department is strong enough to secure due consideration of financial dangers, but much depends on the personality of the Financial Member, 14,776-7.
The Viceroy, both personally and in Council, exercises control over military expenditure; personally, by means of consultations with the Military Member, before the matter comes up in Council, 14,603-7.
No large new expenditure can be incurred without the sanction of the Secretary of State; but the influence of the Secretary of State in Council is not always exercised in the direction of economy, even in military matters, but more especially in the case of railway construction; the present Financial Member considers that excessive expenditure upon railways is the great danger to Indian finance, 14,603-11.
With regard to military expenditure, the control of the Secretary of State has not, within witness's experience, produced any sensible economy, 14,612-5, 14,056-71. No other appeal than to the Secretary of State in Council, however, is practicable, as Parliament would be the worst possible, the House of Commons being, as a body, ignorant of Indian affairs, 14,612-43; and also it is most desirable not to bring India into the field of party politics, 14,687-8. The intervention of the Secretary of State during the first two or three years of witness's service as Military Member was too much in the nature of "nagging" the Government of India about the details of military expenditure, 14,614; his province is more particularly to determine the greater questions of policy, but his criticisms in regard to details of administration must be less effective than those of the Indian authorities on the spot, 14,644-55. The only forms in which the influence of the Indian taxpayer can be brought to bear on expenditure are: (1) Through the unofficial members of the Legislative Council, and (2) through the press. It would not at present be desirable to alter the constitution of the Legislative Council, 14,675-86. The great difficulty of increasing taxation in India has been fully recognised by the Military Members of the Governor General's Council, and they are quite willing to defer to financial considerations. The difficulty in imposing new taxation, however, arises not from the fact that taxation is the arbitrary act of the Executive Government, but from intrinsic difficulties, 14,689-712.

PROGRESS OF EXPENDITURE:
In 1884-5 the military expenditure of India was at about its lowest point. In 1885-6 there was a great increase; but since that date, but for exchange, military expenditure has remained fairly stationary, 14,358-62. Analysis of the increase in 1884-5, apart from exchange, of 2½ crores; increased pay to the native soldier accounts for about 48 lakhs out of the 2½ crores, 14,408-10; exchange accounts for another crore, 14,363-71. But between 1885-6 and 1895-6 the increase, apart from exchange, has been trifling. Illustration by military budgets of last four years, 14,372-85. The rate at which soldiers' pay is converted is fixed by the Secretary of State on the average exchange of the preceding year; the compensation rate is taken in the Budget at a rate founded on the probabilities of the coming year, and actually paid at the actual rate of the preceding quarter, 14,386-94. Both in 1894-5 and the following year the ordinary expenditure was below the estimate, but in the latter year the Chitral expedition, which cost 165 lakhs, caused an excess of 108½ lakhs, 14,395-7. The tendency was for expenditure to be in excess of estimates, until a proper system of control was introduced, 14,398-402.

BRACKENBURY, Lieut.-General Sir HENRY—*cont.*
Thirty lakhs might be said to represent the actual increase in the ordinary military expenditure during the last 10 years, 14,403-7, 14,411-9.
On the general lines it is not probable that Indian military expenditure will in the future vary greatly from its present standard, 14,714-6, 14,768-70. Home expenditure is not under the control of the Government in India, except in regard to stores, on which increased expenditure in India will probably diminish the demand upon England. Instances of economies due to manufacture in India, 14,717-24. In India itself there are some changes in organisation which are, in witness's opinion, desirable, and which would cause increased expenditure, *e.g.* (1) An increased number of British officers with Native regiments; this has not yet been taken into serious consideration; (2) An increase to the Garrison Artillery, which is not a large matter; (3) An increase in the Camel Transport, which may involve five or six lakhs a year additional expense. On the other hand there are other changes which may diminish expenditure, 14,725-34. It is not probable that there will be any diminution in officers' pay, which has recently been increased by the grant of exchange compensation allowance on account of the fall in the sterling value of their pay and allowances, coupled with some increase in the cost of living in India, 14,737-41, 14,743-67. It would be an advantage if more money could be spent at once on water supply to cantonments, &c., and India would only be following the example of other countries if she borrowed money for this purpose, 14,742. Expenditure on frontier expeditions must probably diminish in future, as the frontiers are getting settled, 14,771-5.

APPORTIONMENT:
The general basis on which payment is made by India to England appears to be that India is to pay for everything which it can be proved that England would not have to pay but for Indian military requirements. That theory appears to be altogether wrong, because (1) India has to keep a powerful field army, in addition to her garrison, 14,875-85, in consequence of British political considerations, 14,794-9, as it cannot be contended that England holds India purely for the sake of India, 14,886-95; (2) India, as compared with England, is undoubtedly a poor country; (3) India, being arbitrarily governed, the governing power ought to deal generously with her, 14,782. It is not the case that the British forces in England are a reserve available for India in all cases, 14,800-26, or that England could reduce her army but for India. So far as internal disturbances are concerned, the British forces in India are quite sufficient, 14,801-3; and it is only in the case of outside political complications that India might need extra assistance, which might not then be available, 14,800-26. It is true that England contributes by her Navy to the defence of India, but not towards the defence of the land frontier. It would be far better to sweep away *all* (14,846-8) questions of account between England and India, and let India pay a fixed contribution into the British Treasury in consideration of the services of the Navy; but nothing in respect of the service, effective or non-effective, in regard to which the military and other contributions are now paid. The contribution to be paid by India should in that case be on a fair scale, 14,778-93, and considerably more than the 100,000*l.* now paid, possibly 500,000*l.*, 14,828-30. The effect of this arrangement would be that India would be relieved of a payment represented by the present 7*l.* 10*s.* rate of about 540,000*l.*, and other existing payments, excepting a share of pensions in respect of Indian service, and deferred pay, and instead would pay a fixed contribution representing the service rendered to India by the Navy, 14,831-48. Aden and the Somali coast must be taken together; but the present arrangements, according to which India bears the whole cost, should be modified; it is, however, quite right that India should pay a share of the cost, as Aden, though no longer of importance to India alone, yet is undoubtedly still of importance to India, 14,879. India is certainly a good training ground for British troops, as was proved in the Nile campaign, 14,850.

BRACKENBURY, Lieut.-General Sir HENRY—*cont.*

Health of British troops in India.—The ravages of venereal disease in India are a desperate misfortune; and there is no doubt that there could be an efficient system of protection, if it were allowed, 14,851–3.

35TH DAY.

WATERFIELD, SIR HENRY, K.C.S.I., C.B., AND JACOB, MR. STEPHEN, C.S.I. — ANALYSIS OF EVIDENCE.

AMPLIFICATION AND CORRECTION OF PREVIOUS EVIDENCE.

Reasons which determined the close of the financial year on the 31st March, *Waterfield*, 14,898–901.

The increase of provincial taxation was for the purpose of better administration (Appendix handed in), *Waterfield*, 14,902–11. Difficulty of comparing the present and past excise taxation, *Jacob*, 14,911–4. There has been practically no increase as regards stamps, provincial rates, and registration, *Waterfield*, 14,915–8. Relations of the Provincial and Central Governments as regards alteration of the rates, *Waterfield* and *Jacob*, 14,919–22.

The Commander-in-Chief is usually, but not necessarily, a Member of Council; at all events he is not a member in the same sense as the other members, *Waterfield*, 14,923–7. Only two Members of Council can be appointed who have not served in India for 10 years, *ib.*, 14,928–30.

The practice of accounting for exchange with reference to debt, *ib.*, 14,931–4.

The general policy adopted with regard to irrigation works, *Waterfield*, 14,935–6. On the whole the irrigation policy has produced the financial results expected, *ib.*, 14,937–40. Classification of protective works as major works; possible separation in the accounts, *ib.*, 14,942–51.

Amount contributed by civil servants to their pensions, *Waterfield*, 14,952–4.

Possibility of printing a return relating to salaries and pensions referred to in Q. 10,988, *Waterfield*, 14,955–62.

In the 10 years 1883–4 to 1893–4 the increase in the gross revenue was 6,750,000 Rx, and not 19 millions; the increase has practically been about 25 per cent., *Waterfield*, 14,963–77.

India paid the whole cost of the Chinese consulates when the East India Company enjoyed the monopoly of the trade; but, now that the trade is shared by the colonies, the Indian contribution should only be proportionate, *Waterfield*, 14,978–85. India pays more than half of the Persian Mission expenses, *ib.*, 14,986–9.

For the ordinary maintenance of Aden England pays nothing, *Waterfield*, 14,990–4. England should bear some share of the cost, because of the value of Aden to her, both from the commercial, military, and political standpoint; reasons why the control of Aden should remain with the Government of India, *Jacob*, 14,995–9. England paid half the cost of the special defence works at Aden, but nothing further, *Waterfield*, 15,000–14.

The reduction in postage rates has cost the Government of India Rs. 4,80,000, *Waterfield*, 15,015–6.

The proposal for the Zanzibar and Mauritius Cable, which originated with the Government of India, was intended to provide an alternative means of communication with England *viâ* the Cape, which the present scheme does not provide; the existing scheme is not so important to India as to England, *Jacob*, 15,017–38.

Amounts spent in various years for station conservancy, *Waterfield*, 15,039–41.

Detailed charges in 1884–5 and 1893–4 on account of the Remount Department, *Waterfield*, 15,042–5. Increased charge in the purchase of remounts, *ib.*, 15,046–8.

Detailed increases and decreases in the charge for Clothing Department contributing to the total increase, *Waterfield*, 15,054–8.

The increase in the barrack charges is due to transfers from other heads, *ib.*, 15,059.

Under the head of Martial Law there has been an apparent increase owing to an alteration in the procedure for bringing to account the charges for military prisons, but really a substantial decrease, *Waterfield*, 15,060.

Explanation of the increased charge of the Medical Department, 1884–94, *Jacob*, 15,064–5. Contemplated increase in the pay of medical officers, *Waterfield*, 15,066–79.

WATERFIELD, Sir HENRY, and JACOB, Mr. STEPHEN—*cont.*

Explanation of the increased charge of the Ordnance Department in 1884–5, *Jacob*, 15,080–8.

Details of the increased charge for pensions to European officers, payable in India, *Jacob*, 15,089; and for pensions to Native officers and men, *Jacob*, 15,090–3.

Further detailed explanation of the increased charge for Regimental Pay and allowances; on the whole, exclusive of exchange, the increase in charge is less than proportionate to the increase in strength, both in respect of the European and the Native army, *Jacob*, 15,095–114.

Detailed comparison of Commissariat charges, supplies and service, 1884–5 and 1893–4; the great increase has been in Madras, owing chiefly to high prices in Upper Burma; the increased cost per head is due to increased cost of supplies, *Jacob*, 15,115–25. Explanation of the increased commissariat charges for Native troops, *Jacob*, 15,126–31. Compensation for dearness of forage, *ib.*, 15,132; and for dearness of provisions, *ib.*, 15,133–50. Increased charge in India for malt liquor due to local purchase, though there is a net decrease in the cost per head and per gallon, *ib.*, 15,151–2.

Further explanation of the increased charge for clothing, *ib.*, 15,153–8.

Calculations on which the increased cost due to increased strength was based, *Waterfield*, 15,159–164.

The capitation rate is now calculated on the War Office estimate of the numbers of British troops in India, *Waterfield*, 15,165–70.

Explanation of the low payment for effective charges in 1875–6, *ib.*, 15,171.

The Henley clause of the Act for the Better Government of India was intended to secure for officers the expectations that were held out to them by the East India Company; after various committees had reported, these expectations were more than realised, and this accounts for the increase in officers' pensions, *Waterfield*, 15,172*a*-185.

36TH DAY.

WATERFIELD, SIR HENRY, K.C.S.I., C.B. ANALYSIS OF EVIDENCE—*continued.*

Division of the non-effective Army charge for 1884–5 into the charges for officers and men, 15,188–99.

A considerable part of the reduction, but not the whole, in pensions to soldiers has been due to the short-service system, 15,200–220.

System of accounting for special expeditions, 15,221–2.

Special defence works, and special operations are separated in the accounts, 15,223–7.

The system of purchase in the old local Army, 15,227–35.

A fair comparison cannot be made between the average payment of 8*l.* per man before 1857 and the present capitation rate of 7*l.* 10*s.*, because of the variety of the charges included in the respective payments, 15,236–73.

Question of laying the Government of India's despatch of March, 1890, before Lord Northbrook's Commission, 15,274–80.

The average service in India of the soldier just exceeds five years, 15,280–319. Short service has increased the transport charge by about 40,000*l.* a year, but there is a reduction of 76,000*l.* in these charges due to other causes, so that the net result is a decrease, 15,320–1.

India bore the ordinary, and the Colonial Government the extraordinary, expense of the Perak Expedition, 15,322–3.

The Indian share of the cost of the Perak Expedition, 15,506–14.

The Auditor in India would have the opportunity of knowing that expenditure had been incurred by the Indian Government outside of India, but he probably would not report if the Act of Parliament had been infringed; the Secretary of State is responsible to Parliament, 15,515–23.

The objections of the Government of India to the present division of the charges for Indian troops employed out of India, 15,324. There is a want of reciprocity, 15,325–34, 15,340–3; as no opportunity for reciprocity has occurred for 40 years, 15,335–7.

India paid every charge, including expenses of training, of the troops sent out to quell the Mutiny, 15,338–40.

WATERFIELD, Sir HENRY—*cont.*

Circumstances under which British regiments have been borrowed from the Indian establishment, 15,341–53. In no case where regiments have been borrowed from India has the establishment been reduced, 15,354–61. There is much difference of opinion as to the extent to which the Indian Government is interested in various expeditions, 15,365–9. Charges imposed on India at the time of the Mutiny, under the then system of paying for the depôts, 15,370–6.

England pays for that part of the training which exceeds six months; but the recruiting is for the British Army in general, not especially for India, 15,377–82.

Numbers of the military establishment in India, 15,383–4.

As regards the question of the rebate, India is said to be liberally dealt with; but she nevertheless pays full value for the services which she receives, 15,385–9.

The existing life-tables for the calculation of the non-effective charges were introduced in 1887–8, 15,390–2.

The sum of 600,000*l.*, unclaimed prize money, was taken in relief of the charges on the British estimates for Chelsea and Kilmainham Hospitals, as if it belonged entirely to the British Government, whereas, had it been given to those institutions for an endowment, they would have been self-supporting, 15,393–402.

If India did not belong to England there would be a saving of half a million to both the British and Indian Governments on military account, 15,403–6.

The 72,000 or 73,000 troops that England keeps in India are kept there at the expense of India; England would have to maintain a larger Naval force in Indian waters were India a foreign power, 15,407–15.

Purposes for which the "Lawrence" was built, 15,415–6.

The arrangements made between the Admiralty and India Office with regard to docking provided for reciprocal treatment, but England only has been able to avail herself of the arrangement, 15,417–34.

Question of the duties taken over from the Indian Navy by the Royal Navy, 15,435–45.

The contribution of 70,000*l.* was made by the Indian Government for the services of Royal Navy ships as Maritime Police, and for the repression of piracy and local slave trade, 15,452.

The Royal Indian Marine ships are valuable to the Admiralty in the same way as the ships of large steamship companies, as auxiliaries, 15,468.

The Indian Navy was kept up in the later years, after the abolition of the Company's monopoly, not for the protection of the Company's trade, but for the protection of the trade of India in general, 15,469–75.

Reasons for the adoption of a special rate of exchange in calculating military pay, 15,476–88.

Rules of business of Governor-General's Council, 15,489–93.

The position and status of the Military Accountant-General, 15,494–6.

It is quite foreign to the duties of the Comptroller-General to discuss the propriety of new military expenditure to be introduced into the Budget, 15,497–8.

The cost (and Indian share) of the Indian Contingent sent to Egypt in 1882, 15,499–503.

Explanation of the deficit of 1894–5, 15,504–5.

37TH DAY.

ROBERTS, FIELD-MARSHAL THE LORD, V.C., G.C.B., ETC.—ANALYSIS OF EVIDENCE OF.

Experience, 15,524–6.

FINANCIAL ADMINISTRATION:

There is not too great a preponderance of the military element in the Council. The Military Member is a distinct check on military expenditure, and his tendency, in witness's experience, has always been decidedly towards economy, 15,547; the Commander-in-Chief is not a regular attendant at Council, 15,526–32. It would not be desirable to follow the English analogy by having a civilian to fill the position of Military Member, because the Commander-in-Chief is away from

ROBERTS, Field-Marshal the Lord—*cont.*

Council for long periods, and there ought always to be a soldier on the Council, 15,791–5. The duty of the Commander-in-Chief is to see to the welfare and the efficiency of the Army, and that money is properly expended on those objects. Proposals for small expenditure are made through the Controllers; those involving larger sums by communications from the Commander-in-Chief to the Military Department, and sometimes in personal discussions with the Viceroy or the Military Member and the Finance Member, 15,537.

The Commander-in-Chief would accept the decision of the Government on his proposals, and the opinion of the Viceroy and Finance Member would have great weight with him. In matters other than military, he would generally support the Viceroy and Finance Member, 15,537–44, 15,559. The Military Member's position is generally analogous to that of the old Secretary at War, 15,546. Though the military Secretary has a right of direct communication with the Viceroy, it is very unlikely that he would act independently of the Military Member, 15,548–57.

The Finance Member is generally anxious to meet the views of the Commander-in-Chief, so far as the general arrangements of his budget permit, 15,558. The Commander-in-Chief is in constant communication with the Viceroy, and endeavours to interest him in his proposals. Only in two instances did the witness persevere in proposals which the Viceroy did not support, 15,559. The Commander-in-Chief is the principal adviser of the Government in all matters connected with the organisation of the Army, but not necessarily in regard to military policy, 15,561–2.

The financial checks on military expenditure work very satisfactorily from the financial point of view, but they interfere with many projects for increasing the efficiency of the Army. The weakness in financial check referred to by Sir A. Colvin and Sir D. Barbour was really a difference of opinion in regard to a policy; it would not be expedient to give one Member of Council a preponderating influence. The Finance Member's power must really depend largely upon his personal influence, 15,563–76; and upon the support of the Viceroy, 15,576–9. The Viceroy would probably form his views after consultation with his colleagues, 15,580–6; who are at all times fully alive to the importance of financial considerations, 15,587–9. Expenditure was constantly being postponed, or spread over long periods, owing to financial considerations, 15,590–1. It would not be desirable to give the Finance Member a special power of appeal to the Secretary of State. He already has the power of recording a dissent, or having his opinions expressed in a despatch, 15,592–8. The Viceroy would always consult the Finance Member before committing himself to any line of policy, or change in organisation of the Army, involving expenditure, 15,509–603. There will probably be further expenditure on military railways on the north-west frontier, 15,604–5. It is a mistake to say that expeditions on the north-west frontier have increased in number of recent years. The new, and more thorough, policy ensures a more permanent good result, and will probably greatly diminish the number of such expeditions and their burden on the budget, 15,606–27.

Witness approves of the policy of depriving the Presidential Councils of the military element, 15,743–4.

APPORTIONMENT:

It is very difficult to compare the present system of recruiting with the former system. The men now sent out are assumed to be trained soldiers, formerly they were raw recruits; and presumably the Government of India are only called upon to pay the actual cost of the superior article supplied, 15,628–33. Short service must undoubtedly increase the charge for transport; and though India may gain by the reduction in passage rates, yet on the other hand she loses by the fall in exchange. As to the pension charge, witness is not prepared to discuss it, 15,634–45. India is only interested in a modified form in the reserve, and should not be called upon to pay for it, 15,646–53. It is, no doubt, possible that difficulties connected with recruiting were the reason for estab-

ROBERTS, Field-Marshal the Lord—*cont.*

lishing short service, as much as the creation of a reserve, 15,654–5. There should be reciprocity in the matter of claims made by England upon India and *vice versâ*; and the principle should be that each country should pay the ordinary and extraordinary charges of troops lent by the other, 15,656-63. India affords by far the best training ground for British troops, and this fact should be taken into consideration in assessing the charge to be borne by India, 15,656–8; though each country should pay the charge for her own defence, 15,665. India must pay her share of the charge entailed upon her by changes in organisation, resulting from the progress of military science, and the promotion of efficiency, *e.g.*, the abolition of purchase; but she ought to be consulted beforehand in such cases. If the India Office is consulted, however, no blame can attach to the War Office, 15,669–88.

Witness has perhaps a higher opinion of the capabilities of the Army in India than that which Lord Wolseley expresses. He considers it a remarkably efficient army, and, composed of a certain proportion of British and Native troops, it might be depended upon to assist the Imperial Government in many places out of India, even in Europe, 15,689.

It would be well to have some definite understanding as to the terms on which troops should be lent; and the question of the interest of India in an expedition should be referred to the arbitration of a man of high judicial standing, and not to a board of War Office and India Office officials, 15,690–707. England might reasonably bear a half (15,765) of the cost of Aden, which cannot be said to be of value to India alone. Gibraltar and Malta cannot be regarded as a counterpoise to Aden, as they were occupied long before Aden, and for the maintenance of British power in the Mediterranean. India should, however, bear her share of the cost also, 15,708–17. Cases of expeditions in which Indian interests might be involved, 15,777-90.

MILITARY EXPENDITURE:

The present organisation of the Indian Army is satisfactory, but it will have to keep pace with the times. The water supply question is one which will impose an annual charge for some time to come; the increase in the number of British officers in the native army (native officers will not answer the purpose, 15,748–51) should take the form of the formation of a reserve for the time of war, not of a permanent increase of staff, 15,718–30. The present establishment of the Indian Army should not be reduced even in respect of British officers, 15,774–5; though internal danger has been reduced by increased facilities of communication, on the other hand external danger has increased. It would, therefore, not be wise to reduce the Army, 15,731–4. It is not likely that large expenditure will be required on frontier fortifications in the future, 15,735–8. An appreciable portion of our military expenditure is caused by the fear of Russian aggression, which may be measured by the increase of the Indian Army in 1885, 15,752–60. But the greater part of that increase has been absorbed by Burma, 15,772–3.

It would not be wise to reduce the force of British cavalry in India, 15,807–9.

The encouragement given to the temperance movement in the British Army in India has probably increased its strength by two regiments of effective men, 15,766–71.

38TH DAY.

LANSDOWNE, THE MARQUIS OF, K.G., &c.

ANALYSIS OF EVIDENCE OF.

Experience, 15,810-1.

FINANCIAL ADMINISTRATION:

Both theoretically and practically the powers of the Finance Member are as complete as it is possible to make them. In no case can his position be weak, but, of course, much depends on the personality of the Viceroy, and of the Finance Member himself, 15,812–5. Members of Council in general are not unmindful of financial considerations, and do not take a purely departmental view of questions which arise,

LANSDOWNE, the MARQUIS OF—*cont.*

15,816–9. If comparisons can be made between one period and another in respect of economy of administration, the difference probably arises from the peculiar characteristics of the individuals concerned, or of the events passing at the time, 15,820. The increase of expenditure is to a great extent the natural consequence of the changing order of things, 15,821–2. The Finance Member, in common with the other Members of Council, had always free access to the Viceroy (who also learned weekly from the Secretaries how things were going on, 16,156–63); and, so far as circumstances would permit, the Finance Member would be kept fully informed at the earliest moment of any measures likely to have a disturbing effect on the finances, 15,823–30. The power to record a dissent is a very valuable one, and the Viceroy would probably go great lengths in order to avoid the necessity of the Finance Member recording a dissent; the latter, moreover, has the opportunity of having his views stated in the Despatch to the Secretary of State, and, if necessary, in a secret Despatch, not liable to publication, 16,140. Further, in an important matter, the Viceroy would communicate by telegraph non-officially with the Secretary of State, 15,845. There is no necessity for introducing a system of permitting the Financial Member, or any other member, to submit confidential memoranda through the Viceroy to the Secretary of State; such a system might cause friction. As matters stand, the Finance Member can rely on the Secretary of State closely watching expenditure and checking extravagance, 15,831–58. The question of taxation in India is full of difficulty, but not of danger, 15,859–66. The presence of two Military Members in Council does not give the military element preponderating influence in Council, because the Military Member is a potent influence on the side of economy, 15,920–2. The Military Member ought to be a soldier, as there ought always to be a soldier in the Council, and the Commander-in-Chief is often absent, 15,923–34.

No guarantee that the Financial Member will do his duty is possible, except the selection of the right man for the office, 16,112–24. The criticisms on the Budget in the Legislative Council are useful, but it would not be desirable to allow amendments to be moved by the non-official members, 16,125–32.

EXPENDITURE:

Military expenditure may be expected to increase to the extent necessary to keep pace with modern improvements; also some increase in soldiers' pay may be necessary; nor is it probable that any diminution can be expected on account of improved communications. On the other hand, so far as the near future is concerned, the scheme of frontier defence is completed; and frontier expeditions may possibly be a less recurring cause of expenditure in the future, 15,866–84, 15,911–9. The old policy with regard to the frontier tribes was that of alternate vengeance and inaction; the recent policy has been to let the tribesmen feel that it is to their interest to behave properly—*i.e.*, that they have much to expect in the way of pay for road making and other services—but only to interfere in the case of disturbances which would affect ourselves, 15,885–910. The expenditure on domestic administration is not unduly restricted in order to enable military demands to be met, though, no doubt, it would be possible to spend far more money on internal reforms with advantage, 15,935–42.

The provincial contracts might with advantage run for 10 years. The provincial system is successful, 15,943–8.

APPORTIONMENT:

In regard to home charges, the fair charge against India for the men actually supplied to her should be calculated; and then it should be considered whether the circumstances of India afford a fair ground for abating that charge, 15,949–54. The Northbrook Committee's award might be taken as a point of departure, 15,955–6. Taking the India Office pleas in turn: (1) The machinery of recruiting is not more costly than it was, but we

LANSDOWNE, the MARQUIS OF—*cont.*

pay more for our soldiers, and get a better article, 15,957–8. (2.) Short service ought not to be regarded as having been introduced for the special advantage either of England or India. It was necessitated by the breakdown of recruiting under the long-service system, and has been successful in supplying the required number of men, 15,959–65. (3.) In regard to the reserve, the home battalions are constantly drained to keep the Indian battalions at full strength. England could scarcely accept an arrangement of that kind unless she had the reserve, trained partly in India, partly at home, with which to fill up her weak home battalions in case of mobilisation, 15,966–9. (4.) India is of very great value as a training ground for the British Army, 15,970. (5.) The recruits being young, partially trained soldiers, would not be of much value to England in the case of emergency, 15,971–3. (6.) The abolition of purchase, being for the good of the British Army in general, is of interest to India, more especially as it facilitates the selection of officers for commands, 15,974. Broadly speaking, the War Office should make out such a bill against India as public opinion would regard as reasonable; then considerations, such as that Indian foreign policy is determined by Imperial considerations, that the Indian Army serves for Imperial as well as Indian purposes, and so forth—not pleas of a technical and restricted character, such as those just referred to—should be weighed to see whether they would justify any remission being made to India, 15,975–85. If India were isolated from England, she would probably not require such a force as she now borrows from England, 16,023–8; if, therefore, India were to dispense with any or all of the troops now in that country, they would probably be disbanded as being in excess of English requirements; but such a contingency would involve a recasting of our whole army system; and any argument for remission of charge against India, founded on the assumption that in such a case England would retain part of the liberated force for her own purposes, is an academical argument, 15,996–16,015. Sir Henry Brackenbury's proposal to sweep away all detailed charges, and to substitute a substantial payment by India for the services of the British Navy, does not commend itself to witness. India ought to make a substantial payment for her British troops. She would not gain much by the proposed arrangement, and would run a risk of having to pay more, if English naval expenditure were to increase largely. Moreover, it would lead to difficulties in regard to control of the ships. Precedent and tradition are in favour of the present system, 15,986–94. It would be very desirable to have a distinct understanding, and, so far as possible, rules, in regard to the loan of troops by India to England, or *vice versâ*, 16,029. There might be difficulty in Lord Northbrook's proposal to allow the Government which lent the troops to decide whether its interests are involved, 16,080–3. There would be difficulty also in defining Indian interests, unless by laying down a definite geographical area, and, if arbitration is to be resorted to at all, this is the point which it should settle, 16,030–4, 16,088–95. The arbitrating body might be a small standing commission, not a legal tribunal, 16,079, which should be called in to decide in case of disagreement between the two Governments, 16,035–47. No alteration of the Government of India Act would be necessary, nor need the arbitrators necessarily be appointed by Act of Parliament. It is true that section 55 of the Government of India Act has not been altogether successful in protecting Indian revenues, but this tribunal of arbitration would improve matters, 16,048–68. Differences regarding administrative charges might much more easily be referred to a legal arbitrator than those involving political considerations, 16,099–102.

As regards Aden, the present arrangement is fair enough, except for the charge of administering the Somali Coast, 16,103, but the fact that India pays for Aden might be a general consideration in favour of a general remission, 16,109–11. India has a right to be consulted before any changes in organisation involving increased expenditure are adopted, 16,104–8.

39TH DAY.

RIPON, THE MARQUIS OF, K.G., &c.—ANALYSIS OF EVIDENCE OF:

Experience.—Witness' evidence can only relate to India as it was 13 years ago, 16,169–71.

FINANCIAL ADMINISTRATION:

The Finance Member's position is as strong as is possible under the organization of the Government of India; but it cannot be so strong as that of an English Chancellor of the Exchequer; and it must depend greatly on the man himself and on the Viceroy and his colleagues, 16,172–6. The question of policy, however, must, in the long run, determine expenditure and, whereas in England the Chancellor of the Exchequer is selected by the Prime Minister as being of the same opinions as himself, that is not the case in India, where the Finance Minister may have been selected by a different Government from that which selected the Viceroy, 16,177–81. The Finance Member might in witness's time look to the general support of his colleagues, 16,182–6. Finance in India must always be a source of anxiety, on account of the inelasticity of the revenue and the difficulty of increasing taxation, 16,187–8. No doubt, since 1885, there has been a more "forward policy," and that might account for the different estimation of the Finance Member's position held by Sir A. Colvin and Sir D. Barbour, 16,189–92. The fall in exchange is also an important feature in the later situation, 16,193–5. The Finance Member would ordinarily have sufficiently early intimation of the intention to adopt a policy involving expenditure, but the suddenness of an emergency might conceivably prevent this, *e.g.*, the Egyptian Expedition which was ordered from Home, 16,196–202. It is not probable that the Finance Member would find support in his opposition to a policy in the Secretary of State, as it would probably have received the Secretary of State's previous approval, 16,203–6. He has the power of recording a dissent, and in important cases it is his duty to do so, and the proper constitutional way of putting forward his views; a private memorandum, such as Lord Cromer suggested, would not be on record and would disappear with the Secretary of State of the time. The Viceroy would, no doubt, state privately to the Secretary of State objections entertained by the Finance Member; but there would be no objection to the latter expressing them in a private memorandum, provided that course did not supersede the dissent; the same procedure would have to extend to the other Members of Council, 16,207–24. As a body, the Council are fully alive to the difficulties of the financial situation, though occasionally apt to trust to increase of revenue to make good increased expenditure, 16,225–8. Undoubtedly recent policy has caused an increase of expenditure, which, being coincident with the fall in exchange, has resulted in an awkward question of taxation. This is an illustration of the desirability that the Finance Department should be as strong as possible; but there are no obvious effective means of strengthening it, 16,229–36. Witness can express no opinion on the new frontier policy. Frontier expeditions are generally objectionable, though occasionally inevitable, 16,237–46. As to the presence of two Military Members on the Council, the Commander-in-Chief is very often absent, and another military man is necessary. In view of the important military questions which constantly come before Council, a civilian would not answer the purpose, 16,247–55. Civil expenditure in India might advantageously be greater, and has no doubt been kept down by other branches of expenditure, as well as by the burden caused by the fall in exchange, 16,156. The principle of provincial responsibility is right and should be extended as far as it will go, 16,157–73.

APPORTIONMENT:

The analogy of a partnership is not quite suitable to the connexion between England and India, as it is quite possible that the interests of the two countries may not be identical, 16,274–82. The principle that India should pay fairly for her share of services in which both countries are interested is the right one; but there are circumstances which

RIPON, the MARQUIS OF—*cont.*

might entitle India to favourable consideration, *e.g.*, the fall in exchange, 16,283–9, 16,418–29. Probably, if India did not belong to England, she would belong to some other European power, and would be subject to similar liabilities; therefore, the danger of her being involved in the foreign complication of England is not a sufficient argument for a reduction in the claims against her. 16,290–304. If it be the case that the War Office only receive 550,000*l.* for services which actually cost 1,100,000*l.*, that, of course, would be a contribution, but only in so far as the War Office calculation is admitted, 16,305–24 Witness is not inclined to favour Sir H. Brackenbury's suggestion that the payment for the Army should be swept away, and a larger contribution towards the Navy substituted, 16,325–6. The Indian Army is not greater than is required, and its strength is determined by the military requirements of India and by the necessary proportion between the British and Native troops, 16,327–34. The loan of troops by India to England involves, from the financial point of view, the admission that there are more troops in India than are required for Indian purposes. This argument would not apply to the temporary loan of a few battalions, but to the idea that India affords a military reserve to England, which is a dangerous mistake, 16,335–8. As to the naval contribution, there is a difficulty in tying up ships of the Royal Navy to any particular locality; but no change in the present arrangements is desirable, 16,339–48. With respect to the conditions of the loan of troops for expeditions, as India pays all the expense of troops lent by England, so England should pay all the expense of troops lent by India, and, when this has been done, the question of the interest of India in the expedition should be considered, 16,349–53. The Treasury minute (which was suggested by Lord Northbrook as a means of laying down the broad principles regulating the question of Indian interests) would be very difficult to draw, (16,358–70); but, if drawn, any doubtful points might be submitted to arbitration; no question of policy, however, should be referred to arbitration, 16,354–7, 16,430–57. Independent arbitration would be preferable to a reference to the Judicial Committee of the Privy Council in disputed cases, 16,458–60. In such cases arbitration would be preferable to leaving the question of Indian interests to be decided by the Government of that country only (16,445). Arbitration would be a good way of settling disputes upon questions of administration, and a person of judicial eminence would be a suitable arbitrator, 16,548–98. With regard to Aden, things should be left as they are, 16,399. With regard to consultation of the Indian Government, in a period of 18 years (1864–5 to 1881) a charge of 800,000*l.* was laid upon Indian revenues by petty changes of organisation in the British Army, in many instances, without India having been previously informed. The fact that the Government of India has practically no voice in such changes constitutes another claim for favourable consideration; of course, India could not demand to have a veto or even a suspensory veto, 16,400–17. The value and importance of native criticism expressed in the Legislative Council and through the Press, 16,468–74. Question of giving independent members of the Legislative Council more power, 16,474–9. Possible value of a Select Committee of the House of Commons to examine Indian Accounts, 16,478–87. Though the employment of Europeans in India is necessary for the maintenance of British Rule, the cost should wholly fall on India, 16,488–94.

40TH DAY.

NAOROJI, MR. DADABHAI. ANALYSIS OF EVIDENCE.

Experience, 16,495.

FINANCIAL ADMINISTRATION:

The administration is not conducted in accordance with the principles of the Act of 1833 and the Queen's Proclamation of 1858, which conferred upon natives of India a claim to a full share in the administration of their own revenues; the consequence has been a financial, political, and

NAOROJI, Mr. DADABHAI—*cont.*

intellectual drain on the people of India, due to the employment of costly alien officials, and the practical monopoly of industrial enterprise by alien capitalists, 16,499. The British administration has not promoted the general prosperity of the people, owing to its machinery being a costly "crushing machinery," 16,502–4. The remedies are: (1) Replacement of alien labour by native labour. About 18 or 20 millions of Rx. are annually paid to Europeans, which, so far as they go out of India, are a dead loss to that country; and, moreover, they return in the shape of capital and drain India still more in respect of interest, thereby preventing India from making capital and developing its own resources, 16,505–27; (2) Payment by the British Government of the share of the cost of the foreign labour necessary for the maintenance of British rule, 16,505; (3) The people themselves should have a voice in the conduct of their own affairs, 16,528. It is true that natives are employed now, to a great extent, in subordinate offices, but they are excluded from all the greater administrative offices, 16,529–35. There is much difficulty in extracting information from the Government of India, which, if furnished, would reveal the inefficiency of the present system, 16,536. Expenditure in England, incurred for the sake of efficiency of administration, amounts to 1*l.* 6*s.* 6*d.* per head of the population, in India to Rs. 2, 12 annas; which shows how comparatively poor the people of India are owing to the inefficiency of their system of government. If India were allowed to keep her own resources she would be quite able to raise all the money necessary for as great comparative efficiency as exists in England, though, as labour in India is cheaper, perhaps the sum required would not be so great. It is true that the retention in Indian hands of the Rx. 20,000,000 now paid to Europeans, would not immediately have the effect of making India able to bear such enormously enhanced taxation, but the economical effect would be a gradual enrichment of the country. At the same time, there is no desire to sever the connexion of India with Great Britain, which has conferred many benefits on India (16,575), 16,536–59. The witness does not desire to offer criticisms on details of administration, because the necessary information is not accessible, and also because, the whole system being unnatural, discussion on details would be useless. It is the system, and not the action of individual administrators, that is to blame for the evils of Indian administration, 16,560–3, 16,576–93. It is not essential that there should be no Europeans at all in the Indian administration, but they should be an irreducible minimum, necessary for the purposes of British rule, and, therefore, their cost should be fairly divided between the two countries, 15,566. The history of Mysore illustrates the good effects of handing over a Native state to Native rule, 16,567–74. Comparison between rates of salary paid to Europeans and to Natives; question of the statutory and provincial services, 16,594–637. Cross-examination by Sir James Peile, 16,638–17,012.

APPORTIONMENT:

(1) The financial relations between Great Britain and India should be those of partners, and not those of master and slave; (2) Apportionment of expenditure should, therefore, be based on the extent of the interest of each party and their respective capacity to pay, whereas India has been unjustly charged with the whole cost (with a few exceptions) of creating and maintaining British supremacy; (3) Law and order in India are a joint interest; therefore, India should bear all charges for internal and external protection, which she would have to bear if British rule did not exist, but she should not bear the cost of the European agency necessary for the maintenance of British supremacy; (4) The payments to Europeans in the service of India, both in England and India, should be equally divided between the two countries (17,056–7); (5) Public employment should be apportioned to British and Indians in proportion to the amount of the charge borne by each country; (6) The cost of wars beyond the Indian frontier should primarily be borne by the British Exchequer, India contributing a share corresponding to her interests involved; and a fair share of the sums already expended from Indian revenues on avowedly Imperial wars, should

NAOROJI, Mr. DADABHAI—*cont.*
be refunded to India (17,064), 17,014–9. The British Navy is an acknowledged necessity for the Imperial interests of England; nevertheless India should pay a fair share for the East Indian Squadron, and have a fair share in the benefits of the service, 17,062–3. If the whole Imperial expenditure is divided proportionately between England and India, then the united forces of the two countries might be used in any part of the world; otherwise, the expense of the employment of Indian troops should be borne by the British Exchequer, except where the objects of the expedition are common to both countries; and in that case the charge should be fairly divided, having regard to the respective capacities of the two countries; so, too, should the charge for Aden be treated, 17,072–4.
Views of the War Office and Admiralty regarding the admission of Indians to the naval and military services, 17,020–38.
A number of small and well governed Native States are in the highest degree advantageous to the political and moral development of the people of India; and if such a system were generally adopted, the result would be a strengthening of the supreme power. Illustration by the case of Mysore. Repetition of such evils as led to the annexation of Oudh would be prevented by the control of the supreme Government, though it must be admitted that that control is not always efficacious, 17,039–55.

41st and 42nd Days.

WACHA, Mr. DINSHAW EDULJI. ANALYSIS OF EVIDENCE.

Experience, 17,075–7.

FINANCIAL ADMINISTRATION:
Since 1875 the expenditure of the Government of India has been growing at a rapid pace, and the Finance Member is powerless to check it, unless supported by the Viceroy and Secretary of State; and so long as the taxpayers have no effective voice in the councils of the Empire, no retrenchment can be hoped for. Other weaknesses in the existing system have been pointed out by Sir A. Colvin and Sir D. Barbour, 17,078–90. The discussions in the Legislative Councils are not effective, so long as the members are debarred from proposing motions and deciding upon them; and of late the tendency has been rather in the direction of restricting than of encouraging expressions of popular opinion, 17,091–145. Indian opinion is strongly in favour of a Parliamentary Committee reporting each year on the Indian Accounts, and this would stimulate the Non-Official Members of the Legislative Councils to careful criticisms of financial proposals, which would take the form fo amendments on the items of the Budget, 17,146–9. The details of the Budget should be made available to the non-official members and to some outside bodies, such as Chambers of Commerce, before the Budget is brought forward. At present, the estimates (except in Bombay) are not available till a considerably later date, and are, therefore, not available for the purpose of criticising the Budget proposals, (the detailed military estimates are never published) though, of course, those of previous years are available for this purpose, 17,150. Cross-examination, 17,151–94. Members of the Legislative Council have the right of interpellation, but satisfactory answers are often not returned, nor are sufficient opportunities given for putting questions to members of the Government, 17,194–219. The revised estimates invariably exceed the Budget estimates, and the final accounts are generally better than the revised estimates, which ought not to be the case, 17,220.
Cross-examination on this statement, 17,785–803.
Exchange is at present an element of confusion in the accounts, it ought to be treated as an ordinary item of expenditure, and, at all events for the present, taken at a fixed rate in the Budget; if the amount of charge incurred is less than the estimate, the difference should be credited to a "Reserve Account," and not, as at present, utilised for remission of import duties, &c.; in the opposite event, the difference should be withdrawn from this account, 17,220–59.

WACHA, Mr. DINSHAW EDULJI—*cont.*
Provincial Contracts.—With regard to the provincial contracts, responsibility for the financial administration of the Provinces should be left principally to the Provincial Governments, the Supreme Government receiving a fixed equitable percentage, to be increased only in case of "dire emergency," which should be formally declared by the Supreme Government. It is claimed for this system that it will enable each Province to develop its own resources, while providing the Supreme Government with sufficient means to meet its expenditure, and at the same time compelling the latter to exercise the strictest economy, 17,260–312. Witness has no criticisms to offer upon the details of departmental administration, 17,313–23. There should be Indian representatives, chosen by the Members of the Legislative Council on the Secretary of State's Council, 17,822–3.

PROGRESS OF EXPENDITURE:
The year 1881–5 is, for reasons stated, taken as the standard year, and the average of the ensuing decade is taken to represent the increase, 17,324–32. In the decade the total revenue exceeded the total expenditure by only about half-a-million Rx.; but had it not been for enhanced taxation, suspension of the famine fund and encroachments on provincial balances, there would have been a deficit of about 29 millions Rx., 17,333. Explanation of the above figures, 17,334–45. This deterioration is due in the first place to the growth of military expenditure, and secondly to the growth of civil expenditure, 17,346–7. Indian public opinion considers the increase in military expenditure to be unnecessary, and representations to that effect have been made to the Government by public bodies, while remonstrances against the increase of the Army were made by the Government itself in 1878, 17,348–59. Various other suggestions for the reduction of expenditure were made to Government by the Bombay Presidency Association, and the financial embarrassments were in their memorial attributed to a faulty system of administration, 17,360–75. The specific defects, apart from the extra expenditure resulting from the employment of European agency, are, generally speaking, those referred to by Sir A. Colvin and Sir D. Barbour, which can only be remedied by the choice of economical Viceroys and Finance Members, and by giving the Non-Official members of the Legislative Council power to vote the Budget, 17,376–97. It would be better to appoint as Financial Member a well-trained financier from England, 17,398–414. The increase in expenditure since 1886 has more than swallowed up the savings recommended by the Finance Committee, 17,415. Rupee debt has increased by 11 millions, sterling debt by about 45 millions; Indian opinion is that, as far as practicable, money shall be borrowed in India, owing to the burden of exchange on the payment of interest in sterling, 17,416–35. It is true that if the money cannot be raised in India, it must be borrowed in England, and also that, if the money raised in England was so raised for the purpose of reducing existing charges, that course is not to be deprecated, 17,550–65. Indian rates of interest are higher, no doubt, but the exchange charge adds to the lower English rate, 17,566–73. In the last decade, notwithstanding Sir H. Brackenbury's evidence to the contrary, there has been a net increase in military expenditure of a quarter of a million, 17,436–43. Details of military expenditure, 17,444–55. If expenditure were incurred on measures of a nature to conciliate the people, such expenditure would be more efficacious than expenditure on the Army, 17,456. The cost of a soldier in India compares unfavourably with that in other countries, 17,457–66. In March 1894, the Bombay Association made a representation to Government on the subject of the increase in the military expenditure, which in its essential features is supported by the "Economist," 17,467–71. The total loss on State and Guaranteed Railways in the 10 years has been nearly 15 millions, or an average of nearly a million and a half Rx. a year, including exchange; but this loss is merely on the working of the railways; including interest on capital, &c. The loss in one particular year, 1894–5, was nearly Rx. 2,350,000, 17,473–4. Explanations as to these

WACHA, Mr. DINSHAW EDULJI—*cont.*

figures, 14,475–8, 14,487–501. The loss on military railways should be shown in the annual accounts as military expenditure; this expenditure requires to be looked into closely, 17,486. The most important economic disadvantage of Indian railways is that they have been almost entirely constructed by English capital and therefore the profits go out of India, 17,502, but it cannot be said that India would have done better without the railways, notwithstanding the loss incurred in working them, though it is a difficult question how much they have added to the wealth of the country or how much the people are actually benefited by the increased facilities, 17,503–35. If the capital for railways had been raised in India, the profits would have remained in the country; it is true that they might have in that case proceeded more slowly, as the same amount of capital would not have been available, 17,536–49. The salaries earned by European employés of the railways are another heavy drain on India, 17,580–2. Irrigation works have been paying their way for the last few years, but in Bengal and Bombay they are still showing a loss, possibly because they are to a large extent famine protection works, 17,583–9. The extension of irrigation should not take the shape of costly works, but of wells, in order to remedy the present deteriorated condition of Indian agriculture; such an extension of irrigation would be more valuable than an extended railway system, 17,590–621. The increases in the Civil Departments for the decade have averaged nearly Rx. 1,600,000, 17,622–44. The tour charges of the Viceroy should be greatly curtailed, as all India has condemned the migration of Government to Simla, 17,645–73. Great complaints are made as to the efficiency of the police; and if Native agency were employed in the higher grades, the police could be more economically and efficiently managed; judicial functions should be separated from executive and magisterial, and the scheme already put forward by Mr. Mehta with this object would not be costly, 17,674–89. Expenditure on education is very illiberal; Sir A. Grant thought that 2 per cent. of the revenues should be spent of education, and this minimum has not been reached in Bombay, 17,691–704. The miscellaneous charges, including pensions, &c. have increased greatly, and are a further proof of the costliness to India of foreign agency, 17,705. Less money has been spent on protection from famine than was the case in 1884–5, by an annual average of Rx. 558,849 on Protective Railways and Rx. 169,000 on Irrigation Works. The Indian public have never understood that the Famine Fund was to be available only when there was a surplus. Moreover, sound finance requires that this famine charge should be considered an ordinary recurring item of expenditure. It is also not right to charge the interest due on the capital of the Bengal-Nagpore and Indian Midland Railways to the fund, 17,706. Cross-examination, 17,707–41. Objections to the exchange compensation allowance, 17,742. General conclusions, 17,743. Cross-examination as to increased taxation, 17,744–55. Cross-examination as to increase of military expenditure as compared with the increased charge for exchange, 17,756–84. Cross-examination on statement that India "has no true surplus," 17,804–7. Cross-examination as to statement that the income of the Indian taxpayer does not exceed Rs. 27 a year, 17,808–15. Cross-examination as to statement that the net deficit has amounted since 1849–50 to Rx. 37,620,000, 17,816–18. Witness' practical suggestions are that military expenditure must be materially reduced; and that the more economical Native agency should be substituted gradually for the existing foreign agency, a fair share of the expenditure necessitated by mutual interests being borne by England, 17,819.

APPORTIONMENT:

(1.) The home charges should be apportioned on grounds of justice and equity. (2.) England should bear at least half the charge for the European agency, civil and military, required on account of mutual interests, both in India and in England. (3.) The expense of all frontier wars since the time of the second Afghan War should be equally divided; the cost of the Burma War should be refunded to India. (4.) The charges for Aden should be fairly divided between England, India, and the Colonies; and that for the Teheran Legation should be borne wholly by England. (5.) India should not be called upon to pay any extraordinary charges, unless her interests are concerned, and in that case only a moiety: and Indian interests should be confined to the natural boundaries of India. (6.) India should be treated as a partner in respect, not only to payments, but to the benefits accruing from the partnership.

43RD AND 44TH DAYS.

GOKHALE, Mr. GOPAL KRISHNA. ANALYSIS OF EVIDENCE.

Experience, 17824.

FINANCIAL ADMINISTRATION.

Whereas in England and the Colonies expenditure is controlled by the taxpayers, and is presumably solely in their interests, in India the standing claims of British supremacy entail a vast expenditure, the benefit of which goes to others than the taxpayers. No doubt this supremacy has been of great benefit to India, but the price which is exacted for it is too high. Large sums are expended on the extension of British supremacy in the East, and on extravagant privileges conceded to the British military and civil services; and the interests of British commerce and moneyed classes prevail over those of Indian taxpayers. In these circumstances a specially strong financial control is necessary, but, in fact, the existing safeguards are illusory, 17,826. No doubt the Indian Government ostensibly act in the interests of good government, but the above is the feeling of the Indian people, 17,827–9. Wars undertaken for the extension of British supremacy are frequently ordered by the British Government in opposition to the views of the Indian Government, *e.g.*, the second Afghan War, 17,830–2. In regard to other expenditure, which the Indian people consider wasteful, if there had been better control, the waste would have been minimised, 17,833. The spending authorities are the Provincial Governments, the Government of India, the Secretary of State in Council, and also the Secretary of State acting in the Secret Department under the special powers given him by the Act of 1858, and issuing orders, which may ultimately involve expenditure, 17,834–58. The controlling authorities are the same, each controlling its subordinates, with Parliament, in theory, controlling all. All this is purely official control; notwithstanding the existence of the Legislative Councils, there is no real popular control, there being no power of moving resolutions in connexion with expenditure. Criticism may be effective as a check, but it is not control. The Provincial Governments are certainly not only controlled, but crippled; but the Government of India and the Secretary of State, if in agreement (as in important matters they usually are), are practically uncontrolled, 17,859–64. The result of this state of things has been that under the Queen's Government Indian revenues have not been so efficiently protected against demands by the Imperial Government as under the East India Company, which was generally more economical than the present régime, 17,865–9. The inquiries that used to take place, when the Charter had to be renewed, were a further protection to Indian revenues. Now all financial power is concentrated in the hands of a member of the Imperial Government, who is peculiarly liable to be swayed by English influences. His Council is no real check upon him, 17,870–5. Consequently, millions upon millions have been spent on objects which have not advanced the welfare of the Indian people by one inch, (*e.g.*, in the opinion of the Indian people, expenditure on the North-West frontier) while objects of real interest to them have been neglected, as has on one occasion been represented by a member of the Legislative Council, 17,876–92. One of the principal defects in the existing system is that autocratic financial control is vested by the constitution in a member of the Imperial Government, and the absence of any constitutional power to resist or appeal against unjust demands, 17,893. Appointments to the Council of the Secretary of State

GOKHALE, Mr. GOPAL KRISHNA—*cont.*

should be made by the Crown, for a term of, say, five years; three of the members should be appointed on the recommendation of the "representative" members of the Indian Legislative Council, and the remainder should consist of, say, three Indian judges, two Englishmen who have never been in the Indian service, and two men who may, or may not, have belonged to the Indian Executive Service. This is not a scheme likely to be carried out, but it would improve the Council, 17,894–978. Subject to the, often nominal, control of the Secretary of State in Council, the Government of India can spend the revenues of India as they like in all ordinary matters; and they cannot be much interested in economy, as the departments of administration left under the decentralisation scheme in their hands, are those which demand the largest expenditure, and the Finance Member is the only member of the Government not directly interested in increased expenditure, 17,979–18,007. Neither in England nor in India is there the salutary check on expenditure of public opinion; Parliament is indifferent, and the Legislative Council powerless. The Indian Budget should be passed by the latter, item by item, the Government retaining, as at present, its standing majority. A committee of control should sit in England, to whom a majority of the Non-Official Members may state there objections to any specific item of expenditure. This Committee might be either parliamentary, or judicial, or the proposed arbitration committee; it might report to Parliament from time to time, and exercise, not a veto, but a check on the action of the Secretary of State and the Indian Government, 18,008–15. Section 55 of the Act of 1858 should be so amended as to provide that, except in the case of actual or threatened invasion, the revenues of India shall not be used for military operations beyond the frontiers of India, unless, at any rate, a reasonable share of the expense is borne by English revenues; and these frontiers should be definitely declared by Statute, 18,015–7. The members of the various Provincial Legislative Councils should each have the power of returning a member to the Imperial Parliament, 18,017–27. Viceroys should be selected from men who have distinguished themselves in finance, and their immediate connexion with the Foreign Department should cease, 18,028–35.

Provincial Contracts.—With regard to Provincial Finance, the time has come for extending the powers entrusted to the Provincial Governments, in whose hands the whole internal administration of the country lies. At present the Supreme Government secures the maximum to itself, and retains the power of disturbing the arrangements during the period of their currency. For instance, whereas in 1886–7, provincial net expenditure amounts to 12·12 crores, and in 1894–5 to 13·13; in the former year Imperial net expenditure amounted to 32·43 and in the latter to 39·61. In fact, the Supreme Government have taken from the Provincial Governments, in all, a sum of Rx. 1,800,000, which it ought to have left in their hands for the advancement of education and necessary administrative reforms; if the Supreme Government had not done this, they would have been more careful in their expenditure in order not to have to face the unpopularity of imposing fresh taxation, 18,036–93. The contracts are at present based on no fixed or intelligible principle, such as the ratio of population or revenue; the ideal arrangement would be to leave to each province a fixed 50 per cent. of its revenue, 18,094–104. The correct system of levying provincial contributions is that formulated by four members of the Finance Committee. (1) Certain departments should be Imperial, others provincial, in respect of the whole of their receipts and expenditure; (2) The necessary charges of the Supreme Government, over and above the net receipts of the Imperial departments, should be a first charge on provincial revenues, (3) to be met from provincial net receipts, before any increase is made in provincial expenditure, (4) Future growth of revenue should be divided equally between the Supreme and Provincial Governments, subject to Imperial exigencies. These Imperial exigencies should be confined to cases of "dire necessity," which should be stated

GOKHALE, Mr. GOPAL KRISHNA—*cont.*

to, and accepted as such by, the Secretary of State, after hearing anything the Provincial Governments may have to say on the subject, 18,105–38.

PROGRESS OF EXPENDITURE:

Expenditure shows a large and continuous increase since the transfer of India to the Crown, and especially since the inauguration of the new frontier policy; and India differs in this respect from other countries because that increased expenditure has, in the opinion of the Indian people, only increased the exploitation of Indian resources, retarded material progress, weakened the natural defences, and imposed indefinite financial responsibilities, 18,139. Cross-examination as to the meaning of "exploitation of resources," 18,140–84. Owing to the forward policy and borrowing for commercial enterprises, the Indian Government has no resources to spend on domestic reforms, and the capacity of the country to bear increased burdens is perceptibly decreasing, 18,185–8. In the last year before the Mutiny expenditure amounted to 30·8 crores; in the four subsequent years to 46·1; in the subsequent decade to 46·9; from 1871–2 to 1881–2 to 53·9; from 1882–3 to 1894–5 to 58·8 (all these figures are apart from exchange), 18,289–91. Explanation of tables analysing the different causes which have affected Indian finance during the period, 18,192–222. Facts in connexion with military expenditure. The ratio (35 per cent.) of military expenditure to total revenue compares unfavourably with other countries; and the charge per soldier has grown greatly. There is an excess force of 11,000 British troops, entailing an excess expenditure of 1½ crores a year; and the organisation of the Army is faulty, and thus causes needless expenditure. England reaps all the benefit of the short service system in force for the British troops; while in India the system of reserves has been inadequately carried out. The officering of the native Army by European officers is costly, and shuts out natives of India from the prizes of a military career, 18,200–21. The organisation of the Indian Staff Corps is the most wasteful feature of all, 18,221–4.

Cross-examination regarding the alleged increasing poverty of India, 18,225–330, 18,452–64.

In every department of Indian expenditure the question of agency is of paramount importance. In all the more highly paid appointments there is a great preponderance of Europeans increasing in the higher grades. This system is not only costly, but it dwarfs and stunts the aspirations of Indians, 18,331–2. The Public Works Department is overmanned; the greater part of the Royal Engineer Establishment should be employed as civil works, recruitment from Cooper's Hill College should be stopped, and the Department should be recruited from Indian colleges, 18,333–50. Argument against the exchange compensation allowance, 18,351–64. The meagreness of the Government assistance to education is one of the gravest blots on Indian administration, while in Great Britain the Government grant has increased in five years from five millions to nine millions, in India it has increased only from Rx. 889,000 to Rx. 910,000, and out of 35 millions of children of school-going age only about 4 millions are under instruction, 18,365–6. Cross-examination on these figures, 18,368–83, 18,530–9. Indian railways are not worked and constructed cheaply according to Indian ideas, and considering the cheapness of Indian labour. The main trunk lines were extravagantly constructed, and on the railways, taken all together, there is a loss; therefore there is a necessity for proceeding more cautiously, and regarding the interests of the Indian taxpayer rather than the British investor, 18,340–417.

The Famine Insurance Fund was instituted with the object of increasing the revenue, so as to avoid constant additions to the debt in consequence of periodical famines, and additional taxes were imposed for the special purpose of devoting Rx. 1,500,000 annually to the prevention of famine. Yet, a portion of this fund has been hypothecated for the payment of interest on the Bengal-Nagpore and Indian Midland Railway capital, and on more than one occasion for other purposes, 18,418–30.

GOKHALE, Mr. GOPAL KRISHNA—*cont.*

Cross-examination regarding the Famine Fund, 18,431–51.

Criticisms on the Civil Departments in Bombay Presidency, 18,465–507.

APPORTIONMENT:

The India Office charges should be divided between Indian and British revenues. The cost of the increase to the Indian Army in 1886 should be borne by the British exchequer. The whole of the ordinary debt would have been discharged but for charges unjustly thrown upon India, therefore it should be redeemed by the British Government. Burma, Baluchistan, &c. should be taken off the hands of India, and the expense of the conquest of Ceylon refunded to her. All expenditure beyond India frontiers, such as the subsidy to the Ameer, should be borne by England. England should pay a fair share of the cost of the irreducible minimum of European officers, 18,508–29.

Question of the action of Lord Elgin with reference to a memorial of the Poona Sarvajanik Sabha, 18,547–53.

46TH DAY.

BANERJEA, Mr. SURENDRANATH. ANALYSIS OF EVIDENCE.

Experience, 19,059.

FINANCIAL ADMINISTRATION.

Witness agrees with Sir D. Barbour and Sir C. Colvin that the Government of India do not pay sufficient attention to the financial results of measures, 19,060–66. Expenditure is too often governed by political considerations, over which, if the Secretary of State in Council agrees with the Government of India, there is no control, except that of Parliament, which is seldom enforced, 19,067–79. The Council of India is not an efficient check on the Secretary of State, and the existing Parliamentary control is practically valueless. The existing financial checks are, in fact, merely theoretical, 19,080–9. The utility of discussions on the Budgets in the Legislative Councils is curtailed by the want of the power to move amendments in favour either of increasing or reducing expenditure. It might be sufficient if the non-official members had power to move to reduce expenditure only; this power would focus opinions and attract public attention, 19,090–6. At present, once the provincial budgets have been accepted by the Supreme Government, there are no means of amending them, and, in the case of Bengal, according to the rules, there is, strictly speaking, no power of discussing the budget at all, 19,097–100. Answers to questions are sometimes refused, and the questions have to be put to the Secretary of State in Parliament. The practice in the Legislative Councils should be assimilated to that of Parliament, 19,101–5. Cross-examination on this point, 19,106–33. There is no reason for withholding the power of moving amendments, as Government has a standing majority. At present there is no sort of check on expenditure exercised on behalf of the taxpayers, as even in the case of legislation for increasing taxation the unofficial members are bound to be in a minority, 19,134–41. The experience of the municipalities shows how useful the unofficial check on expenditure can be, *e.g.*, Calcutta, 19,142–51. In Ceylon, if the unofficial members are unanimous in opposing an item of expenditure, witness is under the impression that the question must be referred to the Secretary of State. If, however, there is no such absolute rule, the position in Ceylon is practically the same as that in India, 19,152–9. As a further check on expenditure, three members of the Secretary of State's Council should be elected by the unofficial members of the Viceregal Legislative Council to represent the three Presidencies. It would be better still if two more were added to represent the North-West Provinces and the Punjab, 19,160–3. Further, there should be a Parliamentary inquiry of a general nature into Indian affairs every 10 or 20 years, as there used formerly to be on the renewal of the Company's charter, which were most beneficial, 19,163–85. The remedies (besides those referred to above) for these defects are (1) that the Budgets should be laid before the Legislative Council in sufficient time to enable them to be discussed effectively, and power of moving and dividing upon amendments should be given to the unofficial members; (2) a committee of the House of Commons should be appointed to look into and control Indian expenditure, 19,186–99.

BANERJEA, Mr. SURENDRANATH—*cont.*

PROVINCIAL CONTRACTS.

Sketch of the growth of the existing system and it connexion with local self-government, 19,200–7. The term of the contracts is too short, and the resources placed at the disposal of the Provincial Governments are inadequate, the Supreme Government reserving too large a share for itself. The remedy is, starting from the existing basis and having no periodical revisions, if they can be avoided, to divide the normal expansion of revenue equally between the Supreme and the Provincial Governments, reserving to the Supreme Government in case of necessity the first call on Provincial revenues, over and above their share, 19,208–10, 19,260–78. The proper course, however, for the Supreme Government to take is to reduce its expenditure within the margin of its income and, in the last resort, to impose new taxation, 19,211–17. The Provincial Governments, on the other hand, should increase their expenditure, 19,218–28. In no other federal system is so large a share appropriated by the Central Government, 19,229–34. The military expenditure is too high, 19,234. Cross-examination, 19,235–58. The Provincial Governments do not get their fair share of the expansion of revenue, so that the internal progress of the country is retarded, and the quinquennial revision leads to undue dissipation of these revenues within the quinquennial period in order to prevent the Supreme Government from annexing a further share, 19,260–78. A further evil of the present system is the power of the Supreme Government to demand special contributions. This power has been extended beyond the intentions of Lord Mayo's Government, and made to apply to all cases of emergency, 19,279–82. The working of the system has given rise to much dissatisfaction in Bengal. Account of the working of the system in that Province, 19,283–307. The Supreme Government looks at the question of expenditure from the Imperial point of view; the Provincial Governments from the taxpayer's point of view; consequently, Indian opinion would like to see provincial expenditure increased, whereas the share of increased expenditure awarded to the Provincial Governments is inadequate, *e.g.*, expenditure on education, courts of law, &c., 19,309–18. If Sir C. Elliott's recommendations cannot be accepted, and periodical revisions are inevitable, the period of contract should be extended to 10 years, and the proposed terms submitted to the Provincial Legislative Councils for discussion and amendment; should the Supreme Government object to the proposals of the Provincial Government in an important matter, reference should be made to the Secretary of State, 19,318–9.

PROGRESS OF EXPENDITURE.

It may be admitted that the Indian Government is progressive, but its progress is not commensurate with the wants of the country, 19,448.

The extended employment of natives of India, combined with a contribution towards the cost of the army from English revenues, are the means whereby means may be provided for meeting the legitimate requirements of the people. History of the question of the extended employment of natives, 19,320. The recommendations of the Public Service Commission for the extended employment of natives have not been given effect to, 19,320–24. Cross-examination, 19,325–41. The organisation of the Medical Department is too expensive. Suggestion of a more economical system, 19,342–9. No serious effort has been made to train natives of India for the Forest Department, 19,349–65. The recent reorganisation of the Educational Service has given great dissatisfaction, as natives will have little or no chance of admission to the superior grade, 19,366–72. Cross-examination, 19,373–408. History of question of employment of natives in connexion with the Survey Department, 19,409; with the Telegraph Department, 19,410; with the Post Office, 19,411–13; with the Civil Service.

BANERJEA, Mr. SURENDRANATH—*cont.*

Question of simultaneous examinations in England and India, 19,414. The employment of European agency has resulted in the grant of exchange compensation, which has even been given to officers whose salaries are fixed by statute, 19,415–20. Cross-examination, 19,421–31, 19,441–47.

APPORTIONMENT.

Indian public opinion would support the view that India should pay for the native army required for the maintenance of internal peace, but for the European army England should contribute a share, which might be settled by arbitration, 19,432. Cross-examination, 19,433–8.

45TH AND 47TH DAYS.

IYER, Mr. SUBRAMANIA. ANALYSIS OF EVIDENCE.

Experience, 18,554–6.

FINANCIAL ADMINISTRATION.

There are no provisions in the Indian constitution for the protection of taxpayers, 18,559–62. Consequently military expenditure has grown considerably, though in the last decade this is mainly due to exchange, 18,563–7. Civil expenditure has also increased, and in departments which are not of direct benefit to the people; these increases have led to an increase of taxation, amounting (exclusive of land revenue) to over 7 crores; it is true that this may be partly due to increase of consumption, 18,567–8. The burden of land revenue, too, on the cultivating classes, is being increased at every revision, and it has been proposed to make revisions more frequent, 18,568–78. The accounts show a net deficit, between the years 1849–50 and 1894–5, of Rx. 37,000,000, it is true, however, that that is due to the Mutiny, 18,579–89. The surpluses which are shown are arrived at by paying out of loan money, in some years' services that ought to be maintained out of revenue, and by cutting down grants, *e.g.*, the loan of 1893–4 and the famine grant, 18,590–604. There are no true surpluses in Indian finance due to increased revenues resulting from the taxpayer's prosperity. The surpluses are in most cases due to fresh taxation, to loans, or to reduction of normal expenditure. There is no elasticity in the revenue. Since 1884–5 there has been a net deficit of nearly 3,000,000 Rx., including the Budget estimate for 1897–8. Excluding the estimate, however, there would be about equilibrium, though rather on the side of deficit. No doubt, but for the fall in exchange, which has involved an average annual extra charge of nearly 5,000,000 Rx., the result would have been very different; but, still, if expenditure had been kept within moderate limits, the result would have been far better, 19,843–61. Details of the Budgets of the last 14 years. The financial policy of the Government is a hand-to-mouth policy, leaving no margin in ordinary years to be utilised in time of difficulty. The policy of the famine insurance fund has borne no practical fruit, in consequence of its having been improperly applied, 19,862–72. The debt has increased, and railways are being pushed on with undue speed, while the famine insurance grant has not been fully provided for, 18,605. Cross-examination on these statements, 18,606–37. Notwithstanding its financial embarrassments, the Government granted a compensation allowance to its European servants, and the employment of a costly foreign agency involves a constant heavy drain on the Indian taxpayer, and impoverishes large classes of the people, 18,638–9. Notwithstanding the increase of the population, there would be no difficulty in providing subsistence for the people, if the revenue policy of the Government was more moderate, 18,640–53. Certainly the opening of new industries has been a great relief; but every foreign enterprise is detrimental, as the foreigners carry off the proceeds, and render the natives more unfit for independent enterprise, 18,654–66. Cross-examination, 18,667–715. One of the causes of the decline in agricultural prosperity is the increase in the land revenue assessment, 18,716. Cross-examination, 18,717–32. If the cultivator had capital to improve the land it would bear a larger population than exists at present, but the Government take away his margin in taxation, 18,733–9. Cross-examination, 18,740–62. The representatives of the taxpayers in the Legislative Councils should have a more direct and substantial voice in legislation. The existing checks on expenditure are the annual debate in Parliament, which is ineffective; the Secretary of State, who is an English politician in the first instance, not always inclined to economy, and is the mouthpiece of Indian officials; and his Council, whose knowledge is often antiquated. Members of the Legislative Council should be enabled to provide the requisite financial check by being given power to move amendments on the Budget (though any adverse decision should be overruled by the President, 18,767), and increased power of interpellation. Government should also consult public bodies, &c., more than they do at present. Sufficient time should be allowed to the members to study the financial statement before it is introduced, and the provincial budgets should be submitted to the Provincial Councils before adoption. The Viceroy should not be in charge of any particular department, and more attention should be paid to internal affairs, 18,763–5. Members of the Council of India should be appointed for 5 years instead of 10, and should include some Indians recommended by the elected members of the Legislative Councils, 18,766–7. Cross-examination. Parliament should exercise its control by appointing a Committee to consider the Indian Budget, 18,768–900.

IYER, Mr. SUBRAMANIA—*cont.*

PROVINCIAL FINANCE.

The expenditure of the Government of India is mostly on objects which concern only the indirect interests of the people; that of the Provincial Governments concerns their direct interests. Yet the latter are constantly being called upon to contribute to the former, and the improvement of the provinces is obstructed. The present system has been condemned by Provincial Governors. The Government of India alleges that the whole revenue of India is its "constitutional possession," and retains 44 millions, giving the Provincial Governments only 20 millions, whereas it should gradually (18,931) give Provincial Governments an equal share. Moreover, the contributions should be fixed on an equitable principle, such as that recommended by Sir C. Elliott's Committee, and backward provinces should adjust their expenditure to their income, and not depend on contributions from the richer provinces, 18,937–9. Illustration of the working of the present system by the case of Madras, 18,901–5. Cross-examination, 18,906–48. In municipalities there is great scope for development, and loans should be raised for the purpose, 18,949–57.

GROWTH OF EXPENDITURE.

It is natural that the cost of administration in any country should increase; but foreign domination is bleeding India to exhaustion. Military and civil expenditure are increasing, home charges and indebtedness are growing, railway construction is being pushed on too fast, while education is being starved, and the native ministerial officers have had no increase of salary for 20 years. Railway construction has proceeded beyond the limit laid down by the Parliamentary Committee of 1884, while the result is that there is an accumulating balance of capital yielding no return. The railways have not appreciably raised the price of produce, and cannot transport grain if there is no grain to be transported, while an undue number of Europeans are employed in working them. The increase of the sterling debt is a serious evil, the increasing amount of interest being a drain on India's means of subsistence, in addition to the drain caused by the salaries paid to Europeans, 18,963–4. Cross-examination, 18,965–19,026; 19,635–44. In the matter of compensation allowance, the interests of the taxpayers were disregarded in favour of a class of officials already in receipt of liberal salaries, considering the alteration of the circumstances since the salaries were fixed, 19,027. Cross-examination, 19,028–44. Since 1884–5 there has been an increase of taxation of 5½ millions in Imperial revenues, and 1½ millions in Provincial. The land revenue has increased in the decade from 21¾ to 25½ millions, owing mainly to increased assessments, but partly to the annexa-

IYER, MR. SUBRAMANIA—*cont.*

tion of Burma, which is unable to pay its way, and ought to be separated from India altogether, 19,045–52. With regard to the famine insurance grant, Government have recently contended that no special taxation was imposed for it, though Indian opinion maintains that the assessed taxes were pledged to this special purpose; and the Government of India have wrongfully applied the money to other purposes, including payment of interest to the Bengal-Nagpur and Indian-Midland companies, 19,449–55. Cross-examination, 19,456–558, 19,604–8. The total expenditure and loss of revenue, due to famine, has amounted in the last two years to rather over 5 millions of Rx., and the moral is that the burden of taxation on the people should be lightened, and military expenditure reduced, 19,559. The construction of railways should be limited to those which can be paid for out of revenue or out of money borrowed in India. They are only one means of averting famine, 19,560–71. Cross-examination as to the progress made by Government in dealing with famines, 19,572–634. In Madras the Education Department has suffered from the extravagance of other Departments, but the expenditure might even be reduced, if scholars were attracted to the Government Colleges by lower fees, and more natives employed on the staff. Criticisms on the administration of the Department, 19,645–88. There is no branch of administration so unpopular as the police. The men are drawn from a low class, and in Madras 16 per cent. of them are totally uneducated. In order to get a better class it is necessary to increase the pay. The cost of the force in Madras has increased, but owing to increase of strength, not of pay. Head constables are promoted from the rank and file, and it is dangerous to entrust such men with important duties. Inspectors (mostly natives) are a better class, but hardly up to the mark. The inefficiency of the force is mostly due to incompetent Europeans being pitch-forked into the higher appointments. The force is inefficient and corrupt, 19,689–731. Cross-examination. It is possible that the new system of appointing men to the higher appointments may have better results, but the competition system should be extended to India (19,757–64), 19,733–88. In the Public Works Department, notwithstanding the efforts made for the last century to extend the employment of natives, Europeans continue to be employed to an undue extent, and full effect has not been given to the recommendations of the Public Service Commission in 1886–7. Details of this complaint as regards Madras Presidency, 19,789–96. Generally, the preponderance of Europeans in the various services involves unnecessary expenditure, and increased employment of natives would also improve efficiency, 19,797–9.

APPORTIONMENT.

Witness endorses Sir H. Brackenbury's evidence on this subject. The pecuniary drain and moral deterioration involved in the Government of India by a foreign agency constitute a claim on the sympathy and generosity of the British people. British rule, though of great benefit to India, is of still greater benefit to England. The ruling country should pay in some measure for the benefit to her, and afford adequate compensation for the evils necessarily inflicted on the dependent country. England, therefore, should pay all military charges not required for the maintenance of peace and order within the borders of India; also a moiety of the salaries paid to European officers; also of the charges incurred on military operations on the North-West Frontier since, and including the second Afghan war; also the whole of the charge for the conquest of Upper Burma. When Indian troops are lent to England, England should bear the whole charge. The frontiers of India should be defined by Statute, and not extended at the cost of the Indian taxpayer. Any difference of opinion as to charges between the two Governments should be referred to the Judicial Committee of the Privy Council, 18,766, 19,800. Cross-examination. Speaking for himself and the other Indian witness, witness repudiates any desire to have the British rule in India in any degree shaken (19,833–4), 19,801–42.

48TH DAY.

JACOB, MR. STEPHEN, C.S.I., ANALYSIS OF EVIDENCE—*continued.*

PROVINCIAL FINANCE:

General—In considering the provincial expenditure, it is necessary to exclude railway revenue and irrigation accounts, because those are commercial services, and administered on different principles. Also it is necessary to take provincial and local expenditure together. In the last 20 years the yearly average of provincial and local expenditure in all the Provinces together has been Rx. 9,142,000 in the first quinquennium; 11,537,000 in the second; 12,273,000 in the third; and 13,795,000 in the fourth. The average population for each of these quinquenniums was roughly 198 millions, 205 millions, 214 millions, and 225 millions respectively, or about 12 per cent. of an increase in the last period over the first, whereas, making all allowances for adjustments, the provincial increase of net expenditure has been in the last quinquennium 38 per cent. over that in the first. In the same period the average Imperial expenditure, apart from exchange, has fallen from 31¼ to about 29½ millions, but special causes made the expenditure of the first quinquennium abnormally heavy. Taking the second quinquennium, therefore, as the standard, there has been an increase in the last quinquennium from about 27½ to about 29½ millions or 7·7 per cent. Comparing the net provincial expenditure in the second and last quinquennium, the increase has been about 19½ per cent. Exchange compensation only comes into the last quinquennium, but its amount is proportionally about the same in both Imperial and Provincial expenditure. These figures appear to show that the Provincial Governments have had their full share of the increase in the revenue, 19,873 – 902. It must be remembered also that a considerable part of so-called Imperial expenditure is in reality provincial expenditure; and that consequently the comparison with Germany is not altogether sound, 19,934–51. Excluding increased taxation imposed for special Imperial purposes, Imperial expenditure has not increased at all, whereas provincial expenditure has increased by nearly 20 per cent. 19,903–8. The Indian Government would not hold that the increased provincial expenditure fully meets the legitimate demands of the Provinces, but only that it is a fair share of the available revenue, 19,909–12. With regard to the differing rates of increase in the different Provinces, the aim of the Government of India is to secure not so much uniformity as equality of advantage, 19,971–2. The original contracts were made on the basis of existing facts with a view to gradual development of provincial resources and expansion of provincial expenditure on useful objects, 20,050–3.

Bombay.—The figures include all provincial and local charges, except (1) Direct demands on revenue (taken as reductions of revenue); (2), Commercial services; (3), Ecclesiastical and other charges (only provincial during part of the period), 19,915–24. The increase of the fourth quinquennium over the first is 30·9 per cent. Details thereof, 19,924–33. In Civil Departments the increase is 22 per cent., 19,955, and in Public Works, 23·6 per cent., 19,968. The provincial share of the total revenue of the province has increased from 22·6 to 23·9 per cent., 19,959.

Madras.—This province came under the extended provincial system later than the other provinces, and comparison with other provinces can only be made for the last three quinquenniums, 19,956. The percentage of provincial revenues assigned to this province has increased from 27·7 to 29·8 per cent., 19,961. The average total increase in provincial expenditure in the last as compared with the second quinquennium is 23½ per cent., 19,970. In Civil Departments the increase is 26·8 per cent., 19,965, and in Public Works, 22·6 per cent., 19,968.

Bengal.—In this province the increase in provincial expenditure in the last as compared with the first quinquennium has been about 25 per cent., 19,969.

Education.—Under this head there is an increase in Bombay of 58 per cent. (20 years), in Madras 45 per cent. (15 years), and in Bengal 44 per cent. (20 years). The increase has been, perhaps, greater

JACOB, Mr. STEPHEN—*cont.*
than that under any other head of service, but the starting point was certainly low, and the Government of India do not profess to think that the scale of expenditure is in every case adequate, but only that it must be proportionate to the means available. India is not yet in a condition for the adoption of a system of general education; but expenditure in India now is far in excess of what it was in England before the adoption of that system, and full advantage is not taken of existing expenditure, 19,973–90.

Law and Justice.—Except in Bombay, where the circumstances were exceptional, expenditure on courts of law has kept pace with the requirements of the increasing population; and it is doubtful whether the Government of India would incur much extra expenditure under this head, even if they had more ample means, 19,991–4.

Civil Buildings and Roads.—There is undoubtedly room for almost unlimited increase under this head, and the Government of India would, no doubt, utilise their resources in this direction as far as possible, 19,995–20,002.

Quinquennial Contracts.—Sir J. Westland's and Lord Elgin's arguments for the existing system, 20,003. The Government of India regard the quinquennial system not only as expedient for administrative purposes, but as a question of financial principle. They now have under consideration a scheme for separating certain classes of expenditure, *e.g.*, education, medical, public works, &c., and making for them a fixed and permanent grant, any addition to which would be derived from local taxation; or possibly a fixed permanent assignment. The smallness of the assignment would free it from the objections to which a more general permanent assignment would be liable. The Provincial Governments have, as a fact, gained by the existing revisions. As to the "shearing" of Provincial Governments on revision, pressure is constantly brought to bear on those Governments by their own officers to undertake every sort of expenditure, and, when they are arguing with the Supreme Government for an increased assignment their position is totally different from that which they adopt in meeting the arguments of those officers. Too much weight should, therefore, not be attached to their arguments in this sense. As a fact, there has been a steady increase in Provincial assignments in excess of the ratio of increase of the Provincial revenues; and Sir C. Elliott was able to look back upon a substantial array of administrative improvements during his period of office, 20,003–20,043. There is a slight tendency to excessive expenditure in the last year of the quinquennium, but not to any important extent for the purpose of getting better terms under the next contract, 20,044–9.

EMPLOYMENT OF NATIVES.
It is not denied that the Government of India have done much in the direction of extending the employment of natives, but it is contended that more progress should have been made. The orders of the Government of India in the case of each department show what has been done, but it must be borne in mind that full effect can only gradually be given to the orders, 20,054.

JACOB, MR. STEPHEN—*cont.*
In the Executive and Judicial Departments a Provincial Service has been established, including 95 appointments previously reserved to the Covenanted Service. The new service is practically a native service. This is the cadre to be gradually attained. In the whole executive and judicial service there will eventually be 850 covenanted civilians, 156 provincial service officers, besides 1,500 or 1,600 other native officials on salaries ranging from 250 to 1,000 rupees a month, *i.e.*, about two natives to one European. The objection to the scheme is chiefly a sentimental one; the pay is much the same as that of the old statutory service. Though the majority of the highest appointments are still held by Europeans, the holders of the 95 listed appointments are eligible for them, 20,055–107.

Details of other Departments.—Opium Department, 20,108–10; Forest Department, 20,110; Postal Department, 20,112; Financial Departments, 20,113–21; Police Department, 20,122; Education, 20,123–5; Public Works, 20,126; Public Works Accounts, 20,127–8; Telegraph Department, 20,129; Survey Department, 20,130; Minor Departments, 20,131.

The number of natives employed in posts carrying pay of Rs. 250 per mensem and upwards were in 1877 (excluding Madras and Bombay) 752, or probably including those provinces about 1,000 (20,136); in 1887 (including Madras and Bombay) 1,629; in 1897 (including Madras and Bombay) 2,110. Tables illustrating these figures, 20,132–42.

The extent to which natives will get the advantage of the new rule depends upon their qualifying themselves, *e.g.*, hitherto natives have not to a great extent qualified themselves for engineering appointments. The proportionate growth of the admission of natives has within the last 30 years been far greater than the growth of the departments; but the effect of the rules must be gradually attained, 20,143–68. Of course the Government of India are deliberately of opinion that the proportion of natives in the highest executive and judicial posts must not exceed one-sixth; but that only applies to the departments concerned in government, 20,169–72.

Professor Gokhale's evidence:
Revisions by Lord Ripon's Government of provincial contracts, 20,173.
Domestic expenditure has increased in an even larger ratio than military expenditure (table) 20,174–6.
Comparison between period of government by the company and the present time, 20,177.
Increase of pay to natives, 20,177A.
Exchange compensation, 20,178.
Forest revenue, 20,179–83.
Police department, 20,184.
Provincial rates, 20,185.

Mr. Wacha's evidence:
Civil estimates, 20,186.
Estimate of exchange, 20,187–9.
Enhanced taxation, 20,190–2.
Army charges, 20,193–202.
Railway expenditure, 20,203–4.
Rates of interest on Indian loans, 20,205–6.
Indian Midland and Bengal-Nagpur Railways, 20,207.

LIST OF WITNESSES.

INDIAN EXPENDITURE COMMISSION.

MINUTES OF EVIDENCE.

31st to 48th DAYS.
Q. 13,724 to 20,909.

At the India Office, S.W.

THIRTY-FIRST DAY.

Wednesday, 27th January 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).
The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Mr. H. MORGAN-BROWNE, late Secretary of the British Committee of the Indian National Congress, called in and examined.

Mr. H. Morgan-Browne.

27 Jan. 1897.

13,724. (*Chairman.*) Mr. Morgan-Browne, you are secretary to the British Committee of the Indian National Congress, are you not?—I was secretary.

13,725. And you come here specially to speak upon the note on the Indian Finance Minister's Budget, which has been sent round to us by Sir William Wedderburn; and which will form the subject of your evidence?—Yes. There was also another paper, a memorandum on Indian financial expenditure, which was printed in the Appendices.

13,726. That is what Sir William Wedderburn calls the first note, is not it?—No, it is a memorandum distinct from either of the notes. Perhaps I might say that the notes that I am referring to are Note No. 1, on Mr. Westland's Budget, 1894-95, Note No. 2, on Sir James Westland's Budget the following year; a memorandum on Indian financial expenditure.*

13,727. Which is already in the Appendix?—Which is already in the Appendix.

13,728. (*Sir William Wedderburn.*) I think, Mr. Morgan-Browne, you prepared these memoranda under the instructions of the Committee?—That is so.

13,729. And your object was to analyse and arrange the official figures so as to make them as intelligible as possible?—Yes.

13,730. And you came to certain conclusions?—Yes.

13,731. And these general conclusions are stated in a memorandum of proposed evidence which you handed in to the Secretary, and which has been circulated to the Commission?—The main conclusions are there stated; yes.

13,732. The Note No. 2 to which the Chairman has just referred is in amendment, to a certain extent, of Note No. 1, with reference to the criticisms made upon it by Sir James Westland in the Legislative Council at Calcutta, I think?—I should rather describe it as in continuation. There were one or two amendments, certainly, which I made in reference to criticisms which Sir James Westland passed on the first note, but strictly speaking it takes a different period, and really is a separate document to Note No. 1.

13,733. And the memorandum of expenditure dated the 26th June 1895, which you have just mentioned, is an analysis, I think, of 20 years of expenditure?—Yes, an analysis of expenditure on the basis of net expenditure, following to some extent the return which Sir Henry Fowler has now moved for two or three years in succession in the House of Commons on Indian expenditure, and based very largely upon that form of putting the accounts.

13,734. And there is also one more printed paper, dated the 12th August 1895, a note on Sir Henry Waterfield's memoranda?—Yes; that was the note which you put in at the last meeting of the Commission.*

13,735. And you are prepared to undergo cross-examination upon these papers in order to show the source from which you obtained your facts and figures,

* *See* Appendices Nos. 10, 11, and 12, Vol. II. First Report.

Mr. H. Morgan-Browne.

27 Jan. 1897.

and to give the reasons for the conclusions which you have summarised?—Yes.

13,736. That is your position?—That is exactly my position.

13,737. I will take in the first place Note No. 2, and if you look at the beginning of that note I will ask you a question with regard to the first four paragraphs of that note. I think that that refers to certain criticisms which Sir James Westland made upon Note No. 1?—Yes.

13,738. Would you state the point?—In the first note Sir James Westland said there was one gigantic blunder which appeared in the very first page of it, meaning that there was a certain amount of the charge for exchange which did not appear in the proper exchange column, and had not been taken into account in deducting the exchange from the total expenditure, and that to that extent the figures were wrong. That would be so. In the first note account was not taken of exchange compensation allowance, and of the additional cost of exchange caused by the fact that the pay of the British troops is in sterling; but I should like to point out that that mistake, so far as it is a mistake, arose from the form in which the accounts are published and presented to Parliament, and that it was a mistake into which Sir James Westland himself on a former occasion had fallen. At paragraph 4 of this note, I there explain that at page 8 of the financial statement of the Government of India, for 1888-89, is a table which was submitted to the Viceroy's Council by Sir James (then Mr.) Westland, when introducing a Bill to provide for the levy of a customs duty on petroleum; and in that table he there gives these figures, showing the net army expenditure, excluding exchange at so much in different years. But in that account he had left out of account the fall in exchange on the sterling pay of the British troops. It did not affect materially one way or the other his argument. I am only instancing this to show how easy it is for experts to fall into error on this point of leaving out exchange, by reason of the fact that the exchange column in the accounts does not represent the whole of the cost of exchange in the Government of India accounts. In this second note, I may say that I have been very careful to avoid any possibility of such error, and that every possible form of exchange—except such forms as may arise from differences of price and small matters like that, which cannot be traced, but every legitimate form of cost of exchange—has been separated from the total expenditure, and shown separately.

13,739. Then paragraph 7; will you explain to the Commission why you selected the year 1888-89 for the purpose of comparison?—Because in criticising that note No. 1, Sir James Westland said that we had misunderstood his argument. His argument was that he admitted an increase of military expenditure, but pointed out that it had its origin before 1888, in the charges which were necessitated by the increase of the troops for Upper Burmah. Therefore I took that date as being a convenient one, because at that time the charges for the extra troops would already have come into account, and therefore I took 1888 as a fair starting year of normal expenditure under the new order of things with regard to the increase of troops.

13,740. Then will you look at paragraphs 6 to 10, and state what the objection is to the comparisons made by Sir James Westland, based upon conversion into sterling?—Sir James Westland took the accounts of the Government of India for a series of years, and reduced them all into sterling, and by that means was able to show an apparent decrease in Indian expenditure. The reason was pretty simple, because 500,000,000 of rupees at the beginning of this series were worth more in English money than 650,000,000 of rupees now are, so that even an increase of 150,000,000 of rupees in the expenditure of the Government of India, would appear in the sterling table as an actual decrease in expenditure. In paragraph 10 of this note I showed what the effect of such a system would be upon Imperial expenditure—meaning English expenditure—and also of treating the National Debt, and I show there how, if we were to take Imperial expenditure and translate it into a currency which was not the currency of the country, subject to this variation in exchange, and then re-translate it back, we arrive at contradictory results, and that a slight increase of some 4,000,000*l.* in our Imperial expenditure during 10 years would have become an increase of 22¾ millions, and a decrease in the National Debt of 18 millions sterling during the last 10 years would have been converted into an increase of not less than 110½ millions sterling. I did that to show the fallacy of the table published by Sir James Westland, which would naturally come before the public, and lead to the belief that actually the increase of Indian expenditure was purely illusory, and that the Indian Government were really spending less and taking less from the people than they were formerly.

13,741. This illustration in paragraph 10 is a *reductio ad absurdum* of the argument by which Sir James Westland tried to prove the great economy of this Indian Government?—Yes.

13,742. Then paragraphs 11 to 13; I think that you take certain objections to the form in which the accounts are presented to Parliament, and will you state the reasons for preparing Tables 1 and 2, shown in pages 6 and 7, in the form which you have adopted?—The chief objection, I thought, to the form of presenting the accounts to Parliament is that gross expenditure is shown, which includes a great deal of railway expenditure.

13,743. For commercial services?—Commercial services. That was one of the chief differences—a difference of 25 millions it makes. The Government of India have, for a long time, published, along with their gross tables, net tables, but the net tables deduct the charges for the cost of collecting the revenue. My own idea as to presenting the accounts of a Government is, that every penny of taxation taken from the people should be shown on the revenue side, and, of course, every penny expended should be shown on the expenditure side, and that, therefore, the charge of collecting the revenue should come into the expenditure side; but that where there are commercial services, and where they do not involve an actual burden upon the people, but are merely money paid for services rendered, which might have been done by a trading company instead of the Government—that there only the net results of the enterprise of the Government should be shown. This was also the form of table adopted by Sir Henry Fowler in his return, and I have followed that very closely, except in some small matters of detail, with which I need not now trouble the Commission.

13,744. (*Chairman.*) Which table do you mean Sir Henry Fowler adopted—the gross table?—No. Sir Henry Fowler made a new table of his own entirely.

13,745. Based upon the net expenditure?—Yes, based upon the real net expenditure.

(*Sir Edward Hamilton.*) It was based on the lines of his annual return.

13,746. (*Sir William Wedderburn.*) I think the British Committee brought this matter to Sir Henry Fowler's notice, and begged that such a change should be made?—No, I think Sir Henry Fowler had already made his return, and the British Committee submitted to Sir Henry Fowler certain criticisms on that table. The criticisms are contained in the appendix to this Note No. 2, Appendix A.

13,747. And that Appendix A. you consider is a correct statement?—No, there is a further correction I should suggest in that, and one which, I think, the India Office are making themselves, and that is that the cost of collecting opium ought not to appear as expenditure—that the opium revenue ought to be expressed absolutely as net—because the cost of cultivation is there not a burden upon the people in any way—it is not like the collection of the land revenue, or the collection of stamps, and it is really a commercial service.

13,748. (*Chairman.*) Do the India Office propose to make this correction in what you describe as the net tables?—Yes, their tables are practically the same, I believe, as this one, or rather this one is practically the same as theirs.

13,749. Therefore the net table which they present, modified as you think they are going to modify it, would practically coincide with your view?—Practically.

13,750. (*Sir William Wedderburn.*) Then paragraphs 15 and 16; I think these contain an analysis of Tables 1 and 2. Will you just state what the point of that analysis is?—These tables are a comparison of the expenditure in 1888-89 with that in the estimate of 1895-96. It is shown there that the total increase in expenditure during those years was eight crores. That

increase was made up of 1½ crores in the cost of collecting the revenue, a decrease of half a crore in the Debt services, an increase of nearly four crores in the Civil Service, including Civil Departments, miscellaneous charges, and building of roads, an increase of over five crores in the Military services, a decrease (that is, an improvement, really) of a quarter of a million on the whole of the Commercial services, including the Post Office and Telegraphs, the Mint, the Railways, and the Irrigation. That was another minor criticism which I made in the tables of Sir Henry Fowler, that if you have a heading "Commercial Services," it ought to appear either on one side of the account or the other. In Sir Henry Fowler's tables there is a heading "Commercial Services" on the expenditure side and a heading "Commercial Services" on the revenue side, because some of the Commercial services are paying and others are not paying. I suggested that if we have that heading, the net result of all the Commercial enterprise of the Government of India should be stated on one side of the account or the other, and it is following that that I have put this heading here—"Commercial Services." The special services and administration were practically the same. In Special Defence there was a decrease of half a crore, and in the provincial surplus or deficit there was a nominal improvement of nearly a crore. That made up the total increase of eight crores.

13,751. Then paragraphs 17 and 18; these deal with the important question of loss by exchange. Will you explain upon what ground you make a distinction between what has been called automatic loss by exchange and voluntary loss by exchange—that is to say, voluntarily incurred loss by exchange—and in what points you differ from the view held by the Government?—There are four principal means by which loss by exchange becomes a charge upon the expenditure of the Government of India. The first is that due simply to fall of exchange, where 1*l.* of sterling expenditure, which in one year, say, would have cost 12 rupees, in another year will cost 13 rupees. Then again there is increase of cost of exchange due to the increase of the sterling charges, where 1*l.* 10 years ago cost 12 rupees, then in 10 years' time, perhaps, there will be 30*s.* of expenditure to represent that 1*l.*, and that, perhaps, again, by an increased rate of exchange, say, at 14 rupees, will add much more than the mere loss due to the fall in the exchange, because there will be the additional cost of exchange due to the increase in the sterling charges. Then there is the cost of exchange due to the fact that the British troops are paid in sterling. And then there is, lately, in the last few years, the cost of exchange due to exchange compensation allowance. Of those four classes of exchange, in my opinion, only the one due to the fall in exchange on the sterling expenditure as it was in the past, and that due to the fact that the troops are paid in sterling, constitutes automatic exchange. That is what is really due; whatever the Government may do, that exchange will go on increasing if the rupee continues to fall in relation to the 1*l.* The exchange compensation allowance, however necessary it may be, was a deliberate act of the Government of India, within their control. It may be necessary—I am not suggesting otherwise, or disputing the policy, I am only saying that, as a matter of fact, it was a voluntary increase of the burdens of the Government of India. Again, the increase on cost of exchange, which is due to increase of sterling charges, is almost entirely—there are some exceptions, perhaps—a voluntary increase on the part of the Government of India. In referring to exceptions, I mean certain schemes of pensions which were begun years ago, and which Sir Henry Waterfield explained must go on increasing—these would naturally fall under the heading of automatic increase of exchange; but, except for that exception, those headings where the increase in the cost of exchange is due to increase in the sterling charges, and where it is due to exchange compensation allowance, I should call a voluntary (however necessary) increase of exchange by the Government of India, and not to be classed in the same category as that which is due to the fall in the value of the rupee.

13,752. Therefore the Government of India, on account of what you have called the voluntarily incurred loss, cannot complain that this was entirely outside of their responsibility, and that they could not have foreseen it. As I understand, you think that they might have foreseen it, and could have provided for it?—I think this—where they are going to increase, say, the sterling charges, however necessarily, they should take into account at the moment the probable increase of exchange on those sterling charges, and that they ought not, therefore, to say that it is the cost of exchange which has swelled the increase so much, and that in the same way, with the increase in exchange compensation allowance, it should not be called due to exchange, but should be classed as an increase of expenditure, to be defended as such.

13,753. (*Sir Andrew Scoble.*) Is it not merely a question of book-keeping?—Not entirely, because it becomes a question of policy—in the one case it is all thrown on to exchange, and the public over here regard that, therefore, as in no sense the fault of the policy of the Government of India, whereas, in the other case, if it is calculated as an increase of expenditure, then it becomes a question to consider whether the expenditure was justified or not. It seems to me to make a material difference from the point of view of the financial management of the Government of India.

13,754. Assuming that the increase in the sterling charges was inevitable, is not it a mere question of book-keeping whether you charge the exchange under one head or under another? Accepting the distinction you propose, it is an increase in exchange, whether it is automatic or voluntary?—Quite so; it would not make any real difference even in the book-keeping. This note was drawn up to contest the statement of the Government of India that their financial difficulties were due to exchange and exchange alone, and I am saying that at any rate some portions of the exchange were not properly due to the fall in the value of the rupee, but were due to the deliberate policy, however good and desirable, of the Government of India, and that, therefore, they are estopped from saying that it is exchange which is responsible for this particular increase in their charges.

13,755. Yes, but my point is, assuming the increase to be necessary and unavoidable, it really does not matter under what head you put the increase by reason of exchange, whether you attribute it to voluntary or to automatic causes, does it?—It would not make any difference.

13,756. It really resolves itself into a question of policy in the first instance, and the rest is mere account keeping; is not that so?—It makes a great difference. If the Government of India think it necessary to plead exchange, it is necessary that that plea should be perfectly valid right throughout.

13,757. (*Sir James Peile.*) But if the rupee had not fallen there never would have been any compensation allowance at all?—That, I presume, would be so.

13,758. Then the compensation allowance is entirely due to the exchange and nothing else. It is not to carry out any measure of the Government of India of an administrative kind; it is simply to fill the gap caused by the fall in the rupee?—It is due to it, but not necessarily due to it.

13,759. Certainly, as a matter of policy, it is necessary to fill up that loss?—If they have got to pay interest on the debt and the rupee falls, the increase in the interest is necessary because of the fall in the rupee, but where they had not before exchange compensation allowance, if they impose it because of the fall of the rupee, it is true it is due to it but not necessarily due to it.

13,760. The Government of India consider that it is necessary; you get there to a question of policy?—Quite so; then, as I say, it is an increase of expenditure to be defended as such, not to be put down merely as the operation of exchange. That was my point.

13,761. I do not see that in the accounts it is any use making a distinction?—I do not suggest that you can make a distinction in the accounts; I am only suggesting that the explanation given by the Government of India as to their difficulties being entirely due to the operation of exchange is not absolutely correct.

13,762. I think it is, decidedly.

13,763. (*Mr. Courtney.*) You want to bring out the point of difference between what is within the discretion and what is not within the discretion of the Government of India?—Quite so; yes.

13,764. Although the distinction may be influenced by circumstances that they could not as reasonable people avoid observing and complying with?—Quite so.

Mr. H. Morgan-Browne.

27 Jan. 1897.

13,765. For instance, if they engaged to pay a man 100*l.* sterling, the additional number of rupees they may have to pay him in India is not within their discretion?—Quite so.

13,766. But if they engage to pay the same man 1,000 rupees, it is within their discretion whether they increase it or not?—Entirely.

13,767. Although their discretion may be influenced by such circumstances as a reasonable man could not fail to observe?—Of course.

13,768. (*Chairman.*) You are admitting the plea of the Government of India that a great part of the increase of expenditure is due to the fall of exchange, and is automatic, but you want them to amend their plea by noting also those items which you contend are in the discretion of the Government?—Quite so.

13,769. It is not a question of altering the account, it is a question of the correctness of their plea that a large part of the increase is due to fall in exchange?—Entirely.

13,770. (*Sir William Wedderburn.*) That is as regards the compensation allowance—that is to say, as regards the Army it is the case that as to the charges for men your argument does not apply?—Except in so far as the increase of the Army in 1886, or 1885, added to the sterling pay of the British troops. That is purely a question of policy.

13,771. (*Sir Andrew Scoble.*) That is policy again?—Quite so.

13,772. (*Sir Ralph Knox.*) But the argument is different as regards the officers from what it is as regards the men?—Quite so, because I understand the contract with them is to pay them in sterling.

13,773. (*Chairman.*) You are not questioning the policy; you only want to make a distinction between the two classes of Indian expenditure—that over which the Indian Government have no control, and that over which they may have control?—Quite so.

13,774. You do not condemn them for that policy?—I am not questioning the policy in one form or another.

13,775-6. (*Sir James Peile.*) I should like to put it in this way: that the exchange compensation was not automatic, but it also was not avoidable?—That is a question of policy, which I am not discussing.

13,777. (*Sir William Wedderburn.*) What was exactly the plea—was it not that the financial difficulties were entirely due to exchange. What was the exact plea that the Government of India put forward?—I think it will be found in Note No. 1. I have quoted there from Mr. Westland. Mr. Westland at that time stated in his speech, on the introduction of the Tariff Bill in the Viceroy's Council on the 1st of March last—that would be in 1894——

13,778. (*Chairman.*) Are you reading from Note No. 1?—Note No. 1. It is the first paragraph. I merely quote—"he attributed the estimated deficit of "Rx. 3,500,000 on the Indian Budget for 1894-5 to "'one cause, and one alone,' namely, Exchange. More "particularly he stated that 'the fall in the value of "'the rupee has of late been increasing the burden "'of our sterling payments in a ratio which far out-"'strips any possible increase to be hoped for in our "'revenues.'"

13,779. And your note comments upon that statement by saying, "It appears, therefore, that the Government "of India, speaking by its Finance Minister, maintains "that loss by exchange is the sole cause of the present "financial difficulty"?—Yes.

13,780. (*Mr. Mowbray.*) Is that a quotation?—Part of it was a quotation.

13,781. "One cause, and one alone"?—That was a quotation.

13,782. That relates to the estimated deficit in that particular Budget?—It was so on that occasion, clearly he was speaking to one Budget.

13,783. (*Sir Andrew Scoble.*) What year was that?—That was in 1894—the 1st of March 1894; but, of course, that is one isolated instance. Nearly every year for the last five or six years Indian Finance Ministers have made the same plea, that exchange, and exchange alone, is the cause of their financial difficulties.

13,784. (*Sir William Wedderburn.*) And I think that plea has also been regularly put forward in Parliament at the time of the Indian Budget statement?—As far as my experience goes, that is so.

13,785. The British Committee of the Indian National Congress have brought this point to the notice of the Secretary of State formally without these arguments being recognised or replied to, as far as you are aware?—Yes.

13,786. Will you look at paragraph 19 and explain the object for which Table 3 has been prepared?—This table was prepared to show how the separation of exchange into different classes would affect the matter. Table 3 at page 10 of Note No. 2 breaks up the increase in the expenditure of the Government of India between the years 1888-89 and 1895-96 in the following manner. It divides the expenditure into civil and military expenditure, including thereunder collection of revenue, civil departments, miscellaneous charges, and civil works, and the army services and military works in one block of expenditure, and in the other block it places all other expenditure of the Government of India—the Debt Services, the Commercial services, the Special Services, Special Defence, and change from provincial surplus to deficit. The result is this: that during those seven years in the expenditure on civil and military services, the total increase, excluding exchange in any shape or form, was Rx. 5,429,000, and in "other expenditure" there was a corresponding decrease of Rx. 5,771,000. In the cost of exchange on the first half there was an increase of 2¼ millions due to the fall in the exchange value of the rupee, and Rx. 654,000 due to the sterling pay of the British troops. Exchange compensation allowance cost Rx. 1,300,000, and the increase due to an increase of 1,000,000*l.* in the sterling charges during those seven years is Rx. 848,000. Therefore the total increase in civil and military expenditure in any way due to exchange was five millions, bringing up the total increase in that portion of the expenditure to 10½ millions. Then on the other hand, in the other portions of expenditure there was a total increase of exchange under these three heads of Rx. 3,365,000 against which there were savings of 5¾ millions, so that in spite of that heavy cost of exchange on all the other branches of expenditure there was a net saving, a net improvement on the financial position, of Rx. 2,406,000, and that being set off against the heavy increase of Rx. 10,473,000 produced a net increase in all expenditure of Rx. 8,067,000, as shown in Table 3. The further object of this division was to show that under certain heads of expenditure, either by good management, by economical control, or by good fortune, or by some savings, for instance, in reducing the Famine Insurance Fund, there were made sufficient savings in expenditure to more than cover the cost of exchange; therefore reducing the real burden of the increased cost of exchange to that which fell upon the civil and military expenditure of the Government.

13,787. Therefore, in certain departments, they were able to meet the fall of exchange, the loss by exchange, while in other departments they not only failed to meet in their own departments the loss by exchange, but they consumed the savings of the other departments and the whole of the increase of revenue that had accrued during the period?—That is so, including additional taxation; and the increase in expenditure in those other departments was greater than the increase due to exchange.

13,788. (*Sir Andrew Scoble.*) I should like to ask you about that table. Column 7 shows that the total increase attributable to exchange was Rx. 8,409,000, does not it?—Yes.

13,789. The total increase, excluding exchange, was a saving of Rx. 342,000. This is Column 3, is not it?—Yes.

13,790. But taking the total increase, including exchange, the total increase shown in Column 8, Rx. 8,067,000, is somewhat less than the increase attributable to exchange on the whole transactions?—Yes.

13,791. Then exchange really accounts for the whole of the increase and rather more, does not it?—That depends entirely how you look at it.

13,792. But I mean on your table?—It is merely a question of which figures you set off against the others.

13,793. Well, setting off column 8 against colume 7?—Yes, if you take those two columns, each nearly equals the other column; it rather exceeds the total increase brought about in the way the table shows.

13,794. Well, that rather confirms the view that Sir James Westland expressed in the passage that you quote, does not it?—I think not.

13,795. Why not?—I think not, for the reasons that I have given—that in the 8 millions total increase is included a total increase of 5½ millions apart from exchange besides the 8½ millions due to exchange, and that you cannot say that the whole of that 8 millions is due to the exchange part, and that none of the 5½ millions apart from exchange has gone to make up that final total, that is, the resultant total, and really Columns 7 and 8 cannot be set off one against the other; they are both resultant totals.

13,796. That is your view?—That is my view; yes.

13,796*a*. (*Mr. Courtney.*) Any straw is the last straw?—That is so; yes.

13,797. (*Sir William Wedderburn.*) Then in paragraphs 21 and 22 I think you summarise the position of loss by exchange in the expenditure, and you contend that loss by exchange has long ceased to be an uncertain element in Indian Finance, and it ought to be provided for with as much foresight as any other necessary charge of the Government of India?—Yes, more than 10 years ago the cost of exchange had become so serious that the Government of India recast all their accounts in order to show the operations of exchange.

13,798. So that it should not be regarded each year as a sort of unexpected calamity that befalls the Indian Government, and which is to be made an excuse for everything that is wrong in the Indian accounts?—I should imagine that by this time it must be expected.

13,799. (*Sir Andrew Scoble.*) Do not you find it anticipated and provided for in every annual Budget?—Yes, it is anticipated.

13,800. And provided for?—And provided for.

13,801. (*Sir James Peile.*) But naturally deplored?—Deplored, and even that there is no objection to; but it is made the excuse for all the increases.

13,802. Why do you say "made the excuse"?—The plea is that it is only the exchange which causes the increase of expenditure.

13,803. I do not call that an excuse, do you—it is a fact?—Well, perhaps "excuse" is an unfortunate word; it is the plea that is put forward.

13,804. I do not agree with "plea" either—I should say "explanation."

13,805. (*Sir William Wedderburn.*) From these facts and figures that you have brought forward you consider that certain propositions have been established: will you read the first of those propositions in case any objection is raised?—"During the seven years from "1888-89 to 1895-96 the expenditure on the civil and "military services alone has increased by Rx. 5,429,034, "quite apart from any increase due to exchange; and "if we add the Rx. 848,769 due to exchange on "the increased sterling charges, which is an increase "within the control of the Government of India, we "find that the increase on the services amounts to the "enormous total of Rx. 6,277,803, besides Rx. 4,195,628, "which may be said to be due to the fall in exchange."

13,806. To the automatic fall in exchange you mean?—Quite so, including, of course, the sterling pay of the British troops—that we had included in there—and exchange compensation allowance.

13,807. And you consider that this is a deduction partly from this No. 2 Note, and also from your memorandum of expenditure?—No, this is entirely from No. 2 Note, because this was anterior to the other.

13,808. (*Sir Andrew Scoble.*) You do not intend to suggest, in stating that proposition, that this expenditure has been unnecessary or extravagant?—I do not intend to suggest anything of the kind; I am only stating the fact that it has been so.

13,809. (*Sir William Wedderburn.*) Proposition No. 2?—"While the expenditure on the civil and military "services has been increasing by about Rx. 6,000,000 "(leaving out of account the increases in the cost of "collection of the opium and customs revenue) other "expenditure, apart from the question of exchange, "has decreased to the extent of about Rx. 5,750,000."

13,810. (*Sir Andrew Scoble.*) Those are the figures contained under heading B. of your Table 3, are they not?—Yes, the "other expenditure."

13,811. (*Chairman.*) They appear in Column 3?—They appear in Column 3, both sets of figures.

13,812. (*Sir William Wedderburn.*) When you say that you do not express any opinion upon the necessity of the expenditure, you do not mean to say that you approve of it; you mean to say that that question is not relevant to your present evidence, which is purely financial?—Entirely so.

13,813. Proposition 3 then?—"In civil and military "expenditure we find, instead of economies to meet "the heavy burden of Rx. 4,195,628, due to the fall in "exchange, Rx. 6,277,803 of additional expenditure—"in other words, for every rupee of additional burden "entailed by the fall in exchange, the services add "another rupee and a half on their own account."

13,814. (*Mr. Courtney.*) Is not there some suggestion of blame there; do not you go beyond a mere arithmetical statement?—There, undoubtedly, may be a suggestion of blame, but I am now attempting to say what the figures point out, and the statement there is strictly accurate on the figures.

13,815. But a pure arithmetician might state it differently?—It might have been stated in other words, of course.

13,816. (*Mr. Mowbray.*) From which column do you get your figure Rx. 6,277,000?—Column 3 and this added together.

13,817. Then, in fact, that figure includes an item which the Indian Government put down to fall in exchange?—Yes, it includes the increase in the cost of exchange due to the increase in the sterling charges.

13,818. And your reason for not allowing that to be a matter of exchange is that the Indian Government, as you say, voluntarily incurred a sterling charge, and ought to have foreseen the increase which would result from the fall in exchange?—Yes, it ought to have been classed as an increase of expenditure, pure and simple, and not as an increase due to exchange.

13,819. They ought to have foreseen the fall of exchange?—Not necessarily from the point of view of avoiding it, but, if it were necessary to make it, it should have been called an increase of expenditure, and not an increase due to the fall of exchange.

13,820. But, it seems to me, the increase would not have taken place unless the rate had fallen?—Undoubtedly some of it would, because it was due to increased sterling charges.

13,821. And therefore the question always is how far the Indian Government ought to have refrained from an expenditure which they considered necessary, because it might probably involve a further loss by exchange owing to a further fall in the rupee?—But I think I ought to point out that this increase of exchange, due to the increase of sterling charges, does not include the difference merely between the exchange of Rs. 12 to the £, and Rs. 17 to the £, but it includes, for additional sterling charges, the difference between Rs. 12 and Rs. 10; it includes that as well as the additional increase due to the further fall; therefore, in no sense can it be entirely put down to the fall in exchange.

13,822. (*Chairman.*) You look upon it as an integral part of this expenditure?—Entirely so.

13,823. Inasmuch as experience has shown that the fall in exchange is practically permanent, therefore this extra charge ought to fall into the estimate that the Indian Government made of the cost involved in this new service?—Quite so.

13,824. (*Mr. Mowbray.*) But some of that Rx. 848,000 is due to the fall between 1889 and 1895?—Undoubtedly so.

13,825. (*Sir Andrew Scoble.*) I should just like to ask you, what do you mean by "the services" in that paragraph—you say "the services added another rupee and "a half on their own account"?—I mean the whole civil and military services of the Government.

13,826. Not the civil and military services as individuals, but the whole cost of the Government?—Quite so.

13,827. Is not that rather an invidious way of putting it—"the services on their own account"—do not you think now, on reflection, that is rather an invidious way of putting it?—Well, naturally, I cannot say "Yes" to that, because otherwise I should not have put it so if I had thought that it was an invidious way of putting it.

13,828. At the same time you cannot say "No"?—It seems to me that it is a matter of expression.

Mr. H. Morgan-Browne.

27 Jan. 1897.

13,829. (*Mr. Courtney.*) Sir Andrew asked you whether you could not on reflection?—I could xpress it differently, but I do not know that I should wish to express it differently.

13,830. (*Chairman.*) You would not wish to express it in any way so as to imply a reflection, since you are not making a reflection—therefore, if your readers take it as a reflection, when you learned that that was the case, you would not mind reconsidering the method of wording?—Quite so. I do not mean to express there any invidious reflection on members of the two services; and, indeed, if that is what Sir Andrew Scoble means, I am willing to modify it.

13,831. (*Sir Andrew Scoble.*) I mean that instead of saying that the cost of the Government has increased by another rupee and a half, you say "the services "have added another rupee and a half on their own "account," that seems rather to point to the services as individuals, and not to the Government as an administrative machine?—Well, if that is so, I should, on reflection, like to express it differently—to express it clearly that it is the cost of government.

13,832. (*Sir William Wedderburn.*) I remember the circumstances under which these headings were selected. Was not it purely for the object of distinguishing one portion of the civil and military expenditure from certain other portions?—That was so; there was a certain limit to the number of words that could be used, and it was sometimes rather difficult to employ words which should not create confusion, and therefore on an occasion like that I employed "services" to indicate all those headings—civil and military expenditure, collection of revenue—every department—everything to do with the administrative service of the Government.

13,833. But did not you do your best to follow the expressions and terms used in the official documents, in order to make your figures exactly correspond with those in the official documents?—I think I may say I did.

13,834. (*Sir Ralph Knox.*) The charges that you would criticise more particularly would be the increase due to increase in sterling charges—is not that so? That is to say, the Rx. 848,769, and perhaps some portion of that which is included in column 5—the exchange compensation allowance. Is not it so?—I am only criticising it in reference to its inclusion by the Government of India as a charge entirely due to exchange.

13,835. Quite so, but those are the two items—the whole of column 6 and a portion of column 5?—Yes, the (a)'s of column 5.

13,836. As regards the other column, 4, and a considerable portion of column 5?—Well, the (b)'s of column 5—Rx. 654,000.

13,837. Quite so—you would admit that those were automatic and due entirely to the fall in exchange?—Entirely, absolutely, yes.

13,838. (*Sir William Wedderburn.*) Then Proposition 4?—"In other expenditure we find the heavy burden "of Rx. 3,309,692, due to the fall in exchange, com-"pletely wiped out by reduced charges or increased "profits amounting in the aggregate to Rx. 5,715,802 "(*i.e.*, Rx. 5,771,463—Rx. 55,661), leaving expenditure "less, in spite of exchange, by Rx. 2,406,110—in other "words, every rupee of additional burden entailed by "the fall in exchange is met by a saving of a rupee "and three-quarters."

13,839. You do not wish to pay a compliment to those "others," any more than you wanted to cast a slur upon the services; you only wish to state what you believe to be the actual fact?—Just so; because, as a matter of fact, I believe some economies were arrived at by reducing the expenditure on famine insurance.

13,840. (*Sir Ralph Knox.*) Conversion of debt helped?—Conversion of debt helped, and the change from a provincial surplus to a provincial deficit helped very largely.

13,841. (*Mr. Mowbray.*) What is the heading "Special Defence" under the other expenditure?—Those were the special defence works.

13,842. And why do you include them in the "other expenditure" rather than in the military expenditure?—I think I was following the division made by Sir Henry Fowler in his tables there. If I were to make this table again I should take that out and put it in "Military Service" certainly.

13,843. (*Sir Ralph Knox.*) But, however, is there any reason why the conversion of debt or the saving due to the conversion of debt should be set off against that particular class of service any more than against the other class?—Of course, the division of the table is arbitrary—that is admitted—it was to show the actual administrative cost of government, the civil and military service of government, as opposed to the other forms of government.

13,844. (*Chairman.*) Is not your table divided into two very intelligible divisions, namely, the 1, 3, and 4 (A), services in which there has been an increase, and the services called (B), which show a decrease?—Yes.

13,845. And you have collected the increases together on the one side and the decreases on the other?—Practically that is what I have done.

13,846. (*Sir Andrew Scoble.*) Would you tell me why, in this fourth paragraph, you take the item of Rx. 3,309,692 as the amount due to the fall in exchange; how do you arrive at that?—That is columns 4 and 5—exactly Rx. 3,309,692.

13,847. (*Sir William Wedderburn.*) Then Proposition 5?—"The enormous increase in seven years of nearly "10½ millions Rx. in civil and military expenditure (of "which about two-fifths can be said to be due to the "fall in exchange) has (i.) consumed all the natural "increase in the revenues of about Rx. 5,000,000; (ii.) "used up all the decrease in other expenditure of "about Rx. 2,500,000 (obtained after paying for "Rx. 3,300,000 due to exchange, partly by reduction "of charges, partly by increase of profits, partly by "starving useful and reproductive services, and partly "by meeting the expenditure of the year out of past "savings); and (iii.) further necessitated the imposi-"tion of fresh taxation to the extent of Rx. 3,000,000 "as shown by the following figures:—

	Rx.		Rx.	Rx.
Increase in civil and military expenditure.	6,250*	Increase in revenue.	- -	5,000
Add—Exchange	4,250	Decrease in expenditure.	5,750	
		Deduct — Increase in exchange.	3,250	
		Net decrease in expenditure.	- -	2,500
		New taxation -	- -	3,000
Total -	10,500	Total -	-	10,500

* 000 omitted."

13,848. (*Sir Andrew Scoble.*) There you go beyond the arithmetician into the politician, do you not?—There I was simply translating or adopting a phrase used, or a series of phrases used, by Sir James Westland himself in one of his financial statements, or rather, his speeches at the Council, in which he complained that the loss by exchange—he gave it a different cause—was compelling them to starve useful and reproductive expenditure.

13,849. Yes, but still this is rather a political paragraph; this is not merely arithmetical?—Well, as I say, I was taking there what, so to speak, has been admitted by the Government of India.

13,850. And using it *alio intuitu* from the speaker?—Well, I was simply giving a different reason. The facts are admitted; the facts are the same; he gave a different reason for it.

13,851. (*Sir William Wedderburn.*) This note, I think, is headed—"Note on Sir James Westland's Budget"?—Quite so; naturally it is somewhat controversial in points.

13,852. (*Chairman.*) There is one rather controversial sentence in it—"partly by starving useful and repro-"ductive services." That is rather to the prejudice of the administration of the service which, I think you have told us, was not your intention. You wish to call attention to the facts without implying a reflection. This does rather imply a reflection?—Perhaps it does. It really is the same thing as was said by Sir James Westland in his speech in the Council, only he gives the reason that it was the fall in exchange

that has done it; that they were compelled to starve the services.

13,853. Therefore, in using that phrase, you are only really reproducing what the Indian Finance Minister himself has said?—Yes.

13,854. (*Sir Andrew Scoble.*) In another connexion?—Well, I am giving one reason for the starving and he gave another.

13,855. Yes. Then you can scarcely say you are quoting him there?—I am not alleging that I am quoting him.

13,856. But that is your explanation, that you are quoting him, but in a different sense to which he used the words?—I am making use of facts which are admitted.

13,857. (*Sir William Wedderburn.*) These notes, I think, were not prepared specially for the Commission?—That is so.

13,858. They were prepared upon Sir James Westland's Budget, and therefore it is to a certain extent accidental that they come within the circle of reference to the present Commission?—Yes.

13,859. But you were not preparing the wording in view of the limitations of reference?—No, that is quite true. I do not mind saying that if I had been preparing it for the Commission, doubtless, I could have put it in a different form, and in some way, perhaps, have represented it differently. This was written as purely a criticism on Sir James Westland's Budget of 1895–96.

13,860. And as regards what I think has been said with regard to the expenditure being justifiable or otherwise, you do not in any way wish to infer that that expenditure may not be both useful and good in itself. You wish only to see that that expenditure is referred to its right financial heading; that is what your object is?—Entirely so.

13,861. And it may be, and probably is, useful and proper, but it has to be justified from another point of view?—Quite so. Obviously, any Government can spend a great deal more than it does on useful objects, but it all becomes a question of ways and means, how far they can give way to their desire to promote those useful objects.

13,862. I think that concludes your memorandum. You were present, I think, when Sir Henry Waterfield gave his evidence?—Part of the time; at any rate, while he gave his evidence on those tables which he had prepared.

13,863–5. He gave his evidence on certain tables that we have put in?—Yes.

13,866–9. Would you like to make one or two brief remarks with regard to Sir Henry Waterfield's evidence upon the memorandum, and his last evidence upon our memorandum when I examined him?—There was one point raised in paragraph 3 of the note on Sir Henry Waterfield's table, dated India Office, 26th of June 1895—the date of the note upon those tables was the 12th of August 1895. I think it is Appendix 10?—Yes. It follows Sir Henry Waterfield's tables. And if you will turn to questions to Sir Henry Waterfield, 12,059 to 12,062, I think they are in reference to paragraph 3 of this note, where it was pointed out that the division between Imperial and provincial expenditure was on the whole an economical one, but that it failed in this—that it encouraged to some extent expenditure by the provincial governments without weighting them with a corresponding increase in the cost of exchange. Sir Henry Waterfield seemed to think that any possible increase in exchange which could fall upon them would be of very small amount as they had very little control over questions of pension and superannuation allowance, and that it was only in regard to the Civil Service that much increase of exchange takes place. I would only suggest in that connexion this: that, as I understand that division, a certain proportion of the cost of officers of Government is thrown upon the provincial service. That, for instance—here I give an instance in connexion with the contract of the Government of Bengal—three-fourths of the cost of collecting the stamp revenue of Bengal was assigned to the provincial government. I believe that means that three-fourths of a certain proportion of the salaries of those officers—the proportion in connexion with their work of revenue collecting—is there thrown upon the provincial governments, and my suggestion would be—Why is not the proportion of superannuation allowance, of pension belonging to that proportion of salary, also thrown upon the provincial governments, not merely in regard to possible increases in the future, but right from the beginning, so that the provincial governments may have the proportion of exchange falling upon them, as in fact they now have in the matter of exchange compensation allowance, and that when there was a heavy fall in exchange the provincial governments would have to meet it, that is, before they could look to increasing any other expenditure? That would be what I wanted to suggest in answer to what Sir Henry Waterfield said there.

13,870. (*Sir James Peile.*) They would have had to have an increased allotment from Imperial funds to meet that?—Probably at the start that would have to be so; the benefit would be that in the future the Imperial Government would not have quite so heavy an account to reckon with in the variations in exchange.

13,871. (*Chairman.*) I see that Sir Henry Waterfield seems to think that if a change was made in that direction, it would not be a material one. Do you agree to that statement of his, or do you think it would be material?—Well, I think I am taking it from rather a different point of view. I think Sir Henry Waterfield in that answer meant that if the actual increase of exchange was due to any increase of establishment from this date, that that would be a small amount; but I am suggesting that the exchange already existing on the existing establishment should be allotted more to the provincial governments. That would in the first instance be a serious amount I admit, and might come up on a revision of contract, but subsequently it would have the advantage of relieving the Imperial Government of a great deal of this cost of increase of exchange, and would compel the local governments to have the same regard to economy in respect of the fall on exchange as is now forced upon the consideration of the Imperial Government.

13,872. When you say the revision of contract you mean the revision of contract between the Imperial Government and the provincial governments, which takes place periodically?—Yes.

13,873. (*Sir Ralph Knox.*) But are the normal superannuation charges debited against the provincial governments now?—I believe not.

13,874. But you would throw them against the provincial governments, and also with the exchange compensation allowance?—The exchange compensation allowance is thrown upon them now—a proportion of it.

13,875. I mean the charge arising from the depreciation of the rupee due to the payment of this superannuation; would you throw both the charge for superannuation and also the additional charge due to the fall of the rupee against the provincial governments?—A proportion of it; the same proportion of it as they are charged in the contract.

13,876. But neither as regards the superannuation charge nor the expense of the fall of the rupee are now at present charged against them?—I believe not.

13,877. (*Sir William Wedderburn.*) Since preparing these different memoranda you became aware that you were to become a witness before this Commission?—Yes.

13,878. And I think I suggested to you that you should put in a number of headings, points which you proposed to establish, and you did so after making a more extended examination of the figures; and I think these headings, which have been circulated to the Commission, are a result of an examination over a longer period—20 years?—That is so.

13,879. (*Chairman.*) May I ask is that memorandum based upon Sir Henry Waterfield's tables, and so far as it goes, upon Sir Henry Waterfield's evidence, or upon Sir James Westland's?—This was an entirely independent inquiry, if I may say so; it was not based upon either.

13,880. You did not take Sir Henry Waterfield's tables as the basis of your figures?—No.

13,881. They were your own figures?—These were my own figures, that is so. This summary for 1895–96 in Note 2, which I made of the expenditure, explaining how I made it in the appendix, was based largely on the net tables in Sir Henry Fowler's returns, and is identical with the one for that year in this table, and all the other 19 years or 20 years have simply been carried out upon the same principle. They practically very nearly

Mr. H. Morgan-Browne.

27 Jan. 1897.

coincide with the net figures published in the return of Sir Henry Fowler.

13,882. Am I right in thinking that, assuming your basis, you and Sir Henry Waterfield agree as to the figures?—Well, I do not know that I ought to go so far as that; I saw Sir Henry Waterfield several times; he did not formally agree then.

13,883. I want to know whether there was any difference between you in the figures, assuming your basis?—I do not think there was, but I would not like to say.

13,884. I asked you the question because I was aware that you had seen Sir Henry Waterfield?—Yes, I have seen him several times; I have never had any real disagreement with him about the figures.

13,885. That does not imply that he can accept your figures?—No, not at all; there has been no formal agreement whatever about the figures.

13,886. (*Sir William Wedderburn.*) Would you read what I might say is your matured proposition, at least the proposition from the further examination of these 20 years?—That during the last 20 years the increase of net expenditure upon the civil and military services, apart from exchange, has far exceeded any increase in the cost of these services caused by the fall in exchange; while the additional cost of exchange accruing under other heads of net expenditure has been more than met by decreased expenditure under these other heads. The following is a summary of the figures:—

	Rx.	Rx.
Increase in civil and military services - - -	13,150,000	
Add increase in cost of exchange - - -	7,750,000	
Total increase -		20,900,000
Decrease in other expenditure - - -	8,600,000	
Deduct increase in cost of exchange - - - -	6,600,000	
Total decrease -		2,000,000
Net total increase -		Rx. 18,900,000

13,887. (*Chairman.*) That includes the total expenditure here in India and at home, I suppose?—That includes the total expenditure.

13,888. (*Sir James Peile.*) Sir Henry Waterfield merely puts the same figures in a different order, as I understand?—That is all it comes to; he has divided it between the Imperial and provincial.

13,889. I do not mean that quite. But, taking those figures that you have just given us, he has given us here, in his Table 33 the same sums in a different order?—Is that Sir Henry Waterfield's Table 2?

13,890. Table 33; at the end of his tables?—Oh, I see, that summary.

13,891. He made it expressly to reconcile, as it were, his figures and yours?—Yes, I see.

13,892. He gives the total increase of expenditure in the 20 years, excluding exchange, 4,542,000?—Yes, that would be so.

13,893. And then he puts the whole of the exchange, 14,352,000, making a total of 18,894,000?—Yes, that would agree.

13,894. That total, of course, does not differ from the figures in his other tables?—No.

13,895. Although it is arrived at by a different arrangement which you cannot exactly compare?—Quite so.

13,896. I understood from him that he does not differ from you at all?—I believe that that is so. As I say, we have had no formal agreement, but my own impression is that Sir Henry Waterfield does not dispute any of my figures.

13,897. It is merely a difference in the way of putting it. It seems to me a more reasonable course to deduct the decrease in "other expenditure" from the increase in the civil and military services, and to treat the exchange as quite a distinct thing, than to adopt your arrangement; but of course that is a matter of opinion?—My point was only to show that under some heads exchange had not been the burden or had been met under other heads. The increase of expenditure had given no chance of meeting it.

13,898. But the great point is that there is no essential difference in the figures between you and Sir Henry Waterfield?—Quite so.

13,899. (*Chairman.*) That is, I think, the point that I put to you, that in the figures you and Sir Henry Waterfield are practically agreed?—Yes, I believe we are.

13,900. (*Sir Edward Hamilton.*) I do not quite follow. How do these two figures tally, 7,750 and 7,600; I do not see how they are worked up. One is called the increased cost of exchange; they are both that—increase in cost of exchange. I do not see how they are worked up differently?—I have divided the cost of exchange.

13,901. It follows the same calculation as in your papers?—Quite so.

13,902. (*Sir William Wedderburn.*) Then the second proposition?—Taking 1884–85 as a middle year and altogether excluding expenditure due to exchange, the increase in civil and military expenditure in 1895–96 over that in 1884–85 was more than double the increase in such expenditure in 1884–85 over that in 1875–76. The following is a summary of the facts:—From 1875–76 to 1884–85 there was an increase in total net expenditure (excluding exchange altogether) of Rx. 3,000,000; from 1884–85 to 1895–96 the increase is Rx. 1,550,000 The increase of Rx. 3,000,000 during the former period is made up of an increase of Rx. 4,200,000 under the heads of civil and military services (including collection of revenue) and a decrease of Rx. 1,200,000 under other heads of expenditure; while the increase of Rx. 1,550,000 during the more recent period is made up of an increase of Rx. 8,950,000 in civil and military expenditure and a decrease of Rx. 7,400,000 in other expenditure. I have prepared a chart just to show more clearly, perhaps, than the figures can convey what I mean by the statement. This chart shows six lines. The black lines in each case indicate the total expenditure. The dotted lines indicate that expenditure, excluding exchange. The black lines give the expenditure year by year; the dotted lines only give it for three periods—the beginning of the 20 years, the middle year 1884–85, and the end. It will be seen that the total expenditure—the main purpose of it is to show the different rates of rise in the curves for the two periods, taking the first period ending with 1884–85 and the second period ending 1895–96.

13,903. (*Chairman.*) Perhaps, as there is only one copy, you could describe to the Commission what the results of the dotted line periods is?—Taking the total expenditure during the 20 years it went up from 46½ millions to 65¼ millions.

13,904. But there was a variation, I think, there; some years it rose to a higher point?—One year, In 1881, when there was the Afghan war, the expenditure rose very high temporarily, and then dropped, and then it went up again. There was a series of ups-and-downs, gradually rising. The greatest period of increase has been from 1891 to 1896.

13,905. Even though in the previous period the Afghan war expenditure is included?—Yes. In 1876 the expenditure was 46½ millions. In 1878 it was 52 millions, in 1879 it dropped to under 50 millions; and then it went up in 1881 to 56¾ millions, the year of the Afghan war; then it dropped the next year to just over 50 millions, and it kept for those three years, 1882–3–4, at just over 50 millions.

13,906. Well, now comes in your first dotted line, does it not?—Yes.

13,907. Will you give the result of the dotted line?—The result of the dotted line—where the exchange is excluded—is that in 1876 the expenditure was 45 millions; in 1884–85 it had gone up to 48 millions, and in 1895–96 it was still under 50 millions—it was 49½.

13,908. Will you put in that chart?—Yes. [*Chart put in.*]* Then comes the relation which the civil and military expenditure bears to the total expenditure, and here again I will take the dotted line, excluding exchange altogether. During the first period, from 1876 to 1885, the civil and military expenditure went up from 30¾ millions to 33¾ millions corresponding, more or less accurately, with the rise in the total expenditure from 45 millions to 48 millions. Then, in the second period, from 1884–85 to 1895–96, while the total expenditure, excluding exchange, was increasing from 48 millions to 49½ millions, only by 1½ millions, the civil and military expenditure was increasing from 33 millions to 40¾ millions. That shows the difference

* *See* Appendix No. 68.

in the two. [*Exhibiting chart.*] The curve of the civil and military expenditure is a much steeper curve than that for the total expenditure during the last 10 years, and again the same can be shown in the military expenditure taken separately; there again the curve during the last period is much steeper than the curve for the total expenditure.

13,909. (*Sir Ralph Knox.*) All your figures appear practically to be stated in the table which has been alluded to furnished by Sir Henry Waterfield. In Table 23 he says that between 1875–76 and 1884–85 there is an increase of 5,000,000, and between 1884–85 and 1895–96 there is an increase of 13,700,000, and comparing the original year 1875–76 with 1895–96, the increase as you have stated before was 18,900,000. It is brought out in that table completely. It omits the intervening years, but it takes the three periods, and I have been following it with your figures. It is precisely what you have stated?—Yes.

13,910. (*Mr. Mowbray.*) I think all those figures are exactly the same as the figures in your Table 3 of this memorandum; the details you give there exactly correspond with those?—Those for 1895–96 would be the same in both documents.

13,911. Yes, but the differences between these years which you have been referring to?—No; I think not.

13,912. If you look at your Table 3?—Table 3 in which?

13,913. In the memorandum on Indian financial expenditure, page 16?—Those are the same as——

13,914. Those are the same as the figures in Sir Henry Waterfield's Table 33?—Oh! doubtless. I think that was simply a copy of this; I think Sir Henry Waterfield adopted it.

13,915. I understood he had worked it out on a different basis, but had arrived at the same conclusion?—No, I think not.

13,916. (*Chairman.*) They are the same figures, but you and he state them in rather a different form?—I think that is it.

13,917. I think the remarkable point in your statement of the more recent period is that this very heavy increase of very nearly 9,000,000 in civil and military expenditure is really reduced to a comparatively small sum by the very large decrease in other expenditure. Are there any remarks upon that which you would wish to place before the Commission?—Well, I have prepared a table. Is that dealing with the 20 years?

13,918. I am dealing with the periods of which you are now speaking—of the 20 years—and you divide that 20 years into two periods?—Oh, yes.

13,919. On the first period you say that though there is an increase of Rx. 3,000,000, thus made up—Rx. 4,200,000 in the civil and military services compensated by a decrease of Rx. 1,200,000 under other heads?—Yes.

13,920. And then you come to what you call the more recent period, and state that the increase on civil and military services is Rx. 8,950,000; while on the other hand there is a decrease of Rx. 7,400,000?—Yes.

13,921. That, of course, is a very notable decrease, and I wish to call your attention to it, in case you would like to make any remarks upon that very large increase?—I have tried to express it here by means of a chart showing the normal line in the middle, and showing lines going up for increase of expenditure, and lines going down for decrease of expenditure. All above the line is civil and military expenditure, and all below the line is the other expenditure of government, and there I have shown that the line of increase goes up almost at the same angle as the line of decrease goes down, as those figures would show. In addition to the angle line of increase there is a further increase for exchange, bringing, as a resultant of those two lines, a still sharper line of increase, showing the total increase in civil and military expenditure at Rx. 15,640,000 from that year 1884–85 to 1895–96. Then below the normal line there is the line of decrease in other expenditure, excluding exchange, brought up again by the increase in exchange, though still below the normal, because the line of decrease is more than the increase due to exchange, and producing a resultant line of decrease about Rx. 2,000,000—Rx. 1,905,000 below the normal. That is the chart which shows that. [*Chart No. II. put in.*]*

13,922. Now, I see from your table in the memorandum on Sir James Westland's Budget, on which the early part of your examination was based, that the other expenditure, which shows such a very large decrease, consists firstly of Rx. 1,600,000 on the debt?—Yes.

13,923. That is an economy, a repetition of which can hardly be expected in the future, can it?—Part of that economy is brought about by means which I confess I am not in a position to quite understand. There is an entry in the books "due to the transactions with the companies," the amount of debt is credited to the railway companies at a certain rate of interest, regardless of the rate of interest at which money may be raised. I am not intending to suggest in any way that the transaction is not a perfectly good and a very valuable transaction, but it is one I do not understand.

13,924. Naturally speaking, one is very much struck by the fact that the increase in the civil and military expenditure is very largely in excess in the last period compared with the increase in the previous period, the net effect, however, being that the increase is very much reduced by a large decrease of other expenditure, and my question addressed to you was directed to this point: If the increase in civil and military expenditure were to go on in the future at the rate of the recent increase, could we expect a corresponding decrease on other expenditure; and on looking down your Table 3 I see, for instance, that part of this very large increase is 1,600,000 Rx. on debt. Well, that is not an economy which we can look upon as renewable every seven years, is it?—I should say not.

13,925. I mean *primâ facie*?—Yes; quite so.

13,926. Then come commercial services, Rx. 2,666,000 Have you any remark to make upon that?—That, I should think, is likely to continue.

13,927. You think it is?—Because that is excluding exchange. The tendency, I think, would be for the commercial services to go on paying better and better every year.

13,928. And that you would attribute to the railways, for instance?—Yes; chiefly to the railways.

13,929. Bringing in a considerable annual sum to the Government?—The railway enterprise has always been a loss because of the exchange, but when you take away the exchange, the actual receipts of the railways in India will tend to increase largely, and will go on always forming an increasing asset. For instance, if by any change exchange should ever recover, the Government of India would have a very large sum at their disposal from the net revenue from their railways.

13,930. One other point—that special defence item (which, if you were remaking the tables, I understood you to say, you would class with army services and military works) has ceased now in that form, has it not?—That has ceased. It was because it was temporary that I put it here; it was not normal.

13,931. Of that large decrease of Rx. 7,398,000 on "other services," at all events, you would consider *primâ facie* that the economy on the commercial services would continue, but that we could hardly reckon on a similar decrease of the debt or a similar decrease on special defences, because that item has fallen out?—Quite so; and again, we could not reckon with advantage to the finances on a continuance of this large deficit, which changes a provincial surplus to a deficit; that is not an advantage.

13,932. Therefore in the future one must expect that any decrease upon "other expenditure," as you call it, would be very much reduced as compared with the figures shown upon the recent period?—Quite so; that can be partly shown by a table in the memorandum, a similar table dealing with the periods from 1875–76 to 1884–85— a similar period, because the same division was made. You see what happened there.

13,933. What page is that?—Page 18 of the Memorandum on Indian Financial Expenditure. There was only a decrease of Rx. 1,189,000 on those two branches of revenue. I think it answers in some way, as showing over another series of years the same effect. It is Table 5.

13,934. Appendix No. 10?—Appendix No. 11, Table No. 5. Tables 5 and 6 show what happened respectively in those two periods with regard to this "other expenditure."

13,935. It shows there that the service of the continuing economy, if I might so call it, is the commercial service?—Quite so.

* *See* Appendix No. 69.

Mr. H. Morgan-Browne.

27 Jan. 1897.

13,936. (*Mr. Courtney.*) What are the totals of the civil and military expenditure and the "other" expenditure at the commencement of the second period?—At the second period the civil and military expenditure, including the cost of the collection of revenue, came to 42½ millions. The total of civil and military expenditure including exchange or excluding exchange?

13,937. Excluding?—Excluding exchange 42½ millions.

13,938. And the other expenditure?—The other would be 5½ millions net; it is all net expenditure.

13,939. No, it must be more than that, because you have effected a greater reduction?—That is all it is, 5½ millions.

13,940 At the second period?—Yes, in 1884–85.

13,941. But you say you have saved Rx. 7,000,000?—Yes, but then this is it: in 1884–85 the civil and military expenditure, including cost of collection of revenue, was 42½ millions; other expenditure was 5½ millions. In 1895–96 the civil and military expenditure, including cost of collection of revenue, was 51½ millions, and the other expenditure was minus Rx. 2,000,000 That is where the difference comes in. I ought to say this: In the charts now put in I have only given civil and military expenditure in the ordinary way.

13,942. That will serve my purpose. Do you not think in that case you were wrong in stating that the same angles could be shown of increase and decrease?—No.

13,943. Have you not to bear in mind not only the amount of the addition, but the position from which it arises?—No; I have shown in both cases that there was a change of nearly Rx. 7,000,000 from the normal; that is to say, it varies from the plus side to the minus side of the line, but the total below the normal was a total expressible in the same way by a single curve as the total which was above the normal. The one was about Rx. 8,000,000 and the other was about Rx. 9,000,000, so the angles were about the same.

13,944. Surely in a true angle representative of the rate of increase which you are dealing with you ought to consider the basis from which you start?—Yes, I have; the basis is the normal in each case, and, therefore, the same whatever the totals may be; it is the normal I was starting from, not from any actual total.

13,945. (*Sir William Wedderburn.*) With reference to the Chairman's question as regards the future prospect of these same savings in Table 3, which is change from provincial surplus to deficit, that represented the Imperial Government drawing from the balances of the local governments?—Oh, not only that, it also represented the fact that the provincial governments had to draw on their own past surpluses, that they were spending really more than would appear in the Imperial accounts, and that they made up for the extra amount by drawing on their own past resources.

13,946. Then Proposition 3?—That since 1884–85 the effect of the heavy fall in exchange has been aggravated by a large increase in the sterling expenditure of the Government of India, and by other increase not automatic in its character.*

	Rx.
Cost of exchange on increase in sterling expenditure (1,900,000*l.*) - - -	1,600,000
Cost of exchange compensation allowance (1895–96) - - - - -	1,400,000
Rx.	3,000,000

13,947. (*Sir James Peile.*) Do you mean that the sterling expenditure was not automatic in its character?—Generally speaking I should say it was not.

13,948. We have got a return of it, have we not, in Appendix No. 44. It was put in by Sir Henry Waterfield, page 258 of the second volume?—Rx. 843,000 of it was made up on the commercial services which would probably be chiefly railway—increased railway debt.

13,949. Well, there is Rx. 131,500 furlough pay, and superannuation payments at fixed minimum rates. That of course was automatic?—That of course would be automatic; I presume that would be automatic.

13,950. Then there is the item you gave just now, railway companies, 824,654*l.*, which is much the largest item?—Yes.

* *See* Appendix No. 70.

13,951. You would not expect the Government of India not to develop its railway policy, would you, although you cannot call it strictly automatic?—Again, I do not want to criticise this expenditure; I am only showing, and especially with regard to railways, that if it were necessary, as part of their commercial enterprise, to bring in the large receipts in India, it may be very desirable expenditure, but it is increased expenditure deliberately incurred as such, and not increase due to the fall in exchange. It is the same point I am making. I am not criticising the expenditure or saying that it may not all be desirable, but that it is not increase due to exchange.

13,952. (*Mr. Mowbray.*) That figure, Rx. 1,600,000 cost of exchange, I suppose, is the difference between the rupee at 10 rupees to the 1*l.*?—And 18⅓.

13,953. And the rate of the Budget of 1896?—That was 18⅓; it has now fallen very much, and of course it is now a good deal less.

13,954. I was going to ask you whether you had calculated at all what the difference would have been between the time at which this sterling expenditure of 1,900,000*l.* that you have referred to was incurred and the rate in 1896?—No; it would, of course, reduce it.

13,955. You cannot tell me how much of that Rx. 1,600,000 is a difference in exchange between an imaginary figure of 10 rupees to the 1*l.* and the actual rate of 1896, and how much is due to an actual fall between the rate at which this sum was borrowed or this liability was incurred and the rate of 1896?—No, I could not tell you that, without a very long calculation.

13,956. A portion of it would be due to the fall between 10 rupees to the pound and the rate of the time at which liability was incurred?—Certainly.

13,957. And a further portion would be due to the fall which has occurred since that liability was incurred?—Certainly.

13,958. But do you draw in your own mind any distinction between the responsibility of the Indian Government for the fall in exchange which occurred prior to the incurring of this liability—I am referring to this liability of 1,900,000*l.* on your figures here—and the fall which has occurred since?—No, where it is not automatic I should not, because I would suggest that where a Government borrows sterling at a time of falling exchange, it thereby incurs the full liability which the total fall of exchange might ultimately impose upon it, and it is a point which it ought very seriously to consider, and which should operate to prevent it borrowing sterling in time of heavy falls of exchange.

13,959. I quite understand of course that you would say that when the Government was borrowing after a certain amount of fall in exchange had occurred that they had no right to complain of the fall of exchange that had occurred, but I understand you to go further than that and say that they ought not to complain of a fall in exchange which has occurred since these liabilities have been incurred?—Yes, I do, because it was notorious that the exchange was falling at the time.

13,960. Yes?—I would not carry that right back so far as to the time when exchange first began to fall, but when once the downward trend of exchange was established, as it was by 1884–85, I would then suggest that if the Government did increase their sterling charges they did so at the full risk of the total fall that exchange might experience.

13,961. (*Chairman.*) They ought to have borne that in mind as part of the cost that was incurred?—Entirely.

13,962. (*Sir William Wedderburn.*) Then Proposition 4?—That from 1875–76 to 1884–85 the military expenditure of the Government of India (excluding exchange altogether) was almost stationary leaving out the amount due to the Afghan War when it came—that is to say, the ordinary military expenditure, but that since 1884–85 (again excluding exchange in any shape or form) there has been an increase of nearly Rx. 4,500,000 per annum.

13,963. (*Chairman.*) When you say 4,500,000 per annum at the close of the time, do you mean that the military expenditure was higher by Rx 4,500,000 than it was at the commencement?—Yes.

13,964. (*Sir William Wedderburn.*) Then Proposition 5?—That during the 12 years 1884–85 to 1895–96 over and above a large increase in ordinary military expenditure (*i.e.*, army and military works) and excluding all

charges on account of Upper Burma, and, the cost of frontier railways, special and extraordinary expenditure has been incurred to the amount of nearly Rx. 12,000,000.

13,965. (*Sir James Peile.*) That is the aggregate of 12 years, is it not?—That is the aggregate of 12 years. It is shown in that note on Sir Henry Waterfield's table at page 9. Perhaps I might put in this other chart which would show the point about exchange, showing how the exchange is made up, natural increase, increase of exchange compensation allowance, and the increase in sterling charges, also showing the incidence of it on the two different portions of the revenue.

13,966. (*Sir William Wedderburn.*) Then Proposition No. 6?—That, generally speaking, and whatever may be the explanation, while the fall in exchange has been a disturbing factor of considerable magnitude, increased expenditure on the civil and military services, apart from exchange, has been a more important source of financial difficulty.

13,967. (*Chairman.*) Vide exhibits A. B. C. D.?—Those were these different memorandums and notes which were put in.

13,968. (*Sir William Wedderburn.*) With reference to the seventh proposition, I think that the Secretary of State, when the Indian Budget was under debate, specially said that the question was one for the Royal Commission?—That is my recollection.

13,969. I think that I moved an amendment alleging that the statements with regard to debt were misleading, and the answer of the Secretary of State, I think, was that that was a question that could be well dealt with by the Commission, and I think it is with reference to that that you have looked into that point and this proposition is framed?—Yes.

13,970. Will you read Proposition 7?—"That some "of the statements in the accounts of the Government "of India relating to debt are misleading, that the "set-off against ordinary debt of debt transferred to "public works is improperly carried out in these "accounts owing to the mixing of gold and silver debt "without taking into account the varying rate of "exchange between the pound and the rupee; and "that, therefore, the Government of India are wrong "in stating that the ordinary debt, less that transferred to public works, has decreased since 1884–85 by "about Rx. 9,000,000. It has, in fact, increased by "nearly Rx. 3,000,000."

13,971. (*Chairman.*) Have you any statement drawn out by which you endeavour to establish that fact?—Yes. In this criticism in Sir William Wedderburn's note on Sir Henry Waterfield's tables at pages 19 and 20; the criticism on Table 20 will give this, paragraphs 33 and 34; and since then I have found out what I thought would be a perfectly specific case to show the Commission exactly what I mean.

13,972. Which is the table in that note to which you are referring, the memorandum on Indian financial expenditure, is it not?—No; it is the note on Sir Henry Waterfield's tables, put in by Sir William Wedderburn, dated 12th of August 1895; it is in Appendix 10, I think.

13,973. And which table is it?—It is paragraphs 33 and 34, criticising Table 20 of Sir Henry Waterfield. I think Sir Henry Waterfield, in Question 12,238 made some reference to this, and said they were generally careful not to express what the result of adding rupees and pounds was, but I have here the Finance and Revenue Accounts of the Government of India for 1893–94, page 195, in which they show the summary of capital expenditure on railways and irrigation works, and in which we have here a column, 22, which is an addition of columns 20 and 21; column 20 being an Rx. column, and column 21 being a £ column, and column 22 being expressed as tens of rupees.

13,974. And are they added together?—They are added together, so that that is one of the points where it would be misleading.

13,975. And I think I gathered from Sir Henry Waterfield's answer to Question 12,238, to which you have been referring, that he admits it ought not to be done?—He admits it ought not to be done.

13,976. And here it is done?—Yes.

13,977. (*Sir James Peile.*) I see that in Table 20, in the last three columns, he has given no denomination, neither pounds nor rupees?—He has not, no; but still it is impossible to add them up without putting some denomination to it. The result of doing this is this, that year by year there is shown in this account, which is published to Parliament and to the public, a continual reduction in the ordinary debt of India, brought about, as I contend, by these illegitimate means. First of all, taking these accounts of the Government of India 1893–94, page 219, there is an account showing the additions to and discharges of permanent debt during the year ended 31st March 1894, and the amounts of the permanent debt at the commencement and the close of the year, and then follows a classification of the debt into ordinary debt, exclusive of that for railways and irrigation and debt incurred for productive works. First of all, they add up the two debts, the rupee and the sterling debt, without putting the denomination it is true, but adding the two up; that is to say, the total debt in India of 105½ million Rx., the total debt in England bearing interest of 108 millions sterling; total debt without any denomination either of pounds or Rx., 213,659,000.

13,978. That, you would contend, is misleading?—That distinctly is misleading, and for this further reason. They then proceed to classify that debt, and the classification is as follows:—Permanent debt, exclusive of that for railways and irrigation; that is to say, the permanent debt for ordinary purposes, 69 millions, again without any denomination; and then this heading here, Rx., at the top of this whole column, can be taken to cover all that column; it may be so, but I do not know. Then for railways, 114,701,000, and for irrigation, 29,679,000. Those figures, that classification is then put into the statistical abstract year by year.

13,979. (*Mr. Courtney.*) And those make up the 213 millions?—Those make up the 213 millions.

13,980. (*Chairman.*) The 213 millions is the addition of those two figures?—Of 105 plus 108 millions; it is an exact addition of those two figures.

13,981. So we know that this classification mixes up the two denominations?—This classification mixes up the two denominations.

13,982. Where do you carry it in the abstract?—Page 130, Statistical Abstract for 1893–94. Therefore, year by year, this is done. You will see from 1883–84 that there is shown a regular reduction of debt for "Other purposes," the final column on the page shows a gradual reduction of debt for "Other purposes" from 92,902,903 in 1883–84 to 69,279,331 in 1893–94. That is arrived at by this process: the debt for ordinary purposes being the total amount of debt remaining after that for railways and irrigation has been subtracted from the total of 213 millions. The total of the railway and irrigation debt has been arrived at at page 195 of the Finance Accounts by, among other things, the addition of those two columns together, 20 and 21.

13,983. The heading of this account, to which Mr. Morgan-Browne has referred in the Statistical Abstract to which these figures are carried, is headed in tens of rupees and sterling mixed together?—And, as I say, in the accounts of the Government of India this is produced from this Table No. 69, page 195, in which, as I pointed out before, columns 20 and 21 being in, respectively, tens of rupees and sterling, were added up in column 22 to represent tens of rupees pure and simple. The result of this is pointed out in this criticism on page 19 and 20 of Appendix 10 in the appendices to the first report. If I may just read there the gist of it to put it clearly, I think, before the Commission.

13,984. What paragraph?—Paragraph 23, I have said: "With regard to the debt, Sir Henry Water-"field's table shows a large reduction of the ordinary "debt during the last ten years." That would conform with the table in the statistical abstract. "The "increase of debt in India since end of financial year "1884–85, Rx. 11,161,894; increase in England, "44,734,738*l.*; Total, Rx. 55,896,632.

13,985. Are you quite correct; you put against that Rx. 55,896,632?—Yes, I am afraid the "Rx." ought to have been left out; if Sir Henry Waterfield has not got it that must be a mistake.

13,986. Still the fact remains, I suppose, that you would impress upon us. The ordinary reader would think they were of a like denomination?—And I would go so far as to say that even without it it must have meant that by the ordinary rules of arithmetic, because Sir Henry Waterfield proceeded to subtract from it a total which was Rx., and you cannot subtract anything from Rx. but Rx.; therefore, he implied that the total 55 millions was necessarily Rx. Then he showed that the

Mr. H. Morgan Browne.

27 Jan. 1897.

debt transferred to public works was Rx. 65,392,589, and that the net decrease in the ordinary debt was therefore 9½ millions Rx. Then it is pointed out here that "the fallacy consists of taking the increase of "44,734,738*l.* in sterling debt as only equivalent to an "increase of Rx. 44,734,738, and then setting off "against it what is largely rupee expenditure on "public works. The following table shows the equiva-"lent in Rx. of this 44,734,000*l.*"—this table shows that that 44,734,000*l.* really represents Rx. 65,269,000.

13,987. (*Sir Andrew Scoble.*) At what rate of exchange?—At the different rates of exchange for each year in which the different portions of the total sum were raised. "Again, the sum of Rx. 65,392,589 "transferred to public works contains a sum of "19,943,152*l.* treated as equivalent to Rx. 19,943,152 "besides a large amount of sterling expenditure duly "converted into Rx. at the current rate of exchange," for there would be alterations to make in both sides of the account, both in favour of the Government of India's contention and against it, in the matter of setting off this sum of Rx. 9,495,957.

13,988. And all your calculation would be vitiated if you took the present rate of exchange, would it not? Supposing the Government of India wanted to pay off the sterling debt now at the present rate of exchange, all your calculation would be vitiated, would it not?—No, because the rate of exchange is made out for each year when the transaction is made and when the expenditure was made, it would remain exactly the same.

13,989. Supposing the Government were to pay the whole debt off now and raise the money at the current rate of exchange?—To pay off which?

13,990. The silver and the gold debt; to ascertain the actual indebtedness of the Government you ought to take the rate of the day, ought you not?

13,991. (*Chairman.*) At what rate could they pay off at the present moment, at the present rate of exchange? That is your meaning, Sir Andrew, is it not?—They would have to pay off the sterling debt at the rate of the day.

13,992. (*Sir Andrew Scoble.*) All these calculations are simply arithmetical exercitations, and have really no practical bearing on the position of the Government of India; is not that so?—Not at all, because those were made for each year. If in 1884–85 I borrowed a pound and got for it 15 rupees in India, and spent that 15 rupees, and I am going to pay off, I have to pay off 15 rupees in India, and that figures as 15 rupees in India. If it was spent in England on the other hand it still figures as 1*l.* of debt, and, of course, if I pay it off I have to pay off the 1*l.*—in India 15 rupees—I have spent. This is only brought into account when it has actually been expended in public works, and is no longer represented by a fictitious amount of money, but is represented by an equivalent amount of work done.

13,993. (*Mr. Courtney.*) Is the point where the thing was spent and not in what money you have to repay it?—The point would be, I think, that what you would have to repay would be the amount actually expended at the time. If I spend 1*l.* in England I have always got to pay back 1*l.* of debt.

13,994. If you borrowed 10*l.* in England and spent it in India, and at the time you borrowed you got 150 rupees for the 10*l.*, if you have to repay that 10*l.* in England, by the time you have to pay it you have to pay 200 rupees for the 10*l.*?—Yes, but under this calculation that 10*l.* would never have come into debt; t would remain in England.

13,995. Both processes are wrong, but yours is less formidably wrong of the two, I see; the other is quite wrong, but it is also wrong on your part, in estimating the increase or otherwise of the indebtedness of India, to take into account what might have been the equivalent of rupees to the loan raised in sterling at the time the loan was raised, and then taking into this account its equivalent now?—I think I am misunderstood a little. I did not mean that all the sterling debt in England, which is spent on debentures here—all this sterling debt here—could be dealt with in this way. I am only saying that this must be done where it comes to a question of setting off the debt raised for the purposes of public works. If you want to do that at all in this country you must reduce your sterling debt and your rupee debt to a common denomination. I am not suggesting that it is necessary to make this set-off; I am only saying that if you make it, you must do it with equivalent factors. I do not say that it is necessary to make it; I am not trying to defend the setting off.

13,996. (*Sir Andrew Scoble.*) But at all events, when Sir Henry Waterfield's tables take ten rupees as the equivalent of a sovereign, and you take a certain number of rupees as equivalent to a sovereign for the purposes of your calculation, does it not come to very much the same sort of error; it is only a question of degree; it is an arbitrary rate in both cases?—No, I think not, for this reason. Suppose the Government of India raised two million pounds in England, there are several courses open to them. One course, probably a very common one, is to reduce for the year the drawings of the Secretary of State, and that sets free, not merely two million Rx. in their hands, but the amount they would have to pay to remit that money to England—it may be three million Rx. Then they can take that three million Rx. either in reduction of their borrowings, or they can employ it as expenditure, saving their borrowing in India for famine insurance works or any other works they may want to make. Therefore, I say, if you are to set-off that work you have to set-off that three millions, and not two millions.

13,977. (*Mr. Courtney,*) But if your object is to inquire how far the indebtedness of India has increased or diminished you must make that calculation in rupees wholly or in pounds wholly at the moment you have in contemplation—the present moment?—Certainly, I should say so.

13,998. And conform to the exchange of the day in making that calculation?—Quite so.

13,999. (*Chairman.*) Is there any proper way of stating it, and can we get out of this method of statement. If you are making an estimate for any practical purposes the obligation of the Government of India in debt is that it owes so many rupees in India?—Yes.

14,000. I see that in 1883–84 she owed in rupees in India Rx. 90,688,766 and in 1893–94, Rx. 102,937,552. I am taking the total without making deductions for irrigation and so forth. That represents an increase of 12 millions in the denomination of rupees, in addition to which amount she owed in England in 1883–84 68,585,694*l.* and at the end of that period 106,683,767*l.*, being an increase of 38 millions?—Yes.

14,001. Must you not always state the thing in that way if you are measuring the indebtedness?—Yes, I think you are absolutely bound to keep them entirely distinct. I do not think you can set off, but I think if you are going to make any calculation about the productiveness of public works, and you have got sterling debt into it you must reduce it to the chief denomination.

14,002. You feel bound to call attention to this because the Government of India have made a statement based upon this muddle of the two metals showing a decrease of debt?—Yes.

14,003. And that leads you to this statement, that instead of a decrease, as they point out, there has been a small increase, and for that reason it is an important distinction?—I think so.

14,004. Do you know at all how these figures would come out if you kept them separate—if you stated the one obligation in sterling and the other obligation in rupees—and whether there would be an increase or decrease?—I take it that if one could have a proper inquiry into the amount of debt there would be found to be an actual increase in the ordinary debt.

14,005. It would be quite possible to take those figures on which Sir Henry Waterfield arrives at nine millions decrease, and on which you arrive in round figures at three millions increase—it would be quite possible to take those figures, either in sterling or in rupees respectively, and show the actual facts whether the Government at the end of the time owed a greater or less sum, either in sterling or in rupees?—I think they ought to be separated; you could not arrive at any conclusion bringing them together.

14,006. It would not be difficult to state it?—I should not think so.

14,007. (*Mr. Courtney.*) The real difficulty would be to ascertain the value of the set-off against that debt?—Yes, that would be the difficulty.

14,008. (*Sir William Wedderburn.*) I understand that you are aware that these figures, facts, and allegations

have been formally brought to the notice of the Secretary of State for India, and he has had them before him for a considerable time?—Yes.

14,009. And do you claim that if these facts and figures are not impugned you have established the conclusions—the five conclusions which are stated in Memorandum No. 2, and seven conclusions in the headings which you have now put in?—Yes.

14,010. (*Chairman.*) I wanted to ask you one question. In the memorandum of Sir Henry Waterfield's, which formed the basis of the first part of your examination, there is paragraph 15, in which it is stated that the increase of taxation is reckoned at eight millions, and of this new taxation new import duties account for about three millions out of the total sum of eight millions, leaving five millions in 1888. Have you considered or have you made any calculation as to what the increase of taxation is that has been necessitated in the last period?—Yes.

14,011. There is some difference of opinion about it, is there not?—I thought not. I think that my figures are rather under Sir Henry Waterfield's tables—that is, since 1884–95 to 1895–96. No; the figures are practically in exact agreement—that is, to 1894–95, paragraph 6 of Appendix 10. Since 1884–85 to 1894–95 the increase in revenue due to increase of taxation was 5½ million Rx., and I think that Sir Henry Waterfield in some of his answers estimated it at 6½ millions to 1895–96.

14,012. In reference to that, would you look at Answer 12,073; I think that that is the answer you refer to. I think there that Sir Henry Waterfield takes it at 7½ crores?—Yes, for 1895–96 he gives it at 7½ crores.

14,013. And you have put it at less?—I have put it at 5½ for 1894–95. He gives it for 1894–95 at 6½—6,474,000; but he divides it into two parts, the Imperial share, Rx. 5,494,000, and the provincial, one crore.

14,014. Then his figures for the Imperial share would very nearly correspond with yours?—I think so. If anything it is a little over; mine is an understatement. *Mr. H. Morgan-Browne.* 27 Jan. 1897.

14,015. Supposing we put the case that the increase of taxation has been 5½ millions, and the military and civil expenditure has increased during the 10 years by Rx. 8,952,000; then the increase of taxation really has little more than covered one half the increase?—That would be so. This increase of taxation is for 1894–95, and in 1895–96 another million came in from the Customs duties—the cotton duties; really this would be 6½ millions. My table here would be 6½ millions.

14,016. Therefore, while the increase of military and civil expenditure has been 9 millions, taxation has been put on for about 6½?—About that; yes.

14,017. (*Sir Ralph Knox.*) As I understand it, however, the main conclusion established by you is that if all the expenditure arising from the fall in the rupee be omitted from the accounts, that total expenditure would stand at an amount less by the sum of 11,156,000?—The total expenditure would be less by 11 millions—you mean the total expenditure in any way due to exchange amounts to 11 millions.

14,018. I say that if that be omitted the amount would be less by that sum?—Oh, yes, yes. If there was no expenditure in exchange, of course there would be a great deal of difference in the expenditure of the Government of India.

14,019. By the sum of 11,156,000?—That would be about the increase. It would be less two millions—a difference of two millions—because of the considerable rise in exchange which has latterly taken place.

14,020. But upon these figures you have put before us that is what it would have been?—Upon these figures, yes.

The witness withdrew.

(Adjourned till Wednesday next at 11 a.m.)

At the India Office, S.W.

THIRTY-SECOND DAY.

Wednesday, 3rd February 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field Marshal SIR DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

The Right Honourable the EARL OF NORTHBROOK, G.C.S.I., called in and examined. *The Rt. Hon the Earl of Northbrook, G.C.S.I* 3 Feb. 1897.

14,021. (*Chairman.*) I think you have held many ministerial posts, both here and in India, would you kindly tell the Commission what posts you have held?—I have been connected with Indian affairs for a great many years. I was private secretary to Sir Charles Wood when he was president of the Board of Control in the time of the East India Company, from 1852 to 1855; I was Under Secretary of State for India from 1859 to 1861; I was Under Secretary for War for a few months in 1861; I then was again Under Secretary for India till 1864, and I was again Under Secretary for War from 1868 to 1872. I was Governor-General of India from 1872 to 1876. I do not mention the services I have in other departments.

14,022. May I add that you were First Lord of the Admiralty; it has, I think, a bearing on this question so far as there have been naval questions between England and India?—I was First Lord of the Admiralty in Mr. Gladstone's Government of 1880.

14,023. Have you read the evidence of Sir David Barbour, Sir Auckland Colvin, and Lord Cromer?—Yes.

14,024–5. In your experience had the Financial Member of Council sufficient weight?—Yes; in my experience he had sufficient weight. I agree pretty much with what Lord Cromer says in one of his answers, 13,518. He said that he thought he saw running through the evidence an idea "that the Indian Council consists "merely of a number of heads of departments, each of "whom is interested in pushing forward the views of "his own department, and nothing else," and "that "certainly is not my conception of the Indian Council."

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

I entirely agree with Lord Cromer, that the Indian Council is a Cabinet; the members of the Indian Council in my experience did not look only to the interests of their own departments, but to the general interests of the Government, and, as Lord Cromer says, "Of course, every Member of Council has to "be acquainted with the facts of his own depart-"ment, and to put forward the interests of his "department, exactly as the First Lord of the Admi-"ralty and the Minister of War in England, but he "certainly is expected to do more than that" and so on. "I always found the Council," he says, "every "member of it, I may say, very willing to listen to "argument, and to give due weight to financial "considerations." My experience entirely confirms the view Lord Cromer took of the working of the Indian Council as respects financial questions.

14,026. And so far your Lordship would hardly agree with the opinion of Sir David Barbour, that the Finance Minister stood in a somewhat isolated position in the Council?—I can give no opinion, of course, upon that, having had no connection with the Indian Government during the time for which Sir David Barbour and Sir Auckland Colvin formed part of it.

14,027. Sir David Barbour took rather a general ground, saying that he thought, if I recollect, that the different members of Council were heads of departments whose attention was very much centred in making their own departments thoroughly efficient, and probably men who had not studied finance very much, and who therefore did not take a very wide view of financial questions?—Of course I cannot speak to what Sir David Barbour's experience was; I can only say that my experience was not the same.

14,028. We learned from Sir David Barbour, and I think Sir Auckland Colvin agreed in that view, that theoretically the Finance Minister in India has as full control over expenditure as the Chancellor of the Exchequer at home, but that in practice there is considerable difference. Would you agree in that view?—I should agree with the view that the Financial Member of Council in India is pretty much in the same position as the Chancellor of the Exchequer. As regards the difference in practice, it seems to me to depend in India precisely upon the same considerations as in England. In England the power of the Chancellor of the Exchequer depends upon the support of his colleagues, and especially of the Prime Minister; in India the power of the Financial Member of Council depends upon the support of his colleagues, and especially of the Viceroy. I see no difference in practice between the two.

14,029. Has not the Chancellor of the Exchequer in England an advantage in this respect, that if any measure is brought forward which is likely to involve any notable expenditure, he has to warn his colleagues that that expenditure must be the subject of a special vote, and possibly of an increase of taxation; and therefore that the measure which is going to lead to this expenditure must come under the full discussion of Parliament; is not that a check upon his colleagues that the Finance Minister in India has not?—It depends very much upon whether the general disposition of the House of Commons is in favour of economy or not; sometimes in the history of this country it is in favour of economy, and at other times it is the reverse.

14,030. But still the Ministry learns from the Chancellor of the Exchequer that in all probability there will be necessity for discussion in Parliament; and for discussion in Parliament a Ministry would wish to be satisfied beforehand that they had got a good Parliamentary case?—Certainly. I think that the fact that the acceptance of the Budget depends upon a vote of the House of Commons, does constitute a difference between the principles upon which the two Governments are conducted.

14,031. And so far that fact strengthens the hands of the Chancellor of the Exchequer as compared with his Indian colleague?—I could hardly say that, because I think that everyone connected with the Government of India is so strongly impressed with the difficulty of raising fresh taxes in India that there is no member of Council of the Governor-General who is not fully aware of that difficulty, and therefore will not give full weight to financial considerations. I am speaking of my own experience.

14,032. Do you consider that questions involving immediate or contingent expenditure come before the Finance Member as early and as completely as can reasonably be wished?—I think so. I do not think any complaint has been made either by Sir David Barbour, or Sir Auckland Colvin, or Lord Cromer in respect of that part of the business of the Financial Member of Council.

14,033. The question is of importance, because high authorities are agreed that an increase of taxation in India is not only difficult, but in a certain sense a dangerous line of policy?—Yes, I quite agree in that. Perhaps, if your Lordship would specify what kind of measures are referred to, I could give a more definite answer. I should say, generally speaking, that the financial questions which come before the Governor-General's Council, except at the time of the preparation and consideration of the budget, are very small unless in such extraordinary cases as the famine of the present year, for example, where some circumstance occurs which entirely deranges the financial arrangements of the year.

14,034. Supposing, we will say, that a frontier difficulty took place, and the question arose of an expedition; of course it is quite possible that the Government might have committed itself to a line of policy before the question came into discussion in the Council: and in such a case as that is it not possible that a line of policy might be adopted, and that the Finance Minister, not from any intentional omission to consult him, might not have had the opportunity of bringing before the Viceroy and the Council what the financial consequences of that policy must be. That was the kind of measure that was in my mind when I put that former question to you?—I should be giving you a hypothetical answer. I have no recollection of any frontier expedition of importance being proposed in my time. Lord Mayo, who was my predecessor in the office of Governor-General, set his face strongly against frontier expeditions. I am talking now of the north-western frontier. But there was an expedition against the Lushais, which, however, was a matter of no very great financial importance. I could not give an answer, because no case of the kind came before me.

14,035. And, therefore, within your experience, there is no question but that the Finance Minister had ample knowledge of measures affecting finance beforehand?—I have no recollection of any case to the contrary. I will say, as regards general finance, that the Financial Member of Council, in the preparation of the budget, has every opportunity of obtaining information from all the different departments in respect to the money that they want for the coming financial year. He is the person who prepares the budget; he has the initiative in respect to that; therefore there can be no doubt that he can get full information if he pleases upon every matter of expenditure that is to come before the Government of India for decision in the budget. If he does not get sufficient information, I conceive that it can only be from his not having asked for it.

14,036. (*Sir Donald Stewart.*) And would he not have timely notice if there was any chance of an expedition taking place?—It is absolutely certain he must. It would come to the Military Department for an estimate, which would come to the Finance Department, and from the Finance Department to the Financial Member of Council.

14,037. (*Chairman.*) That, of course, would be the case when once the expedition was set on foot. The point to which I was drawing your Lordship's attention was this: circumstances may occur which lead to a line of policy being resolved upon some time before it is necessary to take active measures for giving effect to that line of policy?—The only expedition of that sort I can recollect was against the Lushais. I have no doubt whatever, although I have not referred to the papers, that whether there should be an expedition to punish the Lushais would have come before the Governor-General in Council (I believe it was decided before I arrived), and when it came before the Governor-General in Council the Financial Member of Council would have had an ample opportunity of expressing an opinion upon it, and he, as a sensible man, must have known that the expedition was likely to cost money, and if he had any views as to whether it was likely to involve any further expenditure; he could bring that before the Governor-General in Council. He would have ample opportunity of discussing it in Council in my opinion.

14,038. (*Mr. Courtney.*) May not similar frontier difficulties occur with no more notice to a Chancellor of

the Exchequer? Turning to the analogy of England, our Cabinet and the Chancellor of the Exchequer here, might not similar frontier difficulties be impending ultimately resulting in an expedition of which the Chancellor of the Exchequer would have just the same fore-knowledge, although no call might be made for money until some time after the fact that these troubles were impending was known to him and his colleagues?—I suppose that one ought not to give any information as to what takes place in the Cabinet, but naturally the Chancellor of the Exchequer being a member of the Cabinet, would be able to give his opinion upon any expedition proposed by the Imperial Government in the same way.

14,039. And before the expedition is resolved upon is not the Chancellor of the Exchequer aware that difficulties are thickening?—Most certainly.

14,040–1. In the case of African frontiers, on the west coast, south coast, east coast, or north coast?—Certainly. I think that the positions of the two, the Chancellor of the Exchequer in England and the Financial Member of the Governor-General's Council, are precisely the same. They are both Members of a Council, they have both an opportunity of expressing any opinion before any decision is arrived at by the Government with respect to an expedition, certainly involving immediate expenditure and which might involve ulterior consequences; I cannot put it broader than that.

14,042. But the position of the individual Financial Member of Council, as of the Chancellor of the Exchequer, might depend a good deal upon whether the Prime Minister or Viceroy was severely financial?—It might. It depends also upon his other colleagues in the Cabinet. I cannot say more than that the power of finance in any Government must depend on the support of the colleagues of the Financial Minister and especially of the head of the Government.

14,043. (*Mr. Naoroji.*) But sometimes the Government here resolves upon some policy which the Government of India does not know, and when the Government of India is informed that that policy should be carried out it becomes difficult for the Government of India to do anything contrary to that policy there; they are forced to carry it out if the Cabinet here had determined to have it so. That is the difference, is it not, between the Chancellor of the Exchequer and the Finance Minister. The Finance Minister only knows of the subject when it comes before the Government of India, but with regard to the Chancellor of the Exchequer he knows it from the very beginning of any policy resolved upon by the Cabinet?—I have no recollection in my time of any such case. I do not know of the case the honourable Member alludes to, and I have no recollection of such a case.

14,044. In the frontier war the policy was determined by the Cabinet here?—I have just observed that no expedition on the north-west frontier was undertaken in my time; therefore, I cannot answer hypothetical questions.

14,045. (*Chairman.*) There is this difference between the analogy of the Chancellor of the Exchequer and the Prime Minister, is there not? Shall I not be right in saying that the Prime Minister is the *primus inter pares?* and that the Viceroy is a more powerful person in India than the Prime Minister is here?—I suppose if your Lordship means to say that the Governor-General is more powerful in consequence of the legal power which he has—the power which he has by Act of Parliament to overrule his Council in certain cases—undoubtedly it would be true; but the power of the Prime Minister does not depend, as your Lordship knows, upon any Act of Parliament; it depends upon many circumstances, principally upon the qualities of the individual holding that office.

14,046. Then I think I may gather from your Lordship as your opinion, that the Finance Minister practically had always before him the information which would enable him to lay the financial consequences of measures before the Viceroy and the Council?—I should say so.

14,047. In your opinion, had the Financial Member of Council sufficient weight?—Certainly, in my opinion he had. I am speaking, not of my opinion, but of my experience. I had better put it that way. In my experience he had.

14,048. And you would not think, therefore, that any change is required in regard to his powers?—I should give a decided opinion to the contrary; and, indeed, neither Sir David Barbour nor Sir Auckland Colvin as far as I have read their evidence, suggested any such arrangement to this Commission.

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

14,049. At the same time there appeared to be in the minds both of Sir David Barbour and of Sir Auckland Colvin, the impression and the recollection that though theoretically the powers of the Finance Minister were very complete, yet, when they came to put them into practice, there was something wanting?—As I said before, I can only speak from my own experience. I cannot answer for what took place when Sir David Barbour and Sir Auckland Colvin were Financial Members of Council.

14,050. Sir Auckland Colvin seemed to think that there had been a change in the principles of administration within later years, as compared with former years; and would not those former years be the time when you were Governor-General?—No; I do not think Sir Auckland Colvin became Finance Minister until 1883, and I left India in 1876; but I noticed that what your Lordship says appears in Sir Auckland Colvin's evidence. I mean in his answers to Q. 2920 and Q. 3111. I did notice that. In answer to Q. 2920 he said: "Frontier troubles have become "more frequent of late, in consequence of the adoption "of a certain policy"; and then he goes on to say that "since 1885 we have had that disturbing element "constantly present." Then at Q. 3117, he is asked, "Are we to understand that you found that during "the latter part of your tenure of office"—he was, I think, Financial Member of Council from 1883 to 1887—"financial considerations had less weight in "shaping the policy of the Government of India than "during the first period?" And he said, "Very much "so." Those are the two answers that I have noted in respect to that. I have no more power of giving an opinion upon that than any member of the Commission has.

14,051. It seems to point to this: that in practice recent Finance Members of Council have found their position not so strong as was the case during the time with which you were yourself more intimately acquainted?—I should infer that from the answers given by Sir Auckland Colvin, certainly.

14,052. (*Mr. Courtney.*) The difference, however, would appear not to be due so much to a change in the position of the Finance Minister as to a difference in the atmosphere in which he works?—I should say that it came from some change in policy.

14,053. His financial position was unchanged, but his influence may have been lessened in consequence of the motives to which he appealed not being so powerful with his colleagues?—I am speaking still quite hypothetically, only drawing a conclusion from the evidence which I have read.

14,054. I am endeavouring to bring out what his evidence implies?—I should say that his evidence distinctly implies a change of policy about the year 1885.

14,055. (*Chairman.*) The witnesses agree generally that the Viceroy has immense power,—that, if he is inclined in favour of a particular policy, the Government will probably act in that direction; would that, in your opinion, be a correct view of his powers?—It would not be from his actual statutory power, although that is very great; I think that the experience of the Government of India is that the members of Council would be very much inclined to give great weight to the opinion of the Governor-General upon any matter.

14,056. The Governor-General would be a very predominating influence in the Council?—Certainly.

14,057. The members would not like to oppose him?—The legal position of the Governor-General is very strong, and that gives him undoubtedly a very great predominance in regard to any question relating to the Government of India.

14,058. That being so, if the Viceroy appreciates the difficulties of finance in India, and the necessity of cutting his financial coat according to his cloth, the Finance Minister would be safe, would he not; he could ask for no more support than that?—It is a difficult question for me to answer; I can only speak for myself. My opinion is that the Viceroy has great power. You ask me whether, having great power, if he holds a strong view with respect to economy—having that great power, doubtless that view would

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

most probably prevail. I do not want to say more than that in answer to the question.

14,059. In that case the Finance Minister could not possibly ask any further security?—I have expressed my opinion that I do not think the Finance Minister requires any further security in the constitution of the Government of India; I do not think that in any case he requires or could be given with advantage any further security than he now possesses, namely, the security of being always able to express his opinion in Council, and, being Finance Minister, to have the initiative in respect to the annual financial arrangements of the Government.

14,060. But it is possible, on the other hand, that the Viceroy might not, as some people might think, sufficiently appreciate those dangers, and might attach more weight to the necessity of pursuing a line of policy than to the financial dangers which attend it. In that case would not the Financial Member of Council be—well, I will only say in a somewhat different position to that in which he would be under such a Viceroy as I was describing in the previous question?—It would not be the Governor-General alone; I think your Lordship is putting forward the Governor-General in rather too strong a manner. If the view of the Governor-General in Council upon any matter was contrary to that of the Financial Member of Council, of course he would have to give way. Your Lordship must recollect that the Government of India is not a government by the Governor-General, but by the Governor-General in Council, and questions of importance are always considered in Council; details, of course, do not come before the Council.

14,061. What I want to put before your Lordship is this: the position of the Finance Minister would be somewhat different, would it not, if he was serving under a Viceroy with an economical tendency, to what he would be if he was serving under a Viceroy, in whom the economical tendency was not so strong?—The question is a hypothetical one; but as your Lordship has put it to me I will give the best answer I can. I can conceive cases in which the view of the Financial Member of Council might be contrary to the views of his colleagues and of the Viceroy in respect to a great question of policy, of expenditure upon an expedition, for example, or any question of that sort, but I cannot conceive it possible that there would be a general tendency on the part of the Viceroy and of the Government of India collectively not to attend to economy upon ordinary questions; I think that upon a great question it is very possible that there might be a difference of opinion, but upon ordinary questions I cannot conceive a case in which the Viceroy would not be desirous to support the Financial Member of Council in respect to economy in administration.

14,062. Of course, there may be cases in which the Viceroy very properly says, "Financial considerations "must give way to the importance of the policy which "I advocate"?—Certainly; that is what I mean.

14,063. But in that case would it not be desirable that the Finance Minister being overruled—and, perhaps, overruled very properly—should have the opportunity of himself stating the financial criticisms which he would offer to that policy, in a form which would come before the Secretary of State?—My impression is, as your Lordship put me that question (which is a very hypothetical one), that in such a case as that the policy would have been sent out to India from the Secretary of State; therefore there would not be the slightest advantage in the Financial Member of Council protesting.

14,064. (*Sir Andrew Scoble.*) As a matter of fact, has not every member of the Viceroy's Council an opportunity of recording his dissent and sending it home to the Secretary of State?—Certainly.

14,065. So that in that way a Finance Minister who disagreed with the general policy of the Government in any particular matter could put his own views fully into writing and send them home for the consideration of the Secretary of State in England?—Certainly, and I believe it is done in certain cases. It is not very frequently done, but it has been done on matters of importance when the Financial Member of Council differed from the policy of the Government. In one case it happened during the time I was Governor-General.

14,066. (*Chairman.*) It is perfectly true that the Finance Minister, and any other member of Council, has a power of recording a dissent; but the record of a dissent is a very formal act. A member of Council who puts a dissent on record must be prepared, must he not, for that dissent being published?—Yes, I think that is true. It is a most important power that a Member of Council has of recording his dissent, and although it is not absolutely necessary for the Government to produce that dissent in Parliament, if asked for, yet I apprehend that it would require very strong reasons indeed to justify a Government in refusing to produce that dissent; and, therefore, a Member of Council might not always be able to put all the considerations which would occur to him in a formal dissent which he would naturally expect might be laid before Parliament and before the public.

14,067. That was in my mind when I was putting the question of communications with the Secretary of State. The Financial Member might have some reasons for questioning the wisdom of a certain policy from the financial point of view, which he might not care to put down in a document which might be published. In such a case, we have been informed, his objection to that policy would be reported home by the Viceroy, probably in the Viceroy's own personal communication to the Secretary of State; but, if the Viceroy is opposed to that policy, would it not often be the case that, although intending to represent the case of his Financial Member of Council fairly, he would not represent that case so strongly as the Finance Minister would do himself? In that case I should like to ask your Lordship whether it might not be an advantage that the Finance Minister should have the right and the power of sending to the Viceroy a private memorandum of his objections, which the Viceroy would, as a matter of course, forward to the Secretary of State?—Your Lordship's question refers rather to the preliminary consideration of measures before they actually come before the Governor-General in Council.

14,068. That certainly is most important in point of time, because that is the time when the Finance Member's reasons might influence the policy?—Taking it from that point of view, I would refer to what Lord Cromer said in his evidence about it. It will be found in his answer to Q. 13,551. He thinks that in many cases it would be very desirable that a confidential memorandum written by the Financial Member of Council, or by any other Member, might be sent to the Secretary of State through the Viceroy. He gives the analogy of his position in Egypt, which he has held with such advantage to the country. He said that he had found it exceedingly useful to send confidential memoranda to the Secretary of State for Foreign Affairs in which he could put forward considerations which he could hardly properly bring into a public despatch, and doubtless that is a very necessary arrangement between diplomatists abroad and the Secretary of State at home. The difference in India is that the Financial Member of India is only one member of the Government and the Viceroy is another, and the Secretary of State in England is himself constitutionally only one of a body in England dealing with questions relating to the Government of India; he is the Secretary of State in Council; so that the communications between the Financial Member of Council and the Viceroy and the Secretary of State are entirely apart, I may say, from the constitutional authorities both in India and in England, and I do not think the two cases are completely analogous. At the same time, I entirely agree with Lord Cromer that there might be cases where it would be very desirable that the Secretary of State should have a full knowledge of the views of the Financial Member of Council, and I believe that in any such case the Governor-General would send to the Secretary of State any confidential memorandum which the Financial Member of Council might desire to submit. Sir Auckland Colvin has, in answer to Q. 2942, given as his opinion that that would be the case. He says, "The Finance "Minister would trust to the Viceroy as a colleague "to give a fair and ample expression of his views, "and I have not the least doubt that he would be right "in so trusting." I do not think that the idea of confidential communications should be confined to only one Member of Council, for in any matter of great interest in respect to any part of the administration I think that the Governor-General would like to send home the view of a Member of Council, so that the Secretary of State might be in full possession of all the information that he could have on the subject. I think myself that such communications might be desirable,

but very rarely; and I believe that there would be no Governor-General who would in such a case hesitate for a moment to send such a communication.

14,069. My point is that, if a man feels strongly upon a subject, he is a better interpreter of his own objections and views than any man, whoever he may be, however fairly, however ably that man may act as interpreter?—Yes, certainly.

14,070. We have been informed that regulations have been made to the effect that, if the Viceroy and Financial Member of Council are outvoted in Council, action has to be suspended pending a reference to the Secretary of State. Do you know of that regulation, and is it one which you think is of any use?—I only know of it by having seen it in Sir Henry Waterfield's evidence, Q. 578. He read before this Commission the regulation to which your Lordship alludes.

14,071-2. But I think we learned from Sir David Barbour that he did not attach very much importance to that regulation?—I think he said in answer to a question that it was of no practical value. I entirely agree with that. Moreover, I think I am bound, as your Lordship has called my attention to this regulation, to say that I entertain great doubt whether it is legal, whether it is within the powers of law that the regulation should have been made. Sir Henry Waterfield says that he quotes from a regulation made in the "Rules and orders for the transaction of business "in the Governor-General's Council." Then he reads the regulation: "In the case of a proposal referred "to the Financial Department under rule 17 or "rule 18"—not having the regulations before me I cannot say what those rules are—"if the Finance "Member of Council does not concur with the initiating "member, and if the Governor-General concurs with "the Finance Member, the papers shall be circulated "to Members of Council, or be brought before Council "at once, as the Governor-General shall direct, but "no order shall be issued on the proposal, unless his "Excellency shall otherwise direct, until the instruc-"tions of the Secretary of State in Council shall have "been received thereon." My own view is (I state it with great deference because I am not a lawyer) that the regulation is *ultra vires*, that is to say, that it does not come within the statutory power given to the Governor-General to make rules and regulations for the transaction of the business in his Council. That power is contained in the India Councils Act of 1861, 24 & 25 Vict. c. 67, s. 8., and these are the words: "It shall be lawful for the Governor-General from "time to time to make rules and orders for the more "convenient transaction of business in the said Council "and any order made or act done in accordance with "such rules or orders shall be deemed to be the order "or act of the Governor-General in Council." That is the statute under which, as I understand it, this regulation has been made. Now it seems to me that that statute only gave to the Governor-General the power to make rules for the more convenient transaction of business, but your Lordship will perceive that this regulation goes far beyond that. It seems to me to interfere with the power of the Governor-General in Council. Business in India is transacted by the Governor-General in Council, and the majority of the Council decides any question that comes before it. This regulation says that in certain cases the majority of the Council may not come to a conclusion upon the question before them, but that it is to be referred to another authority, namely, the Secretary of State for India in Council. It appears to me that the clause of the statute never was intended to cover and does not cover the regulation which has been made, and I consider this to be a matter of very considerable importance. I consider it to be a matter of very considerable importance because arrangements of that kind which take a question out of the cognisance of the Governor-General in Council and refer it home for opinion before the Governor-General in Council has come to a decision upon it, appear to me to open the door to private and confidential arrangements between the Governor-General and one member of the Council and the Secretary of State. Any regulation of that kind might result in important questions being settled in private by communications between the Viceroy, one member of the Council apart from the other members of his Council, and the Secretary of State. I submit that such a method of transacting business would be unconstitutional in the broad sense of the term. Certain powers have been given by Parliament to the Governor-General in Council; certain powers have been given by statute to the Secretary of State for India in Council, and I take it that too great care cannot be taken not to depart from the provisions which have been made by law for the transaction of business, both in England and in India; but, as I said before, not being a lawyer, I am not prepared to say that my opinion is right upon the point of law. At any rate, I think it is a point which ought to be very carefully considered.

14,073. I understand that your Lordship's point is this: that the Act empowers the Governor-General to make regulations for the transaction of business in Council, not, so to speak, to withdraw business from the Council?—Not to alter the constitutional power which the Governor-General in Council has to decide by a majority any question brought before it.

14,074. (*Mr. Buchanan.*) Has not the Viceroy certain power of overruling his Council?—Yes.

14,075. Statutory power; is not this merely a modification of that?—Of course, I cannot express an opinion upon a point of law, but if he has the power to overrule his Council in the case in question, what was the necessity for that regulation?

14,076. Is not this rather in the way of mitigation of that power?—I do not see what right the Governor-General himself individually has to make such a regulation; he has the statutory power given to him of overruling his Council in certain cases, certainly not in every case in which he and the Finance Member may be outvoted, at least I think not. It would depend, of course, upon the importance of the case. I think the provision of the Act of Parliament giving the Governor-General the power to overrule his Council has been quoted by Sir David Barbour. I should like to refer to it. This is the provision; it is in the Act of 33 & 34 Vict. c. 3. s. 5. "Whenever any measure shall "be proposed before the Governor-General of India "in Council whereby the safety, tranquility, or "interests of the British possessions in India, or any "part thereof, are or may be, in the judgment of "the said Governor-General, essentially affected, and "he shall be of opinion either that the measure "proposed ought to be adopted and carried into "execution, or that it ought to be suspended or "rejected, and the majority in Council then present "shall dissent from such opinion, the Governor-"General may on his own authority and responsibility "suspend or reject the measure," and so on. The rest is in regard to dissents. I should say, as the hon. member has asked me the question, that this regulation extends very largely that power, because it confers the power of suspending action not in any case in which in the opinion of the Governor-General, "the safety, "tranquility, or interests of the British possessions "in India are, or may be essentially affected," but in the case of any question in which the Governor-General and the Financial Member of Council may be of one view and the rest of the Council of another; so that it very largely extends that power.

14,077. (*Chairman.*) But I think that we learned from Sir David Barbour that practically that regulation has never been put into effect?—I do not think it can have any practical effect, but I should wish my observations to go in this direction, viz., that I should very strongly object to any rule or regulation which gives to any member of the Council of the Governor-General in India the right to send to the Secretary of State any memorandum. I think it should be done and would be done in all cases where it was necessary by the Governor-General, and it should be left to him; and that no rule or regulation can with advantage be laid down upon the matter. I would go further than that and say that not only can no rule or regulation be laid down with advantage, but I consider that any rule laid down to that effect would be, speaking very broadly, unconstitutional.

14,078. Do you agree in the answer which we have had put before us as to the power of the Viceroy to overrule his Council?—I should like to add that the Governor-General has other powers which the Governor-General has affecting finance to which allusion was not made. There was an important power given to the Governor-General by the 19th section of the Indian Councils Act, 1861, under which no member of the Legislative Council can without the previous sanction of the Governor-General (not the Governor-General in Council, but the Governor-General personally), introduce any measure affecting the public debt or the public revenue of India, or by which any charge

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

can be imposed upon such revenue; and there is another provision by which the Governor-General can refuse his assent to any legislative measure passed by the Provincial Councils. That again is a personal power given to the Governor-General, and no measure of that class can be introduced into the Provincial Councils without the previous consent of the Governor-General. There are other measures to which his previous consent is necessary, but they do not touch finance; they touch religion, they touch troops, and they touch relations with foreign princes, but it is a very important power, and it is a power also affecting finance.

14,079. In fact, the Governor-General has the power of preventing any member of Council from taking an initiative in financial proposals; and even after financial proposals have been brought in and discussed in the Council, if he thinks the decision to be one contrary to the interests of the Empire, he can overrule it?—Certainly.

14,080. Is there not some limitation of his power as to that? or rather an instruction as to the manner in which he is to exercise it, namely, that he must be convinced that the measure, if adopted, would prejudice the Empire?—I have no knowledge of any such regulation; I do not see how any regulation can affect the words of the statute.

14,081. (*Mr. Buchanan.*) "The safety and tranquility "of the British possessions"—the words you read from the Act confirm that?—I think that the Governor-General must be guided by the words of the statute in interpreting his powers.

14,082. (*Chairman.*) And those words are:—"Whenever any measure shall be proposed before the "Governor-General of India in Council whereby the "safety, tranquility, or interests of the British possessions in India, or any part thereof, are or may be, in "the judgment of the said Governor-General, essentially affected, and he shall be of opinion either that "the measure proposed ought to be adopted and "carried into execution, or that it ought to be "suspended or rejected, and the majority in Council "then present shall dissent from such opinion, the "Governor-General may on his own authority and "responsibility suspend or reject the measure"?—Those are the words I have read; I do not know that there is anything else.

14,083. (*Mr. Courtney.*) That does not go so far as the suggestion that a general regard for the interests of the Empire would justify the Governor-General in withholding his sanction?—I should not like to put an interpretation upon that section.

14,084. For example, a question might be proposed which would involve trade relations throughout the Empire which might be prejudicial to the Empire at large?—I should not like to take the responsibility of interpreting that section.

14,085. The words used by the noble chairman are different from the words of the statute?—All I say is that the Governor-General, for the time being, must interpret, to the best of his judgment, the words of this statute on his responsibility.

14,086-7. (*Chairman.*) I would remind Mr. Courtney that I was speaking of the Empire of India. Unless your Lordship would wish your attention to be drawn to any other point connected with the position of the Finance Minister, that concludes the questions which I should propose to put to you?—I have no suggestion to make.

14,088. (*Mr. Buchanan.*) Do we gather from your evidence, Lord Northbrook, that you think that the position of the Financial Member of the Viceroy's Council does not want strengthening in any degree?—I do not see how his position can be made by any law or regulation stronger than it now is.

14,089. That is, so far as your experience went at the time that you were in India, there was not a very urgent demand for it?—I never heard of any demand for it.

14,090. No questions of great importance arose whilst you were in India in which there was a diversity of opinion between the Finance Minister and the rest of the members of the Council?—There was a very important question in which I differed from the Finance Minister, Sir Richard Temple. I never heard him complain that he had not a full opportunity of expressing his views.

14,091. But in the interests of the economical government of India, do you think that the interposition of the Finance Minister as the chief guardian of economy in the government of India is sufficiently frequent?—Yes.

14,092. (*Mr. Courtney.*) With respect to that regulation which you hold to be *ultra vires*? I have expressed an opinion with some hesitation; but, still, that is my opinion.

14,093. With respect to that regulation which in your opinion is *ultra vires*, I gather that not only do you think that it is *ultra vires*, but that in itself it is not expedient?—I think it is very objectionable.

14,094. (*Chairman.*) Turning now to the progress of expenditure; of course we should not ask your Lordship to go into any detail upon this point; but as you have seen the evidence that has been given before us, I should like to ask whether, with regard to the progress of civil expenditure, there are any points to which you would call our attention?—I have looked casually through the great mass of information that has been put before the Commission, but I cannot pretend to go through the civil expenditure of India for the last 20 years; it would be quite beyond my power.

14,095. Is there any point in the military expenditure upon which you would express an opinion?—I should say that, speaking generally, the increase in the military expenditure, apart from that which arose from the annexation of Upper Burmah, has mainly arisen from political considerations affecting the North-Western frontier.

14,096. In that answer do you include the additions to the army in 1886, and the frontier expeditions?—I include the additions to the army. I think it arose from circumstances which ensued from political considerations affecting the North-Western frontier, and I should include the most important of the frontier expeditions; not all of them—some of them had nothing to do with the frontier, but most of them.

14,097. In your experience, did you find the military department economical?—Yes, I found it very economical. When I say economical it took the greatest pains to keep up the efficiency of the army, because, when I was in India, the Military Member of the Council was Sir Henry Norman, than whom no man that I know was more determined to keep up the efficiency of the army; but at the same time he took very great care to be economical in regard to details. I would go further than that, and say that the statistics which were put in by Sir Edwin Collen in Appendix No. 21 showing a number of cases in which the Military Department in India—and the Commander in-Chief, I suppose too—had made alterations in the direction of economy, seem to me to prove that great care has been taken to introduce economical changes in the details of the expenditure over which the Government of India has control.

14,098. That brings me to the question of the relations of the Commander-in-Chief and the Military Member of Council. We have learnt that in a certain sense the Military Member of Council was appointed rather as a check upon the Commander-in-Chief?—I do not know why he was appointed. I am not aware of the reasons which made the Government of the day settle to have two military men in the Government of India.

14,099. The point arose in questions put to previous witnesses, whether the military element was over-represented on the Council by there being two members, and I think it was replied that we were warned that we must not assume that the Military Member of Council was simply a second military person on the Council; in fact, that in some sense he might be looked upon as a check upon the Commander-in-Chief?—I cannot say. I have had a good deal to do with military men in the public offices I have held, and I have not found, in matters of detail, that military men are disposed to manage the affairs of the Army without economy. They seem to me often to have been very economical in their views. I do not like the idea of one man checking another. Everybody is working for the good of the public in the Government; but no doubt proposals that came from the Adjutant-General or Quartermaster-General's Department would go to the Military Department of the Government of India, which is the Department of the Military Member of Council, and would be checked and worked out to see what the financial result would be; and in that sense you may say that the Military Member of Council is a check upon the Commander-in-Chief. That is the only sense in which I should put it.

14,100. Is not economical criticism an essential point of all administration? A measure is proposed which is for the benefit of the Service very likely; but, after the details of the measure have been worked out, is not financial criticism of it a different operation, and a very essential one?—It is a most desirable operation, and it is very necessary to see how much the measure is likely to cost; and I think that the system in India is better than the system that we have at home. The system in India is that financial considerations and estimates are worked out in the Military Department; and I think that is better, perhaps, than the system in England, in which the Treasury is supposed to check the War Office. I think the Indian system is better and more economical, perhaps, than the other.

14,101. I think you told us that the Finance Minister has the same power of control that the Chancellor of the Exchequer has here; as I should interpret the Treasury control, it is not that of a minute examination of the military expenditure proposed, but a criticism upon it from the Chancellor of the Exchequer's point of view, namely, how it will affect his Budget?—Well, if I were to go into this question, we should rather be discussing the English arrangements between the different Departments and the Treasury. I have had some experience of this, and I have known questions in which there was very minute control endeavoured to be exercised by the Treasury over the Spending Departments, both Army and Navy.

14,102. Without entering upon that point, I suppose the Finance Minister in India, if his powers correspond with those of the Chancellor of the Exchequer, would have a similar power of commenting upon the details of the expenditure?—Certainly; but I think, as a matter of practice, the Financial Member of Council would accept the calculations of the Military Department. I do not think he would try to check those calculations.

14,103. That is the only point upon which I wished to enter. Is there any part of the military expenditure of India over which the Government of India has no control?—Yes; they have no control over the organisation of the Queen's troops in India.

14,104. That is to say, that measures adopted by the home Government for the improvement of the organisation of the army must, in their financial consequences, be accepted by the Government of India as a condition of their using the Queen's troops?—Yes; the Government of India have no power to deal with that matter. Upon this question of organisation the Government of India and the Secretary of State for India in Council have frequently differed with the War Office. There has been a great deal of remonstrance and correspondence going on between one and the other, and I have no doubt that the members of the Commission have noticed that there have been lists sent in by the Government of India, showing the changes which have been introduced, without, as they allege, India having been consulted, and which have thrown an increased expense upon India.

14,105. That is a point which I think we shall come to shortly, when we come to the apportionment of charges?—As you please; I can refer to it then.

14,106. But perhaps I might ask you whether it is in the power of India to refuse to pay in such cases?—It would be impossible to give India the power to refuse to pay for the Queen's troops that are in India serving under certain regulations. It is absolutely out of the question.

14,107. There is no other point connected with the progress of expenditure upon which you would like to offer a remark?—No, I cannot pretend to speak to any matters of detail.

14,108. Have you paid any attention to the arrangement made for the payment of troops lent by India for service out of that country?—Yes, I have had occasion to give considerable attention to this matter.

14,109. Do you think that fair treatment has been given to India in the apportionment of those charges?—I think that India has been hardly treated.

14,110. Could you go through the various cases and give us your reasons?—The cases will be found in Sir Henry Waterfield's Memorandum in the Appendix, page 364. I think I might take them in the order in which he gives them there.

14,111-2. I suppose you are going to take them from paragraph 16, are you?—Paragraph 19.

14,113-4. Quite so; I see, 19?—Well, I will not go back to anything before the Abyssinian expedition. I think that in the case of the Abyssinian war it was not right to charge India with the ordinary expenditure of the expedition.

14,115. Has not there been some exaggeration in the way in which that charge upon India has been put forward. The actual charge upon India compared with the expenses of these expeditions has been not very large, has it?—I can give a kind of estimate of the amount, but what I was looking at was a question of principle, not a question of money, the question of the equitable dealing with India by the Imperial Government. It is a question more of principle than of money—a great deal.

14,116. The question of amount is a preliminary question; of course the question of principle I quite understand is that which your Lordship is putting forward?—Yes.

14,117-8. But, as a matter of fact, the sums involved have not been very large?—Therefore that makes me regret still more the trouble that has been given about them. I asked Sir Henry Waterfield to be kind enough to give me, if he could, the amount of the extraordinary expenses as compared with the ordinary charges. Members of the Commission, of course, know what I mean by that. The ordinary charges are the ordinary pay and so on of the troops that were employed. The extraordinary expenses comprise the extra pay and every other expense connected with the expedition. Sir Henry Waterfield believes that the extraordinary expenses were a little over 7,000,000*l.* I believe that figure is pretty certain, because the money had to be voted by Parliament, and he believes that the ordinary charges were not more than one-tenth of that, not so much as one-tenth, I think he says, so that India's share came to 600,000*l.* According to his estimate the sum in dispute would be 600,000*l.* In my opinion that ought not to be charged to India with respect to Abyssinia, and I think I can show very good grounds for my opinion. In the first place we will take what a statesman of very great weight, as having been Secretary of State for India for many years, and having also filled other important positions, and that was Lord Kimberley, who said, "In the case "of the war in Abyssinia, I confess I am unable to see "what special interests India had in the matter." That is what he said on March 16th, 1885, in the House of Lords; but I think perhaps the best argument I can use is supplied by the parliamentary paper, House of Commons, No. 8181, presented to Parliament last year, 1896, in respect to the payment for the despatch of the Indian troops to Suakim. I have that paper here, and on reading it through I found that a discussion took place between the Secretary of State for India in Council and the Treasury, in respect to the sending of a regiment to Mombassa, and in the course of that correspondence, the Secretary to the Treasury, Sir Francis Mowatt, I presume representing the Chancellor of the Exchequer, in arguing in favour of charging the ordinary pay of this regiment to India, used this argument: "It seems to my Lords that "a stronger claim can be made out in the present "case for the retention of the charge for ordinary "pay and allowances of the regiment upon Indian "funds than existed in the case of either the "Abyssinian war of 1867 or the Soudan expedition "of 1885." The Commission will see that the Treasury considered that the case of Mombassa was a stronger case than that of the Abyssinian war. Well, the conclusion was in the case of Mombassa that the whole of the expense should be paid by England, and none of the ordinary charges should be paid by India. Therefore, the deliberate conclusion of the Government was that a case which was held by the Treasury to be stronger than that of the Abyssinian war was one in which the Indian Government should not pay. Therefore, it seems to me that it was pretty clear that taking the Treasury point of view in that letter, the charge for the Abyssinian war should not have been made upon India. Lord Lawrence at the time protested very strongly against it, and I cannot conceive what substantial interest any reasonable person could contend that India had in the Abyssinian war. India had hardly any connection with Abyssinia. Abyssinia has not got a port. It could not even be said that there was a port in the Red Sea concerned. It was a question of getting back from the King of Abyssinia certain captives there. Of course, some people talk about prestige, and the idea that

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

the prestige of the Indian Government was concerned with the expedition to Abyssinia may have been put forward; but I do not think that anyone who has any knowledge of India would agree with this, or say that India had the slightest interest—any substantial interest, I mean—beyond that common to all members of the Empire, in the Abyssinian war.

14,119. Do you remember the ground upon which the Government decided at the time that India had an interest in Abyssinia?—No; I should like to see that. I never heard of it. I believe a protest was made at the time.

14,120. I am speaking from memory now. Was it not put forward that the Government of India was concerned in this question, because Abyssinia, being within the purview of India, you may say the prestige of the English name must not be endangered by allowing any English official subjects to be taken prisoners?—The idea may have been put forward. I do not think any impartial person would have paid the slightest attention to it.

14,121. (*Mr. Courtney.*) I think I remember a French critic arguing at the time that the war was for the purpose of discovering a sanatorium for English troops?—That would be a better reason than the reason adduced as regards prestige, in my opinion. Then I come to the next case, the Perak expedition. It was a very small one; but in this Perak case I cannot conceive anyone doubting that India has been hardly treated. Here was an expedition beyond the frontier of India, and for which, in order that any portion of the Indian revenue should be applied, it is by statute necessary that there should be an address to the Crown from both Houses of Parliament. I happened to be Governor-General at the time, and I protested against this charge being put upon India. Not only was no notice taken of the protest made by the Government of India, but not even were the statutory addresses from both Houses moved, so that the law was broken, and the charge so made upon India has never been repaid. It has remained charged upon India from that time to this, contrary to the law, and contrary to the protest of the Government of India. That is the case of Perak; that is the second one I have got to deal with, and I think this case is perfectly clear. I do not think that any answer can be given to it. In regard to the expedition sent to Malta, the whole of the expenses both ordinary and extraordinary were very properly paid by the Government of England.

14,122. (*Chairman.*) With regard to the Perak expedition the error which your Lordship points out might possibly be due to the fact that the Straits Settlements had only just ceased to be part of the Indian territory?—The Straits Settlements ceased to form part of Indian territories before 1872, and the expedition took place in 1876, so that it could not have been immediately after that.

14,123. At the end of the sixties I think the transfer took place?—Yes, possibly. The question is a very simple one. Was or was not Perak outside the limits of the Indian empire? It certainly was outside, and troops were sent, and, as I contend, and I believe nobody will deny, the charge was illegally made upon India. I do not say that there was any legal remedy, but still it was illegally made, and I do not think any notice was ever taken of the protest Then, as regards the Afghan war, I leave that out of the question; that is not the sort of case I mean.

14,124. Have you mentioned the Egyptian operation of 1882?—I am coming to that now; that is the next case, the Egyptian campaign of 1882. This was a case with which I individually had a good deal to do. Therefore I should not like to give any very strong opinion against the arrangement that was made. There was no doubt that as regards keeping the Suez Canal open India had a substantial interest. It had an interest. The question was what interest; how much the interest was. In the first instance it was intended that India should pay the whole cost of the expedition that was sent. That was when it was supposed that some very small force would have been sufficient. That was the reason why the Government at that time thought India should pay the whole. The English Government were put to very considerable cost, and we thought that India would be put to a small cost and we thought she might very fairly pay the small cost of the troops sent to Suez. However, the operations became very extended, and it ended in the expedition from India becoming a large expedition. The whole cost was, I think, 1,700,000*l.*, and the ultimate arrangement made between the two Governments, the Government of India and the Government of England, was that India paid 1,200,000*l.* and England paid 500,000*l.** That was the arrangement that was made, and it was accepted by the Government of India, but it certainly was accepted unwillingly. The Government of India thought it had been very hardly treated in the matter, and I think that, looking at it now, I must say that it would have been perhaps better if we had charged India half, that India should have paid 850,000*l.* and England should have paid 850,000*l.* I do not want to press that, because I myself was in the Government at the time; therefore I cannot say that I considered it at the time to be an unfair arrangement.

14,125. But your Lordship is distinctly of opinion that India was interested in the Egyptian expedition?—Yes, in respect to the safety of the Suez Canal. It might be held, if I had to argue the Indian case, apart from my participation in the matter, that, on the whole, one half would have been a fairer charge upon India than the arrangement that was made, but I do not press that. Then I next come to the year 1885, the troops sent to Suakin, that will include all the troops sent to Suakin. I think this was a very bad case In the first instance, the idea was to send an expedition from Suakin into the Soudan in order to break up the force of Osman Digna, and to co-operate with Lord Wolseley's army, which was going to advance against Khartoum. That was the origin of the Indian troops being sent to Suakin in 1885. It was then arranged that the ordinary expenses should be paid by India, and the extraordinary expenses should be paid by England, and I was a party to that arrangement as a member of the Cabinet; but in May 1885 the original plan of sending an expedition from Suakin to break up Osman Digna's force was given up, and the Indian troops were kept at Suakin to garrison the place. The whole of the circumstances were altered. Now, as I said before, by law, it is necessary that an address from both Houses of Parliament should be carried to enable any portion of the revenues of India to be applied to the payment of troops serving out of India, and the address of both Houses of Parliament distinctly said that it was for the purpose of "a military expedition to be "despatched for service in the Soudan and Nubia." The terms of that address covered the expenses at Suakin, between the troops being first sent from India to Suakin and 15th May 1885, when "the expedition "for service in the Soudan and Nubia" was given up, and the troops were retained merely as a garrison at Suakin. I hold that from the 15th of May up to the end of the employment of those troops at Suakin the expenditure of the revenues of India upon the ordinary charges of those troops was not covered by the terms of that address, and, therefore, was contrary to the Act of Parliament. A remonstrance was made to that effect by the Government of India when Lord Dufferin was Governor-General. The address will be found at page 6 of the Parliamentary Paper 8131, and the words are as I quoted them. The Government of India on the 9th February 1886 represented to the Government at home that after the 15th May, 1885, as the object for which the troops were sent was not covered by the terms of the address of both Houses of Parliament, India should be relieved from any payment. The answer to that was, to my mind, most unsatisfactory. The answer was, that in the opinion of the Secretary of State it would be undesirable to raise any question with the Lords Commissioners of Her Majesty's Treasury as to the arrangement under which the ordinary costs of the troops and vessels employed in the expedition to the Soudan is borne by Indian revenues. I think the Commission will see that that was no answer to the contention of the Government of India. The Government of India replied on October 26th of the same year. They said, I think perfectly truly, that "no reason has been assigned for the rejection "of our claim, and Lord Kimberley, who was then "Secretary of State for India, has, I submit, practi-"cally admitted its validity, by allowing that, if

* *Note.*—Since my examination I have been informed that the cost of the expedition to Egypt from India in 1882 was less than I put it at. If this be so, the figures I gave should be altered to meet the facts of the case.—*N.*

See also Q. 15,499 (Sir H. Waterfield, 36th day).

" there was any further detention of Indian troops " at Suakin, the Treasury should be asked to consent " to the ordinary cost of these troops being also " borne by Imperial revenues." Well, it went on. Nothing was done; no request appears to have been made to the Treasury, and the result was that India had still to pay. The next Secretary of State for India appeared to take the same view as Lord Kimberley, and he did not like to write to the Commissioners of the Treasury to ask them to meet what I consider was a legal claim on the part of India for the payment of those expenses. I think, in that case, any impartial person must admit that India has been hardly treated, and that those expenses ought to have been paid.

14,126. May I ask whether you make a distinction between the original intention upon which the resolution of the two Houses of Parliament was based and the change that was made afterwards in keeping the Indian troops in garrison at Suakin?—Yes.

14,127. Would you consider that, if the original plan had been carried out, India was sufficiently interested in the expedition to justify her being called upon to contribute?—If you ask me my opinion, I should say "No, certainly not." I do not think there was a substantial interest of India in any expedition to the Soudan, but my argument rests upon this, that when by a statute the revenues of the Government of India are not to be used excepting after addresses from both Houses of Parliamant, it is essential that the terms of that statute should be strictly adhered to, and, in my opinion, the continued employment of the Indian troops at Suakim as a garrison was not covered by the address. It alone could authorise the expenditure of the money; that is my point. As regards the force sent to Suakim last year, I say that certainly India should not have been charged.

14,128. That is on the same ground that you have just referred to?—On the same ground.

14,129. Namely, that you do not think India was interested?—The Commission will remember that as regards Abyssinia I have quoted a Treasury letter in which the case of Mombassa, in which no charge was made, was held by the Treasury to be a stronger case than either Abyssinia or Suakim, so the Treasury opinion, when they came to look at it impartially, I take it, is pretty clear; and I think I may very fairly observe on this occasion that last year in the House of Lords when the case of Suakim was brought before Parliament, the Secretary of State for India, Lord Kimberley, the Prime Minister, and all the members of the late Government present, voted against charging India, and, moreover, it is a remarkable fact, that two ex-secretaries of the Treasury who have been relieved from their official duties and very properly made members of the House of Lords, the noble Lord who is in the chair, and Lord Lingen, when they came to give their impartial consideration to this question of the charge of the troops upon India, voted against the payment, and I am not quite sure whether my noble friend in the chair did not even speak against it. Therefore, when the immediate pressure is removed and these gentlemen can take an impartial view they take the view which I have been endeavouring to express.

14,130. (*Sir Ralph Knox.*) But it is the duty of an opposition to oppose.

14,131. (*Mr. Buchanan.*) May we ask what line you took yourself, Lord Northbrook, last year?—I took the line of expressing my opinion against the payment, whilst at the same time, as I myself was a member of the Government which authorised a somewhat similar payment, I did not give a vote upon the subject.

14,132. (*Chairman.*) You make a distinction between a permanent official of the Crown acting under the instructions of his chiefs and the same official relieved from those obligations and at liberty to use his own judgment?—Yes, I draw a very great distinction, and I think that a very considerable discount must be allowed to the expressions of the Treasury in the controversial letters which were sent from the Treasury to the India Office.

14,133. (*Mr. Courtney.*) Sir Francis Mowatt might act differently if he acted for himself. What reason did he give for treating the Mombassa case so gently after saying it was so much stronger a case than the case of Abyssinia?—I take it that the Treasury was overruled by the Cabinet. I am only using the letter to show that the Treasury thought the Mombassa case was a stronger one than the other two.

14,134. But if the letter mentioned the other two cases, it must have given some reason for varying conduct in this?—I was not a member of the Government; I do not know. It is the present Government.

14,135. You quoted a letter of Sir Francis Mowatt? (*Mr. Ryder.*) I think the Treasury departmentally maintains its view, but that the Government decided contrary to the Treasury view.

14,136. (*Chairman.*) And therefore, I suppose, Lord Northbrook, you would argue that, if the Government overruled the Treasury in their view that Mombassa ought to be paid for, much more would they pronounce an opinion against making India pay for the Abyssinian expedition?—Certainly, and against the charge for Suakim.

14,137. (*Mr. Ryder.*) Perhaps I may explain that I think the reason that the Treasury thought that the Mombassa case was stronger than that of Abyssinia or Suakim, was that in the case of Mombassa, there were very important commercial interests, there were very many Indian subjects in British East Africa who were dependent upon commerce there, and we argued that India ought, in their interests, to bear at least part of the expenses of sending the troops. There were no such considerations in the case of Abyssinia or Suakim?—I do not understand that there is a question put to me.

14,138. I do not know if I am right in putting an explanation?—I shall be happy to endeavour to answer any question put to me.

14,139. I might turn it into a question by asking whether your Lordship thinks an explanation of that kind is reasonable?—I was not aware that a member of the Commission was responsible for this letter, but I am very glad that he should be present. That view is expressed in Sir Francis Mowatt's letter which I quoted. I think it only makes the case very much stronger, that although this view was put forward, yet the Government did not consider there was a substantial case against India. It makes my case much stronger.

14,140. (*Chairman.*) It was the letter of the Lords Commissioners of the Treasury, not of a member of this Commission?—I beg pardon. I understood Mr. Ryder to speak as if he were responsible for the letter.

14,141. I understood Mr. Ryder merely to give an explanation. [(*Mr. Ryder.*) I happen to be familiar with the correspondence]?—Well, I do not know anything about that.

14,142. (*Sir Ralph Knox.*) It is the case, is it not, that in no instance of these expeditions beyond the frontier of India was any additional charge thrown upon the revenues of India?—I am not certain about that. I am not quite certain. Will you say what you mean by additional charge?

14,143. In declining to pay for the ordinary pay of the Indian troops employed beyond the frontier, the British Government was not throwing any extra charge upon India; in fact, the result would have been that, supposing the pay of the ordinary troops was paid for by the British Government, the Indian Government would have gained so much, as it were, in expenditure during the year?—That is perfectly true; and that argument has been constantly put forward as a ground for making India pay these ordinary charges; but the Government of India and the Secretary of State for India in Council have always protested against it. The Government of India always said "there ought " to be reciprocity between the Governments. If, on " the one hand, you make us pay the ordinary expenses " of troops lent to the English Government, you, on " your side, should pay the ordinary expenses of " English troops lent to us; and as you have never " done it, how is it possible that you, with any degree " of equity, can bring forward the argument that " there is a saving to our estimates. There have been " savings to your estimates. You have never given us " any credit for that." There must be, in a matter of this sort, as the Indian Government have always contended for reciprocity, if the matter is to be decided upon any equitable grounds.

14,144. But do not the British Government undertake to pay the cost of any troops which the Indian Government raise to replace the troops that are withdrawn temporarily for these expeditions; and were not considerable payments made on that account to the Indian Government?—I am not aware. Certainly not in the later expeditions, because no troops were raised. In the case of the Abyssinian war it is possible that

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

there may have been some claim of that kind put forward; but I do not know.

14,145. As regards the earlier Egyptian wars, was it not so?—I am not aware; I have never heard of it.

14,156. As regards the argument that your Lordship has just advanced as to the reciprocity, was it not the case, taking the extraordinary instance—when the Indian Government called for the assistance of British troops for the purpose of suppressing the Indian Mutiny—that the Home Government had to replace all the troops that were temporarily despatched to India, and that it did so by raising additional troops and embodying the militia?—I am not aware. I cannot undertake to say what took place at the time of the Indian Mutiny. I do not know.

14,147. (*Chairman.*) I think that is rather an important point, that there has not been reciprocity; but I have not heard in the evidence that has been brought before the Commission any other case in which that could have taken place except the Indian Mutiny case, which, of course, is a very strong one, and in which the India Office has argued that the principle of reciprocity was not observed; but I think that we had evidence put in before us that in that case—I can put the figures very shortly—something like 40 battalions were sent out there and 20 battalions raised here to replace 20 lent to India. So far, of course, according to the bargain England was not called upon to bear that charge. In addition to that, a great number of militia regiments were embodied, and, so far as their cost covered the charge for the other 20 battalions, the same argument holds good. Therefore, to a great extent, I think, the argument that there is no reciprocity breaks down so far as that case goes?—That question appears to me to be rather a leading question. I should demur altogether to that statement. My opinion is that when the troops were sent to India the whole of the expense of those troops was paid for at once.

14,148. I say so; but, pardon me, I did not intend to put to your Lordship a leading question?—If it is the fact that 40 additional regiments were embodied, what happened to England? England saved the whole of the expense of the troops. English estimates were relieved of the whole cost of the regiments sent to India, and had a much smaller charge for the militia, therefore, it was a benefit to English finance for the year.

14,149. Pardon me, suppose 20 battalions were sent to India, and 20 new battalions were raised here, that is no relief to the English Budget. The charge must have been the same as before?—For a certain time there must have been considerable relief to the English budget. I must explain—I really cannot speak upon this with any authority, because I have not read up the details of it, but my impression would be this: a great calamity happens in India; it is necessary to send out large re-inforcements of English troops from England to India; all the regiments we could spare are put on board ship and sent to India. From the moment those men go on board ship the whole of the charge of them is borne by India. It stands to reason that the English Government must at first be saved a considerable expense for the pay of these men. I do not see how it can be denied. Afterwards it may be necessary to raise fresh battalions. It takes a long time to raise fresh battalions. During the whole time these are being raised India pays the whole cost of the battalions sent to India, and that was, I should think, the effect of the Indian Mutiny as between the finances of the two countries, but I could not prove it. That is the natural course of things that would happen. There was no reciprocity at that time. These regiments remained a certain time in India. India, during the whole time, paid the whole cost of those troops.

14,150. I am anxious to come to an agreement with your Lordship upon the facts. You would admit that to whatever extent the raising of new battalions or embodying militia caused an extra charge upon the English Budget, England under the bargain could ask repayment?—Supposing such an extraordinary thing was to happen that the question of the cost of suppressing the Indian mutiny was to be re-opened, of course the British Government must be credited with all that, but the argument of the Government of India, and my argument is this, that according to the principles which have been laid down and which are acted upon between the two Governments, on the one side India pays for the whole of the training of every man that is sent out from England to India, whether it is for a temporary or for a permanent purpose; on the other hand when troops are lent by India to the English Government India is charged in many cases, as I conceive in some cases not quite equitably, with the whole of the ordinary pay of those troops, so that there is a distinct contrast between the two, there is no reciprocity in the arrangement which now exists. Those arrangements might be altered, and there might be reciprocity in the future, but at this moment there is no reciprocity in my opinion.

14,151. (*Mr. Naoroji.*) Did not the British Government send troops from England in the case of the Mutiny for the maintenance of its very existence in India; was not the British interest most vital in that case, and should not that be considered?—I should not like to enter into any political questions of that kind.

14,152. (*Mr. Buchanan.*) With regard to the raising of the extra battalions, would not India have to pay her share in that too?—Not if extra battalions are raised by the Imperial Government at home.

14,153. (*Chairman.*) Do you think that in the case of two partners, like England and India are, it is any hardship for the one party to ask the other party—I am now assuming complete reciprocity in the matter—to assist with her troops, so long as no extra charge is put upon her? Is there in itself any very great hardship in that? Of course, if those troops are paid for by England, India in such a case as that (or it might be England in the reverse case) would actually benefit by a relief of her Budget by the transaction. Do you think that there is any very great hardship in making a call upon India to the extent of any assistance given within the limit of the ordinary Budget of India?—I should divide your Lordship's question into two parts. In the first place, I say that it is clear to anyone that assistance should be readily given by India to any call by the Imperial Government which may be made without any danger to India, either in respect of the considerations affecting the native troops of India, sometimes of very great importance, or otherwise. On the other hand, there can be no question that the Government of this country would be only too ready to assist India if troops were wanted, but when the noble Lord asks me whether I consider it to be a hardship to India that she should be called upon to pay the ordinary expenses, I revert to my original proposition. It certainly would not be a hardship if there was any reciprocity in the matter, but as the Government of India has always contended, there has been no reciprocity. I, therefore, do distinctly say that it is a hardship, and inequitable to charge the ordinary expenses of the troops in such cases, although it does relieve the Indian Budget.

14,154. I quite admit your qualification of what I put before you—namely, that in the one case which has occurred, when England might have been called upon to pay, she did raise troops to replace the troops she lent to India—that in all probability England made a saving, because she did not raise the troops immediately. To whatever extent that is the case, I think your criticism is undeniable; but, to whatever extent she did raise troops to replace those troops that she had lent to India, I think your Lordship would admit that the principle of reciprocity, or rather the bargain of reciprocity, was observed?—There appears to me to be no arrangement whatever that there should be reciprocity in these cases. There is no such arrangement in existence; on the contrary, the full charge has always been put upon India, even, for example, I believe, for the troops that were going to China that were turned over to India at the time of the Mutiny. There has been no reciprocity observed, in my opinion, of any kind in this matter. If you have one arrangement when troops are lent by England to India, and a totally different arrangement when troops are lent by India to England, I say it is not reciprocity. That is the present state of affairs.

14,155–6. But is that quite the case? As I understand it, in no case where India has provided the ordinary pay of troops lent to England has she raised any troops to replace them. I understand the arrangement to be that the moment she raises troops to replace the troops she lends, England repays the ordinary charges of the troops she has borrowed; but in no case has India done that?—There is no reciprocity. You are asking me a

question I could not agree to in the way it is put. I really do not know; I cannot say.

14,157. What I want to arrive at is an understanding of the facts. It has been pleaded to us by India that where England raised troops to replace troops she lent to India, India was called upon to pay the ordinary charge of those troops which were borrowed. So far the understanding or bargain has been observed, that is to say, India, as far as we know—and it has not been pleaded by the India Office to the contrary—has not been called upon to pay the ordinary charges on any occasion when she replaced troops lent to England. That is on the one side. On the other side it has been averred by India that the bargain has not been observed by England. Only one case has been brought before us, viz., that of the Indian Mutiny, in which troops have been lent by England to India; and in the case of the Indian Mutiny, as a matter of fact, I ventured to point out from the evidence already before us that England did replace the troops lent to India. Your Lordship very properly pointed out that those troops were probably not raised until some time after the troops we had lent to India had gone upon the Indian Budget; and to that extent I entirely accept that reciprocity was not carried out; but, so far as troops were raised, do you admit that there was no ground for asking England to pay the ordinary charges under the bargain?—I have not seen the bargain. If the noble lord would kindly refer me to any despatch which shows the principle upon which this is done I shall be ready to answer the question. My impression was that the only arrangement between the two Governments was that whenever any troops were sent from England to India, the Indian Government have to pay first the whole cost of training these men as recruits, and secondly the whole of their pay from the time that they embark from this country to go to India to the time they return. That, as I understand it, is the only arrangement or condition of the employment of English troops when they are lent to India. Well, I say that when Indian troops are lent to the Government of England, not only does the Government of England pay nothing for their raising and maintenance, but they make India pay in some cases for the ordinary pay. That is what I understand to be the arrangement between the two countries, and I say there is no reciprocity between the two countries in that arrangement. I do not see that I can go further than that. I do not see myself what the other collateral statement has got to do with the question.

(*Sir Donald Stewart.*) But there must be some qualification of the Chairman's way of putting the case. How about the regiments which were diverted from the China Expedition to India for a short time?

(*Chairman.*) I suppose they went on the Indian Establishment just like the regiments sent from here, did they not?

(*Sir Donald Stewart.*) They were lent for a very temporary purpose.

(*Chairman.*) Yes.

(*Sir Donald Stewart.*) There could have been no regiments raised in room of those lent for such a very temporary purpose.

(*Chairman.*) Quite so. I am saying throughout that there was no reciprocity to whatever extent troops were not raised to replace those lent; only we have evidence that a very large part of that force lent to India was replaced, and I think, Sir Donald, you will recollect that the India Office have ignored the fact—that is to say, perhaps they do not know that troops were raised to replace the troops lent to India.

(*Sir Donald Stuart.*) It is perfectly well known.

(*Chairman.*) Well, it was not put forward on the Indian side.

(*Mr. Buchanan.*) There are two other cases given where extra British troops were sent to India, the Sutlej Campaign of 1845, and the Punjaub Campaign of 1849, where in the same way India had to bear the whole charges of those troops from the day they were embarked. That is in a despatch moved for by your Lordship in the House of Lords.

(*Sir Ralph Knox.*) Your Lordship has just stated that these troops were *lent* to England, and that therefore there was no reciprocity as compared with the circumstances of the loan of the troops for the Indian Mutiny; but have not these charges always been paid by India really on the assumption—I do not say it is anything more than an assumption—that India's interest was involved in the objects of the expedition as well as the Imperial or the home interest; is not that the principle which has always governed these arrangements?—That may be so, but my contention was that there was no substantial interest to India, say, in the Abyssinian War.

14,158. And practically that is the point which your Lordship questioned, your Lordship's view being that India's interests were not involved in these various transpontine expeditions?—Yes.

14,159. But supposing India's interest was involved, you would not see any objection to their bearing the ordinary charge for the troops, would you?—Certainly not.

(*Mr. Naoroji.*) But has India any voice in the matter; is India a partner at all. As it is shown all along, India is no partner at all, because India has no voice whatever. The Government of India is simply a branch of the British Government, and the British Government decides, as among the different departments here they may discuss as much as they like, but to say that India is a partner, and India having any voice whatever, is to assume a thing that does not exist.

14,160. (*Mr. Mowbray.*) As a matter of fact, the 1,700,000*l.* that you have given us as the cost of the troops in the Egyptian campaign, did that represent only the ordinary expenses which India would have had to bear if they had not been sent?—No, the figures that I have got for the operations in Egypt in 1882 show both the ordinary and the extraordinary expense. The whole cost of the Indian part of the expedition, as I am informed, came to 1,700,000*l.*

14,161. Yes?—Of that England paid half a million and India 1,200,000*l.*

14,162. I wanted to have that clearly, because I wanted just to ask you whether——?—There was no division between ordinary and extraordinary expenses on that occasion.

14,163. Exactly, the 1,200,000*l.* which was ultimately charged to India cannot be said to represent only the ordinary charges of the Indian troops?—Taking the calculation of, say, one-seventh, being the ordinary charges, of course India paid a great deal more than the ordinary charges in that case.

14,164. (*Sir Ralph Knox.*) But that sum of 1,200,000*l.* included the ordinary charges?—The total sum of 1,700,000*l.* includes all charges. If you assume that the ordinary charges are one-tenth of that, and they probably were something of that sort, that would give you an idea as to what the ordinary charges would have been. But this is only an estimate, I could not say that is the figure.

14,165. (*Chairman.*) Now you have gone through and brought before us the grounds for the differences of opinion between the two Governments?—I should like to be allowed to sum it up before you go to the next question.

14,166. Yes, if you please?—To sum up what I have put before the Commission with respect to these cases of troops lent to India, I think certainly that, if the ordinary charges of that Abyssinian war were 600,000*l.*, that is a sum of money which India has a fair and equitable ground to claim. The whole of the Perak ordinary charges ought certainly, I think, to be paid. I will take the Suakim charges to be about 200,000*l.*, I do not know exactly what they were, but whatever the charges for Suakim were, I think the whole of the garrison charges at Suakim ought to be refunded to India. My opinion is that, on equitable grounds, 350,000*l.* ought to be given to India in respect of the Egyptian Expedition of 1882, so that the charges should be divided between the two Governments, and I think that those sums ought, either directly, or in some other equitable manner, to be allowed to India now. I do not see any reason why it should be considered that because India has been inequitably treated, and in some cases, in my opinion, illegally treated during many years, that that treatment should not be redressed by some action at the present time. that concludes all that I have to say upon that matter.

14,167. Well, that shows the differences of opinion which have occurred between the English and the Indian Governments on these important points of policy, and it leads me to the question whether you have considered any method by which such differences of opinion could be reconciled and avoided in the future?—Yes. I have

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

considered this matter pretty carefully, and I would say in the first place that I agree in the main with the propositions which are laid down in a letter addressed by Lord George Hamilton to the Governor-General of India in Council on the 30th June, 1896, which was laid before Parliament, page 30, number 8131, Papers connected with the Suakim Expedition. Lord George Hamilton says that: "It may be laid down that on all occasions "when the temporary loan of a military force is "urgently required, either by Great Britain or by "India, such assistance will be promptly given, so far "as the ability, resources, and situation of either "country at the time may permit. In the next place, "it would seem to be established that, if the object for "which such assistance is required is one in which the "Government supplying the troops has no special "interest beyond that which must be common to all "members of the Empire, the whole cost of the force, "so long as it is required, including both ordinary and "extraordinary charges, must be borne by the "Government that needs its assistance." That is the second of his propositions. The third is: "In "the third place, if the circumstances are such that the "Government supplying the troops has a distinct and "special interest in the matter at stake, then, although "that interest may be less strong than that of the "Government requiring assistance, the Government "supplying the troops should be content to bear, in one "form or another, a portion of the burden which the "operations involve." I think this third proposition would be generally assented to. I prefer myself the wording which I found in memoranda written by two members of the Indian Council, by Sir Donald Stewart and Sir James Peile. I think the words "direct and substantial" are better than "distinct and special." I really do not know what "distinct and special" means.

14,168–70. Have the memoranda of Sir Donald Stewart and Sir James Peile been published?—They were both laid before Parliament at the time. I do not know what "distinct and special" exactly means; but with that exception, and a consideration of some of the wording, I think those propositions might be agreed to. But those propositions, however good they may be, if they were agreed to, would still leave the matter precisely in the condition in which it now is, for who is to decide whether there is a direct and substantial interest or not? and therefore it seems to me to be absolutely necessary to do something to supplement that proposal by settling who is to decide. I find that in the course of this correspondence, Lord Cross, when he was Secretary of State for India, wrote a letter to the Government of India on the 3rd February, 1887. He said that he took the opportunity to urge upon the Treasury that "in the event of any "occasion hereafter arising for the employment of "Indian troops on duties not directly attributable to "the requirements of your Government or at a distance "from India, no portion of the expense should be "charged against India without your Excellency's "concurrence." The opinion, therefore, expressed by the Secretary of State for India in Council was that in future cases the Government of India should decide whether there were or were not direct and substantial Indian interests involved. Sir Henry Fowler, who was Secretary of State for India, expressed his opinion to the same effect. On July 6th, in the House of Commons, he said; "Who is to be judge as to whether "India has *this* interest or not. I think Lord Cross "gave the right answer when he says the Government "of India," so that you have an opinion by Lord Cross and by Sir Henry Fowler that the Government of India should decide. While I agree with that opinion I do not think it would be at all unfair to the British Government that this view should be accepted. I think the Chairman has pointed out when he was examining me that these questions of ordinary charges are not very big financial questions, the real question is the extraordinary expenses in those expeditions. The financial question is really, as between two great Governments, a matter of minor importance. I think that if you want to make a settlement which would be satisfactory to India, and settle these disputes for good, this suggestion is the best that I have seen. The Government of India is a very big Government. I cannot conceive it possible that they would take a limited and narrow view of such questions. I think they would be quite prepared to deal with them on broad grounds if the decision was left with them. I do not think it would require an Act of Parliament. I think if there was a Treasury minute, accepted by the Government of this country, and by the India Office to this effect, the matter would be settled. In any arrangement of this kind it is absolutely necessary to remember the statutory rights of the Secretary of State for India in Council, to whom by law the protection of the revenues of India is entrusted; and it is impossible by any arrangement that anybody may suggest to preclude the power of Parliament to decide in whatever way it pleases upon a question of this sort; so that this arrangement would be quite outside the statutory rights of the Secretary of State for India in Council, and the power of Parliament. It may be said that, notwithstanding the arrangement, it might be upset on the one hand or the other by the Secretary of State for India in Council or by Parliament, but I am confident that if an arrangement of this kind were made deliberately and formally, it would be a thousand chances to one against any further question being raised either in the Council of the Secretary of State for India or in Parliament, so that I should not attach any importance to the objection. That is the best suggestion I can make to the ommission on this matter.

14,171. Is not that open to this criticism, that the Indian Government is made the last and sole judge of what Sir Donald Stewart and Sir James Peile define as "the direct and substantial interest of India"; and to give effect to the suggestion which your Lordship has made, would it not be desirable that an endeavour should be made, we will say in the Treasury Minute to which you have alluded, to give some general definition, or some attempt at a definition, of what is meant by a direct and substantial interest?—I think if anything of that sort could be done, it would be a decided improvement upon my suggestion.

14,172. Somebody or other will have to decide what is a direct and substantial interest, and, if that duty is put upon the Indian Government in each individual case, it should be possible to lay down some general rules for their guidance beforehand?—If that could be done it would be still better. I quite admit that my suggestion is apparently a concession on the part of this Government to India, but I do not think it is a concession that the Government need be the least afraid of making, and therefore I invite it.

14,173. (*Mr. Courtney.*) Would you couple it with a reciprocal proviso in the case of our lending troops again to India?—Certainly.

14,174. That we should always determine whether we had a direct and substantial interest?—Certainly. I think it should be reciprocal that the Government of England must decide in that case. It is only just that the alternative should be given to England, but I think while the Indian case arises frequently, the other case is likely very seldom to occur.

14,175. (*Chairman.*) Do you think it would be a feasible task to lay down some general rules which might guide the two governments?—I should like to consider that. I think it would be possible; but I do not know whether it would be very difficult.

14,176. I will take such a case as this—a very simple case—in which I think most people are agreed. We will say, the first might be that India is distinctly interested in the keeping open of the Suez Canal, and that the questions affecting the Suez Canal would be held as having a direct and substantial interest for India. I have only given you that as a sample?—In my individual opinion I should say that the keeping open of the Suez Canal had a direct and substantial interest for India, and that, therefore, India should be called upon to pay something.

14,177. I am only giving that as an instance of the kind of rule that might be laid down in this Treasury Minute?—Exactly.

14,178. Then, again, you will remember in old times there was a definition, for the purpose of trading, of the limits of the East India Company; from the Cape eastward were held to be waters in which the East India Company had an interest?—Yes, I believe there was.

14,179. I am not proposing for a moment that everything inside that line should be held to have an interest for India, but, perhaps, anything outside that line should be held not to have an interest for India?—I think that is a matter that would require very great care. I should be very sorry to give a hasty opinion upon a matter of that importance.

14,180. (*Sir Ralph Knox.*) Would you contemplate the sending of troops to India which are not to be charged to India?—In sending European troops to

India, as I said in answer to Mr. Courtney just now, I think I should let the English Government have the absolute decision. I prefer this myself to any arbitration; I think it is simpler.

14,181. (*Chairman.*) It has this advantage, that it is very difficult, in a question of policy such as the interest of India or England respectively in certain expeditions, to find the arbitrator to whom you could refer.—I should be very sorry to be the arbitrator.

14,182–3. (*Mr. Buchanan.*) I did not quite understand, Lord Northbrook, what your suggestion actually was. Was it this: that a Minute was to be drawn up between the Public Departments at home, between the Treasury and the India Office, and the other departments at home by which for the future when this country wanted to use Indian troops outside the bounds of India, the Government of India was to determine whether it was to pay any part of the charges, and what part. Was that your suggestion?—It was not quite that. I began with the three principles laid down by Lord George Hamilton, and it was in respect of the third of these that I proposed a way to settle it. The first, about the employment of Indian troops out of India, I may put aside. That is a political question. The question whether Indian troops are to be employed or not must rest with the Imperial Government. As to the employment of the troops the responsibility must rest with them, and there can be no question about that. The second of Lord George Hamilton's proposals was that "where there was no special interest beyond that "which must be common to all members of the Empire, "the whole cost of the force, so long as it is required, "including both ordinary and extraordinary charges, "must be borne by the Government that needs its assistance." Well, I think that No. 2 is very much met by the suggestion of Lord Welby. It might be laid down, for example, that with respect to any troops in the Mediterranean, clearly there is no special interest for India. On the other hand, when any troops are employed within a certain area, it would be a question whether there was or was not a special interest, so that I think that might be laid down in the Minute which I propose. It is No. 3 which really comes to the question. "If the circumstances are such that "the Government supplying the troops has a distinct "and special interest in the matter at stake, then, "although that interest may be less strong than that "of the Government requiring assistance, the Govern-"ment supplying the troops should be content to bear, "in one form or another, a portion of the burden." Practically that usually comes to the payment of the ordinary charges. I suggest in that case that the decision whether there is or is not a direct and substantial interest for India might be decided by the Government of India.

14,184. Then do I understand that the Minute you suggest would lay down under the second condition certain limitations, such as have been suggested by the chairman?—I think that might be done.

14,185. In this Minute?—Of course, in the Minute no reference is to be made to the first condition, because that is not a matter for the Treasury or the India Office to settle. As to the second condition, the Minute might be written in something like this form—that my Lords, having had under consideration the great differences of opinion which have arisen between the Secretary of State for India in Council and the Treasury as regards the payment of troops, think it desirable to lay down for future guidance certain considerations accepted by both sides; then to go on to say that the whole expenses of Indian troops in the Mediterranean would, of course, be paid by England; then, with regard to the employment of troops within a certain area, it may be a question or not whether Indian interests are or are not substantially affected. Then, as to the third condition, that when the question arises whether there is a direct and substantial interest of India in the employment of troops in a certain expedition, Her Majesty's Government would be prepared to accept the conclusion arrived at by the Governor-General of India in Council, and that the Secretary of State for India in Council had agreed to that arrangement. It would then be binding so far as it can be between the two Governments. Of course, this Treasury Minute, as I said before, would leave untouched the statutory power, on the one hand, of the Secretary of State for India in Council, and on the other the supreme power of the Imperial Parliament.

14,186. With regard to the third condition, would the decision of the Government of India, which is to be decisive in the matter, only affect ordinary expenses, and would the extraordinary expenses of any expedition sent to India by command of the Imperial Government always be borne by the Home Government?—I could not say that. No. 3 is only whether there is to be a division between the two.

14,187. But in your proposed Minute, would you allow the Government of India a discretion to say whether it would bear any of the expenditure, the ordinary only, or the ordinary and part of the extraordinary, or all?—I would leave the Government of India, if it chose, to take a part in the extraordinary. Take the despatch of the troops from India to Suez in the first Egyptian War of 1882, I think it is quite possible that the Government of India might have said: "We are prepared to halve the whole expenditure." I think it might be left to them to say that. I would not deprive the Government of India of the opportunity of saying we are prepared to accept a portion of the extraordinary expenses as well as the ordinary charges.

14,188. And the proposed action of the Government of India under this Minute is to be subject to the approval of the Secretary of State in Council here?—No, I think the Secretary of State in Council must be prepared to delegate that power to the Government of India, always reserving their Statutory powers; I always reserve that, but I think as matter of practice they ought to be prepared to delegate that power to the Government of India, because unless you did that you would have the same correspondence over again, you would have the same difference of opinion and you would not settle the matter.

14,189. Is the Secretary of State on behalf of the India Office to agree in advance to this Minute?—Yes, I think the Minute must be concurred in by the Secretary of State for India in Council. I do not think it is necessary to refer it to the Government of India; the Secretary of State for India in Council is by Parliament entrusted with the duty of protecting the Indian revenues, and I think if he and the Home Government agreed in a Minute of that sort it would not be necessary to consult the Government of India on the details of that Minute. I would confide in the Secretary of State for India in Council in that matter.

14,190. Well, then, with regard to the statutory powers, I gather from what you have just said you would not propose to alter the Government of India Act, clause 55?—No, I think there is a very great advantage in not proposing to alter the Act, from the very great difficulty of carrying any Bill of that sort through Parliament to begin with. Then I think it would be exceedingly difficult to put the arrangement into a statutory form. I do not see my way to bring any agreement of this kind within the four corners of an Act of Parliament.

14,191. I suppose we may take it from you that your opinion is that the safeguard to the revenues of India, which is intended to be given by section 55, has not been effective?—I should not like to say that, but I would say this most distinctly: that although the transference of the Government of India from the East India Company to the Crown was absolutely necessary from a political point of view, India was more effectively protected by the old East India Company than now by the Secretary of State for India in Council against such charges as we have been considering. The Old East India Company were a body independent of the Crown, they had their representatives in Parliament. they could fight their case with the Government of England and were in a far better position than the Secretary of State for India in Council can possibly be. because the Secretary of State for India is a member of the Cabinet. I have never been Secretary of State for India, but I can well understand that it requires a very strong case indeed for the members of the Indian Council to oppose the Secretary of State and the decision of the English Cabinet. They are in a totally different position to the Old East India Company, who were to a great extent independent of the Crown. I have no doubt the members of the Council of India perform their duty to the best of their ability, taking into consideration all the circumstances of each particular case; but I am bound to say I think the old protection, as regards these financial questions, putting

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

aside any questions of policy altogether, was much stronger in the hands of the old East India Company.

14,192. That is as strong a statement, I think, as one could expect to have; and surely it might be fortified by your former evidence, in which you have shown that you yourself have disapproved of almost all the charges that have been put upon the Government of India with regard to these military expeditions since the time of the Abyssinian Expedition, and yet that no effective means have been supplied by this section 55 of the Government of India Act for taking these charges off the Exchequer of India?—I had nothing to do myself with the Abyssinian Expedition, it was before my time; but I had to do with one case, that of Perak, and I have had indirectly to do with the others, and I do not object to the interpretation which you have put upon my evidence.

14,193. With regard to Perak in particular you at that time were Governor-General of India, and not only do you think that section 55 fails to protect the revenues of India, but I gather from you that the statute in that case was not observed?—In my opinion the statute was distinctly neglected in this respect: namely, that there was no address from both Houses of Parliament, which is an essential condition according to law for the application of the revenues of India to any expedition beyond the frontiers of India, and the charge was made upon India notwithstanding a remonstrance from the Government of India. I do not think there could be a stronger case to show that there was not sufficient protection here for the revenues of India.

14,194. That showed not merely that there was insufficient protection but that there was actually an evasion of the statute?—In my opinion; I am expressing my opinion.

14,195. In your opinion it was an illegal charge?—An illegal charge; it was an unconstitutional charge, perhaps I ought to say, for I do not see that there was any legal remedy.

14,196. There was no remedy; no form of audit which would call attention to that?—I do not suppose an action of *quo warranto* would have lain against the English Government.

14,197. What I was leading up to was this, seeing that under the operation of section 55 the Government of India have no financial protection, and that these questions are determined by the vote of Parliament, and under parliamentary consideration here at home, would it not be desirable, if we are to make a new scheme effective, such as you suggest, that we should have some alteration of the statute and give your new scheme, or some such scheme, statutory confirmation?—I do not think I should quite accept the way in which the question is put. I do not say that there has been no protection of the finances of India from the Secretary of State for India in Council. I have no doubt there has been a very considerable protection; all I said was that I did not think that protection was so strong as it used to be when the East India Company existed.

14,198. Well, you would allow that there has been insufficient protection?—Yes, in some cases I think that the protection was from circumstances not so sufficient as I should have wished. I would go that far, but I think if the question is asked me whether I would advise any alteration in the Act, giving some stronger protection to the Indian revenues than is now given by the statute, I think I should answer in the negative. I do not think it could practically work; it might bring on a collision between the Secretary of State for India in Council and the English Government, probably the English Government of the time would be a strong Government; the effect would then be that the law would be altered and the Council would be swept away. I do not think it would be of any value in the end; I would sooner leave the statute as it is.

14,199. As a matter of fact the Indian Government in the past have objected to all these charges—they objected to the charge for Abyssinia; they objected to the charge for the Egyptian Expedition; they objected to the charge for both the Suakin Expeditions—and they were always overruled?—The Government of India, not the Secretary of State for India in Council.

14,200. No; the Government of India. Now you propose to give the Government of India by this minute the power of deciding as to the question of charge?—Yes.

14,201. That Minute has no statutory obligation; the statutory obligation under section 55 still subsists. There would still be a necessity for bringing forward that resolution in both Houses of Parliament on the subject—shall we really be any better off in future than we are at present?—I think so, for this reason, that if there was a deliberate arrangement of this sort between the Cabinet and the Secretary of State for India in Council, and a Treasury Minute of that kind was put on record I think it would be a very strong case indeed, and in all probability so strong a case that Parliament would not support the Government if that arrangement was upset, so I think it would be a better protection than altering the Act of Parliament.

14,202. Supposing a Government came forward with a large majority and determined to overrule the opinion of the Government of India, as it has done in the past, would it not be equally able to do it in the future, so long as section 55 existed?—It would be very much more difficult for them to do it, and I must add to that that the reason why I advocate this course is that the financial—the real financial questions between the two Governments—were a matter of very small importance, with the exception of Abyssinia. That was a biggish question, but with regard to all those others, of a question of 100,000*l.* more or less, I do not think any Government would go against an arrangement of this sort and go to Parliament with the chance of their being opposed for a small financial object. If it was a great financial object the objection would be stronger, but these financial questions which have occasioned so much trouble in India and at home are really hardly worth the time that has been spent in arguing them.

14,203. But if an alteration could be made in the statute so as to give your scheme statutory obligation, it would be to that extent improved?—I do not think so. I have expressed the opinion that I should be very shy in altering that statute. I really do not know when we come to altering the constitution of the Government of India and of the Secretary of State for India in Council where it would end. It would require, in order that I should express an opinion upon this question, that I should see what the proposed alteration of the statute was first, before giving an opinion. My impression is decidedly against altering the statute.

14,204. (*Chairman.*) In the case of the omission to obtain a resolution of the two Houses in regard to the Perak expedition, is it not rather singular that the Indian Audit Office did not report that? I do not know anything about the working of the India Audit Office.

14,205. You would be of opinion, probably, that a really independent auditor ought to report such laches?—I do not know to whom he would report; he may have reported for all I know.

14,206. If an independent auditor really performs the functions for which an auditor is instituted, such an omission as that ought to be reported, ought it not?—I know there is an Auditor of Indian Accounts in England, but what his precise functions are I really could not say.

14,207. (*Mr. Mowbray.*) Do you know whether this was reported or not by that auditor? I do not know at all. I was in India at the time. I could not know what took place in this country.

14,208. (*Sir Andrew Scoble.*) Do you think the auditor would have more power than the Governor-General in Council to bring that sort of thing to notice?—I was alluding to the auditor in England. I do not think it would come to the notice of the Indian Auditor.

14,209. (*Chairman.*) The real auditor of Indian expenditure is the Comptroller and Auditor-General in India; the auditor here is the Auditor of Home Accounts?—I think the Comptroller and Auditor-General in India could not take notice of a matter of this kind; it would be outside his cognisance.

14,210. I suggest that the Comptroller and Auditor-General in England would certainly think such a matter within his cognisance, and would be prompt to report that the Government had been guilty of such an omission?—I know nothing about the business of the Audit Office.

14,211. (*Mr. Mowbray.*) I suppose the Viceroy protested at the time?—Yes.

14,212. There was no question about this having passed without notice?—Certainly.

14,213. Every possible action was taken to draw the attention of the English Government through the India Office to what was considered by the Indian Government as an illegal measure?—The despatch was quoted in one of the papers from which I have already quoted—the Suakim correspondence. The Government of India say, "Turning now to the cost of the Perak Expedition, &c."

14,214. (*Chairman.*) What page is that?—Page 5, paragraph 10, "It is to be observed that on April 14, 1876, the Government of India addressed a despatch, "No. 146, to the Secretary of State, in which it was "urged that 'if the precedent of the Abyssinian case "'be followed in the present instance, a principle will "'be established which is, in our opinion, inequitable "'to the Indian revenue.'" I do not know what more they could say.

14,215. That does not call attention to the fact that the sanction of the two Houses was required?—That was quite out of my cognisance; I was in India; I had no idea that the law would not be followed by the Secretary of State in England.

14,216. But the Comptroller and Auditor-General here reports to Parliament excess payments, or unauthorised payments, on the part of the Government, and he is an officer of Parliament for that purpose. There is no such functionary in India, because the report would be made by an officer of the Viceroy's Government to the Viceroy's Government?—Yes.

14,217. (*Mr. Courtney.*) The Viceroy's Government themselves all the while protested against it?—I do not think the Auditor-General in India could have taken cognisance of whether or not the Secretary of State for India had asked the Houses of Parliament here to move an address; I think it would have been quite outside his functions. He would not have had the materials to go upon; he has to deal with certain accounts, and to see whether there is sufficient authority for the payments which come under his cognisance. This would have been quite outside his duties.

14,218. (*Mr. Mowbray.*) Could you as Viceroy have refused to send the troops, or refused to pay the troops, on the ground that the necessary address had not been passed through the Houses of Parliament?—Certainly not. I had to obey the orders of the Government at home to send the troops.

14,219. The responsibility lies with the Secretary of State and not with the Viceroy?—I should not like to say where the responsibility lay: I can only say I had no option.

14,220. You were acting under the orders of the Secretary of State?—Certainly. No Governor-General would think for a moment of hesitating to comply with any orders that he received from home, whatever the financial arrangements might be about them; the first thing he would do would be to do what was necessary.

14,221. And you would naturally assume that the Secretary of State had taken the necessary legal steps?—I assumed nothing; all I did was to protest against the payment being made, and in doing that, I consider I fulfilled my duty and I had no other course to take.

14,222. (*Chairman.*) You mentioned just now that in old times the East India Company could more effectively oppose the Government than the present Indian Government. It was the case, was it not, that the Board of Control in the last resort could overrule the Company?—The Board of Control had the power of issuing any order, which order—I think it was through the Secret Committee of the Court of Directors; I am speaking now from a recollection of very many years ago—but, I believe, the President of the Board of Control had the power through the Secret Committee of giving any order he pleased to the Government of India. I think Lord Broughton—he was then Sir John Hobhouse—ordered the first Afghan war.

14,223. He being President of the Board of Control?—He being President of the Board of Control. I believe I am not mistaken that he, on some occasion, said that he gave the order, and that he was responsible. Of course, that order involved an enormous expenditure, but that is a different thing from the kind of expenditure which we have been considering. I have no doubt, for example, on a subject which I shall come to, in the course of the rest of the examination, the subject of the non-effective charge, I have no doubt that when the question of the non-effective charge was argued out between the Court of Directors and the English Government, which ended with the passing of the Act under which 60,000*l.* a year was paid for non-effective charge, I have no doubt that was the result of a long correspondence between the Court of Directors and the English Government, in which there were concessions made on both sides; the Court of Directors urging the claims of India and the English Government getting as much as they could for the Exchequer. It is in that kind of case in which the independent position of the Court of Directors was to my mind much more effective than the present system. You must remember that the Court of Directors had their members in Parliament. They were members of the House of Commons, and very able men too. I remember Sir James Hogg, who was for a very long time a Member of Parliament, and a very strong Member of Parliament, and no Government would have liked to have his opposition to anything that was done, and the opposition of many men who supported the East India Company in the House of Commons. It was a very strong Parliamentary position that the East India Company held, as everyone who watched the course of the debates when the Government by the East India Company was abolished, must be aware of.

14,224. You mentioned that you would not think it necessary that that Treasury minute of which you have been speaking should be submitted to the Government of India. If the Government of India is to be the eventual judge of cases in which India has a substantial interest, would it not be desirable that the Government of India themselves should see the terms of that Minute, and acquiesce in it, as well as the Secretary of State?—The noble lord is right; it might be desirable to communicate it to the Government of India and see what they had to say about it; but I would leave the Secretary of State in Council to settle it, being the statutory authority in this matter.

14,225. (*Sir Donald Stewart.*) With reference to the chairman's questions about the powers of the Financial Member of the Governor-General's Council, would it not be impossible for the other members of Council to initiate expenditure of any sort if the Financial Member objected and had the support of the Governor-General?—I do not say it would be impossible, but, as a matter of practice, I do not think it ever would be done. I think it would be possible, but it would be quite futile; I will put it in that way.

14,226. For instance, the other members of Council could not authorise an expedition to take place in defiance of the Governor-General?—Certainly not; that would be a case in which it is clear, under the Statute, the Governor-General has the power of over-ruling the Council.

14,227. There is another question as to the military element in the Council being rather powerful; is it not the case that the Commander-in-Chief is an extraordinary member of Council, that he has no departmental work connected with the Council, and that he is very often absent from the deliberations of the Council?—Certainly. The Commander-in-Chief constantly goes, as he should, on tour in different parts of India, and it is not always that he is present at the Council.

14,228. (*Sir W. Wedderburn.*) I should like to ask one or two questions about these three rules contained in Lord George Hamilton's proposals; I think that you expressed general approval of the principles and spirit of them?—Yes. I think they expressed pretty nearly what I should agree to; I will not say every word of them, but the substance of them.

14,229. A general approval as regards the principles upon which the financial relations between the United Kingdom and India should be regulated?—In respect of the lending of troops.

14,230. Yes. These rules are really for regulating the payments as between the borrower of the troops and the lender of the troops?—Yes.

14,231. I do not see any basis by which it could be decided which country is the borrower. I would ask this question. Under Section 55 of the Government of India Act the revenues of India cannot be, except with the leave of both Houses of Parliament, spent upon operations beyond the frontier. In such operations would the Imperial Government be considered a

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

borrower of the Indian troops?—I am not certain that it would in all cases. For example, we will take the Afghan War. There was a movement of troops beyond the Indian frontier. I do not think the Imperial Government could be supposed to be the borrower of troops upon that occasion. I think that would come under the third of Lord George Hamilton's propositions; but still it is a verbal criticism rather than a substantial one, and perhaps the words "assistance which is required" would not apply to a case of that sort. Care must be taken to use words so as to make everything quite clear. Take this case of the Afghan War, it might be said, in fact it was held by Parliament, that the Imperial Government had an interest, and they paid 5,000,000*l.* to the Indian Government on account of the expenses incurred. It was not a case in which the whole payment was made by India, it was divided between the Indian Government and the Home Government. In that case, of course, nobody would contend that there was not a substantial interest to India.

14,232. I can quite see that India had a substantial interest; but was it not primarily an Imperial war for which the Imperial Exchequer should have paid, claiming from the Indian Exchequer a contribution proportioned to its direct and substantial interest?—That would raise a very important political question; I do not know what the Chairman thinks; that is hardly, I should have thought, within the reference, namely, whether the last Afghan War was produced by the action of the Imperial Government or any other causes, and it would be a very big question and I hardly like to give an answer.

(*Chairman.*) I think it lies somewhat outside our strict order of reference, involving as it does an expression of opinion upon the policy of the Government.

14,233. (*Sir William Wedderburn.*) I think his Lordship suggested the case of the Afghan War; I do not specify any particular war, I only wanted to get some practical rule for apportionment of charge which is part of our reference, and it appeared to me that the most reasonable way would be that the Imperial Government, which has an universal interest, should primarily pay for what is beyond the Indian frontier and is recognised as ordinarily outside all India's responsibilities, claiming a contribution in proportion to the direct and substantial interest of India?—I should think that some such arrangement might be made in connexion with what the chairman has suggested, namely, that there should be some limitation of area settled. I should not like to put it down that in any expedition over the Indian frontier, the English Government should pay in the first instance, because there might be many instances in which it was clearly an Indian expedition entirely. I think if the Chairman's suggestion is carried out, namely, that you should take some area on the one side and the other; take very roughly some area, from the Suez Canal round to Singapore, or anything of that kind, and the Mediterranean, some kind of area of that sort which might be worked out, threshed out; I think then the question of the first payment coming from England and the repayment being made afterwards from India might be quite right.

14,234. (*Chairman.*) As a matter of financial convenience I think it is pretty obvious that the Government that undertakes the conduct of the war had better bear the charge in the first instance?—In the first instance, that would be it.

14,235. The Government of India, no doubt, in the case of a war, say, on the Afghan frontier, would draw from its own resources, supplemented by such assistance as it might get from England; and it seems obvious that they should pay the expenses in the first instance. For England to pay the expenses and India to conduct the operations would be objectionable in practical finance, I think?—Yes, I think so; I think what the chairman says is quite right.

14,236. (*Sir William Wedderburn.*) The doctrine of reciprocity is laid down in these three propositions, but would not the doctrine of reciprocity sometimes operate not quite fairly as between the United Kingdom and India?—I should like the honourable member to be kind enough to explain in what way.

14,237. For example, you suggested that the Government of India should have a practical veto as regards the contribution from India and the Imperial Government should have a veto upon the contribution from the United Kingdom; but if the contributions claimed from India are, as you mentioned, somewhat trifling in amount, and as the amounts that might be claimed from the United Kingdom are very large indeed, that reciprocity would not be exactly equity?—If it was likely that very large demands were to be made from India for assistance from England, certainly that argument would be correct; I should admit it, but as a matter of fact looking to what has happened since the Mutiny, India would get the advantage of an arrangement of that kind, because the fact is that we have asked India to help us with troops on a great many occasions, whereas since that time there has been no temporary demand upon England from India for troops, and as the army of India is kept up to the full war strength, I do not see that there is any likelihood of any such demand unless some great trouble should arise. Practically, I am inclined to think that the arrangement would be rather in favour of India.

14,238. I daresay you remember a suggestion that Lord Salisbury shadowed out, of some authority to arbitrate upon these questions. Supposing it were objected that giving the Government of India on the one side and the Imperial Government on the other the decision upon these points would be giving them the decision in their own case, would it not be advantageous to have this impartial authority, supposing one were satisfactorily forthcoming?—Certainly, I should entirely agree in that; the great difficulty is how any such authority can be constituted that would be satisfactory.

14,239. But supposing a Code of Regulations, or a Minute which was to regulate these relations, were framed, there might be a quasi-judicial authority which, without touching any question of policy, would simply interpret these Regulations as regards the particular question put before them; might that not be done?—I think it might be done; but, as I said before, the great difficulty is how is this authority to be constituted? It is exceedingly difficult, and I have not yet found in my own mind any suggestion upon that matter which I could with any confidence put before the Commission.

14,240. The Judicial Committee of the Privy Council has authority under the existing statute, I think, to advise Her Majesty upon any question upon which their advice is asked. That would be a competent authority, would it not?—I have thought of the Judicial Committee of the Privy Council and probably, if any authority of that sort was to be constituted, that would form the basis; but the Judicial Committee of the Privy Council consists of a great many members. The difficulty would be, which members should be taken? You have two or three ex-Indian officials on it—Sir Richard Couch, my friend Lord Hobhouse. There are two, they would be, Lord Hobhouse might be, considered by the Treasury to have opinions in favour of the Indian view. Sir Richard Couch, being a judge, would be free from any objection of that kind, but still there would be great difficulty. And there is the further difficulty whether you could, excepting by statute, make such an arrangement as that. My great desire is to do something which would avoid the necessity of an Act of Parliament. If you were to set up this tribunal you would still have to leave—as you would leave if something like the suggestion which I have thrown out was to be adopted—(as I said before but wish again to impress it upon the Commission) the statutory power of the Secretary of State for India in Council in full possibility of exercise, and you would still leave the power of the Imperial Parliament, which practically means the power of the English Government, in full force. How you could get over that by establishing any tribunal of arbitration is to me a difficulty. I do not say it cannot be got over, but it is a difficulty.

14,241. In one or two cases, for want of the addresses in both Houses of Parliament, you consider, I think, that the charges upon India were actually unconstitutional—illegal or unconstitutional?—I think in the Perak case they were: and I think in the second case, although I am not so clear, because perhaps a contention might be made to the contrary. The first case, I think, was quite clear. In the second case, namely, the employment of Indian troops to garrison Suakin after the expedition to the Soudan was abandoned, my own opinion is that it was contrary to the Act of Parliament.

14,242. Does not a considerable difficulty arise with regard to the question of what military operations are

beyond the Indian frontier, in order to interpret this section 55?—I never had a case of that sort before me. I think there might be considerable difficulty in interpreting the clause. Perak was the only case that I had to deal with, and it was clearly beyond the frontier.

14,243. But do you understand by this section 55 that the frontier refers to the territories under Her Majesty at the time of the Act or at the time when the operations took place?—I should be very sorry to express that opinion. I think it would be held to be the frontier at the time the operations took place. I do not suppose there could be any idea of stereotyping the British frontier at the time the Act was passed.

14,244. But, of course, the additional territory would be legally under and appropriated into Her Majesty's territory?—It would be a question how the words of the statute should be construed. That would be a matter for lawyers to decide. It is very difficult sometimes to interpret some of those statutes.

14,245. With regard to a question in the earlier part of your evidence, you said that there did not occur to your mind cases where expenditure was enforced on the Indian Government with reference to military expeditions, I think?—I think I said I had no experience myself of it, excepting in one small expedition.

14,246. Was not the Afghan War a case of that sort? Did it not proceed from very distinct and direct orders from home?—I should not like to express an opinion upon that. I do not know how the Afghan War originated.

14,247. (*Mr. Naoroji.*) May I just read a sentence with regard to where the war of Afghanistan originated. The Viceroy, Lord Lytton, said, as was expressed in Mr. Fawcett's speech, "I came to India, and just "before leaving England for India I had frequent "interviews with Lord Salisbury, the then Indian "Secretary, and I came out specially instructed to "treat the Indian frontier question as an indivisible "part of a great Imperial question, mainly depending "for its solution upon the general policy of Her "Majesty's Government"?—I do not understand the Honourable Member to put that to me as a question.

14,248. Does it show, then, that the whole question of the frontier war originated from the Government here as an indivisible part of a great Imperial question mainly depending for its solution upon the general policy of Her Majesty's Government, and with which the Government of India has nothing to do?—I should beg to decline to give an answer to that question, unless the Commission think it is desirable I should do so.

14,249. (*Sir Ralph Knox.*) Assuming that India's interests were involved in these expeditions across the seas, and that the ratio of extraordinary to ordinary expenditure is, as your Lordship has said, something like six to one, that is not an unfavourable division of the total expenses in your opinion, is it?—Not at all, and I have said, I think, perhaps more than once, that I do not consider this question of the ordinary expenses to be a matter worth quarrelling about. That is the reason why I want the thing settled in the way which I have suggested.

14,250. But you have suggested that it should be settled by practically making a concession in favour of India, inasmuch as India is objecting to the payment in every one of these cases, and if the views of the Indian Government were accepted in all cases, the full charge of the extraordinary and ordinary would be made against the Home Government?—In the particular cases which I have mentioned that would have been the result, and I am bound to say that I think it would have been only fair and right; but I am not at all prepared to say that in every case the Government of India would decline to pay the ordinary expenses or even more than the ordinary expenses of an expedition outside India. I think that is a question which the Government of India would consider if confidence was put in them, that they would be prepared to deal with it in a proper spirit, and to contribute if necessary. That is the experience I have had of the Government of India.

14,251. But the only instance in which your Lordship thinks that it was fair to make a charge against India was that in which the safety of the Suez Canal was involved. Would you limit the payments of India of these extraordinary expenses to that case only, or can you conceive any transpontine expedition in which India's interests would be so much involved that they should bear the ordinary charge?—It is rather difficult to suggest a case, but I can conceive such a case. I can conceive a case in which Indian interests might be involved.

14,252. Do you think in those cases that the distribution of the charge should be in this proportion of six to one?—No. I think cases might arise in which it would be fair enough that India should pay half the whole charge. I will not say there might not be cases in which they should pay the whole.

14,253. (*Chairman.*) I think in one case you have mentioned you think they ought to have paid half?—Yes; the expedition to the Suez Canal. I am bound to say the Government to which I belonged took more from India than half; but, at any rate, I think half could fairly have been charged against India in that case; and I can conceive a case where troops might be sent from India to the Cape, which would involve Indian interests very strongly in time of war.

14,254. (*Mr. Naoroji.*) Then, is the capacity of India as compared with England at all to be taken into consideration—that is to say, its poverty as compared with the wealth of England—I would ask whether that capacity is to be taken into consideration or not in the arrangement of any apportionment of charge?—No. I think it is right to deal with these questions simply as matters of equity between the two governments. I should be very sorry to put forward a claim for India for one shilling more than could fairly be given to her. That is my view, and that I think would be the view of Governments of India with which I have had anything to do.

14,255. (*Chairman.*) Was any objection made by India to a contribution in the case of the Egyptian expedition?—There was a long correspondence, and I am prepared to say this much, that the Government of India accepted what we offered, but whether they accepted it willingly or not I should not like to say.

14,256. Did not the dispute turn rather upon this, that we asked a large contribution from them, and they remonstrated against its amount? Do you remember whether they remonstrated against any contribution at all?—I think I have mentioned the circumstances before. When at first the expedition to Egypt, in 1882, was decided upon, it was mainly to destroy the power of Arabi, as the members of the Commission may recollect. It was not supposed that the force to be sent from India would be at all a large force. We proposed to have a small force from India, and as we were going to a very considerable expense we thought it fair that India should pay for this small force. The circumstances altered after that; instead of a small force, numbers of troops were sent. The Indian forces were of great value in the campaign; they behaved exceedingly well, they helped very much in the whole campaign. The increase of the force from India very greatly increased the expense, so there was no particular moment at which the whole expense could have been put before the Government of India, and they could have given an answer aye or no in regard to the apportionment of costs, at least that is my recollection; it was the increase of expense which created the difficulty. But I am speaking without notes of this matter and therefore I may not be altogether accurate.

14,257. We will now pass on to the question of those differences of opinion between the Imperial Government and the Indian Government which have lasted over so long a period and in the adjustment of which your Lordship has taken a considerable part; and in the first place I should like to ask you whether you consider that it is of political importance that the frequent controversies between England and India on such financial questions, whether of policy or of administration, should be avoided as much as possible?—Upon this matter I entertain the very strongest opinion, and the same opinion has been expressed by the Government of India in Lord Lansdowne's time, and I think it has been expressed by Lord Lansdowne himself in Parliament. It was expressed, quite recently, very strongly by Lord Elgin's Government. I think that these controversial questions between the two Governments—I was going to use a strong word, but I do not think it is too strong—are almost a scandal. The matters concerned are very often very small, and, as is natural, there are very elaborate arguments used

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

on both sides, and every now and then rather strong language used by those who advocate the one side or the other, and it gives an impression that there is some intention on the part of the English Government to be unjust to India, and that when it is published in India, with the great extension of the education of the natives of India, and the way in which they now watch political affairs, the Indian press writing articles on the subject, it gives cause to very many attacks upon the conduct of this country, and the quotations of language used by the Secretary of State, and so on, about charges being put upon India which ought not to be put—all which is most undesirable. Moreover, a few years ago there was an alteration made in the legislation respecting the Legislative Council of the Governor-General, and at the present time the budget may be discussed in the Legislative Council. When the budget is discussed there is no reason why any member of the Legislative Council (and as the Commission know, there are a great many members of the Legislative Council who do not belong to the Government) may not take up the question of these charges. It is a very popular question, because the matter is one of which the Government of India have constantly complained. It is very difficult for the Governor-General of India or the Military Member of Council, whoever he may be, in the Legislative Council, to argue against criticisms which would mainly be supported by quotations from minutes, despatches, and speeches of Viceroys and Secretaries of State for India. I think that is a very great evil. As I have said before, I do not believe for a moment there has been any deliberate intention to be unfair to India in any of these matters, I only think that from the greater strength of the Treasury and the War Office in the English Government the result has been that India has not been always equitably treated, that for the future these small, almost miserable, matters of contention should, as far as possible, be avoided. As I said before, I cannot express my opinion too strongly upon that and upon the political importance, I should almost say necessity, of some arrangement being made which will put an end to these controversies.

14,258–9. Now we will take the leading question that has been so long at issue between the two Governments, namely, the capitation rate which India should pay on the effective strength of the Queen's regiments serving in India. First of all, I would call your attention to the Committee of the House of Commons on the East India Finance, which reported in 1874, and which expressed a general opinion upon the subject. It is quoted in Sir Henry Waterfield's paper, page 362 in the Appendix. There is a long extract from the Report, but there is one passage in which they express their general view: "Your "Committee cannot lay down too strongly the posi- "tion that the English estimates ought not to be "relieved at the expense of the Indian Revenue, but "that the Secretary of State for India in Council has "the constitutional right of refusing to pay for objects "in which he considers that India has no interest. At "the same time, India, as a component part of the "Empire, must be prepared to share in the cost of a "system the expense of which may be enhanced for "Imperial purposes." May I ask whether you agree in the opinion so expressed by that Committee?—I cannot do better in the way of expressing my opinion upon this, than to read to the Commission two paragraphs of a despatch which was addressed by the Government of India when I was Governor-General to the Secretary of State, commenting upon that report. The despatch is No. 406 of 1874. It was laid before Parliament in 1893. This is what we said: "We observe that the Select Committee report "their opinion that India, as a component part of "the Empire, must be prepared to share in the cost "of a system, the expense of which may be enhanced "for Imperial purposes. The particular class of "expense to which this observation is intended to refer "is not specified, nor is it stated in what form any "payment on this account should be made by India, "The opinion of the Committee may probably, however, "have reference to some evidence in which it is argued "that India might equitably be called upon to pay a "part of the general staff charges of the army at "home, and of the system of army organisation and "reserves which has been recently introduced. We "have the honour to enclose a copy of a minute, with "which we entirely concur, which has been recorded "by the Viceroy upon that question." So that you will see that when I was Governor-General of India this paragraph was considered by the Government of India, and we could only express our concurrence with considerable modifications as explained in the Minute, written by myself, to which probably I shall have to call attention further on.

14,260. Not to enter into too great detail into the inquiries into the subject of the capitation rate, I would remind your Lordship that both before and after that time various committees have inquired into the subject; and perhaps I might come down, unless you wish to call attention to anything in previous reports, to that important Committee of which you took charge, and which year by year made inquiry, and finally recommended a capitation rate to the Government. You took charge of that Committee, I think, about 1879 or 1880, did you not?—It was in 1879 that I became chairman of the Commission, but I should like before going into that first to allude very shortly to what took place before. In the first place there was at one time a very extravagant and inefficient depôt system in this country for sending drafts to India. I think at one time there were as many as 19,000 men charged to India who were attached to the depôts of the Indian regiments. When I say extravagant, I do not mean to attach any blame to the War Office. It was a very difficult thing to manage, owing to the increase of the British Army in India after the Mutiny, but, however, these were the facts of the case.

14,261. About what time was that?—That was before Major-General Tulloch's Committee.

14,262. That would be about 1860?—It was in 1860. In 1861 Major-General Tulloch's Committee recommended a capitation rate of 10*l*. I do not want to refer to that. But in 1869 this arrangement was altered, and the actual charges were paid, and then there were all sorts of committees.

14,263. A bill was sent in each year in which the War Office stated the actual charges; and the India Office discussed and paid it?—And there were all sorts of committees, as the Chairman has told you. Then, in 1878 the Cabinet took up the question, and there were Treasury Minutes, and it was very nearly being settled then on some basis to which I need not allude. At that time the claims made by the War Office against India had not been settled, the India Office having objected to the charges. The Audit Office complained that these accounts were not settled, and, in the end, the Treasury agreed to admit the India Office objections to the outstanding claims of the War Office, and to refer the question to a Commission, of which I was the Chairman. I would only wish to make one remark upon that. I notice in the evidence that it has been suggested that the acceptance of the objections made by the India Office to the War Office claims was a liberal concession to India. I have no doubt whatever that the noble lord in the chair, who was Secretary to the Treasury at the time, and others thought that they were making a very liberal concession to India at that time, but, as a matter of fact, I believe there was really no concession made at all, because when the claims of the War Office were examined by my Commission, we reduced the claims by so large an amount that I believe if the claims of former years had been referred to any Commission to examine they would have allowed almost all the objections raised by India. I do not think, therefore, as a matter of fact, there was any concession made to India. That is all I have to say upon that.

14,264. Then your Committee sat for many years, did it not, and made a final report in 1892?—Yes: our Commission sat till 1892. We could not deal with the matter at first, because there was a Commission sitting, which is constantly happening, about the army in England, and another Commission sitting in India which might have changed the organisation of the army and interfered with our calculations. Then there was the great increase of the British army in India in 1885–86. Besides, there was a great quantity of details to be got from the War Office. It was not till we got the claims of 1886–87 that we could really deal with the matter so as to work out an average.

14,265. Could you tell us generally what the result of your inquiries came to?—It is all contained in a letter which was laid before Parliament addressed by Sir Thomas Seccombe to the Secretary of State. He stated that by our examination of these claims we on the whole reduced the claims upon India by 1,000,000*l*. sterling.

14,266. But you came at last to the conclusion to recommend a rate per effective man, which has been in

force ever since, has it not?—Yes, we then, having got all the returns we wanted and having got the claims for 1886–87 and 1887–88, arrived at a rate of 7*l.* 10*s.* upon the establishment of the British troops in India, which we recommended as being what we considered a fair charge. That was the result of the Commission.

14,267. And did you intend, at that time, that that should be a permanent rate, or did you intend it only to apply to those years to which your inquiries extended?—I cannot say that we as a Commission came to any conclusion about it being a permanent rate, but if you ask me my own opinion, and speaking only for myself, I think that that rate—so far as what I call the arithmetical calculation goes, namely, what was the real cost which India ought to pay for the effective charges at home—was a very fair rate and might have been accepted for a considerable time.

14,268. Towards the close of your Commission did not a question arise as to whether the final settlement of the question ought not to be entrusted to a commission of rather larger scope than the Departmental Commission of which you had kindly taken the chair?—The circumstances were these. I fully believe, at the time the Commission was appointed, that the Government intended us to settle this question, from what Mr. Stanhope said in the House of Commons, but as years went on the opinion of the Government of India upon the matter came home. We asked for the opinion, or rather the India Office did, and that opinion came in a despatch which is before the Commission. It was written when Lord Lansdowne was Viceroy—the 25th March, 1890. When that despatch came home it was considered by the Treasury, and also by the Secretary of State for War that we could not very well deal with the questions which the Government of India raised. When the despatch was sent to me as Chairman of the Commission, it was coupled with an intimation that the Secretary of State for War was not prepared to agree with the conclusions that we should come to even if we did consider it, and the Treasury expressed very much the same opinion; so of course I could not think of entering into a question when the conclusions at which we should arrive were not likely to be accepted. That was the reason why we did not go into it. I do not know that I even consulted the members of the Commission upon it. I said "No, I "cannot undertake a task, when I see that two out of "the three Departments concerned will not agree." That was the real reason why we did not go further.

14,269. But might I ask you whether it had not then occurred to you that a Commission with rather larger powers, and perhaps I might say a more representative Commission might be asked to take up the question?—Yes; if you ask for my opinion as to whether the Commission over which I presided would have been a proper Commission to decide upon the larger questions of policy involved in the letter of the Government of India, I am bound to say I very much doubt it, and I wrote to that effect to the Treasury. Here is the letter which I wrote to your Lordship on September the 10th, 1891. I said, in the first place, this, "with these papers" (it was at the time when the letter of the Government of India was communicated to us), and I said to your Lordship: "With these papers you "enclosed, for my information, a letter from the War "Office to the Treasury, in which the Secretary of "State for War expresses his opinion that the questions "raised by the Government of India cannot be held to "fall within the legitimate scope of the inquiry of the "Commission, an opinion with which it appears from "your letter that the Lords Commissioners of the "Treasury concur. In these circumstances, as two of "the three Departments of Her Majesty's Government "concerned in the settlement do not consider the "Commission to be able, with advantage, to consider "and report upon the large questions of policy now "raised, an opinion which I myself share, I trust "that the Lords Commissioners of the Treasury "will excuse me for respectfully declining to under-"take the consideration of these documents in con-"nection with the claims of the three years, which "have been referred to the Commission." I gave that opinion because although my two colleagues on the Commission could not have been more able men, Sir Ralph Knox and Sir Thomas Seccombe, and no two men could have been more thoroughly acquainted with the subject they had to discuss and no two men could be fairer in coming to a conclusion, yet I did not think that a Commission consisting of one man at the head of it who was connected with India, and the other two the representatives of the two Departments, the War Office and the India Office, would have had sufficient weight to deal with the bigger questions put forward for the Government of India.

14,270. But did you at that time ever think of the kind of Commission to which such a communication might be referred?—I had some communication with the Chancellor of the Exchequer, Mr. Goschen, about it, and there was some idea of having a fresh Commission differently constituted, but nothing officially passed.

14,271. Was it proposed that there should be a judge at the head of it?—I think something was said about some judicial element in the Commission, but there was nothing official.

14,272. We understand from Sir Henry Waterfield's memorandum that the India Office do not desire a re-opening of the calculations upon which the present capitation rate was arrived at by your Commission; but a memorandum has been laid before us inviting our attention to general considerations which, the India Office think, militate against the equity of a merely arithmetical division of the charges. We shall be glad to learn your opinion on these points, which perhaps I may briefly run through to you. Your Lordship will note that I am about to quote from Sir Henry Waterfield's paper, which appears at page 362 of the Appendix. On page 364 these considerations are laid down. First, "In a letter to the War Office "of the 8th September 1871, the Duke of Argyll said "that he could not 'consider it either politic or just to "'lay upon the revenues of India the entire cost of an "'organisation for furnishing recruits to that country, "'which experience has shown to be far beyond what "'is needed for that particular purpose'"?—As regards that letter I would observe that it was written before the full organisation of the amended system of recruiting was carried out by the War Office. I would not lay any stress upon what was written in 1871; the new present depôt systems, if they were in existence, had only just started, and a great deal of change has taken place since that time. The rest of the paragraph refers to a totally different thing, namely, the abolition of the local European army—a very big question, that is.

14,273. That is what I was coming to. "He added:—"'The abolition of a local European army in India was "'a measure dictated by considerations of Imperial "'policy; but it is questionable whether that measure "'could have been so easily carried if it had been fully "'known how great would be the additional burden "'thrown upon the Government of India.'" Well, we have had evidence to a certain extent traversing the opinion that it has thrown such a great charge upon India apart from the fact that a very much larger army in India is kept there. Has your Lordship any views on that point?—The Duke of Argyll was perfectly right in saying—"The abolition of a local European "army in India was a measure dictated by considera-"tions of Imperial policy." I do not think anybody can dispute that. If I was to go into that question at all I should say that the reason for the abolition of the old local Europeans was mainly mismanagement at home, but probably it is not necessary to go into that. My own impression is that, unless the affair had been mismanaged a certain amount of local European troops would have been maintained in India. I was perfectly conversant with what took place at the time, so that, as far as the despatch goes, I think the Duke of Argyll was perfectly justified in what he wrote, but whether the arrangements that have since been made, have so far increased the charge upon India as to occasion an equitable ground for any diminution of the 7*l.* 10*s.* charge, I think is a very arguable question. My own opinion is that as regards the charge for effectives there is no very strong ground to be put forward now upon this particular plea. As regards the non-effective vote, I think there is cause. I think that the increased charge for pensions occasioned by the abolition of purchase is a charge that ought not to be put upon India. I do not refer to small questions. I am looking at the big questions.

14,274. Perhaps we shall come rather later to the question of the pensions consequent upon the abolition of purchase. The next point, with which Sir Henry Waterfield deals, is that, "although, when the system "of short service was introduced by Lord Cardwell, "he expressed his conviction that it would not entail "any additional charge upon India, it has in fact "imposed a heavy additional charge for transport, as

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

"the reliefs have to be effected at much shorter "intervals"?—I should like to say a few words about the short service system. I was at the War Office at the time when this system was introduced. I was Under Secretary, and I was in full communication with Lord Cardwell about the whole of these matters, and I believe that the introduction of the short service system would have been a great improvement upon the old system in England, if it had been carried out as originally intended. I put in that reservation, because I do not desire to be supposed to approve of certain things which have been done since that time. That being so, I am bound to say that if any reasonable additional cost was thrown upon India by that system, I think that is a charge which would very fairly come under the words to which the chairman referred a short time back, namely, that it was part of the organisation of the Imperial army of which India ought to pay a share. As regards the question whether there has or has not been any additional cost, I think that is a very arguable question. I have seen some very able papers, written by Sir Ralph Knox, showing that he thinks on the whole it will produce a saving to India; I only hope it may be so. These calculations, unless you can show that the saving has actually accrued, are always somewhat doubtful. At any rate there can be no question that there must be in the end a diminution of the charge for pensions for soldiers in consequence of the short service system. On the other hand there can be no question, I think, with great deference to Sir Ralph Knox's memorandum, that there must be a larger charge in respect of the recruits sent out year by year. Whatever figures may be put before us, it is pretty clear, I think, that whereas in some years before the short service was introduced there were about 2,000 recruits a year sent out, and now there are 10,000 or 11,000, there must be a very considerable additional charge, because India pays the cost of training every one of the men that go out. As regards transport there is a memorandum showing, or purporting to show, that sending 11,000 men now costs less than sending 9,000 men some years ago. Of course the reason of this is, that the cost of steamboats is much less than it used to be, and the cost of provisions probably has fallen. It would be impossible really to contend that the charge would not be less if fewer recruits had been sent out. That is all I have to say about that.

14,275. I understand your argument to be this: more men being sent out, there must be a larger charge for transport than if the same number had been sent out as formerly?—Yes. I do not know where the calculation is; it is somewhere in the Appendix.

14,276. On the other hand, you do not think it fair to set against that the economies which have been made in freight and transfer generally?—I do not think that it would be right to raise an equitable claim upon the Imperial Government in respect to the additional number of recruits sent out in consequence of the short service system. I should not like to press that myself as a claim I could defend, although I do not agree with a great many of these figures. I have found the calculations as to the passage of troops, the statement shows that the cost per adult in 1870–71 was 16*l.* 16*s.* 7*d.* for transport and the cost per adult in 1880–81 was 8*l.* 0*s.* 4*d.* Well, suppose at the rate of 8*l.* 0*s.* 4*d.* there were 11,000 recruits sent out, and if the short service system had not existed there would not have been half that number, of course India would have saved half of this cost. The comparison does not show that there is no increased charge upon India in consequence of the change of system, but I do not press that point. I should like to add one thing. I guard myself to this extent, namely, that I do not think India has any equitable claim, provided that a reasonably economical system of training recruits is carried out by the War Office. I think that is a very important reservation that I make.

14,277. You must be satisfied that the recruiting system is a good one?—That it is fairly economical, yes.

14,278. Then Sir Henry next says that India is much more utilised as a reserve for England than England for India?—I think that is quite true.

14,279. That really alludes to those questions which we have been discussing lately?—Yes, I think that is quite true, and I think some fair allowance might be made on that account equitably.

14,280. Further that India not only pays the whole cost of the maintenance of this large force in India, but also the ordinary pay of any troops required for service out of India. That also comes under the head of what we have been discussing?—We have discussed that matter.

14,281. And that apart from the assistance rendered by India in time of war it affords the best training ground for the British army?—I should not like to express an opinion upon that. The opinion would be far better got from Lord Roberts, who has been Commander-in-Chief in India. • •

14,282. (*Mr. Naoroji.*) And that at India's cost, is it not?—I cannot tell you.

14,283. (*Sir Donald Stewart.*) Lord Wolseley gave evidence, I think, as to the value of India as a training ground for the British Army?—Not being a military man, I should prefer not to give an opinion upon that.

14,284. (*Mr. Naoroji.*) My question was this: when it is said that India is used as a good training ground for an European Army I ask whether that should be done at our cost, at India's cost, for training an European army which is useful to England?—I have said that I prefer, not being a military man, to express no opinion upon the military question.

14,285–8. (*Chairman.*) I understand that the India Office think that, in fixing the rate at which India should pay for the home charge of Queen's regiments on the Indian establishment, these considerations should not be lost sight of. Do you consider there is force in that claim generally with regard to these seven points?—Yes. I think that some of these considerations might be equitably considered and constitute a claim upon India for some reduction of the 7*l.* 10*s.* charge; but I think the strongest of the whole of them is contained in the 21st paragraph of Lord Lansdowne's Despatch of the 25th March 1890, page 365 of the Appendix: "Millions of money have been spent on increasing "the army in India, on armaments and on fortifica- "tions to provide for the security of India, not against "domestic enemies or to prevent the incursions "of warlike people of adjoining countries, but to "maintain the supremacy of British power in the "East. The scope of all these great and costly "measures reaches far beyond Indian limits, and the "policy which dictates them is an Imperial policy." I think that is the most important consideration of all. As Lord Lansdowne was Governor-General when that despatch was written, I think he is the best person to explain to the Commission the extent and meaning of the Imperial considerations which are brought forward in that despatch. It clearly, more or less, depends upon those considerations to which I have alluded in one or two answers, namely, the changes of policy in the year 1885 and the question is how far all the expenses since that time have been incurred from an Imperial policy or on purely Indian grounds. On that matter I should prefer Lord Lansdowne to speak; in fact, I could not speak with authority.

14,289. (*Mr. Naoroji.*) Under these conditions that were read by our chairman as to millions being spent in this manner would it not be more fair that for the addition of the British army the British Exchequer should pay a portion of this cost?—That is the main question involved. I have said that I think that some equitable consideration should be given to India on one or two of these heads, especially upon this last one.

14,290. (*Chairman.*) Then, on the non-effective side the India Office consider that the abolition of purchase imposed a charge upon India which she *ought* not to bear?—I should like to say upon the non-effective charge that I think there is a very strong equitable claim on behalf of the Government of India. In the first place, I think there is a claim which has been ignored in reference to the arrangement made in the time of George IV. In the time of George IV. the East India Company paid 60,000*l.* a year under an Act of Parliament. That Act of Parliament said that this arrangement was made for ever, as a permanent arrangement, and Sir George Balfour in one of the many reports of Committees, which are before this Commission, explained that it was at that time a bargain with the East India Company. The East India Company gave up some charges against the Imperial Government, and in return they made this bargain of 60,000*l.* a year, which was at the rate, I think, of about 3*l.* a man, and is a great deal less

than is now paid. After the abolition of the old local European army and the increase of the Queen's troops in India, of course, it was quite equitable that there should be an increased payment on account of the non-effective charges; nobody could dispute that, but I think that what was lost sight of was that there was at the time of this Act of George IV. a bargain at a particular rate, and that some consideration should have been made in the new arrangement not to charge the whole cost in consequence of that original bargain. That, I think, was omitted and ought to have been considered, and it is an instance of the opinion I just gave that the old East India Company could fight their battles better than the Secretary of State for India in Council can at the present time. As regards purchase, I think that the increase of pensions, in consequence of the abolition of purchase, is a very hard charge to put upon India. I see that Sir Ralph Knox, in one of his answers to one of the questions about purchase, question 12,971, said that the abolition of purchase was not the act of the Government at home. I think he must have been somewhat oblivious to what took place in giving that answer, because, if ever there was an act that was the act of the Government, that was; because it was not done by an Act of Parliament, but by the exercise of the prerogative of the Crown on the responsibility of the Government, which occasioned at the time very severe attacks upon the Government. I was then Under Secretary for War in the House of Lords and therefore I have a full recollection of what took place upon that matter.

14,291. (*Sir Ralph Knox.*) My question rather pointed to the fact that the Government had no other course to adopt?—I should say that there was a majority of the House of Lords who thought that there was another course to adopt and that there were a great many people at the time who thought there was another course to adopt. It was by no means a question upon which so strong an opinion could be expressed as that there was no other course to adopt. However, I agree with Lord Cromer, that these pensions have been given in consequence of a very bad system, and I do not think that it was fair to the Government of India to charge them with the whole of these pensions.

14,292. (*Chairman.*) That leads me on to the question whether you think that India is sufficiently consulted? I will divide the question into two points: do you think India has been sufficiently consulted on charges in the past? and, as far as you know, do you think she is consulted sufficiently at present?—Consultation with the Government of India is a very difficult thing. I have not a doubt that the Secretary of State for War and the War Office officials are always most desirous to consult the India Office upon all these charges; at the same time I am bound to say that, in some cases, their intentions have hardly been carried out. Lord Cardwell I remember giving evidence to the effect that he had done everything he could to consult the Government of India about short service, and I believe that was true. He was constantly in communication with Sir Thomas Pears, who was then the Military Secretary at the India Office, on the subject.

14,293. But would you not hold a consultation of the India Office to be equivalent to consultation of the Government of India?—I do not think it would be possible to contend on the part of the Government of India that if the whole thing has been considered by the Secretary of State in council at home, it does not commit the Government of India. Of course there may be cases in which it would be very desirable that the Government of India should be able to express their opinion, but I do not think they have any right to express their opinion in the matter.

14,294. (*Mr. Naoroji.*) Consulting the Government of India is not consulting the Indian people. As Mr. Gladstone says here:—"It appears to me that to make "such a statement as that the judgment of the Viceroy "is a sufficient expression of that of the people of "India is an expression of paradox really surprising, "and such as is rarely heard among us;" is it not so?—I think the honourable member mistook my answer. I was saying that I thought, in respect to questions of army organization between the War Office and the India Office, that the opinion of the Secretary of State for India in Council would be sufficient between the two offices; I was not alluding to the Viceroy.

14,295. (*Chairman.*) Now those are the considerations put forward by the Government of India in mitigation, I may say, of the capitation rate. On the other hand, Sir Ralph Knox and Mr. Ryder, in memoranda laid before the Commission, give the reasons of the War Office and the Treasury for holding that these considerations would not justify a reduction of the capitation rate. Without asking your Lordship to go into the details of the discussion between Sir Henry Waterfield and Sir Ralph Knox and Mr. Ryder, perhaps, I might ask you if you have seen those memoranda; and as between the considerations put forward by the India Office and the defence put forward by the Imperial Offices, on which side you think the case is made out?—It is a difficult question to put to me. I should begin by saying that I have looked through a good deal of this evidence, and that the evidence divides itself into two parts. One part of it is a discussion of the arithmetical calculations upon which the 7*l.* 10*s.* rate is based, and the other the general equitable claims which India puts forward for consideration apart from the 7*l.* 10*s.* arrangement. The Government of India in their despatch of the 25th March 1890 raised a great many questions of detail touching the 7*l.* 10*s.* rate. Upon these questions I see Sir Edwin Collen has been examined before this Commission, and I see also that Sir Ralph Knox has been examined on the other side. I venture to think that it is hardly worth while going into those details. It seems to me that if there was any use in the Commission of which I was chairman for so many years, upon which we had the two very best men we could have had, Sir Thomas Seccombe and Sir Ralph Knox, that this Commission may assume that on the whole our conclusions upon the arithmetical question are fair to both sides. I see that in these Minutes of Evidence on the one hand a question was put to Sir Edwin Collen—it is 6030, page 401—in respect to a certain detail which was brought before my Commission, and Sir Ralph Knox, in answer to question 6029, said that Sir Thomas Seccombe, his colleague on the Commission, did not object to the charge which Sir Edwin Collen was contesting. Your Lordship, then, as chairman, said, "If "you, Sir Edwin, were assured on that point, should "you be content to accept the fact that Sir Thomas "Seccombe did not object as sufficient evidence that "the arithmetical data were right?" I think that was a very fair way of putting it. Then, of course, the same argument must be applied on the other side. I see that Sir Ralph Knox at questions 12,666 to 12,668 has given evidence to the effect that the conclusion of the Commission of which I was chairman upon the subject of rebate was too favourable to India. I think, if the argument as addressed by the Chairman to Sir Edwin Collen is a good one, the same should be applied to Sir Ralph Knox's evidence. Sir Ralph Knox was a member of that Commission. Sir Thomas Seccombe was also a member of that Commission. If it is brought forward that, as Sir Thomas Seccombe agreed to a charge, therefore it is right as against India, I think the Commission may very fairly assume that as Sir Ralph Knox was a member of the Commission and agreed to the conclusion we came to about the rebate, it was a right conclusion; and that it would be hardly worth while for you to reopen the question on either side. Sir Thomas Seccombe is a very able man and Sir Ralph Knox is a very able man, and I have no doubt if Sir Thomas Seccombe were here he would say there were a great many things that we allowed against India that he himself thought India had a very good case for. Sir Ralph Knox thinks, I daresay, that some of the things that we allowed as against the War Office were very hard upon the War Office. That is generally the result of every arbitration; on both sides there must be a give-and-take. All I can say is, upon that Commission, no two persons could have stated their cases with greater ability or dealt with the business with greater fairness; and I am bound to add that there was no protest made from beginning to end by either one or the other with respect to the conclusions at which we arrived. I endeavoured to do my best to carry out the arbitration impartially, and, if the question is reopened now, I really see no end to the discussion of the arithmetical data. I should therefore like to throw aside the whole of this evidence as respects details included in the arithmetical calculation.

14,296. I think Sir Ralph Knox is prepared to answer for himself: but this question comes before us in this way: first of all we have the statement of Sir Henry Waterfield that he does not desire to reopen the calculations of your Lordship's Commission; but, on the other hand, he went on to bring before the Commission

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

a number of points to which, he thought, on general principles consideration ought to be given. Sir Ralph Knox, without disturbing the decision on the 7*l.* 10*s.* rate, thought it necessary, as against those seven points, to bring before the Commission the main reasons that made him think that, if those seven points were to be taken into consideration by the Commission, there was a counter-argument against them?—I know that Sir Ralph Knox has given a most able argument upon the question as to what answer ought to be put in by the War Office to the equitable claims of India, but in the particular answer to which I have alluded he touches the 7*l.* 10*s.* question; he distinctly, in Answer 12,663, just exactly in the same way as Sir Edwin Collen did on the question upon which I quoted your Lordship's opinion, touches the rebate question, which was one of the questions settled by the Commission, whereas Sir Edwin Collen objected to another matter, I forget what it was, which was also settled by the Commission. I say let us get rid of these old questions and admit that they have been settled by the decision of the Commission. That is my view at least. Having said that I come to the main argument of Sir Ralph Knox. No one is more capable of stating that argument powerfully on behalf of the War Office. I hope I am not misrepresenting him when I state his argument in this way. His argument is that there may be some of these claims for a reduction of the 7*l.* 10*s.* rate on equitable grounds, about which the arguments presented by India may at any rate be worth considering. He would not altogether deny that some arguments have been put forward worthy of consideration; but he says, on the other hand, if we look to the whole additional charge placed upon England by the existence of the British Army in India—that charge amounts to more than a million of money; therefore the payment made by India under the 7*l.* 10*s.* rate is so much below the real charge—say half a million or 400,000*l.*—that this statement of itself is quite sufficient to get rid of any claim put forward by India for a reduction of the 7*l.* 10*s.* rate upon equitable grounds.

14,297. (*Sir Ralph Knox.*) For further reduction?—Yes; for this reduction. I think I have put that argument properly.

14,298. Yes?—Then I will continue. I believe that to be his argument and it is mainly supported by a statistical paper at page 380 of the Appendix. These are the words which I would like to quote from Sir Ralph Knox's paper: "I submit that the result "which surrenders nearly 500,000*l.* to the Indian "Exchequer is so favourable to the Indian Govern-"ment that no force can be allowed to criticisms upon "minute details, and that the Home Government "cannot consent to any further diminution of the "claim." That being the argument, I have to make some observations upon this estimate, which gives 1,081,172*l.* as the real cost to the British Exchequer of the maintenance of British troops in India.

14,299. Of the depôts maintained in this country for maintaining the forces in India?—I am reading the heading of your paper: "Estimated cost to British "Exchequer of Maintenance of British Troops in "India (Effective Charges)." Appendix I., page 380.

14,300. Yes, it is the estimated cost to the British Exchequer of the maintenance of those troops?—Of course. I observe, as regards this estimate, that Sir Ralph Knox calculates the cost of the depôts at a sum which I consider to be excessive all through. I consider it to be excessive because he calculates that it is necessary to keep 16,000 men permanently at the depôts in order to send, I think, 1,100 recruits to India in the year. That is his calculation. I say that that shows that the system under which those men are trained and sent to India is very much more expensive than it need be, and that it should not be accepted as a ground for calculating what the real cost to this country of these depôts should be. If it is worked out, members of the Commission will see that in this estimate Sir Ralph Knox puts down a very much heavier charge for the depôts than is now charged to India for each recruit sent out. I will take one instance. The figures upon which my Commission arrived at the 7*l.* 10*s.* rate are given in Mr. Ryder's paper, which is put forward by the Treasury at page 376 of the Appendix. Mr. Ryder's paper shows that our calculation was from a rate for the cavalry of 37*l.* 14*s.* 6*d.* a man. If you will be kind enough to look to Sir Ralph Knox's estimate at page 380 it will be seen that the whole cost of the cavalry depôt, which is considered to be necessary, is 89,377*l.* for 840 recruits sent out for the cavalry in the year, which works out to 100*l.* a man. Now is it reasonable to suppose that this system is an economical one? Is it necessary to keep 23 officers at this cavalry depôt to train 840 men? I take this as an instance of the materials out of which this calculation is made. In reality the whole of the first part of this estimate, namely, the cost of the depôts, the staff of the depôts, the pay of young officers, the staff at Netley and Woolwich, the pay of men for discharge, and so on, making a total of 888,172*l.*—every one of those items is an item which the Commission of which I was the President had to go through and consider in estimating our 7*l.* 10*s.* rate. I do not know that there is one which is omitted, and then I say that if that 7*l.* 10*s.* rate is accepted as a fair arrangement, the whole of that part of Sir Ralph Knox's estimate ought to be dismissed from the consideration of the Commission altogether. Then I come to the remainder of the estimate—namely, "Add for Staff and Departmental "Charges, 193,000*l.*"—and that certainly has given me some surprise. I do not know whether this calculation is put forward on behalf of the War Office, as coming from the Secretary of State for War or whether it is the opinion of Sir Ralph Knox as an expert upon army matters; but it appears to me to raise a charge which I hardly know how to criticise, because it is a charge of one-twelfth part of "the total effective cost of the "staff and departments" of the British Army at home—that is to say, India is to pay a portion of the charge of the staff at Aldershot, Portsmouth, of the Commander-in-Chief, and all the rest of the general staff of the Army, and of the Army Pay Department: I do not believe there is a single man belonging to the Indian Army paid at the War Office. Of the Veterinary Department: I do not know about that. Commissariat staff and subordinates: I cannot conceive what reasonable charge can be made upon India for any of the commissariat staff and subordinates. And so on, and actually 264,000*l.* is put down for the War Office, and India is to pay a part of the charge of the establishment of the War Office. I cannot conceive how such a claim could reasonably be put forward on the part of the War Office. I do not know what the War Office can have to do with the Army of India, unless it is that some of the clerks in the Accountant-General's Department are employed checking the accounts and making out the claims which are sent to the India Office from the War Office. I do not think anyone would contend that India ought to pay the charge of the Office establishment for making out the bill which is sent to the India Office. Miscellaneous charges: India is actually to pay something for stationery, for postal and telegraph expenses of the whole of the establishment in England, simply because so much of the English army is employed in India. These charges come to 193,000*l.*, and so the 1,000,000*l.* is made up. If the Commission think that the whole of the details about raising the recruits are disposed of, and accept the 7*l.* 10*s.* arrangement the first part of Sir Ralph Knox's estimate is disposed of, and I am sure that they are not likely to agree to the claim that the staff and departmental charges of the army at home should be paid for in any part by India. The question arose, curiously enough, in 1874. It was raised by a very able man, Lord Cardwell, when he was giving evidence before a Committee of the House of Commons. And when the report of that Committee was sent out to India I felt compelled to make some observations upon what he said on that occasion. He said, that he thought that some charge might be made upon India for the staff charges. I do not think he ever went to the extent of the claim as stated in Sir Ralph Knox's estimate. I may be allowed to read what I said then to the Commission, because it expressed my opinion at the time, and they will see that the opinion that I express now is not formed in consequence of my having to observe upon this particular statement. I said this: "I should contend that India pays substantially "for the whole management of that part of the Army "which is employed by her, and could not fairly be "charged with any part of the general cost of adminis-"tering and commanding the army at home. We "have a large military department at the India Office. "We also pay for an officer attached to the staff of the "Field Marshal Commanding-in-Chief to assist his "Royal Highness in disposing of any business relating "to the army in India. We pay a percentage upon all "stores we obtain from the War Office, which seems to "me to represent more than the full amount of any "expense to which the Imperial Government is put in "providing those stores. In saying this I do not mean "to dispute that some particular (as distinguished from

" general) staff charges may fairly be brought against " India; for instance, in respect to recruiting, and " possibly to the invaliding establishment at Netley. " But I have not sufficient information to enable me to " give any opinion upon those particulars. I do not " wish to raise any fresh questions; but if an indirect " claim is pressed against India for the payment of " part of the cost of the administration and command of " the Army at home, I think that consideration should " be given to the advantage which England derives from " being able to employ the native army of India for " such service as the wars in China and Abyssinia." The Commission will find a most elaborate despatch addressed by the Duke of Argyll to the Treasury at that time, in which he states, in very much stronger language than I used, his view upon the claim which was then put forward by the War Office; and I certainly thought that it had been from that time forth abandoned. That is my view about Sir Ralph Knox's estimate at page 380 of the Appendix. I do not think I need take up the "estimated normal claim for home charges" which is given by Sir Ralph Knox in sub-appendix 2, because, if the 7*l.* 10*s.* rate is accepted by the Commission, this merely raises the same question in a different form. The main point of difference is, that there is an alteration in the deductions for rebate, and also additions to the rates for each recruit; but I do not think it is necessary for me to go into that.

14,301. I think we may take it, Lord Northbrook, as things stand before the Commission at present, that the question of the 7*l.* 10*s.* is not raised by the War Office or the Treasury; and that the India Office has stated that, so far as the arithmetical calculations are concerned, they do not raise the question. Therefore, to a large extent, that rate is accepted; but no doubt the India Office have added those seven points which they wanted to bring before the Commission, and that fact has, rather naturally I think, made the Treasury and the War Office consider that it is their duty to show counter-reasons to the Commission, in case the Commission should take up those seven points. That is the reason, I understand, why Mr. Ryder's and Sir Ralph Knox's memoranda have been put in?—I think there is one other plea which has been raised. I am not quite certain whether Sir Ralph Knox raised it, but it certainly has constantly been raised, namely, that India ought to pay something in respect of the reserves kept at home in consequence of the short service system, and I should like to read to the Commission the opinion that I expressed in 1874 upon the matter, and if any further explanation is desired I can give it. I said this: "Lord Cardwell describes the system " under which the army at home is now organised, " showing that the number of men with a battalion " at home is 520, while a battalion in India has 820. " The force, therefore, of an infantry cadre, as com- " pared with the number of men comprised in it, " is greater in England than it is in India. In " times of need the cadres of battalions, whether in " England or in India, are raised to a greater strength " of men from the army and militia reserves, which " are paid for by England. India, Lord Cardwell " argues, is interested in the maintenance of this " 'expansive' system, which supplies an effective " reserve, and India should, therefore, pay a pro- " portion of its cost. Whether that payment should be " based only upon the extra cost as compared with " large cadres or also upon the cost of the army and " militia reserves would, I presume, be for further " consideration; but the principle of some such " payment is broadly stated in his proposition: 'That " 'the addional cost which expansiveness involves shall " 'be borne by each (England and India) in the propor- " 'tion in which it employs the British Army.' Even " admitting, for the sake of argument, that it would " be practicable to apportion the benefits of the " 'expansive' system between England and India, we " have still to inquire first, whether the system does " really involve any 'additional cost,' and secondly, " whether India will reap, equally with England, all " the advantages which the system is calculated to " produce." I argued that no additional cost should be put upon India; for Lord Cardwell's system was an economical system, and that it entailed no additional cost upon England at all. "The system is also " excellent, because it will reduce the expense of " bringing the British Army, or a part of it, from " a peace to a war footing. Instead of being put to " the cost of raising and training recruits, England " will, by the payment of a small retaining fee " annually in time of peace, be able to obtain " soldiers fit to take their place in the ranks without " additional charge when the need for them arises." That is the description of the English system. "But " are all these advantages shared by India? No; " the assistance which India will receive when she " requires it may be more prompt than before, but she " will not obtain it without additional charge. She " will pay for every soldier sent with drafts to India, " and for every soldier in corps sent out to India, " a sum calculated at the cost of raising and training " a recruit. Therefore, she will pay England for " every man sent her from the reserve the expense " of his recruiting and training, and if he has served " in India before, she will pay this cost twice " over, except when she had a drawback. We are " asked then, as I understand it, to pay a part of the " cost of a system which, although more efficient, will " probably be more economical than the old one, and " for part of the cost of an article which we may " never use, but for which, if we use it, we shall " have to pay the full price." That is the main argument, namely, that England gets the advantage of this reserve without any payment. If India was to take advantage of this reserve she would have to pay, and, therefore, no claim can be equitably brought against India on account of the expansiveness of the system. Moreover, I may say that the Indian regiments being up to full strength, we do not want to supply for a frontier expedition, or any other expedition, any deficiencies in the strength of those regiments. In England, if we want to send an expedition, we should have to draw from the reserves to make up the infantry regiments to a proper strength; but in India, the regiments being always at full strength, the reserves are not required for this purpose, and it would only be in the case of a very serious war that the reserves would be in any way available. That is the argument for what it is worth. It is an argument against any claim upon India in consequence of the expansive system. I do not know that there is any other argument brought forward in answer to the equitable claims of India by the Imperial Government. If there is, I should be happy to give any opinion which I can.

14,302. (*Sir Ralph Knox.*) I do not think that question has been raised recently?—No.

14,303. It was raised by Lord Cardwell at that time; but I think it was decided that no claim should be made on account of the reserve, but on the condition that, if India was supplied with additional troops in any emergency, India should pay the recruiting cost for those men who were drawn from the reserves as if they had been raised and trained specially for the purpose?—That I assume in the memorandum I have just been reading.

14,304. That being accepted by the War Office, I do not think any claim has been ever made on account of the maintenance of the reserve since?—I do not think I have any other observation to make to answer Sir Ralph Knox's argument.

14,305. (*Chairman.*) We have now gone through the history of this capitation rate; but, as your Lordship is aware, that is not the only question between England and India that has given rise to a discussion ranging over years. I think everybody who has been connected either with the Imperial Government or the Indian Government has been alive to the extreme inconvenience attending the discussion of these disputed points when there is no authority existing to which reference can be made, and which can once for all decisively settle the dispute. Has that difficulty occurred to you during the very considerable experience you have had of these joint Indian and Imperial questions? And, if it has, may I ask whether you could suggest any means of meeting and avoiding what I think very often amounts to a scandal?—I think it is very difficult. I quite agree with what your Lordship has said. I think the present arrangements are very unsatisfactory. All these little discussions are exceedingly annoying and wearisome, and if any such arrangement could be made it would be most desirable. These questions appear in the main to be small questions that are going on from time to time. Supposing that some arbitrator should be accepted between the War Office and the India Office who would have no special knowledge of the subject and no connection either with the Government of England or the Government of India, and that a case could be agreed upon between the departments that could be put before him, rather in the way of a legal arbitration, I really think that might be accepted as a way of

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

settling a great many of these questions. It would save a great deal of trouble.

14,306. In my experience it has always been a great difficulty to find such an arbitrator; and, generally speaking, the results of the arbitration have not been very willingly accepted. Probably, the 7*l.* 10*s.* rate has been the decision that on the whole has been deferred to most readily. The difficulty is, of course, to find the arbitrator whom both sides will think impartial and accept; and such a man is extremely difficult to find. The Government would naturally turn to the leaders of public opinion to undertake such a task; but they are connected too much with one side or the other to be held impartial. Might I ask if you admit that difficulty; and if it has occurred to you whether any kind of arbitrator might be chosen that would not be liable to those criticisms?—I cannot suggest anything better than to take a sensible judge of high character accustomed to deal with such questions, like the late Mr. Justice Hannen—that class of man. I am sure that if he had had a case before him, he would have given a fair opinion upon the question.

14,307. That is what I wanted to get at. Your mind would turn to a man like a judge?—Yes.

14,308. Accustomed to weigh evidence quite impartially?—Yes.

14,309. And who, without reference to either side, would require a complete case to be set before him, and upon that would judge, just as he would judge a question in court?—Quite. Let the India Office and the War Office state their case, and, if possible, agree on their case. If he wanted any further information let him ask for it; do not put experts alongside of him at all.

14,310. As in the case of the employment of troops out of India, no arbitration of that kind could bind the Indian or the Imperial Government; but I suppose you would hold, as in that case you mentioned before, that in all probability the decision of such an impartial person would be accepted?—If the two offices agreed to that kind of arrangement, I do not think any further question would ever be raised by anybody.

14,311. (*Sir William Wedderburn.*) I understand that you would consider that it is more important to get the matter settled than for one side or the other to gain the few pounds; or at least it is more politically important to get these matters out of the area of discussion than to fixing a payment very accurately at so many pounds?—Some of these questions involve very considerable sums, but those, I think, were the questions that we discussed before. In this particular question I am now talking about, if the 7*l.* 10*s.* arrangement were once accepted, there could be no discussion for a very long time. It could only be accepted, of course, for a term of years. After the expiration of that term of years the whole question might be opened again, but for the time being if the 7*l.* 10*s.* was adopted it would really resolve almost all these questions. Of course, this Commission will have to consider whether the India Office have made out any case for a reduction upon the arithmetical calculation of the 7*l.* 10*s.* rate.

14,312. (*Chairman.*) And, of course, if they do that, they must take into consideration what the War Office and the Treasury have to say on the other side?—Take the arguments on the one side and the other.

14,313. (*Mr. Buchanan.*) For what period would you consider it fair to accept the 7*l.* 10*s.* limit?—I think it has been going on now for three or four years. The 7*l.* 10*s.* is payable upon the establishment of the British forces in India, and therefore it is elastic. Supposing there was an increase or a diminution of the establishment in India the payment would be either increased or diminished. Therefore, I think it might be taken for ten years pretty safely.

14,314. (*Sir William Wedderburn.*) I think you said that the inquiry covered two separate matters, one the arithmetical question of 7*l.* 10*s.*, the other the more general equitable considerations of dealing with India?—Yes.

14,315. Could you oblige the Commission with any statement with regard to the practical application of those general principles as regards all questions between India and the United Kingdom, financial questions?—I do not apprehend that if a rate is settled there need be further trouble between the two offices upon the subject of the cost of training the recruits in England. The questions which may come up would be questions of the general organisation of the army which those representing India may consider to throw undue expense upon India. The advantage of this arrangement is that if the War Office choose to have a too expensive arrangement for their depôts and so on they would have to pay the cost. Therefore, the effect of it would be to make them economical.

14,316. (*Sir Ralph Knox.*) Your Lordship does not think it necessary that this question of the 7*l.* 10*s.* should be raised now with a view to its being re-considered. You do not think that there are sufficient grounds for re-opening the question if the two departments are willing to continue the arrangement, do you?—No. I understand that the two departments are agreed. I do not think any further re-opening of the question would be any advantage.

14,317. And you think that it might in fact rest so long as the two departments are willing to go on upon the arrangement?—Yes.

14,318. Supposing, for instance, it was necessary to increase very considerably the pay of the army, that would be a fair ground upon which the Home Government would like to have it re-considered? Or circumstances might arise, in consequence of some modification of the establishment in India, which might cause the Indian Government to wish to re-open the question; but until some distinct change of circumstances arises, you think it would be better that the 7*l.* 10*s.* rate should be maintained?—Certainly. Perhaps that would be quite as good an arrangement as one for ten years. It is not likely that either Department would like to re-open this abominable question, if the Commission will allow me to use the expression, unless there were very good grounds.

14,319. (*Sir James Peile.*) 1890–91 was the first year of the 7*l.* 10*s.* arrangement.

14,320. (*Sir Ralph Knox.*) When the short service was introduced, it was understood, was it not, that there must be an increased charge for the increased number of recruits sent out to India, also for the corresponding increase of transports necessary for conveying them both to and fro?—I think so; quite; certainly I myself should not consider that these points were any reason for any reduction.

14,321. They must be accepted?—Yes, as part of the organisation of the army generally.

14,322. It was anticipated that there would certainly be an increase under those charges, but, as a set-off against that, it was also equally looked forward to that there would be a certain reduction, in consequence of the short service system, in respect of pensions?—Yes.

14,323. And if it could be shown that the saving upon pensions, as compared with what would have arisen under the old system, is greater than the additional charges arising from the increased number of recruits and their transport, then the arrangement is favourable to India?—Certainly, it would be decidedly favourable to India if the anticipations of the actuaries of the War Office are correct as respects the ultimate reduction of pensions.

14,324. I do not know whether your lordship saw a statement of the pensions (page 387 of the Appendix) which were created year by year, both as against the Home Government and as against the Indian Government, Appendix 59?—No, I did not notice that paper.

14,325. If you refer to it you will find that in the first year, 1878–9, the annuities created in the shape of pensions amounted for the Home Government to 168,000*l.* and for the Indian Government to 57,000*l.*?—Yes, I see.

14,326. But if you refer to the last year, 1894–5, the annuities created (that is for the pensions for the men, not for the officers) were 47,000*l.* for the Home Government and 12,000*l.* for the Indian Government?—Yes, I see that.

14,327. That shows definitely that there is a considerable reduction in the annual charge created for pensions against both governments?—No doubt, and it was one of the advantages of the short service system when Lord Cardwell introduced it.

14,328. Quite so. Of course the charge cannot reach the normal for a considerable number of years?—No.

14,329. Because the results of the old system are still in existence to a considerable extent—the old pensioners, men who were pensioned under the old system, are still alive in large numbers. But this reduced pension charge against India of 12,000*l.* a year, as

against 57,000*l.* in 1878–9, shows a considerable diminution in the charge against the Indian Government?—Which is very satisfactory.

14,330. Well, that is what was looked to at the time to counterbalance the excess charges arising from the introduction of the short service system?—Yes.

14,331. Of course for the time there has been a heavier charge against India, but it will be met hereafter by the decreased charge for pensions on account of India?—I think I said, in answer to a question before, that I know that Lord Cardwell was in constant communication with the India Office, and that he was by no means neglectful of Indian interests when the short service system was introduced.

14,332. Then, in order to reduce the number of men transported between the two governments, the period of service in India was lengthened at that time, was it not?—I think every consideration was given by the War Office to the economical carrying out of the system, as far as they could, both in that respect and in other respects. I do not wish to let it be supposed by my evidence that these questions have not been very carefully considered, or that there has been the least desire on the part of the War Office to put undue claims upon India.

14,333. In regard to Appendix 51 (p. 380) I would just like to draw your attention to one or two instances. There is a charge set down for cavalry, 89,377*l.*, which to your Lordship appears a very considerable charge; but that, I may state, was the actual expenditure incurred for the cavalry depôt in existence at that time; that is to say, for the pay of the men, and the staff, and the horses, and so on, that were maintained there, solely for the purpose of training the drafts for service in India; but it represents, as a matter of necessity, the pay of men for a considerable time, because, as your Lordship knows, these men cannot be recruited on the day that we want to recruit them; they cannot be recruited at the age at which we want to recruit them; we are obliged to take them at the age at which we can get them, and at the time that we can get them, and inasmuch as there is a condition that these men cannot be allowed to go to India until they are 20 years of age, and have had at least a certain number of months' training, the result is that men, on an average, are retained at the depôt for a very much longer time than we should like to maintain them, although that time may be, in the opinion of some, absolutely necessary for training. In the 7*l.* 10*s.* arrangement the charge that is made against India is on the assumption that no man is in existence at that depôt for more than nine months; is not that so?—I could not say. I can say how much has been made out for each, because I find it in Mr. Ryder's paper. The calculation, of the Commission upon which the 7*l.* 10*s.* was based, was, according to Mr. Ryder's paper, 37*l.* 14*s.* 6*d.* a man.

14,334. But that is for all men?—Each cavalry man 37*l.* 14*s.* 6*d.* My memory does not enable me to say from what details that sum was made up.

14,335. If it be the case that the charge against India is based on the assumption that a man serves 9 or 10 months only, and that he of necessity is kept 18 months or two years, it is not extraordinary that there is a difference between the actual expense incurred and the claim made against India?—I think the argument may possibly be sound, but I think the administrators of the War Office may possibly invent a more economical system than the present cavalry depôt.

14,336. But your Lordship can quite unders and that that is the case?—Yes, I can understand.

14,337. That it is the case, that you cannot recruit a man the day you want to recruit him, or the exact age to a month or day at which you want to recruit him; that is so, is it not?—That is very true.

14,338. But, inasmuch as the Indian Government makes the condition that the man shall not be below a certain age, it may easily result under those circumstances that the man is kept at the depôt from a year to two years before he can be sent out to India?—I do not see how he can very well be kept so long as that, because, if he has nine months' training, why should any recruit for the cavalry be enlisted under 19 years or 19½. If the regulation of the recruiting officer was to take no cavalry recruit under such and such an age, there could be no necessity for keeping him two years in England.

14,339. Is your Lordship not aware that the experiment was tried, and the result was that we got no recruits?—I should have thought the cavalry was a popular service.

14,340. There was a change made, and the age of 19 years was fixed as the earliest age at which a man should be accepted, and the result was that we were something like 16,000 men short in the army that year. However, that explains the difference, I may say, of the figures set down in this paper, as against the claim that is made in the 7*l.* 10*s.* rate against the Indian Government for these recruits. This calculation represents the actual expense incurred, and the other represents the charge that is made according to the basis accepted between the two Governments; and I put this forward simply to illustrate how moderate is the charge against India as compared with the actual expense. As regards the remarks which your Lordship made about the general charges, have you not noticed that from the earliest times at which the points were under discussion, a claim has been put forward on account of this miscellaneous expenditure?—The only time that I am aware that a claim was put forward, was in some evidence given by Lord Cardwell in 1874. He did not put it forward more than as a kind of what is called a pious opinion—it was not an absolute claim—in the evidence; but I think I am not wrong in saying that there was a correspondence between the War Office and the India Office about it, about the time when the present Sir Henry Campbell-Bannerman was in the War Office, in the course of which correspondence the Duke of Argyll expressed his opinion at great length and with great force against the claim, and, moreover, I do not believe that the claim has ever been advanced since that time, certainly not to my knowledge.

14,341. I do not think that any definite claim has been made. I do not know that it is made in this paper. Now take, for instance, the Army Pay Department. The Army Pay Department is employed in paying all the men who are being trained for the Indian Government, so long as they are in this country. It, of course, prepares all the documents when the men proceed abroad, and so on; it also pays the whole of the pensions of the men who are pensioned, in consequence of their service in India. Do you not think that it is a very fair claim to advance against the Indian Government, that they should pay some of the expense of that Department?—It is just possible that some small reasonable claim for the payment of pensions might be adduced, on proper evidence being supplied. That seems to be a very small affair.

14,342. But if it can be shown, as stated elsewhere, that there are something like 14,000 or 15,000 men continuously on pay in this country, with a view to their being ultimately despatched to India, it stands to reason that the staff which exists in this country for administering the whole force, the 100,000 men at home, is employed partially in providing the wants of the 14,000 men?—I do not think I can accept that argument. I believe that at present one-fifth of the cost of the staff of the depôts forms part of the calculations included in the 7*l.* 10*s.* Surely the paying of the men at the depôts is done by the depôt staff.

14,343. But all these men at the depôts and at the cavalry depôt, and so on, are superintended by staff officers above them, and they are supplied by the departments of the army in existence for making the necessary preparations for those particular forces. Take cavalry for instance?—I do not think that that claim could be established if it was argued out. Take my own county. Take the Winchester depôt. India pays now one-fifth of the cost of the staff of the depôt. Suppose that the Indian troops were taken away from that depôt and put somewhere else to train, I do not believe you could reduce an officer from the depôt. I do not believe that you could get rid of the adjutant of the depôt, because he has got to do with the reserve forces and volunteers, and I do not know what else. The depôt centres were not started for the purpose of recruiting for India. It was with the view of localising the recruiting for the battalions of the English Army, the army in England, and for bringing the militia and volunteers into connection with the regular army. It was part of a general system. I am not perfectly satisfied in my own mind whether it has been found by experience to be an economical system for the training of recruits for India. I think it is very possible it may

The Rt. Hon. the Earl of Northbrook, G.C.S.I.

3 Feb. 1897.

be found not to be, but at any rate I do not think that a single man could be saved from the staff, we will say, of the general officer commanding at Portsmouth or of the general officer commanding at Aldershot. How would it be possible in consequence of taking the Indian recruits away from Winchester to save any portion of the Aldershot or the Portsmouth staff? If the suggestion was put forward in the shape of a claim from the War Office against the India Office, I am satisfied that the India Office would be able to show grounds why such a claim would be quite untenable.

14,344. That is to say, there would be a difficulty in pointing out the particular individual who was doing the particular piece of work for the recruit that was to be sent to India?—For example, take the staff of the general officer commanding at Portsmouth, he has got a deputy adjutant-general, or an assistant adjutant-general, who has to perform part of these duties, but he has a great quantity of other duties. You could not reduce him; you cannot divide officers into pieces; you cannot take off a leg or an arm of a Commander-in-chief.

14,345. But the work of the staff is considerably affected by the numbers of men; you could make some reduction in these numbers?—I think it would be very difficult to make any reduction in the depôt staff.

14,346. The depôt staff is not included in this consideration?—I have not been at the War Office for so many years without some knowledge of these staff officers and so on. I cannot think that any substantial reduction can be made in the staff of the army by an alteration of the system of training the recruits for India; I do not think it could be done.

14,347. But do you not think that by the reduction of 16,000 men there could be a reductien in the staff or in departments?—I think that, if 16,000 men have to be kept up, I must say I doubt whether the system is as economical as it ought to be; but, however, apart from that, these 16,000 men being mainly recruits—almost all of them recruits—that really ought to make no considerable difference in the staff of the army or the expense of the War Office.

14,348. But the recruit has to be fed and clothed, and armed, and equipped, although he may be of very short service; in fact, it seems to me to stand to reason, that there is rather more trouble necessary to be taken with a recruit than with the fully trained man as regards his supplies?—It is quite true that the recruit has to be fed and clothed, and armed and equipped, but it is equally true that India pays the whole cost of that.

14,349. Not as regards the administrative staff?—I think it would be impossible. For example, let me give an instance. Take the Army Clothing Department. Supposing that these recruits are taken away, it would be impossible to diminish the staff of the Army Clothing Department, I should think, or that of the Contract Department in respect of their food. I think if you have got an army such as you have in England, the staff must exist even if there is a certain diminution in the total. I doubt whether the War Office could produce any argument which would be tenable to show that the existence of these men does increase the staff and departmental charges of the army otherwise than to the extent that is now paid for by India to England in the 7*l.* 10*s.*, excepting, perhaps, in the department over which Sir Ralph Knox so very ably presides. I think it is possible that in the Accountant-General's department of the army you might reduce something.

14,350. Are you not aware, taking the War Office for instance, that a very large part of the business of the Adjutant-General's branch consists in the preparation of those drafts for India, and seeing that the necessary men are forthcoming? In fact, it comprises a very large portion of the work of the Adjutant-General's department?—I think it is just possible in that particular case, as to the embarkation of troops, but I should doubt even there whether you would be able to reduce the Adjutant-General's department in consequence of the relief from the work of superintending the embarkation of troops for India; I doubt it; I think it woud be found very difficult.

14,351. Take the payment of the remittances that come from India. The soldiers in India are constantly making remittances to their families. It is almost the only place from which remittances come. All those remittances are made through the machinery of the War Office?—No doubt. That, again, would be a certain charge; and that reminds me of a point that was not mentioned in the course of my examination, namely, the great advantage that is derived by England from the very large amount of pensions which are paid by the Indian Government and spent in England. That is a very great advantage to England.

14,352. Then there is another instance, though only a very small one. The whole of the estates of the men who die in India—they die in larger numbers than they do elsewhere—are distributed by the War Office?—Well, it is just possible that there might be something.

14,353. I am merely mentioning these few things incidentally, to show that there is work distinctly in existence, both in the departments and in the War Office, arising from the fact that the Indian Army has to be supplied. Your Lordship is inclined to admit that there is something, but you do not think very much?—I should be very sorry to admit anything. If the question was thoroughly examined I think the India Office would be prepared to bring forward a counterclaim as against any claim of that kind that might be put forward; but I quite admit that in those particular cases there might be some small reduction made, if no such place as India existed.

The witness withdrew.

Adjourned till Monday next.

At the India Office, S.W.

THIRTY-THIRD DAY.

Monday, 8th February 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

Lieutenant-General Sir HENRY BRACKENBURY, K.C.B., K.C.S.I., called in and examined.

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

8 Feb. 1897.

14,354. (*Chairman.*) Would you tell us the posts you have held at home and in India in recent years?—For the 5¼ years preceding my going out to India as a member of Council I was Director of Military Intelligence at the War Office, and I was at the same time a member of the Colonial Defence Committee—the permanent Colonial Defence Committee—and I may say that I was a member of Lord Hartington's Royal Commission on Naval and Military Administration. I went out to India and took over the post of an ordinary member of the Governor-General's Council in April 1891, and held it for exactly five years.

14,355. That is the post that we generally know as the Military Member of Council?—That you generally know as the Military Member of Council; and I had previously served in India as a regimental officer and as private secretary to the Viceroy.

14,356. Who was the Viceroy?—Lord Lytton.

14,357. And you are now?—I am now President of the Ordnance Committee.

14,358. The Commission has been appointed "to "inquire into the administration and management of "civil and military expenditure in India, and into the "apportionment of charges between the Governments "of the United Kingdom and of India for purposes in "which both are interested." We will, if you please, take the question of administration first. You have read, I think, the evidence of Sir Edwin Collen and Captain Hext upon the progress of military and naval expenditure, and upon the administration of those two branches of expenditure. Are there any points on which you would wish to supplement or amend their evidence?—I think not, my lord. I think that it would be better that my evidence should be taken by itself rather than as an examination of the evidence of others.

14,359. Tables have been supplied to us which show the progress of expenditure under the different heads under examination for 20 years from 1875. You would, I presume, have no personal knowledge of military administration during the earlier part of that time?—None.

14,360. The great increase appears to have taken place about 1884–85. Can you give us your views as to the causes of that increase and the necessity for it?—From the year 1884–85 to the year 1885–86, there was of course a great jump in military expenditure; there was a jump of three crores.

14,361. I was rather anxious to confine the question to what took place in 1884–85, when, I think, the strength of the army was increased, was it not?—In 1884–85 the military expenditure was about the lowest that it ever was in India. The jump took place in the year 1885–86, and from that date until the year 1896–97—until the current year—there was practically no rise at all in Indian military expenditure other than that due to fall in the value of the rupee.

14,362. And also, I suppose, to the expense of certain expeditions which have taken place during that time?—Yes; but military expenditure remained really very fairly steady from the year 1885–86 up to the year 1895–96. I have the facts and the details of that in my own speeches made in the Legislative Council in 1893, 1894, 1895, and 1896.

14,363–4. In your speech in the Legislative Council in March last, I think you reckoned the increase during the decennial period in army expenditure at about 3½ crores, did you not?—I think about that, yes. I used to deal with it each year. I showed in 1893 that, apart from exchange, there had only been an increase of 4½ lakhs in the army estimates between 1885–86 and 1893–94; and then, again, the next year I showed again about the same.

14,365. If we take the increase at something like that figure which I have mentioned, which I suppose we may roughly call 3½ millions?—Well, of course, a crore of rupees is not a million pounds.

14,366. But still the rough method in which we speak of those things is on that basis, is it not?—Yes; I often think that it is exceedingly unfortunate that those accounts are made in this Rx. I think it leads to very great confusion in the minds of those who are not familiar with the sterling value of the rupee.

14,367. But at all events, taking that as the increase, perhaps you would tell us to what extent the measures of 1885–86, the annexation of Burmah and the increase of the force, account for that increase?—I should say that the whole thing is stated here at page 59 of the appendices to your first report in one short paragraph by Sir Henry Waterfield. He shows how the increase of 2½ crores, apart from exchange, has occurred, and exchange up to 1895–96 would very nearly account for the other crore.

14,368. As between 1884–85 and 1895–96?—As between 1884–85 and 1895–96.

14,369. The paragraph you allude to, I suppose, is that in his Table 4, that shows how the increase of Rx. 2,540,838 in military expenditure in India (apart from exchange) has occurred?—Table 4, yes.

14,370. For the sake of getting it down in the evidence, would you just give the chief figures?—At the end of 1885 it was decided to add about 10,000 European troops, and 20,000 native soldiers to the army, which made a permanent addition to its cost of Rx. 1,617,338. The extra charges in Upper Burmah, though much reduced since 1886–87, may still be taken at Rx. 420,000. Special operations in 1894–95 gives more than in 1884–85 by Rx. 157,181; and in other respects the army charges have increased by Rx. 231,619, making a total increase in the army effective charges in 10 years of Rx. 2,426,138. The non-effective charges in India are heavier by Rx. 58,729. The special defence works did not exist in 1884–85. In 1894–95 the cost

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

8 Feb. 1897.

was Rx. 68,900, total, Rx. 2,553,767, but the military works are less by Rx. 12,929. The result is an increase of Rx. 2,540,838.

14,371–2. Besides that, what is usually called the loss by exchange accounts for another million?—About a crore. I said, speaking in the Legislative Council, in 1893: "In 1885–86 the amount of net army expendi- "ture brought into account in India was Rx. 14,361,000. "In the year 1893–94 the Budget estimate is Rx. "14,981,000. The difference between the net military "expenditure in India between 1885–86 and 1893–94 is "therefore 62 lakhs of rupees, and of these 62 lakhs, "57½ lakhs are due to the fall in exchange, the actual "increase apart from that item of exchange being "4½ lakhs of rupees." In the following year—I should like shortly to add this because it shows from year to year how affairs went:—In March 1894, I said: "Last year, in speaking in this Council, I pointed "out that from 1884–85, which was a year when the "military expenditure had touched its lowest after "the Afghan war, there was a great jump to the "year 1885–86. I said that between 1885–86 and "1893–94 there had been a rise of 62 lakhs in the "military Budget estimates, but that of these 62 lakhs "57½ lakhs were due to the fall in exchange, and that "the actual increase in all those years, apart from what "was due to fall in exchange, was only 4½ lakhs. Now "we have almost exactly the same tale to tell this "year; the net figures of the Budget for 1893–94— "that is, last year—were Rs. 14.98.16,000; the net "figures for 1894–95 are Rs. 15.41.67,000, showing a "rise of Rs. 43.51,000. Of these 39 lakhs are due to "exchange, leaving as due to other causes, a rise of "4½ lakhs this year." Then I went on to explain in detail how that rise owing to exchange took place. Then in 1895–96 I showed that there was a reduction in the revised estimate, as compared with the Budget estimate of 1894–95, of 17 lakhs, showing this for the first time for a great number of years. Sir James Westland had pointed out: "It is believed that the net "military expenditure within the year will be actually "less than was estimated for, so that in reality, in "1894–95, the expenditure was less than in 1893–94 "except for exchange."

14,373. In fact the decrease more than counterbalanced the increase in the previous years, putting exchange aside?—Certainly; and then I went on to say—this is speaking in 1895—"the net military Budget estimate for 1894–95 was reduced to Rs. 15.41.67,000. "That for 1895–96 is Rs. 16.28.60,000, showing an "excess over last year."

14,374. What year are you taking now?—This is my speech in 1895. I am speaking of the estimate for 1895–96: "showing an excess over last year of Rs. "Rs. 86.93,000. Now how is this excess accounted "for?"

14,375. I thought I understood you to say, quoting from Sir James Westland, that in the year 1895–96 there was a reduction of 17 lakhs?—No, that was in the year 1894–95.

14,377. 1894–95. But as I have got the figures taken down from you the revised estimate for 1893–94 was Rs. 14.98.16,000; and in 1894–95, Rs. 15.41.67,000. That shows a certain rise?—I am afraid I must refer back for that.

14,378–9. I only want that we should understand our figures?—Certainly. The net figures of the Budget of 1893–94 were Rs. 14.98.16,000. The net figures for 1894–95 for the original Budget estimates were Rs. 15.41.67,000. But the revised estimate for 1894–95 was only Rs. 15.24.61,000.

14,380–81. Still, that shows an increase over the figures of 1893–94?—Yes; but considerably more than that increase was due to exchange. Practically, the amounts would have been the same if the exchange had been the same.

14,382. Where does the saving of 17 lakhs come in?—The saving of 17 lakhs is the difference between the original Budget estimate and the revised estimate for 1894–95.

14,383. After taking off the exchange?—No; it is on the whole estimate. I had shown that there was a rise of 43½ lakhs, of which 39 lakhs were due to exchange, leaving an actual rise of 4½ lakhs; but instead of a rise of 43½ lakhs the revised estimate brought out a rise of only 26½ lakhs, and, as exchange accounted for 39 lakhs, it shows that, but for exchange, the expenditure for that year would have been less than that of the year before.

14,384. That I understand now. You are coming now to 1895–96, are you not?—Yes. Speaking in 1895, I said, "The net military Budget estimate for 1894–95 was "Rs. 15.41.67,000, that for 1895–96 is Rs. 16.28.60,000, "showing an excess over last year of Rs. 86.93,000. "Now, how is this accounted for? It is mainly due "to the old story of the fall in exchange. This year, "as I have shown, we took the soldiers' pay at 1*s.* "3½*d.* and exchange compensation at 1*s.* 2*d.* For the "coming year we have taken the former at 1*s.* 1½*d.* "and the latter at 1*s.* 1*d.* with the result that we have "to add 51 lakhs to our estimates on this account."

14,385. That was 51 out of 86?—That was 51 out of 86. "Then we have 12½ lakhs on account of the occupa- "tion of Waziristan, and the expense of that expedition, "18 lakhs have been added to the Budget for increase "of pay for the dismounted branches of the native army, "and 15 lakhs for the preparation of the Chitral relief "expedition. These four items, fall in exchange, "Waziristan, extra pay for the sepoy, and the new "expedition, amount to about 97 lakhs. The actual "increase is only 87, so that we have made reductions "in other directions amounting to some 10 lakhs."

14,386. (*Mr. Courtney.*) Have you not taken the exchange there at less than it proved to be that year. 1*s.* 1½*d.* you said?—We took the soldiers pay at 1*s.* 1½*d.* That is done under the orders of the Secretary of State.

14,387. And the other item?—And the latter (exchange compensation) at 1*s.* 1*d.* In 1895–96 exchange, I think, at one time fell to 1*s.* 0½*d.* By looking at Sir James Westland's financial statement for the following year I could see what it was taken at.

14,388. (*Mr. Mowbray.*) Why do you take a different rate for a soldier's pay and the compensation allowance?—The rate at which the soldier's pay shall be taken is fixed by the Secretary of State, and it was generally fixed on the average of the exchange during the preceding year up to the 15th December, I think it is. It was fixed on that basis. But the rates of exchange compensation would be fixed by the Financial Member in India in consultation with the Secretary of State according to his real estimate of what exchange would be during the year. He would probably pitch it a little too low so as to allow himself a margin.

14,389. Then, in fact, in a time of falling exchange, the rate at which the soldier's pay is calculated is a little disadvantageous to the soldier?—In a time of falling exchange, yes. If, for instance, the soldier's pay were fixed at the 1*s.* 3*d.* rate, supposing exchange fell to 1*s.* 2*d.*, of course the soldier would not be so well off as if he were paid at 1*s.* 2*d.*

14,390. That is exactly what I thought?—And I may state that during the one year during which there were the greatest fluctuations in exchange—I forget whether it was 1894–95 or 1895–96, I think it was 1894–95—we did for a whole year vary the soldier's pay quarterly. That gave him for the following quarter his pay at the average rate of the preceding quarter. That was only done during this one year. The Secretary of State expressed his opinion that it was very desirable to go back to the old manner of having a fixed rate and paying at that rate all through the year, and letting the soldier take his chance of whether exchange was a little higher or a little lower; but exchange compensation has always been paid at a different rate each quarter, based on the average rate of the preceding quarter.

14,391. (*Chairman.*) Then, I suppose, as far as the soldier's pay is concerned, if the exchange rises during the year, you do not make any saving of it because the soldier receives a fixed rate during the year?—The soldier receives a fixed rate during the year—yes.

14,392. But in your speech on the Budget of last year, you account for the savings on that estimate; and 5½ lakhs are due to diminution in exchange compensation allowance owing to improvement in exchange?—Yes.

14,393. Therefore, when the compensation allowance is concerned, you get the benefit of a rise of exchange?—Certainly; the Government gets the benefit—yes.

14,394. The Government gets the benefit?—But the soldier, of course, as distinct from the officer, does not get the exchange compensation allowance. No one who

is paid in sterling receives compensation allowance, and the British soldier is paid practically in sterling.

14,395. I think now you are coming to 1896–97, are you not?—In 1896 I said, "I have great satisfaction " in bringing to notice that the net expenditure in " the Indian estimates for 1894–95, the accounts for " which year are now completed, was below the Budget " estimates for that year," and so on. Then I went on " The Indian Budget estimates for 1895–96 include " three great items of expenditure which have not " appeared in former Budget estimates."

14,396. Perhaps you would give us the figures?—Before I pass to that, perhaps I had better speak about what really happened in 1895–96. In India there was an excess over estimates in 1895–96 of a crore and 8½ lakhs—108½ lakhs—but there was expenditure in the Indian estimates, on account of the Chitral expedition to the extent of 165 lakhs. Whereas the total excess expenditure over estimates was only 108½ lakhs, there was expenditure on account of Chitral 165 lakhs, so that but for the Chitral expedition the whole of the military expenditure during the current year in the Indian Budget estimates would have been 56½ lakhs below the estimates.

14,397. Then those two years were somewhat exceptional years, and satisfactorily exceptional years in Indian military expenditure, inasmuch as, apart from the Chitral expedition, the actual expenditure would have been very much below the estimate?—Would have been below the estimates, and I hope it will always be so in the future, now there is a proper system of control.

14,398. May I ask, as a general rule, in past years, did you find that the expenditure—the actual expenditure—corresponded closely to the estimate, taking the years before 1895–96?—No, I do not think it did.

14,399. You found that they were frequently in excess, did you?—I think the tendency was for them to be in excess until a proper system of control was introduced, and I explain that shortly here: "The savings in the " Indian Budget estimate, which have reduced the net " excess from 165 lakhs, due to the Chitral expedition " alone, to 108½ lakhs, are due to various causes; 17 " lakhs of these savings are due to fall in food prices " below the estimated rate; 5½ lakhs are due to " diminution in exchange compensation allowance " owing to improvement in exchange; 7 lakhs are due " to savings on account of conveyance of troops and " stores; 5½ lakhs to savings in commissariat establish- " ments and miscellaneous commissariat expenditure; " 1¾ lakhs to saving in hot-weather establishments and " barrack supplies; ¾ of a lakh in savings in sea-water " transport charges," and so forth. "These savings " show careful and economical management by heads " of departments," &c.

14,400. (*Mr. Buchanan.*) But part of that is due to improvement in exchange, is it not?—5½ lakhs out of 56½.

14,401. No more: none of those other savings, transport charges and so forth?—Only the 5½ lakhs.

14,402. (*Sir Ralph Knox.*) The fall in the price of food?—The fall in the price of food, 17 lakhs, and 5½ lakhs in diminution of exchange; that is 22½ lakhs out of 57 lakhs; that is, about 34 lakhs were what might be called real genuine savings due to careful administration on the part of heads of departments.

1403–4. (*Chairman.*) Now, referring for a moment to Sir Henry Waterfield's Table No. 4, which shows how the increase (apart from exchange) has occurred, should I be right in saying that out of the total increase of Rs. 2.54.00,000, the increase in the *ordinary* army charges (*i.e.*, exclusive of expenditure due to the occupation of Burma, to special operations, or to the increase of the Army) amounted to about 23 lakhs on effective account, and very nearly 6 lakhs on the non-effective, making very nearly 30 lakhs in all?—Yes.

14,405. And might we take it that those 30 lakhs represent the increase during that period on what I may call *ordinary* army services?—Certainly.

14,406. That is the total increase in those branches over which the military authorities have control?—I should say so.

14,407. Because, of course, they have control as regards increasing pay or incurring extra charges?—Yes, quite so.

14,408. (*Sir Ralph Knox.*) How much did you say must be put down for the increase in the pay of the sepoy?—I am afraid I did not say.

14,409. (*Chairman.*) I understood you to put it at Rs. 1.61.00,000?—It must be somewhere in these papers that you have, but I cannot really remember the amount.

14,410. I thought that you stated it on Sir Henry Waterfield's authority at Rs. 1.61.00,000?—No, I think not. Oh, no; that is not the increase in the pay of the sepoy, that is the cost of the increase to the army; but Sir Ralph Knox is asking me, I think, about the increased pay to the soldier. Well, of course, there were two distinct increases. There was one shortly before I went to India; there was the increase given to the native cavalry, and I am sorry I cannot tell you how much it was, but I am under the impression that it was something like 20 lakhs; and then there was given in the last year that I was in India an increase to the sepoy, to dismounted branches, as they are called, wrongly called, of the army, and that amounted, I think, to 28 lakhs, so that those items alone would account for 48 lakhs of additional expenditure.

14,411. Up to what date, do you remember, does Sir Henry Waterfield's comparison extend?—To 1894–95.

14,412. Then should I be right in concluding from what you have just told us of various recent reforms and economies, that that 30 lakhs of increase of expenditure in branches over which the military authorities have control, has been diminished by reforms between 1894–95 and the present time?—No, I could not, I think, say that. You see there are alterations constantly going on, very large increases are made in the shape, for instance, of that increase of pay to the native cavalry soldier, and the increase of pay to the native infantry soldier. On the other hand there are constant savings being made in different directions, which counterbalance those, to a great extent, with the net result that, apart from exchange, you really have not got any great rise in the estimates.

14,413. I was taking the increase of pay to the force as a matter of general policy apart from those changes in ordinary administration, on which I gather savings have been made; and when you mention a saving in the Budget of last year of 7½ lakhs in ordnance charges, ¾ of a lakh saving in sea-transport charges, do not those come under those ordinary branches of expenditure in which you have a right to take credit for that saving?—Certainly, I think so.

14,414. And so far, though you have not got a table put together, they would tend rather to the diminution of the 30 lakhs than to their increase, would they not?—Yes, certainly.

14,415. My questions are directed to this point. You have pointed out in your speech the care that has been taken lately to effect reforms and savings whenever possible, and I wish to bring out, as far as we can, on the one hand, the actual increase in the ordinary branches of military expenditure, and, on the other hand, the savings. On the whole, may we conclude that the increase in those ordinary branches of expenditure has been small, if anything?—I think that the increases have been considerable; but I think there have been constant savings in other directions to counterbalance them. If your question points towards the question of whether you can expect or hope that there will be no further rise in Indian military expenditure, I have dealt also with that question in speaking in the Legislative Council in 1894.

14,416. We shall come later to that. I think I can explain my meaning as follows: Taking these figures from Sir Henry Waterfield which you have quoted to us, and assuming the increase in what I call ordinary army charges to be 23 lakhs and 6 lakhs on effective and non-effective account, respectively, suppose Sir Henry Waterfield were to make out those two figures for the present year, would they be greater or less, do you think, than 23 lakhs and 6 lakhs respectively?—I should say they would be greater.

14,417. You think they would?—I think they would be greater, because since that you have added 28 lakhs alone for pay to the native soldier.

14,418. I mean to except that, which I look upon as a question of policy?—Apart from that I do not think there would be.

14,419. Is there any other point in regard to the increase in military expenditure to which you would like to call our attention?—No, I think not.

14,420. There appears at first sight to be a preponderance of military authority in the Council of

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

8 Feb. 1897.

the Viceroy; there are two military members, while no other department of Government has more than one representative. Is there any force in such a criticism?—No. I think that if I might make a statement to you of the position of the so-called Military Member of Council, and of his relations to the Commander-in-Chief and to the Council, and of the relations of the Commander-in-Chief to Council, and so on, that would be the best way of answering your question.

14,421. Certainly; then, if you please, I will put this question to you. Would you describe the position of the Military Member of Council; his powers, and the limitations of his powers?—I should be very glad to do that. I should like to begin by saying that every decision taken, or every act of any member of the Government of India, or any department of the Government of India, is the act of the Governor-General in Council; and I believe that at one time everything was referred to the Governor-General in Council by the Secretaries. But, as business grew, it became impossible for all questions to go up to Council, and then the Viceroy placed certain members of the Council in charge of certain departments, and they then became to a certain extent ministers in those departments, and I must say that the tendency is growing more and more in India—I could see a marked change even during the five years I was in India—for the Government to become a government by ministers, very much as the Government here in this country is. The so-called Military Member of Council is simply an ordinary member of the Council of the Governor-General, who is placed by the Governor-General in charge of the Military and Marine Departments. The term Military Member does not mean that he is a military man any more than, for instance, if the Marine Department were more important than the Military Department—he is member for both—in which case he would probably have been called the Marine Member, that would imply that he was a marine or a sailor. And the reason that a soldier is generally placed in charge of the Military Department—always, I believe, hitherto, the Military Member has been a soldier—is, I take it, simply that if you want to build a house well and economically you employ an architect; if you want to make a road or a railway you employ a road or a railway engineer, and so, if you want to make an army, you employ a soldier. For that reason, where party and political considerations do not come in, as they do not in India, a soldier has been employed to be head of the Military and Marine Departments. Now, he is a minister for that department, subject to certain limitations of his power. In the first place, the secretary in the Military Department is the secretary to the Government of India, and not the secretary to the Military Member, and he has the right under the rules of business to take to the Viceroy any question whatever, even though the Military Member of Council may have decided upon it, if he does not agree. If he does not think that decision quite right, he has the power to go to the Viceroy and lay the question before him. That is the first limitation on the Military Member.

14,422. (*Mr. Courtney.*) Is the Secretary a soldier also?—Yes, Sir Edwin Collen is a soldier.

14,423. He is habitually a soldier?—He is always. In fact, the appointments in the Military Secretariat are military appointments. The second great limitation upon the power is that no member of Council in charge of a department can overrule any Provincial Government without the approval of the Viceroy. The third limitation consists in the rules of business laid down for financial matters, limiting the powers of the member of Council in charge of any department as to what he can do, and what he cannot do, without the authority of the Finance Department; and the Military Member has this rather peculiar limitation, which no other member has, that the Commander-in-Chief, as being a member of Council, has the power if he likes as a member of Council to appeal to the Viceroy in Council against any decision of the Military Member.

14,424-5. Would you call that a limitation of the military authority of the Military Member of Council?—The Military Member of Council has no military authority. He is absolutely, purely, and entirely a civilian. He is an ordinary member of Council in exactly the same sense as the Public Works member, or the Legal member, or any other member. He has no military authority whatever, absolutely none. He is distinctly, by the Act of Parliament, barred from holding any military position, or taking any command of troops.

14,426. Perhaps I should have used the word "bias" instead of "authority." Would you call that limitation by the Commander-in-Chief as any check upon the bias of the Military Member in a military direction?—That is assuming that the Military Member has a bias, which I should not be inclined to admit.

14,427. (*Chairman.*) At all events, it is a limitation upon the Military Member's powers that the Commander-in-Chief has this right of appeal?—I am speaking about the limitations to what may be called the absolute powers of the Military Member of Council.

14,428. The limitation being that the Commander-in-Chief has the right of appeal?—That the Commander-in-Chief has a right of appeal. That is to say—I put it in this way—supposing that the Military Member of Council were without going to the Viceroy, as is the case in very many minor matters, to simply reject the proposal of the Commander-in-Chief on his own authority, if the Commander-in-Chief likes, he, being a member of Council, can send for the notes when the official decision comes to him rejecting his proposal—he can send for the notes on the case. After seeing those notes, he can say, "I wish this case to go up to the "Viceroy and to ask his Excellency to take it into Council."

14,429. (*Sir Andrew Scoble.*) Cannot every civil member of Council also send for the notes in any case in which he thinks the public interest is concerned, and so bring the matter before the Council?—Unquestionably he can.

14,430. So that would be a further limitation on the Military Member of Council?—Certainly, that applies to every member of the Council. I was putting, as a special limitation of the Military Member, the fact that the Commander-in-Chief, who is the executive officer, and to whom he conveys the decisions of the Government, has a power, which no other executive officer in India has, of appeal to the Council.

14,431. (*Chairman.*) This answer of yours, Sir Henry, is in explanation of the apparent predominance of military authority. You say that the directions in which the Military Member of Council and the Commander-in-Chief are acting need not always be parallel?—Certainly; I bring that forward merely to show that there is a right of appeal on the part of the Commander-in-Chief by virtue of his being a member of Council, which does not exist even, for instance, in the case of the Lieutenant-Governor of Bengal or any of the Lieutenant-Governors. They have not got that appeal from a decision which is conveyed to them officially as the decision of the Government of India. They have got no appeal from that; but the Commander-in-Chief has the right of appeal from an official decision if he chooses to exercise it. I will come, if I may, presently to state how that works in practice.

14,432. I gather from an answer that you just now gave, that an ordinary member of Council has always the power of asking the Viceroy to take any question into consideration?—Certainly; and he can ask the Viceroy to bring it before the Council.

14,433. Supposing the Financial Member dissents from a decision at which the Military Member has arrived, he would have the power of going to the Viceroy and asking him to take it into the Council?—Certainly.

14,434. Therefore, in that respect, the practical right of appeal of the Financial Member corresponds to that which the Commander-in-Chief has?—Yes; every member of Council who dissents from the decision of any of his colleagues on anything can go to the Viceroy and ask the Viceroy to bring the matter up and have it discussed in Council.

14,435. Had you finished the question of limitations?—Well, I was going on then to speak about the relations to the Commander-in-Chief.

14,436. I will ask you shortly as to that, but I want to interpose one question, to bring the position home to us. Your description of the functions of the Military Member of Council leaves me under the impression that, on a rough analogy between the Home Government and the Indian Government, the Military Member of Council corresponds to the Secretary of State for War, the Commander-in-Chief to the Commander-in-Chief?—No, the Military Member has not got at all the powers of the Secretary of State for War. The Secretary of State for War is directly over the Commander-in-Chief in England.

14,437. I know. I particularly said that they are merely roughly analogous?—No; I would say that the comparison which was made in some of your questions to other witnesses is a correct one, when you say he corresponds very much with the old Secretary at War. He corresponds very much with the German Minister of War. The Military Member of Council corresponds very much with the German Minister of War.

14,438–9. (*Mr. Buchanan.*) I do not quite understand what you say about the limitation that the Finance Department imposes upon the Military Member of the Council. Has the Finance Department any special check and control over the Military Department more than over any other department?—Yes. There are certain definite rules laid down for the conduct of business between the Military and the Finance Departments. The Military Member is limited by certain rules, in regard to what he can do in relation to transferring sums and so on, which apply only to the Military Department.

14,440–1. But is the Military Department more under the control of the Finance Department than other departments?—No. I think the departments are all under the control of the Finance Department. But the Military Member is under special rules which relate only to his own special department.

14,442. But they do not limit him more than any other department in making financial proposals?—No.

14,443. (*Sir Ralph Knox.*) How do the other members of Council become aware of the decisions of the Military Member of Council, in order to afford them the opportunity of raising any questions?—They would never become aware of anything except the really important questions, and only very large questions. It is only the very large questions that go before the Council at all; but all large questions do. I will come to them in a moment.

14,444. (*Chairman.*) You were speaking of the peculiar position of the Military Secretary. Does he hold office only for a period, for five years?—He is appointed for five years subject to renewal. Sir Edwin Collen was in his eighth or ninth year when I left.

14,445. Then the Secretary does not hold a post at all analogous to that which the Under-Secretary of State occupies in relation to the Secretary of State?—I think that in reality he does, though theoretically he does not. I think he is really very much like the Permanent Under-Secretary of State, except that he has this power of going to the Government; and how that works in practice I would say by-and-by, if I may.

14,446–7. Of course that is a very great difference, because the Under Secretary of State here is purely a subordinate of the Secretary of State, whereas you could hardly describe a man with that power of appeal as purely a subordinate?—No; and the Secretary takes great pains to impress upon you that he is Secretary to the Government of India, and not the secretary of the Military Member of Council.

14,448. (*Mr. Mowbray.*) And this is true of the Secretaries in all the departments; there is nothing special about the Military Secretary?—Quite so.

14,449. (*Chairman.*) Now, would you give us the relations of the Military Member of Council with the Commander-in-Chief?—All proposals whatever for changes, whether for increased expenditure or for decreased expenditure—and I am happy to say we had some of those—or for changes in organisation of the native army, in fact, all proposals from the Commander-in-Chief, must be put forward and made to the Military Department. The letters are addressed by his staff officers to the Secretary to Government in the Military Department, but all proposals which involve expenditure in any way are put forward through Controllers. They go first of all to the Controllers of Military Accounts, and through them they come up to the Government of India with their report upon the financial effect of those proposals. Then the Military Department criticises these proposals; they go to the assistant secretaries, then to the deputy secretary, then to the Secretary, till finally they come up to the Military Member. As a rule, the Controller's reports are so complete that it is not necessary to consult the Accountant-General; but on any important questions, or wherever I thought that I wanted something more than the Controller's report, I referred to the Accountant-General, and in that way, when the thing comes before him, the Military Member of Council has got a very thorough and complete report, not only on the financial aspect of the whole question, but also, from his secretariat, upon the various other aspects of the question, and then he has to deal with it. He may, on his own authority—and it is constantly done if the matter is not one of very great importance or difficulty—reject the Commander-in-Chief's proposal. A letter goes back officially from the Government of India to say they regret they cannot accept the proposal. He can—if it is within those limits within which he has the power to sanction expenditure under the financial rules— accept the proposals of the Commander-in-Chief; or, if it is a matter which has to go to the Finance Department, it being beyond the powers of the Military Department to sanction it, the Military Member can send it on to the Finance Department asking them to concur in the proposal; and, therefore, the Commander-in-Chief in all matters of every sort affecting expenditure is under the control of the Military Department.

14,450. (*Mr. Courtney.*) With a power of appeal?—Yes. How that power of appeal works in practice I think I might presently state. Next come the relations of the Military Department—the Military Member of Council—to the Finance Department.

14,451. (*Chairman.*) Before you pass to that subject, I understand that the Controllers' reports do not pass to the Military Department through the Accountant-General as a matter of necessity?—No. They come direct to the Secretary.

14,452. And the Accountant-General would only know of them in case the Military Member of Council wished to consult him?—It depends. There are certain cases in which they would come up through him. Sir Edwin Collen explained that to you. In certain cases they come through Section F., but if they come up from any other sections to the Military Department, the Accountant-General need not know of them, unless his advice is asked. The Controller is a very high official, and he is supposed to be capable of advising. This is in fact decentralisation. The Accountant-General could not, by any human possibility, advise upon every proposal, large and small, which comes up.

14,453. (*Sir Ralph Knox.*) You say that the most of the proposals come through the Controllers?—They all come, all proposals involving finance.

14,454. But taking the larger questions, such as that we have already spoken of, the increase of pay of the army, the increase of the establishment of the army, they would not come through the Controllers?—That is a proposal which would emanate directly from the Commander-in-Chief. As a matter of fact, no written proposal was put forward by the Commander-in-Chief for that increase of pay to the native army until it had been agreed to by Council. It was discussed between the Commander-in-Chief and myself. It was discussed in Council, and it was an Order in Council that a despatch should be sent home to the Secretary of State asking that this should be done; but, of course, before that despatch went, the Accountant-General was called upon to estimate what the cost would be, and that estimate with a formal official letter from the Commander-in-Chief went with the despatch to the Secretary of State.

14,455. Then from whom would the proposal really have come in that case, from the Commander-in-Chief or from the Military Member of Council?—In that case from the Commander-in-Chief.

14,456. (*Sir Donald Stewart.*) Was it not the fact that the Commander-in-Chief consulted a great number of commanding officers about it before anything was done?—Yes, he consulted a great number of commanding officers about it before anything was done. But the official letter written by the Commander-in-Chief, and sent home, advocating this, was not written until the whole thing had been discussed and very thoroughly talked over in Council, and it had been decided that it must be done.

14,457. (*Sir Ralph Knox.*) That would be the same in regard to the increase of the establishments in the army?—That would be the same, I should think, yes. There is another question, the money which was granted last year for the mobilisation for third and fourth divisions. That, I may say, emanated from me; and that was discussed and talked over between the Financial Member and myself, between myself and the Commander-in-Chief, between myself and the Viceroy, and then was discussed in Council, before any official proposal was made; and then an official proposal

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

8 Feb. 1897.

was made and circulated to Council and everybody agreed; and then a despatch was sent off.

14,458. And who made the official proposal in that case?—The official proposal in that case was made by me in the form of a note addressed to the Viceroy stating reasons why this step was considered necessary, and asking the Viceroy's approval—which was not formally necessary, but as a matter of courtesy was desirable—for my sending to the Finance Department and inviting their concurrence. Then it went to the Finance Department. The Finance Department expressed their willingness to endeavour to find the money; and then it was circulated to all the members of Council and to the Viceroy.

14,459. (*Mr. Courtney.*) The discussion in both cases in Council began with yourself?—The discussion in both cases in Council began with myself. That is the procedure under the Rules of Business.

14,460. (*Sir Ralph Knox.*) Then the proposals that you say come through the Controllers are practically minor proposals in order to improve the efficiency of their particular department, or to meet some local demand which has arisen from the every-day experience of the troops?—Quite so.

14,461. That is the class of expenditure which comes through Controllers?—Yes.

14,462. But all the larger questions are practically decided and discussed, and in most cases raised, by the Military Member of Council?—Certainly.

14,463. (*Chairman.*) Then in such a case as that of the increase of pay, where does the financial criticism of the proposal come in? I understood from you that, when that measure was decided upon, before the despatch was written and the order issued, the Accountant-General was called upon to draw up an estimate?—Yes.

14,464. The drawing up of the estimate was merely putting into figures that which had already been decided?—Certainly.

14,465. At what point did the financial criticism on that proposal come in?—Well, the financial criticism on that proposal would come in as follows: The Commander-in-Chief would say—I cannot remember whether this case came forward in the shape of an official proposal, or whether it came forward in the shape of unofficial notes which passed between the Commander-in-Chief and me—"I consider it necessary, "for certain reasons, that the pay of the native infantry "soldier should be increased, and the amount, by "which I consider it necessary that it should be "increased, is two rupees per month, and I give my "reasons for this—the cost of living to the native "soldier is so much," and so forth. He went into all the different expenses of the sepoy after consultation with a great number of commanding officers; he showed what the cost of living of the native soldier really was, and that, after the payments for absolute necessities, and so on, there was, practically, you may say, nothing left. Then, going into the question of wages, as compared with the wages of the soldier, he said, "For these reasons I consider that two rupees a "month is what ought to be given in order to enable "us to get the class of recruits that we want."

14,466. (*Sir Ralph Knox.*) That is the point; there would be the difficulty?—Yes. That all comes to the Finance Department. The Finance Department would have the power of criticising that proposal in any way that they liked.

14,467. (*Chairman.*) By the Finance Department you mean the Finance Member?—The Financial Member in charge of the Finance Department, and his subordinates.

14,468. But would not you, as Military Member, discuss that with your Accountant-General?—Yes, certainly, and I did so.

14,469. You actually discussed it?—We actually discussed it.

14,470. And that was the point at which your military financial criticism came in?—Certainly; the military financial criticism. Our Accountant-General would tell us whether he agreed with those facts of the Commander-in-Chief. It would then go to the Finance Department, which would also have the power of criticism to any extent that it liked.

14,471. (*Sir Ralph Knox.*) There was some difficulty in obtaining the class of men that was wanted for the army, was there not?—No doubt there was.

14,472. The men were not coming forward freely for service?—Not the right class of men.

14,473. This was intended to be an inducement to draw the right class of men away from their civil occupations for service in the army?—Quite so.

14,474. (*Sir Andrew Scoble.*) Proposals for raising the pay of the sepoys had been in the air for a great many years before that time?—A very long time. My predecessor, Sir George Chesney, when he was leaving, left behind him a sort of valedictory minute in which this was one of the things that was very strongly advocated—the absolute necessity of it. The native soldier feeds himself, and there was really proof that the men were not even feeding themselves properly.

14,475. (*Sir Donald Stewart.*) For many years in my time the same had been a very pressing question?—For very many years.

14,476. (*Chairman.*) Next will you give us the relations of the Military Member to the Finance Department?—They are entirely regulated by the Rules of Business. I do not know whether the Commission have a copy of what are called the Rules of Business in India. They are rules which every member of Council is constantly referring to, he must have them on his table and refer to them; and I think it would be well that you should have them. They lay down rules very definitely and very clearly for the Military Department, what it can sanction itself without going to the Finance Department, and what it must go to the Finance Department about before it can sanction, in the way of expenditure. It can sanction no increase of salary—I am stating roughly some points in the rules—it cannot transfer money from one vote to another, it cannot do anything which would cause a recurring expenditure, without going to the Finance Department. Well, then, a question having been brought before the Military Member; it may be referred by him to the Finance Department in the shape of asking their concurrence. This is practically the only form in which it ever goes forward, because, if he objects to the proposal, or does not agree with it, he does not send it to the Finance Department but he may send forward the original proposal, or a modified proposal, to the Finance Department and invite their concurrence, and then the Finance Department can either agree to that proposal or can decline to agree, but cannot negative it and say it shall not be. It can simply decline to agree. Then in that case it comes back to the member of Council in charge of the Military Department, and he can either accept the view of the Finance Department if he chooses, or he can argue it out still further with them, or he can go to the Viceroy and he can say: "I cannot accept this view of the Finance Depart- "ment, and I would ask your Excellency to bring "this before Council." And then the matter would come before Council. There have been plenty of cases in which I have taken all those different courses, and sometimes I would go to the Commander-in-Chief and I would say to him—this I should do unofficially—"I have asked the Finance Department for this; they "will not give it; I do not think the case is strong "enough for me to take it up to Council and support "it. I think their arguments are good; and I propose "to drop it." The Commander-in-Chief would say "Yes." He would always take your view in a matter of that sort.

14,477. Those Rules of Business are issued by the Council, are they not?—They are issued by the Council; it is in the Home Department that the Rules of Business are drawn up.

14,478. (*Mr. Buchanan.*) On the other hand, I suppose, there are cases in which you press forward your proposals?—There are cases; but of late years, especially, they are very rare. Indeed, the Military Member of Council would now seldom think of going to Council against the Financial Member, because the Finance Department got to understand that we did not put forward proposals, unless they were really well weighed proposals for things that were necessary, and we had got to understand that the Finance Department would not refuse such proposals unless it really was the case that they could not give us the money.

14,479. (*Chairman.*) Now, would you tell us the relations of the Military Member to the Viceroy?—The Military Member of Council, like every other member of Council, has free access to the Viceroy officially, or by demi-official letter, or personally and verbally at, practically you may say, any time, and he can ask the

Viceroy, and frequently does ask the Viceroy to discuss a question in which there is any dispute, and on which opinions differ, with himself and any other member of Council, or with himself and the Commander-in-Chief. For instance, on questions that were put forward by the Commander-in-Chief with which I could not quite agree—not financial questions, but questions it might be relating to appointments or matters of that sort, or questions of policy with which I could not agree—I would ask the Viceroy to see the Commander-in-Chief and myself after Council, and discuss these matters; and in that way we two, the Commander-in-Chief and myself, met and brought our views before an independent arbitrator of the highest position, as it were, and the result of that interview might be that we would arrive at an agreement, that one or other of us would give way, or that we would arrive at a compromise, or that one or other of us would say, "Well, I "should like the matter thrashed out in Council," and the Viceroy might himself say, "I think this is a "matter which ought to go before Council." But the Viceroy is always there as a sort of friendly impartial arbitrator between any two members of Council, or between, for instance, the Military Member and the Commander-in-Chief; and I do not think that it is possible to over-estimate the value of that position. In the same way I have had difficulties with the Finance Member—in old times, none lately—and then I would ask the Viceroy to discuss the matter with the Finance Member and myself after Council in the same way. "After Council" is a sort of technical expression. Council meets once a week, and any member who wishes to speak to the Viceroy, generally speaks to him after Council with papers; as that is the most convenient time for this sort of discussion.

14,480. (*Sir Donald Stewart.*) But the Governor-General has the power of settling a question of that kind himself without the interference of Council?—He has not the power, I think, Sir Donald, if a member of Council wishes it taken up to Council. I have never heard of a case of the Viceroy declining to bring a matter up into Council if any member asked that it should be brought up in Council; and certainly, supposing there had been a matter in which I felt very strongly—we will say that a proposal put forward by the Commander-in-Chief was not justified under the circumstances, or that the refusal of the Finance Department to give me something was not justified under the circumstances, whichever way it might be—after I had discussed it with the Viceroy, and heard all the Viceroy had to say, and seen that the Viceroy was inclined to lean against me, if I still felt very strongly that my case was right, in that case I should say, "Well, my lord, I think I must ask you to allow "that case to come up and be discussed in Council," and the Viceroy would do so.

14,481. He would have the power of deciding the matter himself, if he chose, I think?—Yes, but I do not think a Viceroy would ever refuse to refer to Council.

14,482. (*Mr. Courtney.*) That has happened in your experience? That is, you have carried the matter to the Viceroy in an official or semi-official manner, and, finding him rather inclined against you, you have said, "Your Excellency, I must ask you to put it before Council?"—Well, I should not like it to be thought that there had been a sort of official appeal from me against the Viceroy. In the course of discussion I would say, "I think, your Excellency, that it would be "better that this question should be discussed in "Council," and then the Viceroy would say, "Yes." That has happened.

14,483. But you would say that, feeling, probably, that the movement of his mind was against you?—I probably should. Yes; or I think I should say it even if the Viceroy was with me, if the other man with whom I was not agreeing, had a very strong view against mine; then I should wish the case to go to Council to be settled rather than have it settled only by the Viceroy.

14,484. (*Sir Ralph Knox.*) In a case in which you and the Commander-in-Chief were in agreement, but in which the Finance Member of Council differed, is it your experience that, when carried to Council, the view of the Military Member and that of the Commander-in-Chief would prevail against the Finance Member?—Every case would be dealt with by every member of Council absolutely upon its own merits, simply and solely. There is no doubt whatever about that; every case would be discussed and argued out by seven practical men sitting there round the table, and would be dealt with on its own merits.

14,485. (*Sir Andrew Scoble.*) Are there any parties in Council?—There are no such things as parties in Council.

14,486. Did you ever hear of such a thing as a party in Council?—I have seen two men, perhaps, rather band themselves together for some one particular thing, but not a party; oh, dear no. There is no such thing as parties in Council.

14,487. (*Sir Ralph Knox.*) I am thinking of such a case as a military demand in regard to which the Commander-in-Chief and the Military Member of Council are in agreement, and the Finance Member of Council in disagreement?—Yes; I may say that it is extraordinarily rare for such cases to come up into Council. Where the Finance Department has not been converted by argument to think a thing right, it is very rare that the Military Member would take it into Council; but if he did, then it would come up, every member of Council having, before it was brought up in Council, had the whole of the notes on the case before him in print. Before any case comes up in Council, all the notes upon it are printed and are sent to every member of Council, and he reads them and studies them before he goes into Council, so that he has all the arguments on both sides before him before the case is discussed in Council.

14,488. But you think there are cases in which the Commander-in-Chief and the Military Member of Council are in agreement, while the Finance Member has a strong objection to them for financial reasons—perhaps, because there is no money?—I must take exception to cases in which the reason is that there is no money. If you omit that, all the rest of your question is right.

14,489. It is a strong financial reason?—It is a very strong financial reason, and such a case would never come into Council.

14,490 Then you think that in such a case as that the two Military Members would practically accept the decision of the Finance Member of Council, when there were such strong financial grounds as that urged against the proposal?—If it has ever reached the stage of coming up to Council, the Finance Department having objected to it, that can only be by virtue of the Military Member of Council having made up his mind that the Finance Department is wrong, and that he is right. Then, and then only, would he ask the Viceroy to bring the case up in Council. Therefore, it stands to reason that, the whole of the arguments having been before him, he would adhere to his view in Council, and the Finance Member would adhere to his, and the decision of the matter would then rest with their colleagues.

14,491. Including themselves?—Including themselves.

14,492. (*Chairman.*) I suppose what Sir Ralph Knox means is that in that case there are two military votes secured?—I cannot, in the whole of my experience of five years in India, remember a single question being carried in Council by the one voice of the Commander-in-Chief.

14,493. Has the Military Member of Council a power of dissent?—Certainly, every member of Council has a power of dissent; from any decision of Council you can have your dissent recorded.

14,494. Has the Military Member of Council any power or right of communication, or practice of communication, with the department of the Secretary of State at home?—I fancy the Secretary to Government in the Military Department is generally in communication with the Military Secretary here, demi-officially; I occasionally wrote home demi-official letters myself to General Newmarch, I think, once or twice, perhaps, to Sir Donald Stewart, and, after Lord George Hamilton came into office—I knew Lord George Hamilton personally—I had some correspondence with him; but I may state that I feel so very strongly the absolute necessity for the loyalty of every member of Council to the Viceroy and to his colleagues, that, in this purely private correspondence which I had with Lord George Hamilton, due to the fact of my having known him personally before he took office, I showed to the Viceroy all his letters to me and all my replies to him.

14,495. I have got here before me, the "Rules and Orders for the transaction of business," to which you, Sir Henry, have been calling our attention, and I see

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

8 Feb. 1897.

a heading; "II. The duties of Secretaries in executive departments," and it leads to Rule II.; "The chief "duty of a Secretary in an Executive Department is "to place every case before the Governor-General or "the Member in charge of his department in a complete "form ready for final decision." That looks as if the Secretary was entrusted with the discretion of choosing whether he should send the case to the Governor-General or to the Member?—Theoretically, he has, I believe, that discretion; but practically, he has not. All his business must be done through the Member of Council.

14,496. And Rule 7 says: "Papers of special "importance and urgency shall be sent by the Secretary "at once to the Governor-General, who will initiate "orders himself or send them for initiation by the "member of Council in whose division they fall, as he "may judge best"?—I should say that that rule was a dead letter. Then with regard to the relations between members of Council; a member of Council can ask the Viceroy to submit any question to Council, and when it comes before Council he can plead his own case in Council, and he is bound by the decision of the majority, subject to his power to record a dissent. As regards the practical working of these limitations, dealing first with the power of the Secretary of appealing to the Viceroy—well, it never comes to the Secretary appealing to the Viceroy if the member of Council has any tact. The Secretary would never appeal on trifling matters, and on any large matters the member of Council would himself submit the question to the Viceroy if he found that the Secretary was holding a very strong view in opposition to his. I have habitually done that when I found that Sir Edwin Collen's view was strongly different to mine. I have written on his note that I was very sorry that I could not agree with the Secretary; that I felt so and so, and so and so, but that, as the Secretary held such a strong view in the other direction, I thought it right to submit it to the Viceroy; and then the case would go to the Viceroy. There never was a single case in my five years of the Secretary appealing against my decision to the Viceroy. Then, as regards the order that members of Council cannot overrule the Provincial Governments without the approval of the Viceroy, that I believe to be carried out literally and in its integrity. The rules of business as regards the relations of the Military Department to the Finance Department are interpreted with the utmost strictness. The Accountant-General in the Military Department is really an officer of the Finance Department in the Military Department, and it is his business to prevent the Military Member making any mistake. If he, for instance, were going to sanction something which he has not got the power to sanction, the Accountant-General would say, "You cannot do this: this must go to the Finance Department," and the Military Member cannot overrule the Accountant-General in these matters. If he were to say, "I do not care. I am "going to do it," the Accountant-General would at once go to the Finance Department, and in that way the Military Member is kept absolutely within the lines that are laid down for him in connexion with those financial rules of business. I would only say that in all these matters I look upon the Accountant-General in the Military Department as the mainstay of the department. He is the most valuable man it is possible to imagine; he keeps you straight; he keeps you right; he keeps you within rules; he gives you sound advice on financial questions, and I myself relied immensely upon him during the time that I was in office.

14,497. I gather from what you have said that, in practice, every important question goes to the Accountant-General; but the regulations do not make it absolutely necessary that it should?—Quite so; because there is decentralisation. There are four Controllers, and every financial question comes up through one of these Controllers. Their report is on all matters of account as good as the Accountant-General's; but it may be that you want something a little more than that. It may be that you want advice on what you might call financial policy in the matter, and then you would go to the Accountant-General for something beyond what the Controller had given you.

14,498. My point is that, naturally speaking, the Military Member of Council would for his own better information consult the Accountant-General?—Yes.

14,492. But it is not absolutely necessary that he should do so?—Certainly not.

14,500. The Accountant-General might be ignorant of proposals that were made?—I used to consult the Accountant-General a great deal more, perhaps, than and previously been done; but the real fact of the matter is, he is a very heavily worked man, and it is not fair to go to him when you have got a good report from the Controller; you increase his work so enormously. Well, speaking of the relations of the Military and Financial Departments, I think I ought to say that those relations greatly depend, as has been said by other witnesses before this Commission, and particularly by Lord Cromer, on the personality of the individuals. I think, myself, that the Military Department will be good or bad in its financial working and that the question of the military expenditure will be very largely influenced, by the personalities of the Military Member of Council and the Financial Member of Council, and by the way in which they look at their own work. Now I may mention this: The first summer that I was in India, in 1891, I did not arrive till April, the beginning of the financial year. The Budget was passed, and there was the Budget before me, with which I had to deal. The Financial Member of Council, unofficially, one day offered me 35 lacs to spend on mobilisation, which were not included in the estimates. That was some four or five months after the beginning of the financial year. Now, I take that to have been due to the fact that the Financial Member found that he had underestimated his revenue; that he was getting more money in than he thought he would have; and he had this money to spare. Probably his balances were rolling in to rather a large extent, and he offered me these 35 lacs of rupees for mobilisation. Well, knowing that this money had been urgently asked for by my predecessor in office, that the Commander-in-Chief, in fact, every one, must be desirous that the army should be made fit and ready for war, which it could not be unless this money was spent, I gladly accepted those 35 lacs; and that enabled us to place the two first divisions of the army in a proper state of fitness. The next year, instead of the balances rolling in, the pendulum began to swing the other way; and the same Financial Member who had this year offered me spontaneously 35 lacs of rupees, about the same time of the year, about the summer, when our proposals for consideration for the estimates for the next year were sent in to him, took to returning them all without any criticism whatever, and simply saying, "There is no money"; and when my estimates came forward in the January or February following, he insisted, or endeavoured to insist, upon my cutting the military estimates down by 60 lacs of rupees. That is to say, in one year he offers me 35 lacs of rupees over and above the provision in the estimates: in the next year he says "You must "cut down your estimates by 60 lacs of rupees." Well, that was a case in which it was impossible for me to accept the Financial Member's view: I was unable, with the best will in the world, to cut down the estimates by 60 lacs of rupees, because it was not in my power to reduce the army; it is not even in the power of the Government of India to reduce the army by a single soldier without the authority of the Secretary of State; nor is it in the power of the Government of India to reduce their pay, to alter their pay or their allowances or their rations, or anything else, and there was only one way in which it could be done, namely, to buy 60 lacs less stores in the course of the year, which would have been a ruinous policy; and, therefore, I was unable to assent to this proposal of the Financial Member. That matter was brought up and debated in Council, and the Council decided that the money was to be granted to the Military Member, that he had asked for, although it meant budgeting for a deficit. The matter was discussed, the whole Council present, and that was the decision; and you have in your appendices here to this Commission's Report my minute, which was sent home to the Secretary of State, stating the reasons why I was unable to accept Sir David Barbour's proposal. Of course, there are many things one could say, but one cannot disclose Cabinet secrets—one cannot speak of details of what passed in Council.

14,501. (*Sir Ralph Knox.*) Did not the offer of the money made by the Finance Minister to meet the necessities of mobilisation show his willingness to meet the demand for such services as were, in his opinion, absolutely necessary; where he was convinced that the cause was a very good one and the money was available?—I should say, yes.

14,502. And does not the fact that, since that time, reductions to the extent of 60 lacs of rupees have been

effected through an overhauling of expenditure also show that he was not far wrong in proposing to have a reduction made in the military expenditure?—No, not at all. The Financial Member on the whole is perfectly right to insist, as Sir James Westland insisted, upon the closest and most minute investigation of all military expenditure, and to insist on himself being satisfied as to the necessity of everything that you are doing from day to day in the way of increase of expenditure; but he is not justified, in my opinion, in coming to you at the last moment, when he practically must know as well as you do that you cannot cut down estimates which have been made upon certain fixed data and conditions, and saying, "You must cut down "your estimates by half a million of money, or three or "four hundred thousand pounds."

14,503. (*Mr. Buchanan.*) Did he give you any assurance that these 35 lacs would be continued to you?—It was initial expenditure, not recurring expenditure.

14,504. Do you not think that, if he made a mistake at all, he probably made a mistake in allowing you to have the money to start with?—Pardon me, the 35 lacs were initial expenditure, not recurring expenditure; that is to say, expenditure which only relates to one year.

14,505. (*Chairman.*) Would it have made any difference, may I ask, in your mind, if the Finance Minister had stated that, if the military estimates were accepted in full, increase of taxation would have to be resorted to?—I think that all the members of Council, including the Military Member, are kept very well informed about the financial position of India; and that that question would enter into the mind of every one in dealing with a matter of that sort. Every member of Council would weigh in his own mind what was the most important thing on this occasion: Is this going to be a permanent deficit in front of us? Are we to look at it in a gloomy spirit? or is there reason to hope that it is only temporary, in which case we should certainly be inclined to run the risk of a deficit this year rather than do such a serious thing as to cut down, we will say, the strength of the army, or the reserve of stores, which have been over and over again carefully and deliberately considered, weighed, and approved of by the Governor-General in Council and the Secretary of State at home.

14,506. (*Mr. Mowbray.*) I understand that the Financial Member recorded a dissent on that occasion?—On that occasion the Financial Member recorded a dissent, and the Secretary of State approved the action of the Governor-General in Council.

14,507. And the Viceroy did not concur in the Financial Member's dissent?—He did not; the Viceroy supported me.

14,508. (*Sir Ralph Knox.*) It was during your tenure of office that one battalion, or the cadre of one battalion, of British infantry was reduced, was it not?—Yes, it was.

14,509. That suggestion or request came from the home Government, did it not?—Yes.

14,510. (*Chairman.*) That is the method in which expenditure could be reduced?—No further.

14,511. I say that is a method in which expenditure could be reduced?—You mean by reducing the number of the cadres?

14,512. No. By reducing the number of the Queen's troops in India. I am not dealing with the serious nature of the proposal, but I am only saying that it is a method in which expenditure could be reduced, I suppose?—I should be very sorry to see it done; I think most of the people living in India would.

14,513. (*Sir Donald Stewart.*) But the troops were not reduced in strength; the cadre merely would be reduced?—No, they were not reduced except by one cadre; 20 other men were added to every other battalion.

14,514. (*Sir Ralph Knox.*) That was an economical arrangement, was it not?—Yes; but the reduction of cadres could not be carried further. Might I speak of the power of appeal of the Commander-in-Chief? During my five years in India there was only one case of appeal by the Commander-in-Chief against any act or decision of mine; and in that case the Commander-in-Chief considered that I had gone beyond the terms of an Order of Council, and that in stopping certain expenditure I was acting *ultra vires*—beyond what the Council had permitted me to do. He sent for the notes on the case and wrote a note asking that this matter might be brought up in Council. That came up through me. I noted my views on it, and stated that I believed I was carrying out the spirit of the Order in Council, and I asked for the support of my colleagues. The case came up for discussion in Council, and unanimously the Council supported me, and the Commander-in-Chief was left in a minority of one.

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

8 Feb. 1897.

14,515. (*Sir Donald Stewart.*) But were not the orders, against which the Commander-in-Chief appealed, issued in the name of the Governor-General in Council?—Certainly they were. Yes.

14,516. (*Mr. Courtney.*) It was a question of your having gone beyond its intention in the execution of an order, I understand?—Yes it was. We were considering in every direction where we could stop expenditure. There was one certain class of work—I wish to be careful in what I say—upon which I thought that work might be stopped, and with advantage stopped, and the Commander-in-Chief did not agree; it was brought up in Council, and the Council agreed that the work should be stopped. I thereupon issued orders to stop the work at a certain stage. The Commander-in-Chief considered that I had gone beyond what the Council had ordered, and he appealed, and, in the result, as I say, the Council unanimously supported me, and my decision held good. And that is the only case which I have known of that sort. It was a case, I am bound to say, in which the Commander-in-Chief felt very strongly, and I was not able to support his policy. As a rule, the Military Member, if the Commander-in-Chief makes a proposal which he, for one reason or another, does not think he can support, either because he does not agree with the policy of it, or because he thinks it is an undue expenditure to make, or because he knows there is not much money available, would see the Commander-in-Chief, and would explain to him. He would say, "I am "afraid I cannot support that proposal, and under "these circumstances do you wish to press it?" The Commander-in-Chief knows perfectly well that it is practically hopeless to come forward with a proposal for expenditure to the Council if he is not supported by the Military Member, and he would withdraw it in 99 cases out of 100. If it was something that he did feel very strongly about, he would say, "Well, yes, I "am afraid I must press it." Then the Military Member would write upon the proposal his reasons for not concurring in the proposal, and he would send it on to the Finance Department, saying "I put forward "this proposal of the Commander-in-Chief's, but I "have told the Commander-in-Chief that I cannot "concur in it, and these are my reasons for not con-"curring in it. What do you say?" Well, of course, it is needless to say the Finance Department would not concur with the Commander-in-Chief, and then it would come back. Then, if the Military Member of Council chooses, having got the concurrence of the Financial Member, he might send an official letter to the Commander-in-Chief, and say: "Your proposal is not accepted;" but out of courtesy, and considering the very high position of the Commander-in-Chief, he would send the case forward to the Viceroy, and would say: "Your Excellency will see that the Finance "Department and the Military Department are agreed "in considering that this proposal ought not to be "accepted; do you concur?" The Viceroy would put his initial or say, "I concur," and then the official letter would go to the Commander-in-Chief saying that the proposal was rejected.

14,517. (*Sir Ralph Knox.*) Do such cases often occur?—Oh, they do occur; but they are pushed to that official point very rarely indeed, because one settles these things with the Commander-in-Chief out of court, nearly always.

14,518. They would be all comparatively small points, I suppose?—They might be biggish points, or small points—points of all sizes. The Commander-in-Chief might say, "Well, I should like it to go on because "I should like to have it on record. Even if you "refuse it officially, yet I should like to let it be "on record, as I mean to bring it up again next year." Then, in the most amicable way in the world, he would know that you were not able to support him, and that the Finance Department were not likely to support him, and he would know that the Viceroy would go with you and the Finance Department.

14,519. But the Council would then be informed of the progress of the business?—In that case it would not go before the Council; it would simply be the

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

8 Feb. 1897.

Military Department, the Finance Department, and the Viceroy. That constitutes the Governor-General in Council for any particular question.

14,520. (*Mr. Mowbray.*) That is official?—Oh, yes, official.

14,521. (*Sir Ralph Knox.*) But I think you said there might be a case of appeal by the Commander-in-Chief apart from that?—I did not mean carrying it to Council against the decision of the Government. I meant this: the Commander-in-Chief has put forward officially to the Military Department a proposal for expenditure I go to the Commander in-Chief. and I say, "I am sorry "to say that I cannot support that proposal. I do not "like the policy of it," or, "I think it would cost "more money than it is worth." Or, "considering "what other things I have before me, and the demands "on me, I do not think I can press for this simply on "that ground, and I propose to tell you that we cannot "accept it. Do you wish to press it under these con- "ditions, because, if so, I will send it forward to the "Finance Department?" The Commander-in-Chief would either say, "Oh, no;" or he might say, "Well, "I should like to have it on record," and then one would send it to the Finance Department, and they, of course, would agree in rejecting it, and then to the Viceroy, who would agree with the Military Member and the Finance Department; and so the thing would go on, unless, which is possible, the Commander-in-Chief may have spoken to the Viceroy, and the Viceroy may say, "Well, it is a very important matter; I "will circulate it for Council." In that case it would come up before Council; but not in the shape of an appeal from the Commander-in-Chief, but from the Viceroy on his own initiative. That case, however, would be very rare. If the Military Department and the Finance Department were agreed upon a question, the Viceroy, would, practically, almost always support them.

14,522. (*Chairman.*) If the Military Member and the Commander-in-Chief agree?—If the Military Member and the Finance Department agree.

14,523. (*Sir Ralph Knox.*) But it is equally the case that, if the Military Member and the Commander-in-Chief agree, the Viceroy will probably support them?—Oh, I do not think that follows. On what might be called a purely military question, yes; but not on a question where military and financial considerations are mixed. The Viceroy, just like every other member of the Council, would weigh the financial conditions as against the military needs, or the military demands.

14,524. (*Chairman*). I see in these Rules of Business, No. XXII.: "If the Governor-General concur with the "initiating member's orders, his Excellency will deter- "mine whether and when the subject shall be brought "before Council; and also whether the papers shall be "circulated before action is taken upon them; and, if so, "whether they shall be circulated to all, or some "members of the Council." Does that mean that, if the Viceroy pleases, he forbids the subject to be brought before the Council?—I do not think it can be quite read in that way. What I really think it does mean is this: any member of the Council who is head of a department sends a proposal up to the Viceroy. If he thinks the matter is of great importance, so great importance that it ought to be known by every member of the Council, and ought even to be debated in Council, then the Viceroy would say, "I think this should be "discussed in Council. Circulate and Council on "Friday." On the other hand, in nine cases out of ten, he would say, "I concur," simply, and initial it.

14,525. But might there not be cases in which, if a member of the Council wished a subject to go before the Council, the Viceroy might say, "I do not think "this is a subject that should go before the Council"?—I have never heard of such a case. I cannot think that the Viceroy would ever take that course.

14,526. But it looks as if he had the power under that rule?—It says, "Whether and when" it shall be discussed.

14,527. (*Mr. Buchanan.*) "Whether"; you must get his consent?—I think that the meaning of that is rather that the Viceroy will say whether it is necessary to send the note before the Council; but I never heard of the Viceroy refusing a member of Council.

14,528. But then, technically, you must get his consent?—No one can bring anything up in Council except the Viceroy.

14,529. (*Chairman.*) How do those relations of the Military Member of Council with the Finance Member of Council, the Viceroy, and the Commander-in-Chief work in practice, as regards his independence as a critic of military expenditure?—Well, I hold myself that the Military Member of Council, if he has got any grit in him at all, is a thoroughly independent critic of military expenditure.

14,530. And those relations, of which we have been speaking, in no way trammel him?—No, I do not think they do in any way whatever.

14,531. And further, as regards his ability to obtain what is necessary for the army?—Well, I think that there again, my experience of the Finance Department is that they recognise thoroughly the necessity of having the army in India in an efficient state, and the strength of the army in India is not in the hands either of the Military Department or of the Finance Department. It is a great Imperial question. It is discussed from time to time here, it is revised here; it is settled in the Secretary of State's office here; and having got an army, the strength of which has been decided by the State, that is by the Government of India and Her Majesty's Government here, the Finance Department generally recognises the necessity of having that army efficient and fit for war, and does not grudge or refuse the money that is necessary for that purpose.

14,532. To what extent is military expenditure affected by acts beyond the control of the Military Member, such as the general policy of the Government at home or in India?—Military expenditure, of course, is largely affected by acts beyond the control of the Military Member. For instance, all frontier expeditions (either punitive expeditions or occupations of new territory), increases of the army to meet great new conditions, such as that which took place after 1885—those are really the main matters which affect military expenditure, and are not within the control of the Military Member of Council. And I should like to say that, of course, the Military Member in these matters has only the same voice as any other member of Council. No frontier expedition, no punitive expedition, no occupation of new territory, no increase of the army would be undertaken until it had been very carefully debated in the Council of the Governor-General, and until it had been approved by the Secretary of State in Council at home.

14,533. But those decisions are resolved upon on considerations of policy, quite apart from questions of purely military organisation?—Certainly.

14,534. Whereas, therefore, in regard to questions of military organisation, the Military Member is, to a great extent, master of the field, where questions of policy come in, he is only one member of the Council?—He is only one member of the Council; and, I may say—and I shall be glad of the opportunity of saying—that my experience is that the influence of the Military Member of Council is, as a rule, exercised against these expeditions, unless their necessity is proved to him to be absolute. They upset his Budget provisions, and they are most inconvenient to him in every way, and I may say that, in my own case, the Viceroy more than once acknowledged the efforts which I had made to keep these expeditions down; and in more than one case my influence was brought to bear with sufficient strength to overrule the desire of the Provincial Government, from whom nearly all of these smaller expeditions emanate, and to prevent expeditions which had been advocated by the Punjab Government, and by the Government of Burma, being carried out.

14,535. Then, might I say, as the result of what you have just now been telling us, that the influence of the Military Member has a tendency rather to curb such expenditure?—Such extraneous military expenditure, certainly. Before any such expedition is decided on it is the duty of the Military Member of Council to set fully before the Council the immediate cost and the ultimate probable effect of any such proposal; and the Military Member's policy, I should say, is always towards great caution in those directions. And I would like to say also that my experience has been, especially of late years, that the Commander-in-Chief is also extremely cautious as regards such expeditions. In his case they upset the dispositions of the troops, they cause him anxiety, they cause money to be spent for which there is, practically, no return so far as he is concerned, money which he would much rather have for measures which would increase the efficiency of his army, and

they upset his mobilisation arrangements and cause a great amount of trouble at head-quarters; and also, because the Commander-in-Chief is generally a man of statesman-like views, he is very much disposed to object to small expeditions, unless he is satisfied of the absolute necessity for them.

14,536. Perhaps this may be travelling a little beyond our exact question, but, I suppose, on the other hand it may be said that the feeling of the army would be in favour of such expeditions?—Oh, every soldier wants to get a chance of fighting; but you must remember, please, that neither the Commander-in-Chief nor the Military Member go out and fight in these expeditions.

14,537. (*Mr. Courtney.*) And they would gain no advantage?—No advantage whatever from them, and very great disadvantage.

14,538. Would you say that their hands are sometimes forced by the local officers?—I do not think it would be quite fair to say that their hands are forced. The Provincial Government will sometimes put forward proposals for, let us say, a punitive expedition—those expeditions to which I myself have the greatest possible objection — what we rather know as the "butcher and bolt" policy—and the Provincial Government may be very keen. There have been raids, and somebody has been murdered, and so on. Well, the whole tendency certainly of the Military Member and of the Commander-in-Chief, and, I think, as a rule, of most members of the Council, is to object to these expeditions.

14,539. Looking back upon the past, could you not indicate a period during which punitive expeditions were repressed and prevented, and another period in which apparently they were easily favoured?—I think that most of these punitive expeditions, until quite recent years, were on the frontier of the Punjab, and I must say that I think that the policy of the Punjab Government—this is my personal opinion—in these respects has not, as a rule, been the wisest policy. My opinion is that this going into a country and burning a lot of villages and killing a lot of people and then going away again does extremely little good. They had a system of instituting fines—the people are fined, and they do not pay their fines, and then these fines accumulate; then, finally, there is a request for an expedition to recover those fines. Well, you recover 30,000 or 40,000 rupees, and you spend 300,000 or 400,000 in doing it; and I think that the tendency now of the Government of India generally is very strongly against these punitive expeditions, and is more or less to let these people alone until, it may be, things have absolutely reached such a pitch that you must go in once for all; and going in they do not come back.

14,540. Might you not say that there is always a possibility of making up a case for an expedition if you want it?—You can always make up a case for an expedition; but you cannot always make up a case that the Government of India will accept as a good case.

14,541. I was going to proceed to that—there being always a possibility of making up a case if it were wanted, looking back, say, 30 years, might you select a period in which the cases were easily entertained and carried through, and other periods during which they were kept under control and not carried through?—I am afraid I have never examined it from that point of view at all. I am afraid I cannot answer that.

14,542. You could not say that a bunch of expeditions have followed one another very rapidly in one period?—There was a great bunch of expeditions I should say in, or about, 1890-91 and for the next two or three years; and then, of course quite recently there were two great expeditions—Waziristan and Chitral—but I do not know that you can exactly classify them in that way. Even if you could, I should rather be inclined to think that the excessive number of expeditions at any time was due more or less to things having come to a head, as it were, with the tribes along the frontier.

14,543. That shooting stars appear at one particular season, is due to natural causes?—Yes, I should say the coincidence would be due to the tribes having gradually worked up to a certain state.

14,544. Not to the fact that expeditions are more encouraged at headquarters under one Viceroy than under another?—I do not think so.

14,545. (*Chairman.*) One is struck, looking at the list of expeditions, with the fact that there was a period in which the Budget was singularly free from them, between 1875 and, we will say, 1884-85?—Then you see that in 1885 all their minds were kept excited. It is quite possible there may have been more trouble with the tribes in 1885.

14,546-9. (*Mr. Buchanan.*) From what you have now stated, you would acknowledge that the responsibility for the expenditure on these expeditions rests mainly, and almost exclusively, with the Government of India?—The responsibility for it rests primarily, I should say, with the Government of India. The Government of India do not carry out any expedition of the sort without the approval of the Secretary of State.

14,550. Quite so, but in regard to any small expedition, if the Government of India recommended it, the Secretary of State would not oppose?—I should think, as a rule, the Secretary of State would follow the advice of the Government of India.

14,551. So that we might be justified, from the financial point of view, in assuming that any large increase in military expenditure due to these punitive and frontier expeditions is expenditure for which the Government of India is mainly responsible?—I should say so.

14,552-3. (*Chairman.*) Would the Government of India consult the Secretary of State in regard to such headings as those which come under "Smaller Expeditions," &c., in Sir D. Macfarlane's return?—Smaller expeditions, viz., Quetta, Hazara, &c.? Yes. In every one of these the home Government would be consulted.

14,554. The next heading you will see is "Minor Operations"?—Oh, that is a trifling sum—it is 2,643*l.*

14,555. If you carry your eye along you will see sums of 56,000*l.*, 48,000*l.*, and 168,000*l.*?—Yes, I see.

14,556. Now about those minor operations, would the Secretary of State be consulted?—Well, I should not think, in regard to any operation which only cost 26,000 rupees, that the Secretary of State would have been consulted.

14,557. But then if you look further on there are bigger sums?—Yes; when you get to 56,000 Rx.—the return does not tell us what it is, but I think in all probability anything that would be likely to cost as much as 5 lakhs the Secretary of State would have been consulted about —certainly.

14,558. I gather from what you told us just now about the Commander-in-Chief that on the whole his presence as a member of Council is by no means invariably on the side of expenditure?—I think not. Though possibly the Military Member may sometimes think that he could check expenditure better if the Commander-in-Chief was not there, I think that on the whole the presence in Council of the Commander-in-Chief is most desirable. I think that we must bear in mind how very important military efficiency is under the peculiar circumstances of India, and it is most desirable that the Commander-in-Chief in India, who is responsible for the efficiency of that great army of 220,000 or 230,000 men, should be present, and should be able to give his opinion and his advice in the Council. I must say further, that I think the Commander-in-Chief very often gives most valuable opinions upon other matters, quite apart from purely military matters. It would be difficult to find, from my experience of my colleagues in Council during the last three years, a man whose advice on general questions of administration in India was sounder or better than Sir George White's has been, and I am quite sure that is the Viceroy's opinion, too. And, of course, there is an opinion in this country, which does not prevail to the same extent in other countries, that a soldier, because he is a soldier, is not a good man of business, and that his opinion is not worth much outside the line of military matters. But now take finance. One of the best Financial Members they ever had in India was a soldier, Lord Cromer; and reading comparatively recently on a matter with which I think Mr. Courtney is familiar, the currency question in India —reading, at the time that we had all these great difficulties about our currency, the old minutes on the subject, I doubt where you would anywhere find sounder or better advice on the subject, than that given by Sir William Mansfield, the Commander-in-Chief in India, afterwards Lord Sandhurst.

14,559. I remember the very great weight and value that was attached by the Chancellor of the Exchequer

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

8 Feb. 1897.

and his assistants in the Treasury to Sir William Mansfield's opinions upon that question?—Yes.

14,560. But, of course, there are other great sources of expense in India which fall upon the Indian Budget over which the Military Member has no effective control—I mean changes in the organisation of the army at home?—Yes.

14,561. I should like very much to hear from you an opinion on that point?—Well, there is no doubt that changes and improvements in the British Army do cast expense upon the Government of India. Theoretically, India need not accept, need not apply in India these additions of pay, these improvements in the position of the soldier, which are made at home; but in practice she must do so. I think that that has been brought out pretty fully in some of these despatches which are in the Appendix. The Secretary of State pointed out to us in India that Parliament has secured to the Secretary of State the right of deciding whether any pay or other privileges, sanctioned for the army generally, shall or shall not be allowed in India; and at the same time he admitted that, speaking generally, the pay and organisation of the army must be made applicable to India as to the Colonies. The Government of India, replying to that, said, "You inform us "that you admit that, speaking generally and with a "reservation in particular cases, the pay and organisa- "tion of the army must be applicable to India as to "the Colonies, inasmuch as we feel obliged to con- "cur,"—they then go on to give certain examples, and they say that "our Military Budget estimates are "framed here with the utmost possible accuracy; in "ordinary years no margin is left, out of which to "provide for extra expenditure, full establishments are "not estimated for, as deduction is made for the "average number short of strength. When, there- "fore, the War Office suddenly spring upon us an "order, the carrying out of which would involve "increased expenditure, we have, as a rule, to carry "out one of two courses—either to defer, if it be "possible, the expenditure until provision can be made "in the estimates of the following year, or to obtain a "fresh grant. The former course, in the case of con- "cessions to the troops, causes great discontent. Of "this, delay in the introduction of the Garrison "Artillery scheme in India is an example. The two "last items in our list 'Excess of British troops in "'India caused by home authorities sending out "'larger drafts of men than the Government of "'India asked for,' and 'Changes made by the "'War Office in the British Cavalry Relief Pro- "'gramme,' are examples of the latter course being "necessary. The excess of 1,500 British troops, due "to the War Office having sent out that number beyond "our demands, has led to expenditure of Rs. 70,000 a "month beyond that provided for in our estimates "under this head." I do not for one single moment claim that India is to decide whether these improvements and changes are to be made in the British army or not; they must be made in order to keep the army up to a proper standard; that is done here at home; but India has to accept them and she has to pay additional charges for changes that are made from home without her being consulted, and which, in many cases, are sprung upon her when she has not made provision for them in her estimates. I am sorry Sir Ralph Knox is not here, because I should have liked to have asked him to pay attention, at all events, to this fifth and last paragraph of that despatch of the Government of India which says, "We would ask that, when it is intended by the "War Office to make concessions to troops, or other "alterations which would involve expenditure in India, "these concessions or alterations should not take effect "till the 1st of April following the decision to introduce "them, and that we should be informed that such con- "cessions or alterations are intended to be made in "sufficient time to enable us to make provision in the "estimate. The existing system interferes with the "correctness of our estimates, and at a time of financial "pressure, such as the present, causes serious incon- "venience to the Government."

14,562. I gather then that you would hold that the large part of the Indian force, which consists of the Queen's regiments, when it goes out to India must go out with the conditions and privileges of service which it has at home?—I hold that most distinctly.

14,563. And may I ask further, whether, India being in this matter a partner in the use of the Queen's troops, you would hold that she should bear her fair share of the cost of those changes, which are made in order to improve the organisation of the army?—I do not suppose you want to raise at this stage the whole question of the apportionment of charges, do you, my lord?

14,564. No; that we shall have the opportunity of speaking about afterwards?—The view I hold is this: every officer and soldier in the British army serves under certain warrants which lay down what his pay and allowances are, and I conceive that he ought under no circumstances whatever, to get less than the pay and allowances thus prescribed, because he is serving in India.

14,565. I should like to ask you one further question upon that point. What would be your view with regard to such a question as the abolition of purchase? I think we should all be agreed that, when purchase was abolished, no charge on account of the immediate abolition of purchase was put upon India; but no doubt the change has led to an increased system of pensions to officers. Would you consider that India should bear her share of those increased pensions, which are a condition inherent in, and inseparable from, the reform which has been effected?—If this matter of expenditure as between India and England is to be dealt with as a strict matter of account, I should say that India must pay her share of the cost of the British officer under whatever conditions he is serving, whether it is under a non-purchase system or under a purchase system.

14,566-7. I propose, Sir Henry, to put a question to you in a form which will enable you to express your opinion upon the general question of apportionment between the two Governments of charges in which both are interested. I will take first the India Office reasons, which they have put before this Commission, on which they base their plea that general considerations should be taken into account in fixing the rate to be paid for the home charges of troops serving in India; and the reply of the War Office in a memorandum of Sir Ralph Knox. I think that would be a convenient method in which to elicit from you your opinion upon those general considerations, apart from the mere arithmetical calculations. You said just now that, if mere arithmetical grounds are to be taken into consideration alone, you do not see why India should not bear the charge for the increased pensions consequent upon the abolition of purchase. I gather from that that perhaps you might wish to make some modification of that opinion on general grounds?—Quite so.

14,568. You mentioned just now the question of new charges being sprung upon the Government of India. Do you think that sufficient care is not taken to let the Indian Government express an opinion upon such changes before they are finally adopted?—Well, I should think it desirable that the Indian Government should be consulted, even if it were only as a matter of courtesy, before steps are taken which add to its expenditure; but I do not think that previous consultation with the Indian Government would have much practical value. I think it ought to be done, as I say, as a matter of courtesy. I do not think it would have very much practical value, because, I think, if they have made up their minds at home that a thing has got to be done, and that if it is not done the army will deteriorate, they would decide to do it whatever India might say. But to suddenly inform the Government of India in the middle of the year, that, say, from the first of May or the first of June, or whatever it is, such and such increases of pay are going to be given in the army, when the Indian Government has made no preparation for such increase in its estimates at all, and, therefore, to force it during that year, either to keep these troops in India on a lower rate of pay than they are getting at home, or to spend money which it has not put into its estimates, is, I think, wrong; and I think that what we said in that despatch is the right course to be followed. And one thing which we mentioned in that despatch —I may say that I drafted that despatch myself— which I most particularly think was a wrong thing to do, was this:—for any number of years, the drafts sent out to complete the Indian establishments had been sent out upon one particular system. That system was this: The Commander-in-Chief in India informed the War Office what numbers of drafts would be required during the coming trooping season for each unit of the army to complete that regiment to its full Indian establishment on the 1st April of the ensuing financial year—the first day of the

ensuing financial year. The estimates of the Indian Government are based for pay of troops—of British troops—upon the establishment *minus* the average deduction for numbers short over the previous three years. In the year preceding that in which this despatch was written, without one single word of warning to the Government of India, without any single word of previous advice to them officially or semi-officially, or in any way, the War Office suddenly changed that system. Off their own bat, without asking the authorities in India what they thought about it, they sent out very much larger numbers of drafts than had been asked for by the Commander-in-Chief and the Government of India, taking it upon themselves to decide that the Government of India is not in future to have its full establishment of troops on the 1st of April with the gradual decrease down to the trooping season in October, when it begins to fill again; but that it is to have such a number of troops in India on the 1st of April as will make it have its normal establishment about the 1st October. What was the result of that? They sent us out all these extra troops, and thus not only did they compel us to spend, as I have said in the despatch, 70,000 rupees a month additional for pay which was not included in our estimates, but to overcrowd our barracks; and they caused the greatest inconvenience to the military authorities. Now that was done without one word of consultation or one word of warning to the Government of India.

14,569. And without one word of explanation?—Without one word of explanation. We could not understand why all these troops had come out.

14,570. And did you learn afterwards what was the reason?—We wrote home about it, and we learnt afterwards what had happened.

14,571. And were the reasons of the Government at home such as would have appeared reasonable to you?—Certainly not. When the despatch came out stating what had happened in that case, I, of course, as representing the Government of India in the Military Department, was strongly opposed to this new system, because it added to our estimates, and we did not want the extra men. Of course, if the Commander-in-Chief had wanted more soldiers, he would have said, "Oh, yes, "I want to have all these men;" but that is not at all what the Commander-in-Chief said when we referred to him. The Commander-in-Chief said, "We object "strongly to this change of system. Barracks are "built for a certain number of men; they send me out "all these extra men: it overcrowds my barracks and "produces unhealthy conditions of the troops, and I do "not want these men." And we sent home a protest begging that they would revert to the old system. I do not know what has been done since I left India.

14,572. But did the War Office give any reasons for their action afterwards?—Simply the reason that they thought it better that the numbers sent out should be such as to make the average throughout the year the normal establishment, instead of, as had hitherto always been the case, the establishment being normal on the 1st April, dropping down to the 1st of October, and then rising up again to the normal on the 31st March.

14,573. And that you say, I presume, is a matter on which the Indian Government should be the ultimate judge?—Most unhesitatingly. I do not consider that to be a matter for the home Government at all. It is a matter for the Indian Government to say what troops it wants to keep up the establishments.

14,574. That is against the evidence that has been given to us by the military authorities at home, to the effect that great care is always taken, admitting that there may have been slips, to consult and warn the Indian Government upon these questions. It is very true that there has been some difference of opinion expressed on that point. Some of the Indian witnesses were not content to regard the mere reference by the War Office to the India Office as a sufficient consultation of the Government of India; but I do not think that that contention is sustained. I think it is admitted that, if the India Office is consulted, it is a consultation of the Government of India; but in this case that you bring forward, it seems to me that a very serious cause of expense to India was sprung upon India without her being consulted?—I most distinctly hold so in that case.

14,575. You do not happen to know whether the India Office itself was consulted in that case, and whether by any chance the omission to warn the Government of India lay with the India Office?—I do not really know. Sir Donald Stewart would be very likely to know, but there was nothing to show that the Secretary of State for India was consulted.

14,576. (*Sir Donald Stewart.*) No; I do not think so?—There is a great disadvantage in doing things of that sort. I am not an Indian officer. I am not dependent on the Government of India in any way. I am an officer of the British Army; and my whole desire and my whole wish when I went out to India as Military Member of Council, the first Queen's officer who ever had been Military Member of Council in India, was to have the most friendly relations possible with the War Office at home; but things of that sort cause irritation and bad feeling to spring up; a little forethought, I think, would prevent much feeling which exists, and which it is desirable to allay.

14,577. (*Mr. Buchanan.*) That case is the item included in the schedule to that despatch; 70,000 rupees per mensem?—70,000 rupees a month.

14,578. (*Mr. Mowbray.*) Does that system still continue?—I do not know; it was continuous, certainly, for two years.

14,579. 1894–95?—Yes.

14,580. (*Mr. Buchanan.*) There is a schedule attached to the despatch of 1895, in which is included the charge, to which you have just alluded. It is stated in the heading of this schedule that the charges have been "issued in all cases without the concurrence of "the Government of India, and in some cases without "that of the Secretary of State for India having "been previously obtained." I suppose that, as you were responsible for that despatch, we may assume that you are responsible for that first statement, and that you made yourself certain that the Government of India, at any rate, had not given its concurrence?—I cannot say that I made myself personally certain. I ordered a schedule to be drawn up in the Military Department, giving that heading, and it was drawn up by the responsible persons in the Military Department, and, therefore, I feel sure that it is correct.

14,581. Some question has been raised upon that subject; but, so far as your efforts went, it was meant to be an accurate statement?—An accurate statement under that heading. I have every reason to believe it is so.

14,582–6. (*Mr. Mowbray.*) You will see that in the Appendix that despatch is followed by a despatch of Sir Henry Fowler, as Secretary of State for India, in which he does not take the same view of the question as the Government of India did on that particular point?—Yes, and it was in answer to that despatch that we replied—our reply does not appear to be here—in a separate despatch sent in afterwards, relating to this particular question of the sending out of those excess numbers of troops. I feel perfectly certain there was such a despatch, because I remember the matter being referred to the Commander-in-Chief, and the Commander-in-Chief expressing his strong disapproval of this new system; and, therefore, we again wrote home about it.

14,587. The despatch of the Indian Government of August 20th, 1895, is not the despatch to which you refer? It merely requests that all the correspondence should be laid before the Royal Commission?—No, that is not it.

14,588. (*Chairman.*) At the same time we must take note of the fact that the Secretary of State for India did not entirely concur with the Indian Government upon these points?—It appears that he did not.

14,589. (*Mr. Buchanan.*) I gather from Sir H. Fowler's despatch that the Secretary of State only disagreed in so far that he did not think that the operation of this order could be suspended. But the contention of the Indian Government is surely this: that, particularly where any change in military organisation entails extra financial expenditure upon India, India should be consulted, or, at any rate, should have previous notice?—Precisely.

14,590. (*Chairman.*) That care should be taken not to disturb the Indian Budget by suddenly springing upon it charges which had not been foreseen?—Quite so.

14,591. I think in the main we have been speaking of questions in which policy is concerned; but putting

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

8 Feb., 1897.

policy apart, have you any opinion to express upon the control exercised over military expenditure and the checks upon its growth as prescribed by the Military and Finance Departments?—I shall have a good deal to say about that. I think it is rather important that I should bring out clearly what the exact checks and control now exercised are, because I do not think Sir Edwin Collen's evidence brought it out quite sufficiently.

14,592. I think it will be convenient if you will make your statement?—The control exercised over military expenditure and the checks upon it and current expenditure and upon growth of expenditure are what I would propose to endeavour to explain as clearly as I can to the Commission. In the first place I would say that I found, sometime after I had taken over my office and had been able to go into these questions, that there was what appeared to me a lax system, both as regards spending during any current year money which had not been provided for in the estimates, and, secondly, in regard to saddling future estimates with new expenditure. In the first place, there was rather a tendency in the Military Department to sanction recurrent expenditure because money was available during the current year; and also, even if it was not recurrent, to sanction new expenditure, because money was available during the year. Now, in my opinion, that is a bad system. I think that if you allow your heads of departments and your Commander-in-Chief to get money which they have not included in their estimates, simply because you have money available that you can give them, it leads in the first place to carelessness in estimating and want of foresight, and in the second place, where such expenditure is recurrent, it leads to saddling future estimates, when you do not really know what your future financial position will be. Then there was a system under which subordinates in the Military Department, without the proposals coming before the Military Member at all, sanctioned expenditure that it was within the power of the Military Department to sanction without reference to the Financial Department, or referred proposals to the Financial Department for their concurrence. Even assistant secretaries and deputy secretaries—the Secretary did not so much matter—were sanctioning expenditure and were sending proposals for expenditure to the Finance Department without their going up any higher. Now, my experience was, that that system led to proposals being sanctioned without sufficient care in considering what their real effect might be Thirdly, I thought the system was bad, in that, practically, the Military Member of Council knew nothing about the preparation of the estimates and had very little voice really in their preparation; and, fourthly, the Military Member of Council had no means of knowing throughout the year and at any given moment how his current expenditure was being affected by sanctions given to the expenditure of money that had not been provided for in the estimates, nor had he any knowledge at any moment of how he was being committed to future expenditure in next year's Budget. It took me, I must say, a good long time to get at the bottom of this; but when I had done so, I determined that it was necessary to put a stop to this sanctioning of expenditure during the current year that was not provided for in the estimate, except in cases where it was absolutely necessary that money should be provided; and secondly, I determined to put a stop to this sanctioning of expenditure, or referring expenditure to the Finance Department for concurrence by subordinate officers. I thought it was necessary to have a positive rule on that subject. I see that Sir Edwin Collen, in his evidence, has brought up examples of pots and pans, and so on—questions which came up for my sanction. I will deal with that. I thought it was necessary to draw, at all events at first, a hard-and-fast line, and to say that "no money that has not "been provided for in the estimates shall be spent during "the current year without my sanction;" secondly, "no proposal shall be sanctioned for expenditure in a "future year or sent to the Financial Department for "concurrence without my sanction." It is impossible to draw a line as to amount, because—no one knows that better than Sir Ralph Knox—a very large principle may be involved in a very small sum. That small sum may mean just the crack in the dam that will let all the water through. Take the two small cases that Sir Edwin Collen brings up. He says there was the case of a sweeper—five rupees for a sweeper at some additional place—and it had to come up to me, whether it should be granted or not. No doubt it had. There is a fixed scale of menial establishments for every hospital and every barrack. Some place comes up and wants that scale increased. It ought not to be done, because it becomes a precedent for increasing the scale of menials all over the country. Just the same thing about pots and pans. There is a fixed scale in hospitals of hospital utensils; unless there is some very extraordinary reason why that hospital should have a larger scale, its demand for more ought to be refused. The subordinate officers in the department did not sufficiently understand that, and, therefore, I decided that all these questions—all demands for fresh expenditure—were to come up to me. Then I see, in some of the questions that were asked, it was put forward that this would cause me an enormous amount of heavy extra work, and that it would take away my attention from more important matters, and so on. Well, as a matter of fact, it did nothing of the sort. The whole of such questions that would come before me under the new rules, but would not have come before me under the old rules, would certainly not amount throughout the year to one case in a day. I went somewhat into figures, just to see what the extra work was; and one case in a day, as compared with the mass of work that comes before the Military Member of Council, is an absolute nothing, it does not count at all; and, as an actual matter of fact, I not only kept pace with the work that came up to me, but I was generally ahead of it, and I used to write down to the Secretary to ask if he had any work to send me for "I have got nothing to do." Well, then, in order to carry out these principles that expenditure was not to be sanctioned during a current year which had not been provided for in the estimates, unless there was absolute and crying necessity for it, and, secondly, that all expenditure, either during the current year or for future years, which had not been provided for, was to come to me personally, I introduced certain definite rules: first, that no application for expenditure not provided for was to be sanctioned or forwarded to the Financial Department for concurrence, except by myself personally, or, in my absence through sickness or on tour, by the Secretary; but I put in a saving clause that in any case where the Secretary considered the matter was not of sufficient importance to send to me, he, the Secretary, might deal with it. Then came the point that I had hitherto been without knowledge of what was going on. Now, in order that I might always be in touch with what was going on, I, after consultation with the Accountant-General, ordered certain lists to be prepared and constantly kept up. There were four of these lists. As soon as possible after the 1st April of every year, generally about the 15th April, the Accountant-General gave me a list, which we called List D., which showed what items there were in the estimates of the current year which would fall out and would not be required again in the estimates of the next year. That showed me at once how much there was in this year's estimates I could count upon getting out of my estimates of the next year. The next three lists, A., B., and C., were lists which were prepared quarterly. A few days after the 30th June I received these three lists. List A. was a list that showed exactly all the items of expenditure not included in the estimates which had been sanctioned for the current year only. Then on the 30th September the amount of the preceding list was carried forward, and the new items were put on, and so on up to the 31st December, so that in January I had before me, and I had during the whole year always before me, exactly what was being done towards adding to the current expenditure of the estimates at any given time. Secondly, List B. was a similar list, only showing what items had been sanctioned which would affect future estimates. I may say that, of course, every effort was always made to keep down A. and B., and nothing was allowed to go into A. and B. except expenditure which really was absolutely necessary, and that could not be prevented or refused. And then came List C. Now it had been the custom that if a proposal came forward from the Commander-in-Chief, we will say in June or July, to do something which would cause additional expenditure of half a lakh, or a lakh, or whatever it might be, annually, and if it had been considered in the Military Department desirable that it should be done for the efficiency and the improvement of the army, and it had been sent forward to the Finance Department with a recommendation and the Finance Department had said, "Approved, we agree," then, if there was money available by reappropriation, that expenditure would have begun at once during the current year, and, having once begun, it must go into the

estimates of the next year and future years. Now all these proposals were dealt with in a different way. The Commander-in-Chief put forward a proposal, not a thing of immediate and intense urgency, but a thing of importance for the efficiency of the army and the improvement of the troops. It went to the Finance Department, and they were asked to concur in its being placed in the estimates of the next year, supposing money were available; and this List C., which gradually grew to the end of the year, contained all those items which we wished to include in the estimates next year, provided money were available. These, then, were the three great changes that were made, the Military Member himself controlling all additions to expenditure that was not provided for in estimates; his having before him at all times a complete knowledge of what additional expenditure he was committed to in the present year, and what additional expenditure he was committed to in any future years; and third, all these proposals—instead of their being sanctioned and at once put into the estimates for the next year, without knowledge whether the money would be available or not—being all held over in this List C. until we came to the time of the appropriation for the estimates. I may say that they did not like this in the Military Department at first, because the assistant secretaries and deputy secretaries, and even the Secretary, did not like having taken away from them this power of sanctioning expenditure, or going direct to the Finance Department; but I had from the very first the fullest support of the Accountant-General, and I would like presently to read to you what the Financial Member of Council said on the subject himself. Copies of those lists were furnished to the Finance Department directly they came out. Therefore the Financial Department always had the same knowledge that the Military Member of Council had of exactly what was going on in the expenditure as differing in any way from the estimates; and they also knew at any time what our maximum demand, if we could get it, for the coming year would be for new items. That leads me on to the next question, which is the preparation of the estimates. List D., which I mentioned, is a list which contains merely those items that were in this year's estimates, but would not recur in next year's estimates. That was, once for all, made in April, and handed to me, and it was filed. Lists A. and B., the lists showing what we were committed to in the current year that was not in the estimates, and what we were committed to for the next year that was not in the estimates—these two lists were closed on the 24th January. After that we never committed ourselves to anything, and List C., containing the items that I wanted to get into the estimates if money were available, was sent in, made up to date, on the 15th February. It was then closed. Then, on the 15th February, the Accountant-General sends in his preliminary Budget to the Finance Department. You have been told, I think, how that Budget is framed. The four Controllers send in to the Accountant-General their estimates for pay and other items, and they send in through the heads of the Commissariat, Ordnance, and so on their Budgets for those services. The Accountant-General consults with the heads of the Departments. He examines these estimates, and he compiles them after consultation with the head of the department. He will say, "I think there is too much in here," and he will alter it. But he compiles the estimates from the Controller's estimates, and thus forms the normal preliminary Budget that is sent in to the Finance Department on the 15th February; and the Accountant-General, with whom I was always about this time of the year in close personal communication —I used to see him nearly every morning—would tell me exactly how everything was going on, and how his Budget would probably turn out. I was always in communication with the Finance Member, always keeping him informed by private note, and so on, in order that he might know what our demands were likely to be. This preliminary Budget of the Accountant-General, which was sent in to the Finance Department on the 15th February, did not include any single one of these new items which we wanted to get into the estimates, and as soon as my List C. was closed I let the Finance Member know how much it was. I said, my List C. amounts to, it may be, 20 lakhs, it may be 30, it may be 40, it may be 50, or whatever it was—it amounts to that—that is what I want to get, if I can get it. Then, about the beginning of March the Financial Member was able to make his own Budget calculations. He knew how much money he was likely to have. He knew pretty well what his estimates would be, and he was then in a position to discuss matters with me. I see in a letter which I wrote to Sir Edwin Collen on the 6th March last, I said, "On the 26th February, the "Financial Member informed me that he was ready "to discuss the estimates with me, and asked me to "appoint a day. I appointed 11 a.m., 2nd March, at "my house; informed the Secretary, Military Depart-"ment, and Accountant-General that they would have "to be present." And then the next step was, as soon as I had fixed this day with the Financial Member I went to my office, where all these cases that were in my List C. were arranged ready for me to look at, and I refreshed my memory as to every one of them; and any of them upon which there was likely to be any discussion between the Financial Member and myself, I took to the place where he and I were going to have our meeting, with my mind ready to give him any information that he might require. Then the Financial Member, bringing with him his Financial Secretary and his Comptroller-General as a rule, said to me, "Here is your preliminary estimate amounting to so "much; you want so much more?" "Yes." "Well, "my financial situation is this. You want 60 lakhs; "I can only give you 15." Or, "I have got a good "surplus. I will go through these things with you, "and satisfy myself as to the necessity of them, and "see whether I can give you the whole," and so on. Now, in one year I got perhaps not more than one-seventh or one-eighth part of what I wanted to get. It was a very bad year financially; I was perfectly satisfied that the Financial Member could not give me any more, and that it would not be right for him to give me any more, and I said, "All right, if that is all you can give "me, then I will take 5 lakhs, 10 lakhs, or whatever it "may be, and I will do the best I can with it." Then I went with my List C. to the Commander-in-Chief, and we went through that list together, and we agreed together what were the items that we would select to put into the estimates, amounting to the sum that the Financial Member could give us. Another year I was able to get the whole of my requirements; but I would say that throughout the year, the Military Member and the Financial Member being constantly in touch, if any abnormally large proposal came forward, I would say to the Commander-in-Chief, "I think you "had better not press this this year. There will not "be money available. It will only go to swell this List "C. and make it appear too big, too formidable, and I "would not press it this year if I were you." And he would not press it. Then the Financial Member having agreed with me that he could give me so much money, I would then go down to my office, either having selected the items with the Commander-in-Chief or having been able to get the whole of my list, and on every one of those cases I would pass orders. "This "is to be entered in the estimates." Or, "Cannot "be entered. No money available," as the case might be. Then all these cases went at once to the Accountant-General, who entered in the estimates all those which there was my authority to enter. The estimates, as sent in by the Accountant-General, had generally by this time been overhauled by the Comptroller-General. The Comptroller-General takes the preliminary estimates as sent in by the Accountant-General and he goes through them. As an example, for instance, of what he would do, he might say, "You have "charged this year 50 lakhs for food supplies. I think "it is too much. The average of the last three years, it "is quite true, on which this is generally based, was "50 lakhs, but last year was a lower year than the year "before, and prices are still falling, and therefore I "think you ought to take less than 50 lakhs this year." Then the Accountant-General and the Comptroller-General will agree between themselves. There might be a reference to me, but there probably would not be, as to what this charge should be put at, and it might be that they might say, "Well, we will reduce the estimates "to 47 or to 46 lakhs." On the other hand the Accountant-General might say, "I have taken 50 lakhs "this year, but I want you to observe that prices are "rising. Do you think that it is right that I should "only take 50 lakhs, the average of the last three "years," and the Comptroller-General might say, "No. "you ought to take more than 50 lakhs; you ought "to take 53 lakhs." That is the sort of way in which the Comptroller-General would come in. If there was an exceptionally large demand for ordnance stores, he would say to the Accountant-General, "I must have "some more explanation about this." It would be given

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

8 Feb. 1897.

to him, and so on; but as regards all these what might be called new items of expenditure in List C., not one of them could go into the estimates until they had been personally discussed at an interview between the Financial Member of Council and myself. The result was that no new expenditure was included in the estimates until we knew how much money was available. Until the Financial Member had agreed upon how much he could give, no new expenditure was included, and then only so much as the Financial Member was prepared to meet. Well, those are the checks, and that is the system in the Military Department of checking expenditure—current expenditure, growth of expenditure—and the method of preparing estimates. It would take me not more than two or three minutes more just to go through the same subject in connexion with home expenditure. I found what I thought a bad system in connexion with home expenditure. I found that there was not nearly sufficient control over the demands sent home for stores. There seemed to be an idea in the Military Department in India that they had no responsibility whatever for the home expenditure, that that was the Secretary of State's affair, and not our affair. It was perfectly true that it was the Secretary of State's affair, and not our affair, so far as these charges connected with the charges of the War Office for non-effective service, and all those sort of things were concerned; but it was not true as regards demands for stores, and there was a slack system about demands for stores. An estimate had gone home for ordnance stores—35,000*l.*, 40,000*l.*, 50,000*l.*, whatever it might be—but the Director-General of Ordnance wanted more stores, and it seemed to be taken as an absolute matter of course that his demand for more stores was to go home to the Secretary of State, and the Secretary of State was to deal with it and to say whether he would give them o whether he would not give them; and that I thought was altogether wrong. Stores were being ordered without consideration of the estimates. There seemed also an idea existing that home and Indian estimates and expenditure need not be considered together; and, therefore, I issued an order that no demand for stores was to be sent home to the Secretary of State except by my personal order, and I gave notice that no such demand would be sent home by me unless the head of the department wanting more stores could show me a corresponding saving in his estimates, either at home or in India. If, for instance, he had been going to manufacture something in India, and he had taken money in his Indian estimates for that manufacture, and he then found, "I cannot make this. I have not "yet got the right plant from England, and I cannot "do it; I must order it from home," formerly the Secretary of State would have been indented on for the stores; but the head of the departments requiring the stores would not have been called upon to make a corresponding saving in India; whereas I said, "Well, "you may have these stores from home, but a corresponding amount in rupees will be taken off the "money which you are authorised to spend in India." and in that way I brought home and Indian expenditure together, as it were, into one. The results of that I should like, in a very few words, to state. I was able to show, speaking in the Legislative Council, that in 1894–95, for the first time almost in our history, our expenditure was below our estimates. I said: "This is, I believe, the first time for many years that the "military expenditure has been within the military "Budget estimates. The military works expenditure, "the special defence expenditure, and the home ex"penditure for 1894–95 were all also well within the "estimates." Then I said: "The system which I "found in existence"—this was speaking in the Legislative Council in 1895—"The system which I found "in existence was one that did not give sufficient "control, even in times when money was plentiful, "and was utterly unsuited for times of difficulty. "The Military Members of Council and Finance "Department did not have that control over military "expenditure which they should have had. For that "system one has been substituted under which "not one rupee of additional expenditure can be "sanctioned by anyone but the Military Member of "Council himself, under which no expenditure not "provided for in the estimates is sanctioned during "any current year, unless it is of absolute and urgent "necessity, and no fresh expenditure is added to "future estimates until after the Military and Financial "Members have personally agreed upon the amount "available for military expenditure within which the "estimates must be kept. I can assure this Council "that the most rigid economy is now practised in all "matters of military expenditure, that no effort is "spared by the Military Department, by the Com"mander-in-Chief, and the heads of departments, to "effect reductions of expenditure wherever they can "be effected without detriment to the efficiency of the "army, and that, except for military expeditions, which "cannot be provided for in the estimates, such things "as supplementary estimates have altogether ceased." That was based on the experience of the three years. Then I should like to show what was the opinion of the Finance Department. I hardly like to read it because it is so very complimentary to myself, but I think, after what was said by Sir Edwin Collen here, and also in reference to the tone of some questions that were put to him, that perhaps I ought to read this, which was said by the Financial Member of Council in his speech in the Legislative Council in March last. "Now, my lord, before I close," this was said at the end of his speech, "I have one word to say. It "may be considered impertinence on the part of a "junior member of your Excellency's Council to say "a word in acknowledgment of the services of a senior "member of this Council. But my relations with my "honourable friend, Sir Henry Brackenbury, in the "financial administration of his department have been "such that it is impossible for me to allow him to "leave this Council without conveying to him, on the "part of the department over which I have the honour "to preside, our acknowledgments for the grand "work that he has done in bringing under complete "financial control the whole of the expenditure of his "department. I have had in my time of service in "the Financial Department, now extending back over "a quarter of a century, not a few contests with the "Military Department. It is almost necessary that "these should arise, because the Military Department "is peculiarly the spending department of the Govern"ment, and the Financial Department is very much "interested in its financial control and in its financial "arrangements. But there have been no difficulties "of this kind during the time that I have had as my "colleague the distinguished officer who sits on my "left." That shows, I think, perfectly clearly what the Finance Department thought of those reforms that were introduced into the military system; and Lord Elgin, in speaking afterwards said, referring to Sir James Westland's remarks: "It is a record of a great "work; not only the work during five years of an "individual . . . . . but the work of a great "department of State under the guidance of the "honourable member."

The witness withdrew.

(Adjourned till Monday next at noon.)

At the India Office, S.W.

THIRTY-FOURTH DAY.

Monday, 15th February 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Lieutenant-General Sir HENRY BRACKENBURY, K.C.B., K.C.S.I., re-called and further examined.

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

15 Feb. 1897.

14,593–4. (*Chairman.*) You were speaking of the control exercised by the Financial Department. Could you tell us more precisely the kind of control exercised by the Financial Member of Council?—I should like, with your permission, to answer that by reading an extract from a speech made by Sir James Westland in the discussion of the Financial Statement in 1895. Sir James Westland said; "It is rather "inconvenient to me that the honourable member "should be able to draw from the letters which have "been written and made public by my predecessors, "Sir Auckland Colvin and Sir David Barbour, an "armoury of attack against myself; but, in the first "place, there is a great deal that they say which I "distinctly cannot admit. They have alleged, for "example, the position of the Financial Member of "this Council as an impossible one. He is in a "perpetual minority, perpetually being driven against "his will to sanction expenditure which he does not "approve. In fact, I rather think they give it to be "understood that the moment the additional members "leave this room, the Commander-in-Chief promptly "lays the Financial Member on his back upon the "table, the other members proceed to rifle his pockets, "while his Excellency the President stands by, feebly "deprecating the outrage. Now, I wish to point out "that, as a matter of fact, there is in the constitution "of the Executive Council a weapon with which the "Financial Member equalises his position with that "of all the other members combined. By a rule "passed under statute about 10 years ago, it is "ordained that the Financial Member in any matter "of expenditure, if he is supported by the Viceroy, "has an absolute veto over any measure, however it "may be urged by the other Members of Council. I "believe there is not a single instance in which this "power has been exercised, but it exists, and the "mere fact that no instance has occurred in which it "has been exercised shows that the power which that "rule gives to the Financial Member has been effective "for the purpose for which it has been given. It "obviously, in my opinion, throws upon the Financial "Member the responsibility of accepting as his own "every measure which comes up before the Council, "and which he does not actively protest against. He "is not tied and bound by the votes of a majority. If "he accepts a proposal of expenditure, he accepts the "responsibility; if he declines it, the project is at an "end if the Viceroy support him; and if the Viceroy "does not go with him, he has the power, which every "member of this Council has, of recording a dissent. "Of course it is easy to see from the statements of Sir "Auckland Colvin made in the paper to which the "honourable member has referred, that he disapproved "of the enhancement of the expenditure on the Army "which took place 10 years ago. But there is one "thing that ought to be remembered, and that is that "even the Financial Member (and I include myself) is "not always necessarily in the right. I think, if the "Financial Member finds himself in an absolute mino-"rity, he may reasonably consider that there is some-"thing to be said for the other view. The increase in the "Army, which took place 10 years ago, although it "was opposed by Sir Auckland Colvin, was accepted "by the Government of India and by the Secretary of "State. It must be taken, therefore, as a distinct "policy approved by the highest authorities respon-"sible for the administration of India, and as one in "their opinion necessitated by the interests of the "safety of the Empire."

14,595. What were the occasions upon which Sir David Barbour and Sir Auckland Colvin had expressed themselves to the effect which he criticises?—I think they had written letters to the newspapers, and I think Sir Auckland Colvin had written an article in the "Nineteenth Century." Sir David Barbour had been making speeches or had written to the newspapers; I forget which.

14,596. You are aware that, to a very great extent, they repeated that line of criticism upon the position of the Financial Member of Council before this Commission?—I am aware of it.

14,597. And it may possibly be within your recollection that Sir David Barbour certainly, and I think Sir Auckland Colvin, spoke of the rule as to what Sir James Westland called "the veto," as being of practically no utility; I do not think that I exaggerate what Sir David Barbour said?—I can only say that Sir James Westland, the present Financial Member of Council, holds a directly opposite opinion, which I have quoted from his own lips.

14,598. (*Sir James Peile.*) I asked a question, I remember, whether that rule is not a dead letter simply because, if the Viceroy and the Financial Member of Council agree upon any point, they are able to carry their opinion without going through this process of going to the Secretary of State?—Precisely.

14,599. Therefore they would do equally well without the rule, would they not?—No, I do not think so. There might be a majority in Council in favour of a certain policy of expenditure, against which policy were the Viceroy and the Financial Member of Council. The majority in Council, if there were not this rule, would be able to have a despatch written to the Secretary of State recommending their policy, and the Viceroy and the Financial Member of Council could only append a dissent. But by means of this rule, if the Viceroy and the Financial Member are agreed against the policy, no despatch can be written to the Secretary of State recommending the policy.

14,600. Have you seen what Lord Northbrook said—No; I have not seen Lord Northbrook's evidence, I am sorry to say.

14,601. He held the rule to be entirely unconstitutional?—Well, I am not an authority on constitutional questions.

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

15 Feb. 1897.

14,602. (*Chairman.*) I think also that Sir David Barbour and Sir Auckland Colvin dwelt upon this point, that if the Viceroy and the Financial Member of Council are agreed, the position of the Financial Member is sufficiently strong; I think the point at which they felt it to be, so to speak, weak, was in cases where the Viceroy was against them?—Quite so.

14,603–4. I think that at the time when we broke up last Monday, the point that we had under consideration was the control exercised over military expenditure apart from policy, and that the last question I put to you related to the checks upon the growth of the military expenditure in the Finance Department?—Yes.

14,605. I should like to ask you whether the Viceroy, personally or in Council, exercises control over such expenditure?—The Viceroy, I may say, both personally and in Council exercises control over such expenditure, personally, according to his personal judgment, in consultation with any member of Council, wishing to bring forward any proposals for expenditure; and no large expenditure, either initial or recurring, either for military purposes or for any other purposes, would be sanctioned without going before the Governor-General in Council. I gave, I think, last week as examples of that the extra pay for the native army, and the money which was granted for mobilisation last year, the one being recurring and the other initial expenditure, and both of them having gone before the Governor-General in Council.

14,606. But, previous to such questions going before the Governor-General in Council, do we understand that the Member of Council, for instance, the Military Member, discusses personally with the Viceroy proposals which in due time would be brought before the Council?—Certainly.

14,607. And thus the Viceroy has the opportunity of exercising such control as he thinks fit?—Yes.

14,608. To what extent is the Secretary of State at home a check upon military expenditure?—No large expenditure, no increases of staff or of salaries, either civil or military, can be made without the sanction of the Secretary of State, except in the case of very small salaries; and as regards military expenditure, there can be no alteration in establishments either in the direction of increase or decrease without the sanction of the Secretary of State. As regards public works, no great new public work can be entertained without the approval of the Secretary of State; but I must frankly state my opinion that the influence of the Secretary of State is not always exercised in the direction of economy. I will give an example of that in the Military Department. When it was decided to give an addition of two rupees a month to the pay of what are called the dismounted branches of the native army, the Government of India thought that the opportunity could be taken to withdraw certain concessions, which applied to certain portions of the native army, and which, in their opinion, it would no longer be necessary to grant when this increase of pay was given. The whole matter of all the concessions that were peculiar to any branch of the native army was gone into very carefully; and the Commander-in-Chief, and the Governor-General and the Council, were unanimous in recommending that certain economies might be made by withdrawing certain special concessions then in existence, simultaneously with the grant of the additional pay. A representation was made to the Secretary of State that those concessions should be withdrawn, and the Secretary of State negatived and vetoed the proposal. There are also other cases in which the Government have recommended a reduction in the native army, and the Secretary of State has not approved of it; and I would also wish to express my opinion, that during the time I was in India, as regards public works, the influence of the Secretary of State was most distinctly in the direction of expenditure, rather than of economy.

14,609. When you speak of public works, are you speaking of military works?—No, I am speaking of railways.

14,610. Military works generally?—Military works are not called public works in India. I think, perhaps, I might take this opportunity of stating that it is within my knowledge that the present Financial Member of Council, Sir James Westland, considers that the great danger to India as regards finance is excessive expenditure upon public works,

14,611. (*Sir James Peile.*) That would be railways, I suppose, would it not?—Railways especially. I know that he considers that the programme is too rapid; I know that he has expressed that opinion, and that he has been overruled.

14,612. (*Chairman.*) Then you would hold that Sir James Westland takes somewhat a different view from his predecessors of the utility of the check of the Secretary of State from a simply financial point of view. Those two officers, I think, expressed to us their view that the ultimate reliance of the Financial Member of Council must be upon the adoption of an economical policy by the Secretary of State. Of course, I am speaking of those cases in which there might be a difference between the Viceroy and the Financial Member?—I think that the answer to that is really to be found in the words of Sir James Westland's speech. Suppose, for the sake of argument, that Sir James Westland has protested against the railway policy, I mean the railway programme in India being continued in its entirety, and not being in any way reduced simultaneously with this famine which is going on, and the enormous expenditure which that involves; and that he has been overruled. Then I think that what Sir James Westland would say is what he said in this speech: "I think if the Financial Member finds "himself in an absolute minority, he may reasonably "consider that there is something to be said for the "other view," and also, "But there is one thing that "ought to be remembered, and that is, that even the "Financial Member (and I include myself), is not "always necessarily in the right."

14,613. Of course, that to a certain extent the policy of productive works in India is a reproductive policy?—Quite so.

14,614. And the Secretary of State might hold that the carrying out of a public works policy is, though perhaps not immediately, still within a measurable time, an absolute financial benefit to India. I observe that Sir James Westland's criticism refers rather to that branch of expenditure. There are other branches of expenditure such as military expenditure, of which, however necessary the policy may be, the same cannot be said. Would you consider that in that respect the Secretary of State is rather an expensive element in the Indian adminstration, than, as Sir David Barbour and Sir Auckland Colvin represented to us, a most economical one?—I think I had better speak my mind out frankly and say that during the first two or three years that I was in India, the Government of India was constantly being (I can use no other word) nagged at about the military expenditure without a single useful suggestion for reducing it ever being made to us. It was the Financial Member of Council himself who suggested that we address the Secretary of State, and beg him to put a stop to this perpetual carping about military expenditure, because he had satisfied himself that it was impossible to have the army, the strength of which had been laid down with reference to Imperial interests, more cheaply administered than it was administered; and a despatch was written to the Secretary of State which the Financial Member himself proposed to draft, only he found it rather a difficult task, and we had to help him to do it. I do not think that the control exercised by the Secretary of State over military expenditure has really produced any sensible economy, certainly during the time over which my knowledge of India extends.

14,615. Was that the present Financial Member?—That was the present Financial Member, Sir James Westland.

14,616. Now take these checks generally, may we ask your view as to their efficiency, and as to whether they afford a satisfactory guarantee against extravagance?—I do not see what other ultimate court of appeal there can be with any knowledge of India beyond the Secretary of State. I do not think it is for me to judge, or for me to express my opinion as to whether the Secretary of State exercises a proper and sufficient control over expenditure. I may say, quite distinctly, if the question put by your Lordship in any way points to making Parliament a court of appeal, I do not think it is humanly possible that there could be a worse one.

14,617. My question rather was intended to elicit from you a review of these powers of control vested in the different bodies, not only in the Secretary of State, and I wanted to get generally your view, from your own intimate experience of the working of

these arrangements, as to the efficiency of the checks?—I think that the checks exercised over the detail of expenditure in the Military Department, which is the only one as to which I could speak on that point, are sufficient, and as complete as it is possible for any checks to be—the checks exercised by the Military Department and by the Finance Department. As regards control over expenditure generally, I think that the Viceroy and the Financial Member and the Members of Council, taken as a body, may be thoroughly trusted to watch and to see that expenditure is not pushed beyond the proper limits.

14,618. Therefore, I gather that, as far as India itself is concerned, you are satisfied with the present system of control?—I am quite satisfied with it.

14,619. And, so far as the ultimate check at home is concerned, you are, may I say, very much alive to the difficulties which the Secretary of State must have in exercising an efficient check upon expenditure?—Certainly.

14,620. Further, you see no check beyond the Secretary of State which, in detail, can be of any service?—None that I can imagine.

14,621. With reference to that, I gather that your view is that, on many points at least, the Secretary of State has been uneconomical; and, so far as that is the case, do you not think that a general bias in the favour of economy might be impressed upon the Secretary of State through Parliament?—I do not think that Parliament could usefully interfere in the matter at all. The Secretary of State is more closely interested than anybody else can be in this country—the Secretary of State and the members of his Council—in seeing that India is well administered and well governed. The Secretary of State and the members of his Council know a great deal more about India than anybody else in this country does, and I do not think that any outside quasi-ignorant supervision of them would be of any use.

14,622. Therefore, if the Secretary of State is uneconomical, an uneconomical policy must be enforced without any defence against it?—I do not know how far such questions as that would come before the Cabinet. I should think—I do not know—that the papers on the subject of any large deficit in India would probably be circulated to the Cabinet, and there might be some discussion about it in the Cabinet. Of course I cannot say.

14,623. May I put this point to you: take the Home Government; Parliament as a body, is not instructed in the details of administration. It has, of course, more opportunity of learning the facts of administration in England than in India. There is very little doubt that Parliament, without interfering in the details of financial administration here, can express so strong an opinion upon the general tendency of finance as very quickly to enforce a new policy on the Government or change the Government. Now, do you not consider it possible that, if the Secretary of State was uneconomical, a check of that kind might usefully come from the House of Commons?—I do not think the House of Commons know anything about it.

14,624. I will put it thus, that the House of Commons is, on the whole, a body of sensible people who are able to form a judgment as to whether a policy is likely to lead to difficulty or not?—I take it that if Parliament are dissatisfied with the Secretary of State now, they can express their opinion.

14,625. Quite so; but I wanted to know whether, in such circumstances as I have described, you do not think the ultimate check of Parliament might be useful. Up to this time, you have expressed yourself rather strongly, I think, against the influence of Parliament in any shape?—Most strongly.

14,626. Not in the most general sense?—I do not see it.

14,627. (*Sir Andrew Scoble.*) If you had an extravagant Secretary of State, and an economical Viceroy, would not the Viceroy easily bring the question between him and his chief to the cognizance of Parliament and public opinion by resigning?—Undoubtedly he could.

14,628. And do you not think that that would be an easier, and simpler, and better way for coming to a right conclusion on the matter, than coming to Parliament as a rule?—I do, certainly.

14,629. (*Mr. Courtney.*) Does your experience suggest that that expedient could be relied upon?—I have not known a case in which a Viceroy's proposed resignation has been accepted.

14,630. I think that, looking back upon your own experience for some two or three years, you intimated to us that the intervention of the Secretary of State was unintelligent and, happily, ineffectual?—I do not think I used either of the words.

14,631. No; but was not that the sense of your evidence?—I think I merely said that the Secretary of State's influence had not always been exercised in the direction of economy; I gave examples in the Military Department.

14,632. That is not what I was referring to. What I was referring to was the period during which you said the Secretary of State kept on "foolishly nagging"?—Nagging; I did not say foolishly, but I said nagging.

14,633. Was that not the same thing as unintelligent?—Well, perhaps from our point of view in India we did think it was not very intelligent.

14,634. And also it produced no effect?—It produced no effect.

14,635. And, therefore, it was ineffectual; but you cannot suggest any better means of bringing intelligent criticism to bear than that which failed in this instance?—I really honestly cannot suggest anything better; the criticism is exercised by the Government of India; you must trust somebody somewhere.

14,636. Lord Welby suggested to you that the House of Commons, being composed of sensible men, restrains the tendency, if it exists, to extravagance in Governments at home?—I should hesitate to accept that as a fact. The influence of Parliament, I think, in this country is very often largely exercised in the direction of expenditure beyond what the Government wishes to incur.

14,637. The House of Commons presses for further expenditure?—The House of Commons sometimes presses for further expenditure.

14,638. However, we may look back on times, may we not, when the House of Commons has restrained expenditure?—Certainly.

14,639. Has that pressing for further expenditure been due to the natural, the spontaneous action, of the members of the House, or has it been due to the ignorant impatience, as it has been called, of the taxpayers outside?—I cannot answer.

14,640. You would not discriminate between the two?—I cannot answer that; I am not capable of answering that question.

14,641. Is not that point, at all events, valuable for consideration in respect of this, that, as far as expenditure and taxation of India are concerned, the House of Commons receives no impulse from this impatience of taxpayers outside, whom they represent when inside?—No; I think not.

14,642. The British elector may refuse to be taxed, and through his representative he may cut down expenditure; the British elector is not stirred up to limit the taxation in India in the same sense?—No, he is not.

14,643. Is not that an answer to the suggestion that you could get from the House of Commons any real limitation of the expenditure in India?—I think it helps to answer the question. I do not think that the House of Commons could give you any useful criticism upon Indian finance, as the House of Commons is constituted.

14,644. With respect to that intervention of the Secretary of State, which was so unfortunate, your answer referred, I think these were your words, to an army which had been settled for Imperial purposes. Who settled it?—Would you kindly refer me to that.

14,645. It was an answer you made just now, to Lord Welby?—Did I use the word? very likely I did. I have spoken—I could turn to many places here in speeches where I distinctly state——

14,646. I want you to discriminate between details and the leading outlines of a plan?—Yes.

14,647. That check upon which you rely, and I have no doubt properly rely, as so valuable and so good, is a check as to details?—Certainly.

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

15 Feb. 1897.

14,648. Who settles the Imperial uses and the Imperial scheme of the Army in India?—I should say the Secretary of State in Council.

14,649-50. And this intervention, which was so unintelligent (to use my word), was not directed to the settlement of the army in India upon Imperial lines?—No; I should say not. "Intervention" I do not think is quite the word. The general tenour of many of the Secretary of State's expressions in regard to military expenditure was simply that in view of the great financial necessities of India, and so on, everything must be done to keep down military expenditure; "he again called our attention to the great amount of military expenditure," we must "cut down military expenditure," but never any suggestion to show as to how it was to be done, and it was pointed out, if you will allow me to say so, in a minute of mine which you have here in this appendix, which was in answer to Sir David Barbour, why I could not accept Sir David Barbour's proposal to cut down the estimates as he wanted (*after looking at the minute referred to*). I thought that in all probability somewhere in that minute I should have stated about it, but in that minute I do not seem to have stated what I certainly have stated, and can find in my speeches, that the strength of the Army in India is settled by the Government of India, in consultation with the Secretary of State for India, to meet Imperial needs. I certainly can find that.

14,651. We may take that as your general view?—I find that I said in the Legislative Council: "The "standard of military efficiency—and in that I mean "to include the number of troops—is fixed by the "conditions of this country, and is determined by your "Excellency's Government, with the approval of the "Secretary of State," and I have said it elsewhere; and I may say that while I was in India the question of the strength of the army was over and over again gone into, and we wrote to the Secretary of State about it.

14,652. And upon that question, which determines all others, did you get any light from the Secretary of State?—No, I cannot say that we did during the time that I was there.

14,653. Would you say generally that the intervention of the Secretary of State in details of administration must almost necessarily be vexatious and useless?—May I read, before we pass to that, because I have found exactly what I wanted to say? This is in my speech in Council in 1894:—"I come at "last to this question: Can the numbers of the army "in India be reduced? That is not a question upon "which I would personally wish to express an opinion, "for this reason, that the strength and number of the "troops as they now are have been definitely fixed by "the Government of India and the Secretary of State. "After reviewing the condition of India, they have "been fixed according to what is considered necessary "for safety against external and internal danger. The "strength is reviewed by the Government of India "from time to time, and has recently been reviewed "by us, and by the Secretary of State, and no "reduction of the Army in India can be made by the "Governor General in Council alone. No reduction "can be made except on well-considered grounds, "carefully studied, and so reasoned out as to convince "Her Majesty's Government, because the strength of "the Army in India is not only a question of Indian, "but is a question of Imperial policy."

14,654. Upon that preliminary question the Secretary of State, fortified by the opinions of his Council, and by what you may call the common mind of his colleagues in the Cabinet, would bring a paramount influence?—I think distinctly so.

14,655. But when he interferes in criticism of detailed administration he must be less informed and less effective than the authorities in India concerned?—I think so.

14,656. (*Sir Ralph Knox.*) In regard to the increased force of European soldiers in India, the demand came distinctly in the first instance from the Indian Government, did it not?—I was not in India when those demands were made. I cannot answer that question, but I am quite prepared, if you like, to take it from you as a fact that it did. You mean the proposal for increase?

14,657. The 10,000 men in 1884-85?—In 1885, yes.

14,658. There was no particular anxiety on the part of the Government at home of their own mind to increase the European force by 10,000 men in India?—I did not belong to the Government, and I have not the slightest idea of what the Government thought.

14,659. A considerable difficulty exists as to the supply of Europeans for the army in India, does there not? It is not an easy problem to supply tens of thousands of men for foreign service?—I should think that under voluntary system of enlistment it is extremely difficult.

14,660. And after the supply of those 10,000 men to India, it appears that the Secretary of State for India, moved by some influences, at all events, thought that there might be some reduction of military expenditure. You mention that he was constantly pressing upon the Indian Government to make reductions?—To make reductions in military expenditure; pressing it upon us in vague and general terms.

14,661. So far as the military expenditure was concerned, subsequent to that increase, the Secretary of State appears to have pressed for some reduction; is not that so?—I can, of course, only really speak to the five years that I was in India. During the first three years of that the Secretary of State was constantly pressing us for a reduction of expenditure in vague and general terms. During the last two years that entirely ceased.

14,662. (*Sir Donald Stewart.*) You referred just now to the Secretary of State having objected to certain reductions recommended by the Government of India, I think, in regard to the Native Army?—Yes, that is so.

14,663. Did that objection refer to direct reduction of the existing establishment, or to the reduction of one particular portion of the Indian forces, and an increase in another direction?—To the best of my recollection it referred to a reduction of one portion of the Indian Army. I have no recollection of any corresponding increase being proposed in another direction.

14,664. But was not that in the mind of the Government of India?—Certainly not.

14,665. Are you aware that, notwithstanding the reduction in the Madras Army recommended by the Government of India in your time, the Government has very recently assured the Secretary of State that it is not possible to make the reduction to which, I think, you have referred?—You mean the Madras Government has made that?

14,666. No, the Government of India?—The Government of India?

14,667. Yes?—I am aware that the Government of India has since said that it does not consider it desirable to make that reduction. That is consequent upon an increase of territory, since the original proposal was made.

14,668. But if that reduction had been carried out at the time at which it was proposed by the Government of India, it would now have been necessary to have raised the regiments again?—I do not think it would. If the last small reduction which was recommended had been carried out, I do not think it would have been necessary to raise another regiment.

14,669. You also refer to the Secretary of State's refusal to sanction the withdrawal of special allowances drawn by a certain portion of the Native army in a particular district. Was not this decision due to the matter being one of policy rather than a matter of economy in finance?—I do not know to what it is due; without seeing the Secretary of State's despatch I could not answer; but what I can say is that the whole question of policy, as well as the actual economy, had been carefully considered by the Government of India and the Commander-in-Chief; and the Commander-in-Chief was in favour of these concessions being withdrawn, as were the whole Government of India; but the Secretary of State, I suppose, considered he was a better judge of what was right than we were, and he said that they were not to be withdrawn. In that case his influence was distinctly not in favour of economy.

14,670-1. Precisely; but I suppose that on matters of that importance the Secretary of State's decision is one that ought to carry some weight, he being responsible for the general policy of the Government?—Unquestionably; and it never entered into the head of any member of the Government of India to dispute a decision of that sort when once it had been given.

14,672–3. (*Sir Ralph Knox.*) The Secretary of State, in expressing his views, would really be expressing, or might be held to be expressing, the political views of this country, I presume, as regards a large political question; would not that be the case?—I suppose it would.

14,674. And in that sense he may be regarded as expressing the political views of this country if he presses for a reduction of military expenditure, and rather encourages an expenditure upon productive services, such as railways and irrigation works, might he not?—The Secretary of State is a member of Her Majesty's Government; whatever he writes he writes as one of Her Majesty's Government, and Her Majesty's Government are taken to express the wishes of the country for the time being, I suppose.

14,675. (*Sir William Wedderburn.*) I suppose the feeling of the taxpayers of India is in favour of economy?—The feeling of those taxpayers of India who are capable of reasoning on the subject at all, yes.

14,676. Can you suggest any means by which that influence could be made to act as a check upon undue expenditure?—I can suggest no means except that which already exists—the influence, in the first place, of those additional members of the Legislative Council who represent various classes of the taxpayers, and in the second place, the influence exercised through the press. I can suggest no other means.

14,677. Do you consider that the presence of unofficial members in the Legislative Council operates in any way effectually or usefully as a check?—I think it distinctly does operate usefully as a check.

14,678. Should you not be inclined somewhat to strengthen their position in that respect?—I should not be inclined to make any further alterations in the constitution of the Legislative Council at present. The great addition which was made to the number of additional members is of very recent date; the power given to discuss the financial statement every year is also comparatively new; and I think that it would be far better to allow existing arrangements to work for a time until we know more how they really do work, before any further changes are made.

14,679. You would object to the non-official members being allowed to move an amendment on the Budget and dividing the Council upon it?—Personally, I should not object to their being allowed to move an amendment in favour of reducing expenditure; I should very much object to their being allowed to move an amendment in favour of increasing expenditure.

(*Sir William Wedderburn.*) I meant in favour of reducing it.

14,680. (*Mr. Naoroji.*) At present, however, the unofficial members have no power whatever to propose an amendment, or any resolution either for reduction or increase of taxation; is not that so?—They have no such power on the discussion of the Financial Statement, but they have power on any Bill for taxation to move amendments, or to vote against the Bill.

14,681. The Budget is not legislatively passed at all, as I understand from Sir David Barbour?—The budget is not in any way legislatively passed; but any new taxation of any sort must be passed by the Legislature.

14,682. (*Sir Ralph Knox.*) The number of members of the Legislative Council is not great, is it?—The number, I think, of the Viceroy's Council is about 21 or 23. That includes the official members of Council.

14,683. But it is open to all the members freely to express their opinion upon such a subject as the Budget?—Quite so; and they do so. There is a discussion of the financial statement every year in Council, and they express their opinion with the greatest freedom.

14,684. And it would certainly hardly be obstructive if almost every member of the council expressed his opinion individually?—Very large numbers of them do; I think you will find that two-thirds at least of the members speak in the discussion of the financial statement.

14,685. So that you practically get a division, you may say?—No; there is no formal division, but you know what everybody has to say; it is just as useful as a division, of course.

14,686. (*Mr. Naoroji.*) These mere speeches, or criticisms, expressed on the occasion of bringing in the Budget, have no practical effect as far as the Budget is concerned; the Budget is complete, and cannot be touched, no matter what opinions are expressed; is not that so?—That is so.

14,687. (*Chairman.*) With reference to Mr. Courtney's question to you on the subject of parliamentary control, the House of Commons, of course, has no great knowledge of Indian affairs; upon that we should be agreed, but the House of Commons is the constitutional method of conveying public opinion to the Executive Government, and in that way would you allow that the public opinion of this country might at times be usefully brought to bear upon the Executive Government of India through the House of Commons?—The opportunity, I take it, exists in the discussion every year upon the Indian Budget, when, as a rule, I believe there are 10 to 12 members of Parliament present.

14,688. My question was of a more general kind than that. I am speaking of the public opinion of this country through the House of Commons having an influence upon Indian policy. Do you not think that occasionally that expression of public opinion in a legitimate form may be of use, or are you entirely opposed to any expression of public opinion?—I am the greatest possible advocate for public opinion being expressed in the freest and the fullest way everywhere. I think that the more public opinion is expressed about what goes on in India, as long as it is reasonable and intelligent public opinion, the better. Anyone who has anything to say in the House of Commons about India let him say it. Every member of the Government of India, I am quite sure, reads every word that is said in the House of Commons about it; I read every single word, and I am certain that every one of my colleagues did—every word that was said in the House of Commons about India while we were there. But if you ask me whether parliamentary action, whether if a series of resolutions, for instance, were constantly being passed by Parliament about India, they would be of any use, I do not think that would be a good thing at all. I would like to say one word more, if I may, and it is simply this: What I do feel is this, Parliament is divided into parties, and the expression of the opinion of Parliament is apt to be the expression of the opinion of party, and I think that there could be no more awful thing for India than that the Government of India should become subjected in any degree to the influence of party politics.

14,689. Following out now the influence of public opinion upon those responsible for military expenditure in India, would you agree in the opinion that the increase of taxation in India is difficult, and in certain circumstances may be dangerous?—I think that the increase of taxation in India is very difficult, and I can imagine that if it were carried out recklessly it might become in a sense dangerous.

14,690. I would submit to you that there is a difference between India and this country in that respect; increase of taxation in this country to meet admitted necessities is, to say the least, not by any means so difficult as it is in India?—Certainly, it is not.

14,691. Moreover, in England the Government, if it thinks an increased expenditure is necessary, appeals to Parliament; and if Parliament assents, it implies, or rather conveys directly, the assent of the nation to the expenditure?—Yes.

14,692. In India, on the other hand, the increase of expenditure is the act of the Executive Government, and the Executive Government remains alone responsible for the financial consequences, does it not?—Her Majesty's Government are responsible for the financial consequences; Her Majesty's Government are subject to Parliament.

14,693. But, so far as India is concerned, the Executive Government is responsible. The distinction I want to bring before you is this, that if the Government here think an expenditure necessary, and appeal to Parliament, that expenditure then becomes the act of the nation; and, therefore, there is less risk in adopting a policy than there is in India, where such policy remains the act of the Executive Government?—I do not quite see where the question of risk comes in in that connexion. Taxation in India is what may be called arbitrary taxation, the people do not vote their own taxation as they do in this country. Taxation is in that sense arbitrary, but that great mass, the people in India—what in this country is called the people of India, that extraordinary collection of numbers of different races with far greater differences between

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

15 Feb. 1897.

them than exist between any of the people in the whole of Europe—have never known from time immemorial any other kind of taxation than arbitrary taxation, taxation by the order of the Sircar; they look no further, and they obey, and there is no danger.

14,694. I am not going into the question of whether any other kind of taxation could be adopted. I merely want to draw this distinction, that in England you may fairly say that the nation assents to an increase of taxation, and there is comparatively little difficulty; in India it is the act of the Executive Government alone, and that makes it necessary for the Executive Government to be perhaps more cautious than is necessary here. Would you admit that?—No; I do not think it makes any difference in the need for caution. If you ask me whether, when you are governing people in an arbitrary way, it makes it necessary that you should be just to them, I say, yes, it makes it almost incumbent upon you that you should be generous to them; but such taxation as is necessary for the proper government of the country, I do not think there is any danger whatever attending, nor is there any necessity for greater caution for the reason that that taxation is ordered instead of being voted by the people themselves.

14,695. (*Mr. Mowbray.*) Is it strictly true that the imposition of fresh taxation is the act of the Executive Government alone? Is it not the case that fresh taxation has to be voted upon by the Legislative Council?—Certainly, it has to be voted in the Legislative Council; it is in that sense not the act of the Executive Government alone.

14,696. (*Chairman.*) Not absolutely, but the Legislative Council is not an elected Council?—It is not an elected Council; a certain proportion of them are official members; a certain number of the members of the Legislative Council are in a sense elected, that is to say, they are nominated by the Viceroy on the recommendation of certain bodies, such as the Chamber of Commerce of Calcutta, the land holders of Bengal, the Talukdars of Oudh, and so on.

14,697. (*Mr. Buchanan.*) The official members are in a majority?—The official members are generally in a majority; there is no law under which they are in a majority.

14,698. But they are in a majority?—They were in a majority when I was in India.

14,699. And they are bound to vote for the Government if ordered to do so?—That has never been laid down.

14,700. Well, pretty nearly?

14,701. (*Mr. Mowbray.*) Does the voting of fresh taxation include voting upon an increase of an existing tax? Could the Salt Tax, for instance, be increased without a vote of the Legislative Council?—I am afraid I cannot answer that question; I should have to refer to the existing law authorising the tax upon salt. I should think, probably, that Sir Andrew Scoble would know; I really cannot say.

14,702. (*Sir Andrew Scoble.*) The Government can increase the salt tax to a certain point by Order of the Executive Council?—That I cannot say.

14,703. It may be done under the Act of Council which establishes the salt duty?—But take, for instance, customs duties; we imposed customs duties while I was in the Government of India, and we had to pass a law, and subsequently another law modifying those customs duties. Each change of taxation required an Act of the Legislature.

14,704. I think you drew just now a distinction between the Executive Government of India and Her Majesty's Government. Am I right in supposing that you wish to convey that every increase of taxation, as well as the whole of the Budget arrangements, have to be approved by the Secretary of State before they can be carried out in India?—Yes.

14,705. And therefore your argument is that it is not merely the act of the Executive Government in India, but of Her Majesty's Government as represented by the Secretary of State?—Precisely; by the Secretary of State, who is responsible to Parliament.

14,706–7. (*Chairman.*) You have told us, I think, that you do not see the necessity for special caution in imposing taxation in India, as compared with England, because taxation is ordered instead of being voted by the people themselves. Do you consider an increase of the Salt Tax in India and an increase of the income tax in England to stand on the same footing in respect of the need for caution?—I see the necessity for greater caution in India, because of the great difficulty of increasing taxation in that country; but not on the ground of the method by which that taxation is imposed.

14,708. We are, however, agreed that there is a necessity for greater caution in India?—Certainly.

14,709. In your opinion would the military authorities in India appreciate this necessity for greater caution in taking measures which must lead to increase of taxation?—I have no shadow of doubt that the Commander-in-Chief and the Military Member of Council in India recognise it fully and thoroughly.

14,710. Let me give an instance of what I mean. A measure, the general wisdom of which is not contested, involves heavy expenditure. The military authorities have their attention fixed upon the efficiency of the service, and would naturally wish to carry out the measure. The Finance Minister points out that to carry it out at once means a deficit; but that if the working of the measure is spread over a series of years, this consequence could probably be avoided. Would the military authorities, as a rule, defer to such an argument?—I would ask whether that question does not rather assume that if it is considered necessary by the Military Member of Council and by the Commander-in-Chief that the expenditure should be incurred, and incurred at once, it must be paid out of the revenue of the current year? I think that there are other means of meeting expenditure which must be incurred, or ought to be incurred, at once, such as are used in this country very frequently, and in all other countries, namely, spreading out the expenditure over a series of years; incurring the expenditure at once, but spreading out the payment for it over a certain time, as is done here by terminable annuities, and so on.

14,711. I quite admit that that is a method of dealing with such expenditure. But what I wanted to trace out was whether, looking at the difficulty of raising taxation in India, you think the military authorities, when they have a considerable programme before them, would be anxious to defer to the warning of the Finance Minister upon the subject, and as far as possible to spread over a series of years that which, if it were carried out at once, might lead to financial difficulty?—They are not only willing to do it, but they have done it, and they constantly do it.

14,712. Now let me take the instance of the frontier railways. Do you think that the military authorities were willing to spread the construction of those frontier railways over a period which, no doubt, must have made the provision of funds for them easier?—Certainly the making of the frontier railways has been spread out over a considerable period, and even in the last winter I was in India—12 months ago—we discussed the matter, and, because there was not enough money available, we agreed to postpone expenditure on the Mari-Attock line running down this side of the Indus, a strategical railway. All I wish to say is that the Military Member of Council and the Commander-in-Chief discuss these matters, not merely from the point of view of soldiers as to what is necessary, but as members of the Government of India, equally responsible with the Financial Member himself for economy as well as for efficiency.

14,713–5. You made an interesting speech in the Legislative Council in March last on the Indian Budget, in which you reviewed the military expenditure during the period of your administration; and you mentioned in that speech several important changes in military organisation, either in progress, or, in your opinion, necessary. What would be the financial effect of such changes on future budgets? Of course I am only asking generally whether they would lead to a considerable increase of expenditure, or whether you see the means by which such increase might be avoided?—On the general lines I do not think that military expenditure in India will grow much; but that it can be reduced I do not think either. I went fully into that question in some of my speeches, and also in this minute which has been printed at page 157 of your appendices. Paragraphs 18 and 19 of that minute of mine are devoted to that question of future military expenditure; and I spoke at considerable length upon it also in the Legislative Council.

14,716–7. Could you state the effect rather more specifically in relation to the four heads of military

expenditure to which you called attention in that speech, viz., Home, India. Military Works, and Special Defence?—I am taking that speech, because it seems to me to afford a convenient opportunity for you to tell us something about the present condition and the progress of expenditure from your recent knowledge?—Of course, there is a portion of the Home expenditure which never came under my review in any way whatever; that is, all the portion relating to the charges of the War Office for non-effective services, and all those expenses. The only portion of the Home military expenditure which comes in any way under the control of the Government of India—I am speaking of military expenditure—is their indents for stores. It is very difficult to say whether those will diminish or whether they will increase; it depends very largely on the extent to which manufacture in India is increased. All our efforts have been directed, for many years past, to increasing the manufacture of everything in India, so as to employ money in India instead of sending it to England; and, as that system develops, so the demand for stores from England should decrease.

14,718. And I think in your speech you gave various instances where economies had been effected and were in course of being effected?—I did in several speeches in the Legislative Council, because these were matters in which the unofficial members of the Legislative Council took a good deal of interest, especially Mr. Playfair, the President of the Calcutta Chamber of Commerce.

14,719. But is there any particular instance that you would like to mention? I think you gave some interesting illustrations in the matter of ammunition, if I remember rightly?—Oh, yes; in my 1896 speech I said:—"India is now turning out "all her own small-arm ammunition, is making her "own cartridge metal, gun fittings for the latest "types of guns, powder, accoutrements, harness, and "saddlery, to keep pace with the extended needs of "the army in India; while under the able direction "of Captain Mahon, and of General Walker, the "Director-General of Ordnance, the manufacture of "steel and steel projectiles has been successfully "introduced, and by that a considerable saving has "been effected. The English price of Martini-Henry "rifle cartridges is Rs. 71 per 1,000, and we manufac- "ture them in India for Rs. 49 per 1,000. The English "price of Lee-Metford cordite cartridges is Rs. 108 "per 1,000, we manufacture them in India for "Rs. 83 per 1,000. Twelve-pounder shrapnel shells "cost in England Rs. 837 per 100, we manufacture "them for Rs. 710." Then there are other things, such for instance as boots; the whole of the boots of the European troops are now made in India.

14,720. With an economical result?—They are considerably cheaper, and they are every bit as good. Also a great part of the clothing of the troops is made in India; and now that we have given up cloth tunics, practically the whole of the European clothing will be made in India. I said in my speech: "In all cases "where Indian manufactures can be obtained as good "in quality as imported articles, and no dearer in "price, they have been substituted for imported "articles. The gain in 1891–92 resulting from the "use of stores manufactured in India, in substitution "for stores formerly imported through the Secretary "of State, was Rs. 5,37,000, and in 1894–95, "Rs. 16,50,000."

14,721. And that points generally to the probability of the indents for stores from home diminishing?—I think it does.

14,722. (*Sir Ralph Knox.*) That comparison of price, of course, depends entirely upon whether the accounts in India are made out on the same basis as the accounts, on which the ascertained prices are made out, at home? The English prices I have given are those actually charged to India by the War Office; the Indian prices are made out according to the rules prevailing in India, and, to the best of my belief, include both direct and indirect charges, such as rent of land and buildings, cost of administration of the Ordnance Department, &c. I believe that Home and Indian prices are made out on the same system.

14,723. I need not pursue the argument; but I shall have to prove to the Commission that they were not?—For the purposes of this comparison——

14,724. (*Chairman.*) At all events, it is the view of the Indian Government, that they can more usefully obtain their supplies in India; and to that extent the indents for stores from home are likely to be diminished?—Yes.

14,725. That brings us on to the changes in India itself?—Do you mean the Indian Budget Estimates?

14,726. I am taking now your speech upon the Budget in March 1896?—There I dealt with four estimates, namely, Home Budget Estimates, the Indian Budget Estimates, the Military Works Estimates, and the Special Defence Estimates.

14,727–8. You made some very interesting remarks upon the changes in army organisation which were going on, with their financial effect, such as mobilisation, further supplies of transport, and so forth; those are points of great interest from the military point of view; also of great interest from a financial point of view as to their present effect, and as to their future effect, on finance. It was with reference to that that I wished to call your attention to it?—I am afraid it is rather long. At the end of my speech I gave a sort of summary of what had happened during the five years.

14,729. The summary is what I am calling your tention to?—The question, I think, that you really want to have from me is the question, is it not, as to whether there is likely to be further increase or decrease?

14,730. Yes. At the close of your speech you point out certain reforms which are in progress and certain reforms which you think are necessary. If those are carried out, what would be the financial effect of them?—The only reforms which I have said I thought were of importance, besides those which practically had already been carried out, were an increase to the number of British officers for the Native army, and there is no doubt that that, if it is done, will be a very considerable source of additional expense; I think, myself, that it is essential that this should be done. Then I mentioned an increase to the garrison artillery in India; this is not large, but still it would mean some additional expenditure; then an increase in the amount of transport camels, which would also be a source of expenditure. Then, on the other hand, in one way or the other, there would be a diminution.

14,731. Can you form any idea of what the increase in the number of officers would cost?—Oh, no; because really that had never been mentioned in Council before; I was leaving India, and I thought it right to place it on record that I thought this should be done. Sir George Chesney, my predecessor, had left a minute behind him stating that he thought it ought to be done; but it would require to be gone into with very great care indeed.

14,732. Then, in regard to the increase of transport animals, is that likely to lead to much increased expenditure?—A certain increase of transport has been given during this current year from the money which I obtained for mobilisation, and I expressed my opinion that it is desirable that that should be still further increased. That might mean a few lakhs a year; perhaps five or six lakhs additional a year.

14,733. (*Sir Donald Stewart.*) But I think that everything that did not involve recurring expenditure, was sanctioned?—The Secretary of State sanctioned a certain amount of transport which did involve recurring expenditure. And further, I wish to express my opinion that the Secretary of State's criticism upon our proposal was a very wise one, and the economy which he suggested was very sensible. I say that because I myself made the proposal, and the Secretary of State thought that we should not buy the whole amount of transport which in that despatch we had recommended should be bought; and I think that that decision was a much better one than the original proposal which I made.

14,734. (*Chairman.*) So that occasionally the Secretary of State's criticism may be useful?—Yes; it is my desire to bring that out, which makes me say this.

14,735–6. (*Sir Ralph Knox.*) The officers you would propose to add would be mostly junior officers, would they not?—Yes, mainly junior officers.

14,737. Do you think it possible to touch the rates of pay that are given to European officers in India?—Oh, no; quite impossible; you have just increased them all by exchange compensation, on the ground that the officers were so underpaid that they really could not live.

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

15 Feb. 1897.

14,738. On the ground that the present rate of pay should be preserved as much as possible; was not that it?—I have gone into the whole of the thing in one of my speeches in Council; the basis of the pay of all the military officers serving in India is the pay of the same ranks in England converted at the rate of 2*s.* 6*d.* to the rupee; and the allowances were fixed in rupees at a time when the commercial value of the rupee had never fallen below 1*s.* 11*d.*, and when the Government rate of exchange had never fallen below 2*s.*

14,739. But the rates of pay for the higher appointments in India are admittedly very far in excess of those of similar appointments out of India, is not that so?—You mean in excess in actual amount of money?

14,740. Yes?—I suppose they are; yes.

14,741. And they were fixed, including allowances, very many years ago?—Yes. I stated in my speech in the Legislative Council in 1894 that the sterling value of the pay of the officers in India had fallen 50 per cent., and that the sterling value of their allowances had fallen 37½ per cent., while the cost of a British officer's living in India had risen rather than fallen. There was a general rise in the price of British goods, and there was ample evidence to show that prices in India were rising rather than falling, as apart from British goods. It was in these circumstances that the increase of pay in the form of exchange compensation allowance was given.

14,742. (*Chairman.*) Next, passing on to the military works budget, do you anticipate any considerable increase under that head?—I think that on military works there need not be a considerable increase, although I should myself be very glad to see a larger expenditure incurred each year, if it could be spread out by some means as is done in this country, when they want to build barracks. For instance, take the water supply for the troops in the cantonments in India—we are only able to do half of one cantonment, or one cantonment a year, or something of that sort, and some of these cantonments will be 20, 30, or 40 years before they get a pure water supply; whereas, if we could take a lump sum of money, and do all the cantonments in one or two years, and spread the payment over a number of years, you would not have these poor fellows dying of enteric fever and cholera because they have not got a pure water supply; and I should like to point out, in connexion with that, that India is, so far as I know, the only nation in the world that has carried out the whole of her military expenditure without a loan. Every single farthing of military expenditure each year is paid out of the year's revenue. Every nation on the continent—France, Germany, Italy, Austria, Russia, Belgium—has got an extraordinary Budget, in addition to her ordinary military Budget, money which is provided not out of the year's revenue. In this country at the present moment there are Bills before Parliament for borrowing money to carry out works. I should add that the heading, "Special Defences," as far as works are concerned, was ordered to be closed before I left India. There is still some small amount due under that heading for armaments. When that is paid the heading should disappear.

14,743. (*Mr. Courtney.*) I should like to interject a question as to the answer you gave just now to Sir Ralph Knox. You said that the sterling value of the pay had decreased 50 per cent., and the sterling value of the allowances 37½ per cent.?—Yes.

14,744. But the cost of living had increased slightly?—The cost in India, as apart from that sterling value, has increased.

14,745. Now, just let us understand what you mean by the cost in India. You mean if the military officer spent a certain number of rupees, say 10,000 rupees, before, he spends more rupees now?—He spends more rupees.

14,746. How much more?—When I say that the cost of living has increased, I mean that rent has increased, servants' wages have increased, the price of all food supplies has increased; perhaps clothing has not increased, that is, Indian-made clothing; but the price in India of all those things which are the necessities of an officer's life—his rent, his servants, his food—has increased.

14,747. But may we say, perhaps, that what would have cost him 10,000 rupees now costs him 12,000 rupees; I do not care about the figures, but something like that?—I cannot really say what exactly the amount would be, but there is a considerable rise, a very considerable rise. What would have cost him, say, 200 rupees now costs him 220 or 230 rupees, or something of this sort.

14,748. Suppose we say 10,000 and 12,000 rupees, as I say; but the 10,000 rupees turned into sterling formerly meant 1,000*l.*?—Yes.

14,749. Now 10,000 rupees turned into sterling would be 600*l.*?—A little more than that.

14,750. So that the sterling value has decreased? I only wish to point out that you attached the word sterling to the pay and allowances which had decreased, and then you say that the cost of living had increased, that is to say, in rupees; but valued in sterling, that has decreased also?—Perhaps I might read you the words I used. "The basis of pay of all the military "officers serving in India is the pay of the same ranks "in England converted at the rate of 2*s.* 6*d.* to the "rupee, and the allowances in rupees were fixed at "a time when the commercial value of the rupee had "never, I believe, fallen below 1*s.* 11*d.*, and when the "Government rate of exchange had never fallen "below 2*s.* Now, with a rupee at or below 1*s.* 3*d.*, as "it now is, it is evident that the sterling value of the "pay of these officers," by which I meant the power of converting this money into pounds sterling—"has "fallen 50 per cent., and that the sterling value of "their allowances has fallen 37½ per cent., while I think "that no one can deny that the cost to a British "officer of living in India has risen rather than fallen, "that there has been a general rise in the price of "British goods, and that there is ample evidence to "show that prices in India are rising rather than "falling as apart from British goods. Under these "circumstances, the rate of their pay, having fallen 50 "per cent., and of their allowances 37½ per cent., so "great was the hardship from which officers were "suffering that some measure of relief had become "not only an act of the most elementary justice, but "an act of absolute necessity."

14,751. But that language wants correction, you will allow, I think?—In what way?

14,751*a*. The ordinary reader or hearer following your words that the sterling value of pay had diminished 50 per cent., and the sterling value of allowances had diminished 37½ per cent., that the cost of living had increased, would suppose that you referred to the sterling cost of living?—Oh, I do not think so. No one in India would suppose that.

14,752. But everybody here would?—No one in India would for a single instant.

14,753. If the word sterling is put in, it would not be true?—There is no such thing as sterling cost to a British officer living there.

14,754. It is a way of measuring the thing. If we measure the cost of living in sterling it has not increased; it has diminished?—When we speak in India of the sterling value of any sum in rupees, we mean the amount of sterling money—pounds sterling—which that given number of rupees will bring us.

14,755. I quite understand that?—The expression which I use here is that the sterling value of their allowances had fallen, the sterling value of their pay had fallen; that would mean to any one in India that for the purposes of conversion into sterling money their pay and their allowances had fallen by that percentage. I then go on to say—and this is in answer to an argument which had been used that although the rupee had fallen for the purpose of exchange into sterling, if you wanted to remit it from India to England, the price, the cost of living, in India, had not increased, because in India you spend rupees, and the cost there had not increased—I go on to say that the sterling value of their pay and of their allowances having fallen, I think that no one can deny that the cost to a British officer of living in India has risen rather than fallen.

14,756. It is quite enough if you allow that you meant by that the cost in rupees?—Certainly, I meant the cost in rupees.

14,757. And if you were to say the cost of living measured in sterling, we should have to say that it had decreased?—Oh, if you said "measured in sterling," yes.

14,758. (*Sir James Peile.*) The officers are paid in rupees; they have to give more rupees for a sovereign; and also more rupees for a horse, or for the pay of

servant?—Precisely; there is another thing that has gone up enormously—the price of ponies.

14,759-60. (*Chairman.*) May I ask, in order to understand this point fully, is the officer's pay fixed in sterling and converted at a certain rate, and has the amount been altered since, we will say, 1870?—No, the pay has never altered. I will read you this extract from one of my speeches:—"The pay of the officers of the "Honourable East India Company's service was fixed "in the last century. It was composed of two parts. "It included British pay, converted into Indian "currency at the rate of 2*s.* 6*d.* to the rupee, together "with certain allowances fixed in rupees. We have "three classes of officers now. First, the officers of the "Indian Army; the few of them who still remain "receive exactly the same pay and allowances as in the "old company's days. Secondly, the British officers. "The pay and allowances of the British officers were "fixed in the days of the Honourable East India Com-"pany; the principle followed was to make their pay "and allowances, as a whole, equal to those of officers "of corresponding rank in the Company's service; this "equalisation was carried out in 1797 and 1811. While "as regards the third-class of officers, that is, the "officers of the Staff Corps, their pay was fixed in 1861 "at identically the rates of the lower scale which had "for many years been in force for infantry officers of "both the Honourable East India Company's service "and the British service when not in the field, and "when serving within 200 miles of the seat of the "Government of each Presidency," which is the basis, as I said before.

14,761-2. Therefore, we will say, where an officer in any one of these categories received 1,000 rupees in 1860, he receives 1,000 rupees now. And so far as he spends it in India, the only question is whether the price of goods in India and things in India has risen?—So far as he spends it in India, yes; it is perfectly evident.

14,763. Do you think that prices in India have slightly risen?—They have risen considerably.

14,764-5. Are you quite sure upon that point? We have had evidence which, I think, points towards a slight increase in the cost of Indian servants, and so forth; but I do not think it has been shown that it is a very large one. I think, perhaps, the same might be said of prices. I think Mr. Courtney will back me up in saying that, before the Indian Currency Committee, there was a question whether prices had gone up; and the evidence before us would hardly allow of its being said that there was a very heavy increase?—I do not think I have said that it was a very heavy increase; I said in my speech, "Have risen rather than fallen." I have now said "a considerable increase."

14,766. (*Mr. Mowbray.*) Besides the expenses which you have mentioned, which are all incurred in India in rupees, there is also an expenditure, I suppose, incurred by a British officer in India for goods which are necessary to him, which are brought from England, and of which the price has risen in rupees owing to the fall in exchange?—Yes. There is a general rise in British goods.

14,767. (*Chairman.*) But the rise has not been very great?—And then, of course, the heaviest loss of all is to the married officer, who has to send home money for his wife and children.

14,768. Your speech shows how much consideration you have given to economies which may counterbalance increases in other directions, rendered necessary by the advance in military science. Are we at the end of such economies, or do you think there are like possibilities in the future?—I think savings are always being made in one direction or another.

14,769. And, on the whole, must we expect the increase in military expenditure to continue?—It is most extraordinarily difficult to forecast; it is impossible to say what the progress of science will do in the way of increasing the cost of warlike stores, and so on. The price which we now have to pay for guns, and so on, is something enormous, and I cannot forecast in any way what will be the increase due to that. I can see no great reason why the normal military expenditure of India should rise to any great extent beyond what it is now; on the other hand, I do not see any probability of its decreasing.

14,770. Apart from that question of the increase of the number of British officers in the Native Army?—But that has not been approved by anybody; that is merely a *ballon d'essai* of mine, which has since been taken up in Parliament, I see, and the Secretary of State, I believe, has ordered a committee to consider the question.

14,771. Frontier expeditions must very much disturb the financial programme of the Finance Minister; they would appear to have become more frequent of late than in former years. Do you regard them now as a permanent item of military expenditure?—The number of minor frontier expeditions must necessarily, I think, be less in future than it has been in the past, because we are rapidly reaching the point where all the minor tribes will have come directly under our control. For instance, on the North-West Frontier there are really only about two places left where there can be any future serious disturbance—of course I am not speaking of the possibility of a war with Afghanistan. In Burmah, again, we have now got our frontier pretty well settled, and if Viceroys will only be firm enough to prevent an indefinite extension towards the north, because of some little tribe giving trouble, I do not see why there need be any more frontier expeditions in Burmah.

14,772-3. (*Mr. Courtney.*) Has not that kind of language been used by your predecessors very often about Viceroys being firm enough, and the present frontier being satisfactory?—I do not know; I am not aware of it having been used before. It only occurred to my mind at this moment to use it in connexion with a particular proposal which was made for an expedition on the Burmah frontier by the Chief Commissioner of Burmah, which I most strongly opposed and resisted on the ground that it was the opening up of an indefinite extension of the frontier, and the Viceroy on that occasion was firm, and the expedition was not allowed.

14,774. (*Sir Ralph Knox.*) To what extent is Upper Burmah at the present time self-supporting as regards its expenditure, do you know?—I cannot tell you to what extent; but I think you would find it in this financial statement of Sir James Westland.

14,775. However, if not self-supporting, it will, I suppose, within measurable distance be expected to be so?—I should think so. Of course, Lower Burmah does very well; it is Upper Burmah, which is newly acquired and is a very sparsely populated country, which does not at present pay its expenses; military, or rather police, expenses in Upper Burmah have been enormously heavy.

14,776. (*Chairman.*) I think that in the course of your evidence, we have gathered your view on the evidence put before us by Sir David Barbour and Sir Auckland Colvin; but I do not think that special attention was called to the evidence of Lord Cromer, which no doubt you have read. I think at this present moment I need only ask you whether there are any points to which you would like to call our attention or make any remarks upon, in what they have said?—No; I have read the evidence of Sir Auckland Colvin and Sir David Barbour and Lord Cromer, and I wish to express my strong concurrence with the general lines of the evidence given by Lord Cromer.

14,777. Looking to the financial stability of the Indian Empire, do you think the Financial Department is strong enough to secure due consideration of financial dangers?—Yes, honestly, I do; but it depends upon the man—that is the whole thing. I cannot say anything else.

14,778. We have come now to an important question—the question of the apportionment of charges between the Home Government and the Indian Government. I do not know how far you will feel able to discuss the question in detail, but I may point out to you the position at which we have arrived. If you will turn to Volume II. of the Report you will see at page 364 a memorandum put in by Sir Henry Waterfield, of which I will read paragraph 14: "It is "not desired, on the part of the India Office, to re-open "the calculations upon which the actual capitation "rate"—that is the 7*l.* 10*s.*—"was arrived at, after "examination in great detail by Lord Northbrook's "Commission. Nor does it appear necessary to "minutely inquire whether the establishment in India "has been maintained at the prescribed strength. "It must at one period of the year, after the reliefs "have been completed, be above strength, and six "months later below strength, in order to maintain "the average, and if it fell materially below the "prescribed number, the Government of India would "make representations." That we took to mean that in the main the Indian Government acquiesced in that

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I

15 Feb. 1897.

7*l.* 10*s.* rate; but they go on to say that, while they do not wish to re-open the calculations, "there are general "principles of great importance to which it is desired "to invite the attention of the Royal Commission, as "militating against the equity of a merely arithmetical "division of the charges." And then the memorandum goes through a number of these considerations. For instance, the heavy charges incurred in consequence of the abolition of the local European army; the cost of the recruiting; the cost in reliefs which is entailed by short service; the consideration that the creation of a reserve is more useful to England than to India, and that India is a good training ground for the English Army; the fact that India has been charged with her share of the cost of many changes in organisation; the cost of pensions consequent on the abolition of purchase; deferred pay; and the fact that of the pensions paid by India a great portion are spent in England and not in India. Now those are the heads which I understand the memorandum had in view when it said "There are general principles of great "importance to which it is desired to invite the atten-"tion of the Royal Commission." Against this, on the other hand, must be placed some calculations made by Sir Ralph Knox which you will find at page 378. The upshot of that is that Sir Ralph Knox, as I understand him, has, on behalf of the War Office, put forward certain calculations which, in the view of the War Office, show that considerable consideration has already been paid to India, that the cost to England is considerably more than that which India now pays. That, I think, generally sums up the question on the two sides. Now I do not wish to trouble you with each of these headings, unless there are points on which you would like to remark, and I would ask you in what form you would like to give us your opinion on this question?—My Lord, I might say in the first place that I am absolutely unable to go into any of these questions in detail. The year before I arrived in India as a Member of Council, the Government of India had sent home that despatch of the 25th March 1890, which is given here in your Appendix at page 261, accompanied by a memorandum drawn up in the Military Department, in which they stated their case. That case was before the Secretary of State; the Secretary of State took no action upon that particular document, but Lord Northbrook inquired into the case generally, and, beyond reading that document and forming my personal opinion that there was a *primâ facie* case for inquiry by an independent body, I have never committed myself to, nor have I ever stated, any one of these arguments put forward by the Government of India. I joined the Government of India in proposing that the whole matter should be referred to a Royal Commission, and I thought it was just a question for experts on both sides to argue before that Royal Commission; I am not prepared to go into any one of those cases in detail; but I am, if you will allow me to do so, prepared to express a strong opinion that this matter between England and India is not one which ought to be dealt with as a question of detailed accounts at all. The principle upon which these accounts are based is virtually this: that India is to repay to England all that it can be proved England would not pay but for the military requirements of India. That, I think, is practically what Sir Ralph Knox says in the first answer of his evidence.

14,779–80. Sir Ralph Knox puts forward a calculation of the cost of the home services of the British regiments in India to England according to his view. That is put at page 378?—Quite so, but I was looking at the answer of Sir Ralph Knox, I think, to your Lordship's first question. It is at page 485: (*A.*) "Would you define what you consider to be the "actual cost to the British Exchequer of main-"taining a force in India?—According to my view "the actual cost consists of every expense incurred at "home which would not be incurred if it were not "necessary to send the reliefs and drafts to India."

14,781. You observe the point that he puts forward in answer to my question is "the actual cost to the "British Exchequer"?—Quite so.

14,782. It is not the amount that either the War Office or anybody else is proposing to charge India?—I perfectly understand that; but, as I understand it, the basis of these charges generally is that India should repay to England what it can be proved that England would not pay but for the military requirements of India, subject to what, I think, is called some sort of debate. Well, my personal opinion is that it is altogether wrong that there should be any such theory as that at all; and if I might be allowed to give my reasons for that opinion. In the first place, I would say that the army in India is largely in excess of the requirements for the preservation of internal order in India. The strength of the army in India is calculated to allow of a powerful field army being placed on or beyond the Indian frontier, in addition to the obligatory garrisons required for keeping order in India. The necessity for maintaining in India that powerful field army, in addition to the obligatory garrisons, is caused by the approach of a great Military Power into a position which enables her to threaten directly Afghanistan, to which we are under treaty obligations, and indirectly to threaten the security of India. The foreign policy of India is directed entirely from England by Her Majesty's Government, and it is part of British foreign policy generally. The object of British foreign policy generally, I believe, is to secure British rule over the British Empire. If it were desired to maintain British rule in India only for India's sake, then I think it would be fair to make India pay to the uttermost farthing everything that could be shown was due to Britain's rule over India; but I cannot but feel that Britain's interest in keeping India under British rule is enormous. India affords employment to thousands of Britons; India employs millions of British capital; and Indian commerce is of immense value to Great Britain. Therefore it seems to me that India being held by Great Britain, not only for India's sake but also for Great Britain's sake, Great Britain should pay a share of the expenditure for this purpose; and in estimating what that share should be I think that England should behave generously, because in the first place England is a rich country and India is a poor country. It is not altogether a fair basis of comparison of their comparative richness and poorness, but it is one that is worth bringing to notice, and that is the income tax of India as compared with the income tax of this country. In India you have an income tax of two and a half per cent., about 6*d.* in the pound. I cannot lay my hand exactly on what that income tax produces, but I believe that the 6*d.* in the pound produces less than 1,000,000*l.* sterling; in England every 1*d.* produces considerably over 2,000,000*l.* sterling. Moreover, Indian taxation is chiefly derived from Land Revenue and Salt Duties, and those fall ultimately on the poorest classes. Another reason why I think England should be generous to India is that India has no representation. I believe that it is an absolute necessity that she should have no representation under her present conditions; but it seems to me that where a nation is practically arbitrarily governed, the governing power should behave generously to the nation it so governs. Now it has been said that England does contribute to the military expenses of India, even if she charged her to the uttermost farthing of these expenses which come into that account. It has been said that England contributes because she has troops in England in reserve available for service in India. I would wish to state that the Government of India is perfectly aware that, while it is, of course, impossible to forecast the precise conditions under which India might be called upon to mobilise, it is far from improbable that the same circumstances which necessitate the mobilisation in India might also render it impossible for this country to part with any considerable portion of the small number of the regular troops in the United Kingdom. It is within my own knowledge that there is no misunderstanding between the Government of India and the War Office on this point. I would wish, further, to say that I believe—I can state positively that it was the case a few years ago, and I believe it to be so now—that all these troops in England are told off definitely to places in the scheme of home defence. That seems to me to be an answer— those two facts—to the argument that England by having troops in England, contributes to India's defence. It has been said that, but for India, we could have a smaller army, but a better one. Now certainly, but for India, we could reduce the army by the 73,000 men that there are in India, but I would point out that the first effect of that would be to reduce our reserves at home by one third roughly. I do not say that is an exact statement, but it is a simple matter of arithmetic that if an army of 225,000 men gives you a reserve of 75,000, an army of 150,000 will only give you a reserve of 50,000.

14,783. (*Sir Ralph Knox.*) Assuming that they serve the same period?—Assuming that they serve the same period.

14,784. That is an assumption?—Now, you have been told that these reserves are the backbone of the British Army; that the young soldiers who are in this country are not fit to be put into the field, and that these reserves are the backbone of the British Army. If we were to give up India, reducing our army by 73,000 men in consequence, and unquestionably reducing the reserve, if not by the full third, certainly to some extent, is it humanly probable that any Government would still further reduce the army in Great Britain, which has already been rightly described as the small number of regular troops in the United Kingdom? Therefore, it seems to me there is no ground for stating that England contributes to the expenses of the military maintenance of India by keeping troops in this country who are available for service in India; or that she could reduce her army in this country, and so have a better army, if she gave up India. I should like to state here, in regard to the question of the reserves being available for employment in India, that I hold most strongly the opinion that, so far as any danger of mutiny or internal revolt is concerned, the British army in India which is maintained by Indian revenues, is amply strong enough to deal with any such revolt. The time, and the only time, that it seems to me India would wish to call upon England to send her more troops is the very time when it is far from improbable that England would not be able to send those troops. I should like to express my own opinion—I was for 5½ years head of the Intelligence Department before I went to India—that, in the present state of political balance in Europe, if there was to be a great danger of war with the Power which is on the northern frontier of India, there would not be the slightest chance of one single man being sent out of this country to the help of India. Then it is said that England contributes to India's defence by her Navy; and that, it seems to me, is perfectly true as far as the defence of Indian commerce is concerned.

14,785. (*Chairman.*) I beg your pardon for interrupting; but would not this question of the Indian navy and the support given by the Imperial Navy to India come in rather more conveniently upon a subsequent question which I may have to ask you, namely, whether you wish to make any remarks upon Captain Hext's evidence?—I think, my Lord, it is part of this general argument that I am using now. It is quite true that England largely contributes to Indian defence by her Navy, so far as the defence of Indian commerce is concerned, and so far as defence against attack by sea is concerned; but the Navy contributes nothing to the defence of India's land frontier, as no amount of sea power could prevent the great Power which is on our northern frontier from assembling there by land. And, therefore, holding, as I do, these views, I think that the whole of those accounts which England has against India, the Military Accounts, should disappear. I think it is perfectly right that India should pay, because she can afford to pay, for every soldier that goes to India from the day that he leaves these shores to the day that he comes back again, and for all her stores, for everything that she purchases in this country, and for her own army; but I think it is utterly wrong that she should pay one single farthing to England for all these charges which are the subject of these accounts. I think if England paid the whole of these charges she would be dealing—I do not then think she would be dealing particularly generously by India—but I think she would only be dealing fairly by India. And there are other charges, not Military and Naval charges, which I also think should be borne by this country, although I will not go into them, unless I am asked to do so. For myself I would abolish the whole of this question of accounts between England and India altogether. I should say that India should make a contribution to England, not to go into either the Naval or the Military estimates as a receipt, but to be paid direct to the Treasury, for what England does for India by sea, and that she should not pay one single farthing for what England is supposed to do for her by land.

14,786–7. Then, I take it, that, as a practical question, 7*l.* 10*s.* per head, which is the present capitation rate, and, I presume, the sum paid for non-effective charges, should be swept away?—Not the sum paid on account of non-effective charges—the contribution to the War Office.

14,788. Both the non-effective and the effective charges should be swept away?—I do. I think they should be swept away.

14,789. I only want to get your view. Both the non-effective and the effective should be swept away?—I think so.

14,790. And in support of that view you hold that the Indian Government should only pay for keeping order in India?—I have not said that, my Lord; I say she pays for an army of 70,000 or 80,000 men more than she wants to keep order in India, and I would let her go on paying that.

14,791. But I understood you to say "keeping order in India" in the sense of guarding against mutiny; and that you were drawing a distinction between expenditure she would have to undertake for the purpose of keeping order within her own territory, and expenditure on any expedition or any service she might have to undertake, say, against Russia?—I say, my Lord, India keeps an army now nearly 50 per cent. in excess of what she need keep if it were not for matters beyond her frontier. I would let her pay for that army; I would let her pay to defend her own frontier, but I would not let England have no payment to make on account of that frontier.

14,792. You hold that India should pay for a sufficient army to repel an invasion on her frontier, but that towards this army England should make a contribution which, according to the view of the War Office, amounts to something like 1,100,000*l.*?—Yes.

14,793. And that should be the contribution of England on account of what you consider Imperial policy?—Well, I say this is what I think. On the other hand, I think it would be perfectly fair that India should pay a fair contribution, a good contribution, for what the Navy does for her.

14,794. We will come to that afterwards; but just for the moment I should like to ask you whether a power like Russia on the borders of India is not a danger to India, even if England was not behind her: is it not so?—Distinctly so.

14,795. Exactly, and therefore India is very much interested, like any other power, in being able to keep up a sufficient force to keep her territories intact?—Certainly she is very much interested, but she is not alone in being interested; that is the pith of my argument.

14,796. I quite understand the distinction you draw; but you do not think that, primarily interested though she is in keeping her territories intact, she ought to pay the whole cost of that force?—I think she ought to pay the great portion of it, but certainly not the whole, because she is not the only one interested in keeping another great power out of India.

14,797. I suppose it might be said that if England had no connection with India, she would not care what happened on the Indian frontier?—If England had no connection with India—no, I suppose not—you mean if England had no connection with India, England would not care what happened then.

14,798. Quite so, any more than she cares what happens in Persia or Thibet or anywhere else?—Quite so.

14,799. Therefore the primary interest of India, like every other state, is to be able to keep her own territories intact, is it not?—That, in my opinion, is the first thing to be done before you spend a lot of money in developing a country or anything else—to make sure that it is safe—to keep the country safe.

14,800. Then, next to that, you do not think that, if an emergency arose, India could rely upon England being able to send her troops, and that therefore the reserve of England is really not a valuable reserve?—I have stated to you exactly what I think on that point, and I express my own firm opinion—and that opinion may carry some weight, because I was, as I say, 5½ years head of the Intelligence Department, and five years in India, and have seen a great deal of what has been going on in the way of confidential papers—I feel perfectly certain, in my own mind, as long, at all events, as the balance of power in Europe is what it is now, that if there were to be a necessity for a mobilisation on the Indian northern frontier to resist a great power there—the great power which is there—that they would not at that time move a single man from England to the help of India. They would not dare to do it.

14,801. The question of sending help to India has only once arisen; but do you lay no stress upon the fact that in that emergency England sent out 40 battalions?—Which emergency was that?

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

15 Feb. 1897.

14,802. The Mutiny?—The Mutiny has not anything to do with the great power threatening the frontier of India: it is an entirely different subject.

14,803. No, pardon me; surely, when we are speaking of keeping the territories of India intact, the case of the Mutiny is a very serious one. Without demurring to your view as to what might happen in the case of a great European war, I would call your attention to the fact that on one occasion, the greatest crisis, at all events for a very long time, that India has been through, the English battalions were ready, and went to her aid. That is an instance in which, in a crisis of great importance to India, she has been able to call upon the reserve in England?—My Lord, I served in the suppression of the Indian Mutiny, and I remember it very well. I have already said that, in my opinion, the condition of things now in India is so absolutely changed that the European army now existing in India, and maintained there by India solely out of Indian revenues, is amply sufficient to deal with any revolt or mutiny, without calling for more troops from England; and therefore I rule any charge against India on that account, from my point of view, out of the question altogether.

14,804. (*Sir Ralph Knox.*) I thought you said "had "been more than sufficient for that purpose?"—The expression I used is "amply sufficient."

14,805. (*Mr. Courtney.*) That force includes the 75,000 British soldiers?—That includes the 75,000 we have now. In the days of the Mutiny I do not remember what the proportions were, but they were something like six to one of Native troops to British troops. The artillery was in the hands of the Natives, the arsenals were in the hands of the Natives. Now the proportion throughout the whole of India is two and-a-half to one of Native troops to British troops. The Natives have not got a gun, a single artillery gun, in their hands with the exception of a few little mountain batteries; and the whole of the arsenals are in the hands of the British troops. To my mind you have got a condition of safety now in India which makes it utterly improbable that India should require soldiers from England to maintain internal order in India. The occasion when India would require soldiers from England is on the occasion of her northern frontier being threatened by a great power; and that is the occasion when England would not be able to send them; and therefore it is that I say it is not right to say that England contributes by keeping a reserve for India.

14,806. (*Chairman.*) Of course, in a time of great emergency partners, like England and India, must make the best they can of their means; but is it not stating the case rather strongly, that under no circumstances, in no emergency of that kind, could any assistance be given from here?—I desire to express my conviction that—I am obliged to keep repeating this—with such a balance of power as there is now in Europe, and such a condition of alliances, if India were to be threatened by Russia on her northern frontier, and there were imminent probability of war, this country would not send one soldier out of England.

14,807. (*Sir Ralph Knox.*) But Russia might be vulnerable in another point?—This country would not send one soldier out of England, Sir Ralph Knox; neither to India nor anywhere else.

14,808. (*Chairman.*) But, on the other hand, you would be prepared to make a contribution to the Navy?—Certainly.

14,809. (*Mr. Courtney.*) One moment before we leave that point; does our history at the beginning of this century quite support your view?—Our history at the beginning of this century? I am afraid I must ask for a little further explanation of the question.

14,810. What I understand you to say is this, that in the event of India being assailed or threatened with attack on the North-west, the situation in Europe would be of such a serious character that England would be unable to render any military assistance?—Yes; not unable.

14,811. Well, that we should not?—That the country would not.

14,812. We would not?—The country would not.

14,813. From motives not of inability? you would not say that?—I do not say absolute inability.

14,814. But from the feeling of the necessity of keeping things secure at home?—That is the point.

14,815. Very well; at the commencement of this century was not our position in Europe at least as full of danger as it would be under the contingency you suppose, and did we not afford some assistance?—To whom?

14,816. To the East India Company in India?—Yes, a certain amount.

14,817. At the same time, under different forms, under different organisation, were we not at the same time fighting in Europe and in India?—We were, with very small bodies of men.

14,818. That is your answer; the forces engaged were so small?—The forces engaged in those days were very small indeed; the conditions of steam did not then exist; the conditions in the eyes of our military advisers, the Government's military advisers, were then so different to what they are now; that is to say, the conditions favouring the possibility of danger to this country are much greater now than they were then.

14,819. Do not some of these conditions tell both ways?—They may do; that is one of the problems that has to be solved.

14,820. You feel persuaded that we should not run any risk now?—I feel persuaded of it from what I know was the feeling during those years that I was at the head of the Intelligence Office, and from what I see and read, even in the debates of Parliament, at the present day, within the last week.

14,821. (*Chairman.*) You think that no effort would be made to save the Indian empire?—I do not say that no effort would be made to save the Indian empire.

14,822. You come very close to it; do you not?—Well, I am not sure that it is not very close to it, but I should have to think a little about that. I do not say that after a certain length of time—after, perhaps, this country had completely established her supremacy at sea, had swept the seas, if she had succeeded in doing this, and after all possible danger of attack upon this country had disappeared—I do not say that then she might not send troops out to India; but it is a question whether it would be in time, and, therefore it is, knowing all this, that India does keep up this great force in India.

14,823. (*Mr. Courtney.*) Yet our population is relatively bigger now than it was at the commencement of the century; we had not swept the seas at the very commencement, at the time of Assaye?—No; we had not.

14,824. And yet we did manage to send some important military supplies?—Oh yes, I quite grant you that it has been done, but I may say I am quite convinced in my own mind that it would not be done now.

14,825. (*Mr. Buchanan.*) The military forces opposed to us now would be very large; the disproportion between our total military force and that of European powers is much greater now than it was then?—I do not think the disproportion of forces on the frontier of India would be so very great, because I do not think that very enormous forces can be moved in that country from difficulties of transport.

14,826. (*Chairman.*) I do not think the disproportion of the forces can be said to be so very much greater, if you think of what the forces of the different Powers were at the commencement of the great European war. Our forces at that time, you remember, were very small?—Very small indeed.

14,827. Now passing on to the question of the Navy; you would make a contribution towards the Navy?—Certainly I would.

14,828. In what form would you make that? You have explained that it would be a contribution to the Exchequer; but on what sort of basis would you go? At present, as you know, there is a sum granted for the maintenance of certain ships that are employed?—I certainly should not have any question of account in this matter. The whole of this dispute between England and India, I think, over the naval contribution arises from the fact that up to the present day it has always been so very much a matter of account for certain ships, and so on. Lord Rosebery, in his award, suddenly changes all that, and he says India ought to pay 100,000*l*. Well, he is doing the thing that I would do, only I would, at the same time, sweep away all those military charges. I do not think England helps India too much even if she pays 1,100,000*l*., or if she pays 1,250,000*l*. indirectly in this way on behalf

of India; I do not think it is any undue advantage to India for England to pay for her share of the defence of India against foreign invasion. On the other hand, I do not think that 100,000*l.* is nearly enough for India to pay for what the British Navy does for her.

14,829. I understand that you would sweep away the account; but if a sum is to be fixed, it must be fixed on some kind of basis. Supposing our Navy estimate now to be 20,000,000*l.*, what sort of form would your contribution take?—I think my contribution would take the form of a fixed sum, payable by India to England yearly, based upon what India can reasonably afford to pay for that great help and protection which she gets from the Navy.

14,830. Of course, when you come to what India can afford to pay, that is somewhat difficult to arrive at. But what I want to ascertain from you is, what would your idea be, would it be 500,000*l.* or 1,000,000*l.*?—I say sweep away these military charges and call upon India to pay 500,000*l.* a year for what she gets from the British Navy, not counting the British Navy as merely the few little ships there are in the Persian Gulf or in the Indian command, but the whole of the protection which she gets for her commerce and for her relief of troops from the British Navy throughout the whole seas.

14,831. Now, let us bring the two ends together. At present, putting it in round figures, the War Office calculation would be, that the non-effective and effective payments of India to England are about 1,350,000*l.*?—I am afraid I do not quite understand what the non-effective payments are.

14,832. (*Sir Ralph Knox.*) Pensions of the men who have served in India?—Oh, yes.

14,833–4. (*Chairman.*) Which I understood also from your rough sketch you would sweep away?—I do not think there is any harm in India paying a share of pensions; I think it would be quite fair that, supposing a man served eight years and had been in India five of those years, India should pay five-eighths of his pension. I would not object to that; I do not think India would object to that.

14,835. Perhaps for the purpose of our calculation we will put that aside?—I would.

14,836. Then at present we have got what we will call the War Office calculation of 1,100,000*l.*, and 100,000*l.* for the Navy—we will call the total 1,200,000*l.* That is 1,200,000*l.* which you would sweep away. (Let me say that I put this as an outside figure, because there are various items in this 1,100,000*l.* which, I think, before they could be fully admitted, would be very much criticised. On the other hand, whereas the Indian Government now pay 100,000*l.*, you say they might pay 500,000*l.*, or some sum of that kind, for the Navy?—I think so; if you would sweep the other charges away.

14,837. And that would really mean a gain to India, on the War Office computation, of 700,000*l.*?—That is assuming Sir Ralph Knox's contention. At present I think India only pays for the army charges about 600,000*l.*, does she not?

14,838. Not quite so much; but I am putting it first of all from the War Office point of view?—She pays 7*l.* 10*s.* a head.

14,839. From the War Office point of view India would gain 700,000*l.* Coming now to your point of view, the War Office get something like 650,000*l.* a year from India, viz., 550,000*l.* on account of the Army and 100.000*l.* on account of the Navy, besides deferred pay?—Deferred pay; I should perfectly admit that a man's deferred pay during the time he was in India is a charge against India. It is part of the soldier's pay.

14,840. That 650,000*l.* would be swept away and replaced by a general contribution to the Navy of, say, 500,000*l.*; so that, as far as the actual sums under your plan and the actual sums the War Office receive now are concerned, there would not be a very great difference?—I do not say the Government of India would like to pay 500,000*l.*, but I believe the Government of India would without hesitation, if they were released of all these capitation charges, in the fairness of which they do not believe—nobody in India does believe in the fairness of them—if you sweep them away and have done with them, and say that England is going to pay her share of the expenses of maintaining India against the foreigner, and that the way she is going to do it is that all these charges that she might bring against India for training recruits for her and for this and for that and for the other shall be wiped out, that is to say, England is going to pay; on the other hand she expects that India, for the enormous benefit that there is to her commerce by its being absolutely protected at sea, and for all that she gets from the English Navy—that India should pay a real contribution for that, I believe there would be no difficulty with India whatever.

14,841. As the account stands at present between the two countries, England would take less from India under your plan by about 150,000*l.*?—It might be so; I really have not thought of it as a calculation in my mind.

14,842. I was going to ask whether some consideration is not due to the British taxpayer; but if it comes down to a difference between you and Sir Ralph Knox of 150,000*l.*, I do not think we need elaborate it?—I think the British taxpayer is bound to pay something towards this land defence in India, and, on the other hand, I think he pays practically almost everything for the naval defence.

14,843. (*Mr. Buchanan.*) Do you admit that 500,000*l.* is a fair charge?—I have never attempted to investigate it. You must not bind me down to any statement of a particular figure.

14,844. (*Chairman.*) In saying what you have about 500,000*l.*, you merely take a figure?—I think I wrote somewhere in my notes "even a quarter of a million."

14,845. The point I want to get out from you is this: at present the contribution is 100,000*l.*, do you mean something more substantial than that?—I do indeed; I mean a real, good, substantial contribution, if you wipe out these military charges.

14,846. (*Mr. Buchanan.*) I suppose you would sweep away all those charges in respect of the Red Sea and Mauritius telegraphs, the China consulate charges, &c.?—I would. I would sweep away all those altogether.

14,847–8. You think those ought to be borne by the Imperial exchequer?—I do. I cannot understand why India has to pay for consulates in China. I must honestly confess I hold strong views on that subject.

14,849. In the same way with regard to Aden; you think that it is an Imperial fortress and should be maintained out of Imperial funds?—I do not see any objection to India paying a part of the charges for Aden. The Government of India is anxious to get rid of everything connected with the Somali coast, which is dependent on Aden. It is becoming more important every day, the question involving European entanglements with France and with Italy on that coast of Africa. The Government of India is very anxious to get rid of it, and the Government of India was inclined to make a proposal for separating Somali land from Aden, and letting Somali land be dealt with by the home Government, while India retained Aden. On my way home, by the Viceroy's request, I stopped at Aden. I went into that matter with the Resident at Aden, and I wrote a memorandum which we agreed to at Aden, and which I afterwards handed in here. It showed, I think, pretty conclusively that you cannot separate the two; that the interests of the two are so mixed up that they must be dealt with together, and therefore under those conditions I do not think that the Government of India would at all object to the home Government taking Aden over bodily if they liked to do it. In that case I suppose the home Government would pay for it; now, India pays for it. I, of course, hold that Aden is an important place for India; but formerly it was a place for India only, before there was the Suez Canal; now it has become a place of great importance to the whole of our commerce with the East, and therefore I think the conditions, if you are going into details at all, should be revised as regards payment for Aden.

14,850. Do you think that, if there was a European war, the Suez Canal would remain open?—That is an open question. I know it has been said to you definitely in evidence that it would not. I am sure that question has been the theme of an immensity of discussion and an immensity of debate, and the naval authorities themselves were not—I do not know whether they are now—agreed one way or another. It must depend upon a great variety of conditions. There is one other point that I might perhaps mention in connection with what I have already said, which is this. It has been urged in favour of India, I think by Sir Henry Waterfield, that India gives good training for troops, and is in that way

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

15 Feb. 1897.

valuable to England; and it has been said, on the other hand, here that India does not give good training for war, that the climate injures the men, and that the officers and the men acquire false ideas of service elsewhere owing to their having numbers of servants and luxuries unknown elsewhere, and so on. I should like, in reply to that, to make a simple statement of fact. In the Nile campaign of 1884–5 the battalion which gained Lord Wolseley's prize for the fastest journey from Wady Halfa to Korti with its boats, was a regiment which had just landed from India, having completed its time of service in India, and it was of that regiment that Lord Wolseley wrote—of this regiment just landed from India, "When I first saw the Royal Irish in the desert I felt "that they could not be beaten," and I think that is more or less an answer to the statement that men live in such conditions of luxury in India, or are made so effete by the climate, that they are not fit for war elsewhere, because the nature of the work that they did in Egypt was quite as hard as any work that they would be called upon to do in any European campaign.

14,851. (*Sir James Peile.*) I want to ask you a question, Sir Henry, relating to the health of the British troops in India. We have had it in evidence that the proportion of the European soldiers constantly sick has risen very greatly; from 1870–9, when the average was 60 per thousand, to 92 per thousand in 1894, whereas among the native troops the result is quite different; that is, in 1882–9 the proportion was only 34 per thousand, and it has fallen instead of risen; in 1891 it was 31 per thousand. We had it stated that that increase was chiefly due to venereal disease. We also have been told that the number of admissions of British soldiers for venereal disease in India last year or the year before was 522 per thousand. Now, in foreign armies, the admissions are not, I find, one-fifth of that proportion, and when we come to consider what the cause is, we find it due to a resolution of the House of Commons which was conveyed to the Government of India with instructions to give effect to it, and the result of that was that the control of prostitution in cantonments was withdrawn from the Government of India, so that the commanding officers in cantonments are entirely without any power to check prostitution or to regulate it. The consequence of that is that we are told that there are 3,200 men which you may call, I suppose, four regiments, always entirely incapacitated from service. Sir Henry Fowler, in speaking of the duty of this commission, said that its duty was to see that India gets full value for what she pays. Would you say, with reference to those 3,200 men, that India gets full value for what she pays?—I think that it is a very desperate misfortune; that is my personal view; it is a very great misfortune that we are not allowed in India to have a strong control over prostitution. That is my personal view, and I believe that if you were allowed to have such control it would improve the health of the troops, and that India would get better value out of the men that she has there than she now gets. The misfortune of the present state of things is that it is not merely that there are so many sick and so many in hospital, and so on; that does not tell the worst part of the story. The worst part of the story is that the seeds of this disease are in these unfortunate men, and when they go out upon service they break down with the first few days of hardship, as was found to be the case with men in the regiments that we sent to Chitral, not to speak of all the misfortunes to those unborn; but in that India is powerless.

14,852. And you would consider that the effect of this interference of the House of Commons in Indian administration has had an adverse bearing on its financial interests?—I do not believe it would be fair to say "in the Indian administration" only, because we know that the same protective measures which were introduced at home were also ordered to be swept away.

14,853. But we find protective measures in foreign armies to be thoroughly effective?—Thoroughly. There is no doubt in my mind you could have a thoroughly effective system of protection if you were allowed to do it.

14,854. (*Sir Ralph Knox.*) To return to a minute point in your last day's evidence, you alluded to the fact that India was embarrassed, or Indian finances were embarrassed, by the fact that drafts in excess of those requisitioned had been sent out to India?—Yes, unexpectedly.

14,855. You are aware that there has been considerable correspondence between the home and the Indian Governments on this point from time to time, are you not?—I cannot say that I am; there had been no previous correspondence on the subject during the time that I was in India.

14,856. Well, the practice had prevailed for very many years in consequence of an understanding with the Indian Government that drafts should be sent out sufficient to bring the army at the commencement of the financial year in excess of the establishment so as to counterbalance the waste which necessarily arose during the period during which no drafts were sent?—I do not think that was the arrangement which had been acted on for a number of years. It was to bring the establishments up to full strength on the first of April.

14,857. No?—That was the arrangement, as I understand it.

14,858. It was a long-standing agreement with the Indian Government that they should be brought up at the beginning of the financial year to a number in excess of the establishment, so as to allow of waste during the following months. At one time, I believe, the understanding was (although I have not been able to lay my finger upon the paper) that there should be a number of 5 per cent. in excess of the establishment?—I must say I am not aware of that, and that, I am afraid, it does not altogether correspond with the information that was given to me.

14,859. Assuming that some understanding of the kind existed, that would be an explanation, to some extent, of the numbers being slightly in excess of the establishment at the commencement of the year, would it not?—Assuming that, yes.

14,860. You are aware that for some years in succession the numbers that were borne on the Indian books at that time fell short of the establishment by some hundreds?—At what period of the year?

14,861. After the drafts were completed?—I believe they did, yes.

14,862–3. And the Indian Government remonstrated in consequence. For instance, in 1889 I find there were 686 below the establishment of 70,000, and that in 1889–90 there were 1,300 below, in 1891–2, 440 below; but there was one year 1890–1—that is at the time when the increase of the artillery was being made, it was not quite made up to the full number so soon as was expected—when there was a deficiency of 2,000. Against that deficiency in 1891, the Indian Government protested?—Yes.

14,864. And in a letter of June 1891 the Secretary of State for India desired to impress most strongly on the Secretary of State for War, the extreme importance of making early and efficient arrangements to meet this deficiency, as well as the normal requirements of the ensuing season?—What is the date of that letter?

14,865. June 1891?—Oh, that was written in my time, yes.

14,866. In consequence of this remonstrance inquiries were made, and it was found that the returns that had been sent from the regiments in India were inaccurate, and did not properly represent the requirements of the regiments; in fact, their requirements had been underestimated, and the deficiency was to some extent due to that fact; are you aware of that?—No, I do not think I am.

14,867. However, steps were taken to improve the returns that came home from India, with the result that, the augmentation having been completed, the numbers reverted to the condition at which they had been for some time before, that is to say, some excess over the establishment on the 1st April. [I find that in 1892–3 there were 600 in excess; in 1893–4, 1,400; in 1894–5, 1,200; in 1895–6, 542.] It would appear that, relying upon the deficiencies of the previous years, the estimate framed for the pay of troops in India for these later years was not put sufficiently high because a deficiency was anticipated; whereas, the War Office having come to an understanding with the India Office as regards the returns sent home, the War Office were able not only to complete the establishment, but to bring it a little in excess; that was the result, I think?—The result of your sending out more troops than you were requisitioned for, was simply what has been stated by the Government of India, that you sent us more troops than there was room for in barracks, and saddled the Government of India with expenditure of several thousands of pounds a month to the relief of your estimates in England.

14,868-9. That is an assumption, is it not, that these men were sent out simply to relieve our estimates?—I do not say "simply to relieve." I merely say that it did throw that expenditure upon us to the relief of the expenditure in England.

14,870. But is it not the case that these men would have been raised in order to comply with the demands from India—for the purpose of being sent to India?—I do not think so; they are raised for general service in the army, not for service in India; they are raised for general service in the army; whenever the military authorities at home found they could not send out to India the proper number of recruits—that their difficulties with recruiting had been such, or that the men were wanted elsewhere, or whatever the reason was, they did not send them. When they found, as I take it, that they had more on their hands than they wanted, then they sent out more to India than India had requisitioned or asked for.

14,871. (*Sir Donald Stewart.*) Were they not offering bounties to men of other regiments to make up these deficiences?—Certainly, to make up the deficiency.

14,872. (*Sir Ralph Knox.*) Does that not rather point to the fact that there was great difficulty in making up the number that was required for India?—I daresay there was a great difficulty. I know there is constantly a great difficulty in making up the numbers of troops that are wanted.

14,873. However, if it be the case that there was an understanding dating from many years back, that the numbers should be somewhat in excess at the commencement of the year, 1st April or May, that would explain to some extent the fact that additional numbers were sent out?—I do not think it would. If you had been in the habit of carrying out that agreement for some years, it does not explain the fact of your suddenly sending us out very much larger numbers than you were asked for, or had ever sent before; that is the real point.

14,874. 1,200, 600, 500, is not any very large number, considering that they begin to diminish from that date?—It is a large number to be sent out in excess. I do not know what the number is, I have not got my Indian papers here, and I have had no opportunity of looking into the details of this matter; but, whatever the number was that we complained of, it was very much larger than had ever been sent out before at that time of the year. It was considerably in excess of the requisitions made by the Commander-in-Chief in India upon the War Office for troops; it put the Commander-in-Chief to inconvenience, and it put the Government of India to great inconvenience.

14,875. As regards the general question that you have raised, you appear to be of opinion that the greater part of the European army in India is there to defend it from a Russian attack?—Oh, I beg your pardon; I have not said that.

14,876. You surely said something like it?—The strength of the whole army in India is about 220,000, and of that, 70,000 are for what may be called the field army. 70,000 is not the greater part of 220,000.

14,877. No; but I mean British troops?—The British troops are in about the same proportions.

14,878. Do I understand that you think that one-third of the British army is in India to defend her from Russian attack?—I have not said that, and I rather object to having words put into my mouth that I have not said.

14,879. But surely you advanced it as a reason that India should be relieved of a very large charge on account of the Indian army, that the European army in India is, to a very large extent, maintained to defend India from Russian attack?—Not only the European army; a very large portion of the Native army is maintained for that purpose as well as of the British army; and if you have to maintain an army of 70,000 men, of whom, say, 50,000 are natives, for that purpose, that requires that you should have 20,000 more British troops in India as the counterpoise to the Native army: that is the point.

14,880. But surely you said that, in consequence of the re-arrangement made as regards artillery in India, a much smaller European force would be necessary to provide against such a contingency as a mutiny than in the past?—Oh, no, indeed. I do not say that a much smaller force would be required; you have got a very large native force. I said that the conditions at the present time for dealing with a mutiny are such that I hold that the British Army now in India is capable of putting down any revolt that might arise among the Native army without further assistance from home.

14,881. But not more than sufficient for that purpose?—Not more than sufficient; no, not more than sufficient.

14,882. Then it may be argued that, such a contingency being in view, it is required for that purpose?—I am afraid I must be very stupid in conveying my meaning. I endeavoured to explain that for the purpose of the defence of our frontier we have to keep up a large field army, in addition to what might be called the obligatory garrisons of India. The greater portion, two-thirds or more, of that army consists of native troops, and the fact that you have to maintain those native troops for that purpose compels you to keep an additional British force in India, because of that. If you could do away with that frontier question altogether, then you might reduce your army by—I do not wish to commit myself to any figures—but say 50,000 native troops and 20,000 British troops. That is the point I want to get you to understand.

14,883. But supposing there was no British occupation of India, what sort of army do you think would it be necessary for the Indians combined (assuming a combination possible, under such circumstances) to maintain to resist an attack from Russia, who, I suppose, would be just as hungry in that case, as in the present conditions?—I cannot imagine what the state of India would be if the British army were withdrawn. I should say that in all probability within 12 months Bengal would be a dependency of Nepaul, and a considerable portion of Northern India would very likely be annexed to Afghanistan — I do not know what would happen. That, I take it, is your contingency.

14,884. India would be no less liable to an attack from Russia, supposing England did not occupy India, than she is now?—I should think not; no. The only difference would be that India would not belong to England as she does now.

14,885. But India would have to maintain an army in order to resist such an attack?—"India" would be purely a geographical expression, if the British army were withdrawn; it could not have such a personality as you attribute to India in speaking of it as keeping an army. It would be simply and purely a geographical expression; a number of different races, fighting with each other and cutting each other's throats until the strongest—I have not the slightest doubt in my own mind who these would be at the beginning — would ultimately prevail, until another great power would come down and take the country out of their hands.

14,886. You seemed to think that the rule of India by England was much more in her own interests than in the interests of the Indian people?—No, I again most distinctly disclaim having said that. There is no one who holds more strongly than I do the immense advantage to India of British rule. I hold it as an article of my faith, but I hold, and I used the expression, that it is an enormous advantage to England to have India.

14,887. You gave, as one of the reasons, the occupation that it gave to English people?—Yes.

14,888. To what extent do you think it gives occupation to English people? What is the English population in India?—The British population in India? I cannot say offhand what it is.

14,889. Including the army?—I cannot say what it is.

14,890. Two hundred thousand?—It may be 200,000.

14,891. Including the 73,000 military forces?—Yes, I do not know really what it is.

14,892. The military forces comprise, of course, the local forces, which include a large number of Europeans. I suppose the European population may roughly be taken at about 80,000 or 90,000 military and 100,000 civilians?—I do not really know what the population is.

14,893-4. That is not a very large number to be personally benefited?—Well, that is a matter of opinion. I should say it was a very large number to be employed.

14,895. (*Chairman.*) Perhaps it would be hardly worth while for the British taxpayer to pay 1,000,000*l.* to keep those 200,000 persons in employment, would it?—That was only one of many things. I was stating the advantages to England, and I said India employs a large

Lt.-Gen. Sir Henry Brackenbury, K.C.B., K.C.S.I.

15 Feb 1897.

number of Englishmen. Look at all the hundreds and thousands of people that we know whose sons have gone out to India and got employment there; and the great commerce which we have with India; and with regard to that what I would point out is that if India, for instance, were to fall into the hands of Russia, we know perfectly well that our commerce there would become practically extinct, because, if she did not actually prohibit the importation of British goods, Russia would put on such differential duties on them that she would make it practically impossible for them to be imported, as she does in Central Asia and elsewhere.

14,896. Unless there is any other point that you would wish to call attention to, these are all the questions we have to ask?—I have nothing else. But I should like to express my opinion that if this Royal Commission could see its way to recommending the abolition of all these accounts for military and naval services, for the Secretary of State's salary and the expenses of the India Office, for diplomatic and consular charges in Persia, China, and elsewhere, and to substitute for them a fixed contribution from India, as her return for the advantages she derives from Her Majesty's Government and Her Majesty's Navy, treating India more generously than she is at present treated in these accounts, the acceptance of such a recommendation would remove many constant causes of irritation, and would do much to convince all classes in India of the desire of this country, which rules India, to treat India justly and generously.

The witness withdraw.

(Adjourned till Monday next at noon.)

At the India Office, S.W.

THIRTY-FIFTH DAY.

Monday, 22nd February 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Righ Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart, M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G CAMPBELL, *Secretary.*

Sir HENRY WATERFIELD, K.C.S.I., C.B., and Mr. STEPHEN JACOB, C.S.I., re-called and further examined.

Sir Henry Waterfield, K.C.S.I., C.B., and Mr. Stephen Jacob C.S.I.

22 Feb. 1897.

14,897. (*Chairman.*) Sir Henry Waterfield, you have some remarks to make, I think, upon the evidence that has been published?—(*Sir Henry Waterfield.*) Yes. In a few cases it appeared to Mr. Jacob and myself that it would be useful to the Commission to have some explanations in amplification or correction of the evidence already given.

14,898. In the first section of the inquiry, that is, the section which relates to administration, a question arose as to the delivery of the Indian Financial Statement before the close of the financial year. Is there any remark upon that which you would like to give us?—Formerly the financial year ended on the 30th April. In the discussion in Parliament on the Indian Accounts in 1864, great complaint was made as to the delay; and, in deference to many members, who suggested that the year should close with December, Sir Charles Wood explained the difficulty of interference with the English votes, but undertook to see what could be done. The whole system of the Indian Accounts was about that time re-organised; and, after carefully weighing the relative advantages or disadvantages of adopting the calendar year or the *fasli* (or revenue) year, the Government of India came to the conclusion that it would be best to antedate the financial year by a month only, making it terminate on the 31st of March, as in England. It must be remembered, further, that there are no separate Votes in India as in England, and, that, unless the Budget is passed by the Council before the end of March, there is no authority for proceeding with expenditure in the following year.

14,899. When you say that Sir Charles Wood explained the difficulty of interference with the English Votes, what did he mean?—He meant, I think, that, when Parliament had once entered on the discussion of the English Votes, it would be very difficult to obtain a day for the discussion of the Indian Budget by putting aside the discussion on English questions, and that, consequently there would be a great tendency to throw the Indian Debate to the close of the year, after the Votes had all been passed, and when the Appropriation Bill had been introduced.

14,900. How would the reform which Sir Charles Wood made, by which the financial year was put back a month, assist the object he had in view?—The only way in which it would assist the object was that the Indian Statement would be made in India on the accounts being closed somewhat earlier than had been the case before. Sir Charles Wood hoped, when he made his explanation to Parliament, that he might be able to bring the Indian business before Parliament at an earlier date. The point that I wished to explain to the Commission was, that that was attempted in the year 1864, and that the Government of India found it impossible to meet it further than to the extent of one month.

14,901. I do not think that the course of the inquiry by the Commission implied that they were disposed to lay great stress on the alteration, and, therefore (unless other members of the Commission want to ask some questions on the point), after hearing your explanation, nothing further occurs to me?—I only mentioned it in order that the Commission might understand that it was not a new point raised in the evidence of Sir David Barbour and Lord Cromer, but that it had been fully considered and found impracticable.

14,902. Then you have a statement in your hands as to the increase of provincial taxation?—After the discussion which arose on the table given by me on page 29, Q. 679, I wrote to India for such a statement as the Commission desired; and, on its receipt, it was given to your Lordship. That is the information to which

Mr. Jacob referred, in his answer 11,157 (page 330). I now hand in a summary* of the information in a rather more convenient form than that which I gave to you.

14,903. Taking this note, and looking at the evidence that has been given before the Commission, are there any points in it to which you would like to call attention, or do you think it would be useful to the Commission if we took the separate heads of it and I were to put a question to you upon them?—I think it would be sufficient, with the evidence that has been given, if that summary was printed in the Appendix to the Report. I think it bears out, generally, the point which I wished to show, that, although there had been increase of taxation within the law, it had not been increase of taxation for the purpose of an increase, so much as for the purpose of administration. The point, if you remember, was somewhat challenged by Sir Charles Bernard, who thought that there had been no reduction of taxation, that it was entirely an increase. I think that the statement justifies my remark; but I would rather leave it to the Commission to judge on seeing the figures.

19,904. These figures do, to a certain extent, modify the impression that would be left upon the mind of the Commission, do they not, from the note of percentages given on page 29—table, I should say?—I think not; I think that they bear out that statement that there was a considerable increase, but that it was due to the better administration, and that it was not taxation imposed in order to give the Provincial Governments more money.

14,905. From reading the papers which you were good enough to put into my hands, of which you now give us a summary, I am under the impression that the percentage of increase in the case of excise is really due to certain circumstances which very much modify the impression which would be left on the mind of a person merely reading the note, viz., that the excise without any special increase of rates had shown elasticity to the extent of 85 per cent.?—It showed elasticity within what was permitted by the law; and the Provincial Governments, for the purpose of better administration, in many cases raised the taxation in certain districts, but they also reduced it in certain districts, and, on the whole, I think that, large as the increase was per cent. under excise, I was justified in saying that it was caused for the purpose of better administration, and that it was not the result of the provincial system requiring more taxation.

14,906. The changes that were made were not made so much for the purpose of increasing receipts as for the furtherance of better administration?—That is what I mean.

14,907. (*Sir James Peile.*) The increase is very largely due to the substitution of taxed liquor for untaxed or smuggled liquor?—No doubt. That is what I mean by better administration.

14,908. (*Chairman.*) As far as that was ascertained, it would be a fair deduction to say that to that extent the increase was the result of better administration?—Yes.

14,909. At the same time, as I understand it, the law allowed the Executive a discretion as to the rates of excise which they would levy. In the first year, in 1880–81, those rates, at all events in many places, were low, and, acting on their executive powers, the Government increased them, though for that purpose it was not necessary to get a new law?—Yes.

14,910. And so far that increase would represent an increase of taxation, would it not?—It was an increase of taxation, undoubtedly.

14,911. And, therefore, we must not jump too hastily to the conclusion that such a figure as 85 per cent. represents what we generally understand as elasticity of revenue?—No; it was not entirely due to greater consumption owing to the better position of the people; it was also due to the Provincial Governments increasing the taxation in order to administer the revenue better. (*Mr. Jacob.*) Might I be allowed to say also that in many cases the system followed now is entirely different from the system followed in the earlier year, so that it is impossible to make any accurate comparison as to whether the taxation was higher or lower. For instance, in many cases central distilleries have been substituted for out-stills. In the out-stills there was no fixed rate of taxation per gallon, so that it is impossible to say whether the rate in those cases has been increased or not; and that statement will show that in very many cases the change which has occurred is a change from one system to the other.

14,912. Would you explain what you mean by the out-still system?—Out-stills were in places in outlying districts where it was difficult to exercise any total supervision, and the licensee paid a certain amount for a license, and he made as much liquor as he could.

14,913. He was supposed to brew so much spirits, and paid accordingly?—Yes.

14,914. If he brewed more than that, the revenue suffered?—Yes. There was a certain limit to the amount that he could brew, because he was only allowed a distilling vat of a certain capacity.

14,915. Then with regard to the other heads, stamps, provincial rates, and registration, the percentage of increase, though considerable if it is really attributable to elasticity of revenue, is not so striking. You do not consider that these papers which you got from Mr. Finlay, I think, in India, modify to any extent the conclusions to which your tables point?—(*Sir Henry Waterfield.*) Mr. Finlay's note practically tells me that there has been no increase of taxation in such cases.

14,916. (*Sir Ralph Knox.*) But is it not the case that this improvement of administration as regards revenue is induced by the fact that the Provincial Governments are aware that any surplus arising from a better collection of revenue is at their disposal to meet expenditure upon the objects in which they are particularly interested?—Yes; they have the inducement to increase it, provided they have the legal power; but the Provincial Governments cannot increase taxation beyond what has already been authorised by the law.

14,917. No, quite so; but they are induced to be more keen in their supervision of the collection of revenue because it is at their disposal, at all events for a certain time, for expenditure which they consider to be valuable for their own provinces?—The tendency, no doubt, is to give them that inducement; but I am not certain that they have exercised it for the sake of getting more revenue, so much as for the sake of getting better administration altogether.

14,918. What is the particular advantage that is claimed for the provincial system?—That, when they wish to spend more money on their own improvements, they commonly do so within the improvement of revenue which comes under their own resources, and that they must not incur expenditure to a greater extent than the development of those resources admits.

14,919. (*Chairman.*) The Provincial Governments, as I understand, have the power to increase these rates within the law, have they not?—Yes, within the law.

14,920. Without the consent of the Supreme Government?—Yes, within the law, subject to certain provisos which I explained before, that they must not interfere with a neighbouring district or a neighbouring province.

14,921. And during the term of their contract with the Supreme Government they get the benefit of any surplus that may arise from such increase?—Yes.

14,922. At the end of the term of their contract it is open to the Supreme Government to take a larger share of the produce?—Yes, and in almost all cases it does claim a part of the improvement. (*Mr. Jacob.*) They may not alter the rate of duty on any spirits and drugs in any case in which the alteration is likely to affect the excise arrangements of neighbouring provinces. The practical effect of that is, that they almost always have to get the sanction of the Government of India to any alteration of the excise rates.

14,923. We have had evidence given us on the subject of the military element being represented by two members on the Council. I do not know, Sir Henry, whether you have seen Sir Henry Brackenbury's evidence upon that point. I do not know whether it is in the evidence which has been circulated?—I have not seen Sir Henry Brackenbury's evidence; I think Mr. Jacob has read the first day's evidence, but I have not been able to read that.

14,924. Have you any remark you would like to make upon that point? And, perhaps, if anything occurs to Mr. Jacob, he might supplement your remarks?—The only point that occurred to me to explain about it was the reason that there are two members of Council who are military members. The Commander in Chief is usually an *extraordinary* member of the Governor General's

* Appendix No. 66.

Sir Henry Waterfield, K.C.S.I., C.B., and Mr. Stephen Jacob, C.S.I.

22 Feb. 1897.

Council; he may be so appointed, but he is not *ipso facto* a member at all; he is not an ordinary member, he does not see the ordinary business, he could not superintend the Military Department, and he is frequently absent on tour from the seat of Government. It is essential that there should be an ordinary member to supervise the Military Department of the Government of India. And perhaps, with reference to an inquiry by your Lordship at Q. 13,546, page 156, I may add that on one occasion the Military Member of Council had not served in India for 10 years (that is Sir Henry Brackenbury's case), and that, when that happens, not more than one other member can be similarly appointed, so that either the Legal or the Financial Member must in that case be chosen from the Indian Service. The point you raised was a different one, but it arose out of the position of the Military Member of Council.

14,925. (*Mr. Mowbray.*) How is it that the Commander-in-Chief is not necessarily a Member of Council? Has there ever been a case in which the Commander-in-Chief has not been a Member of Council?—None, I believe; but he is not by his appointment made a member; he must be specially appointed, and he is then appointed to be an extraordinary member.

14,926. (*Sir William Wedderburn.*) It makes a difference in his salary, I think?—I do not think so at all.

14,927. (*Sir Donald Stewart.*) It used to, but not now for many years?—That is so.

14,928. (*Chairman.*) The point to which you call attention here is that only two members can be appointed to the Council who have not served in India for 10 years, is that it?—That is so.

14,929. Therefore, if the Military Member of Council has not served in India for 10 years, it interferes with the general arrangement, I suppose, of the Secretary of State, under which, for instance, very often the Legal Member and the Financial Member have not served in India?—Yes. In that particular case the point arose on Sir David Barbour's resignation, owing to the fact that Sir Henry Brackenbury and Sir Alexander Miller were neither of them members who had served in India for 10 years; the power of the Secretary of State to appoint a Financial Member was, therefore, limited to one who had been in India for 10 years.

14,930. (*Mr. Buchanan.*) Is that by statute?—Yes; only two members can be appointed who have not served in India for 10 years.

14,931. (*Chairman.*) Passing now to Increase of Expenditure, are there any observations which you wish to make?—The first point which occurred to me is with reference to the debt, page 236, Q. 7249. It appeared to me that there was a little confusion in the question. We do not add exchange to the principal of the sterling debt: but, when interest is dealt with, exchange should be added to the sterling figures. I merely state it to make it quite clear what is the practice; it is not of great importance; it was only that there was a little confusion in those questions as to whether exchange was added to the interest on the debt or not.

14,932. I do not quite see what the point you call attention to is. I do not see in the question any mention of principal?—At Q. 7249 you say, "The "India Office follow that rule and charge the difference "between the rupee at one-tenth of a pound as loss "by exchange."

14,933. You see I was alluding to the interest?—Yes, there you were alluding to the interest, and, consequently, exchange ought to be added. As I say, it is not a matter of importance, but there is a little confusion as to whether we are dealing with principal or with interest there.

14,934. I quite understand; you clear up the point?—It was merely to make it clear.

14,935. Do you wish to say anything about the general policy adopted with regard to irrigation works?—Your Lordship asked, at page 267, Q. 8729, whether there was any statement of the general policy with regard to irrigation works? I think that, if I read to you an extract from the report of the Select Committee on Public Works in 1879, and the Financial Statement of 1881, it will give you what you desire.

14,936. Will you do so, please?—In the report of the Committee of 1879, page 21, it is recommended, "That "the construction of new works from borrowed money "for the future be limited to those schemes alone "which, upon the responsibility of the Government, "are estimated to be productive, by yielding an annual "income equal to the interest on the capital expended "in their construction, including in such capital interest "during construction. That the debt incurred for "productive public works be kept separate from the "permanent or general debt of India. That all expenditure on the construction of productive public "works should be treated as borrowed money, so that, "if, instead of borrowing to the full extent of such "expenditure, a part of the surplus revenue of the year "can be devoted to this purpose, the general debt of "India be treated as relieved, and the productive "public works debt be increased, to such extent. "That, if in any year the financial condition of India "should admit of an increase in the expenditure on "productive public works by devoting to that purpose "surplus revenue, care should be taken that the "permanent establishments be not so increased as to "prove burdensome in years less generally prosperous." Then in the Financial Statement by Major Baring, on the 25th March 1881, he said, "Successive Secretaries "of State have adopted the principles recommended "by the Committee. The present Secretary of State "has given somewhat greater precision to the instructions of his predecessors. It has been laid down "that the 'question of constructing new railways is to "'be considered on commercial principles. No new "'line is to be undertaken, unless there is good "'prospect of its proving remunerative; that is to "'say, unless it can be fairly calculated to pay, "'within a maximum limit of five years from the date "'of the line being open for traffic, 4 per cent. on the "'capital invested, including therein all arrears of "'simple interest incurred up to that date, and also "'the capitalised value of the Land Revenue and of "'Leave Allowances and Pensions.' In the case of "irrigation works it is said, 'Commercial principles "'may be so far relaxed as to admit of their being "'undertaken if they can fairly be estimated to prove "'remunerative in ten years from the date of their "'completion, on similar terms.'"

14,937. Has the financial progress of those works been watched, and is it within your power to say whether in the result that condition has been fulfilled?—In many cases it certainly has been fulfilled. There have been some instances of failure to justify the estimates, but, taken as a whole, I think the irrigation policy has certainly been carried out on the principles laid down by that Committee.

14,938. Do you suppose, if you were to take the whole of your irrigation works that have been undertaken under this rule, that they have fulfilled this condition? That is to say, that, if four or five have fallen short of what was expected of them, others have so far exceeded what was expected of them that, if you take the whole of the irrigation expenditure together, you would find that it turned out remunerative?—I think so. Of course, it must be recollected that, in looking at the financial result of the irrigation policy, you must exclude the purchase of some very bad works which the Government of India were obliged to take over; I am speaking of the works which have been constructed under this policy. Mr. Jacob points out to me the answer which he himself gave at Q. 8810, "the major "works" (which are the works that I have described), "taken separately, produce a small net revenue over "and above the interest at 4 per cent. on capital "expenditure which is charged against them." That would include even the failures; the Madras Irrigation Company's works would be included in that.

14,939. That includes the loss that you knew would be incurred by taking over the failures?—Yes.

14,940. Therefore, on the whole, you may say that the irrigation works have produced the financial result which you expected, even after allowing for these unfavourable contingencies which accompanied the policy?—Yes.

14,941. You drew a distinction in your evidence, Mr. Jacob, between major works and minor works; are the minor works works of such a small character that you do not apply these strict financial rules to them?—(*Mr. Jacob.*) No. I explained before what the nature of the minor works was; but the chief distinction between them and major works is that the whole of the capital expenditure on minor works is charged against revenue.

14,942. (*Sir Ralph Knox.*) Does this condition that you must make a profit apply to such expenditure as is

incurred practically out of the Famine Relief Fund?—(*Sir Henry Waterfield.*) No; a protective work may be constructed on other principles; but, if it were of sufficient importance for the capital account to be of magnitude, it would be included in major works, although it had been constructed from revenue.

14,943. (*Chairman.*) Would accounts of irrigation works distinguish protective works from works undertaken on commercial principles?—In the accounts for the year they are distinguished by the capital being charged against revenue; but the Public Works Department makes up an account to show how the major works are turning out, and in that they would include these larger protective works, even though the capital had been defrayed from revenue and not from borrowed funds.

14,944. But would it not be desirable that, in such a case, the financial result of the protective works should, at all events by a note, be shown so as to make a clear distinction between works undertaken on commercial principles and works undertaken for purposes of general policy?—That can be prepared at any time; but the statement in the Finance Accounts shows the revenue return on all works of sufficient magnitude to have a separate capital account. It is shown at page 127 of the Finance Accounts; you will see a column showing in each case what is the profit that has been made, excluding 4 per cent. or including it.

14,945. This account shows that during the year 1895–6, as I understand it, the balance of excess revenue, or profit, remaining after charging interest at 4 per cent., is 91,362 Rx.?—Yes, that is so.

14,946. And this account includes the result of purely protective works?—If they were of sufficient magnitude to have a separate capital account; there are some small protective works which are not brought in.

14,947. Would it not be possible to add a note to that account to the effect that, if the deficit on the protective works, which were not undertaken on commercial principles, were deducted, such and such would be the profit?—It could be added, but I should rather deprecate it as tending to cook the accounts. Irrigation works are frequently recommended by the Government of India on the double ground that they are much needed to protect a district from famine, and also that there is likely to be a sufficiently remunerative return. I think it would be a little dangerous to say on which ground they have been executed. It would be very easy to exclude the amount which had been paid from revenue, and say what the return on the amount charged to borrowed funds would be; but a work may be partly paid for from revenue and partly from borrowed money.

14,948. Is any part of the cost of major works defrayed from revenue?—Yes, in the case of protective works.

14,949. My point is this: the Indian Government undertakes a large amount of work of a commercial character; do you not think that it is desirable to show what is the real result of that work? If the Government mixes up in the accounts of such works the results of works which are unproductive and which were not undertaken on commercial principles but in the interest of the general public as matters of policy, does it not give rather an unfair result of the working of the Indian Government where it deals with a commercial business?—It perhaps hardly goes so far in the defence of the Government as would such an account as your Lordship mentions; but the Government of India is at present content with showing that, even if the capital laid out on protective works be included, for which they did not have to borrow, they can still show that there is a profit after deducting charges for interest.

14,950. Should you object to a note being put in that account in accordance with what you were holding out as a possible means of meeting my criticism, viz., to show the result, excluding the interest on sums advanced from revenue?—There would be no difficulty, I think I can certainly say, in making a note that of this total capital outlay so much has been expended from revenue, and, excluding that, that the profit would be $4\frac{1}{2}$, or whatever it is, rather than 4 yer cent.

14,951. But, at all events, speaking on behalf of the Government of India, you are satisfied if you show a profit of Rx. 91,000 upon the total account?—I think that that is sufficient for the purpose.

14,952. At Q. 12,018 (page 362) a suggestion was made that a note should be inserted in the accounts, showing the sums contributed by civil servants towards their superannuation allowance. Have steps been taken to carry that into effect?—Yes; and in the Finance Accounts just received, for 1895–6, on page 97, there is a note stating that Rx. 79,400 approximately was recovered from Indian civil servants, by deduction from their salaries, on account of contributions towards annuities.

14,953. That would make the total receipts, would it not, 374,000 Rx. plus 79,000 Rx. recovered from Indian civil servants?—Yes.

14,954. And this sum might be placed as extra receipts against the sum of Rx. 4,167,869 on the next page?—Yes.

14,955. Turning now to Q. 10,988, at page 325; this was a question put by Mr. Naoroji about two returns, one of 1878 and one of later date, and I think it came out that that first return was never printed?—Yes.

14,956. Is that in any shape available?—When I last inquired, it was in the library of the House of Commons, and I suppose it is still there; but it was very bulky, and owing to the fact that it included a very large amount of mere names, the Printing Committee did not order it to be printed—I believe that that was the reason; but, if that nominal part were omitted, the remainder, which was compressed into 32 pages of manuscript (and therefore certainly would not be a very bulky return), might, I should suppose, be printed, if any member applied that this should be done.

14,957. And that would be a summary?—That would be a summary.

14,958. Have you got a draft of it in this office?—No. Mr. Bright insisted on having the names; the India Office suggested to him that the numbers would give him really what he wanted, but I think that he was a little suspicious that we did great jobs in those days, and he would insist on having the names of every one who was drawing a salary or a pension of a certain amount; and that swelled the return very largely. When it was presented, I compiled a summary which I thought would give all the information, and, expecting to have it back from the printers in a few days, I did not take any copy of it, and we have never been able to use it again since.

14,959. That is to say, a copy does not exist?—There is no copy. The original existed, and I did on one occasion refer to the librarian and found that it was in the House of Commons library.

14,960. The summary was there?—The summary, which is the first 32 pages of the return. I cannot think that there would be any objection to printing it.

14,961. I suppose that 32 pages of manuscript would probably go into two or three of print?—I should think into six or eight at most; it would be a small return. I do not think there would be any objection to printing it, but it is not in the power of the India Office to see to it.

14,962. Perhaps you would ask the librarian of the House of Commons whether access could be had to the return, with a view to seeing whether the summary could be printed in a form available for the Commission?—I will do so. It will, of course, be understood that the information is now very old; it was given in 1879.

14,963. I think you want to suggest some modification of some figures which I gave in Q. 6758?—Yes. I think that your Lordship's reference to the gross revenue, unless accompanied by explanation, may be misleading as to the supposed elasticity of the revenue of India.

14,964. I took my figures from the Statistical Abstract, and mentioned the fact that the total gross revenue of India appeared to show a very considerable increase; and I mentioned that in proof of the elasticity of the revenue, I think?—Yes. The exact figures which you quoted from the Statistical Abstract were, gross revenue in 1883–4, Rx. 71,841,790, and in 1893–4, Rx. 90,565,214, showing an increase of Rx. 18,723,424. Of this amount railways produced Rx. 8,336,816, but at an increased cost of Rx. 9,567,567; and about $2\frac{1}{2}$ millions more must be deducted for the receipts in other departments, which were considerably exceeded by the corresponding charges. The increase in the revenue proper was Rx. 8,155,199, while the cost of collection and other direct demands rose by Rx. 1,473,989. So that the net increase of revenue in the 10 years was not 19, but rather less than $6\frac{3}{4}$, millions of tens of rupees. I thought

Sir Henry Waterfield, K.C.S.I., C.B., and Mr. Stephen Jacob, C.S.I.

22 Feb. 1897.

that the suggestion that there was an increase of 19 millions showed much greater elasticity of revenue than could really be said to have existed.

14,965. It is perfectly true that I took the Statistical Abstract at the moment, and turned to it and read out the figures of gross revenue which were given in it?—Yes.

14,966. But may I call attention to this table which you have given me, and which I will ask you to hand in to the Commission, in which you analyse those sums?—I will hand in the table.*

14,967. You observe there that, if you take the revenue proper, the result of taxation, land revenue, salt, stamp, customs, provincial rates, assessed taxes, forest, registration, and tributes, in 1883-4, the total sum received was Rx. 42,482,000; and, in 1893-4, Rx. 53,566,000, giving an increase of Rx. 11,000,000. I am giving round figures?—That is so.

14,968. Eleven millions is an increase on 42 millions of 25 per cent., is it not?—Yes.

14,969. And an increase of 18 on 71 is also very nearly an increase of 25 per cent.?—Yes.

14,970. So that, though I was not aware of it at the time, as a matter of fact, it appears that on the revenue proper the measure of elasticity, as shown in this table, is 25 per cent.?—But I hardly think that, in taking the measure of elasticity of the total revenue, you can exclude such a head as opium, for instance.

14,971. Quite so, if you are taking it on the total. I am not quoting those figures in the least as against your correction of what I said; but I call attention to the fact, which strikes me now for the first time, that the revenue proper does show a very considerable amount of elasticity?—Undoubtedly it does show that; but whether you say that there is an increase of 11,000,000 or an increase of 8,000,000 (which is the figure excluding opium) it is a considerable difference in proportion.

14,972. I quite agree with that; but still the fact remains which would justify my conclusion: "You "would have to go a very long way through all the "countries of the world before you could find so "elastic a revenue as that," and I should venture to think that any country in the world would be glad, within a period of 10 years, to point to an increase in its revenue proper of 25 per cent.?—Yes, but it is partly by increase of taxation.

14,973. But that fact had previously been brought before us?—Yes.

14,974-5. By-the-way, on the balance of the increase and decrease of taxation during those 10 years, was there a very considerable balance of increase?—I have answered that at Q. 12,073, page 366 of the 1st volume. I think that the two millions under salt, the three millions under customs, and the increase of 1¼ millions under assessed taxes, besides Rx. 200,000 under provincial rates, and about a million under excise, must be considered an increase of taxation.

14,976-7. And against that was there no set-off in reductions?—There was a very large reduction of salt and customs duty just before this date; but these figures would not be affected by that.

14,978. You wish, I think, to add something to your evidence about the China diplomatic and consular establishments, page 482?—I think that I hardly laid sufficient stress on the objection to India's being treated differently from other dependencies. It is argued in Q. 12,450, that, if India has one-fourth of the China trade, she may reasonably be charged with one-fourth of the expense of the establishments; but Australia and other colonies have a certain portion of the trade, yet they are not called on to pay any part of the expense.

14,979. It is nevertheless a fact, is it not, that, from time which we may call immemorial for our purpose here, India has paid her share, at one time nearly the whole, of the cost of the China consulates, has she not?—Under the East India Company she paid a large proportion.

14,980. Therefore there has been no change of policy in that respect; it is an arrangement of very long standing that India should pay a part?—Yes. At the time that that arrangement was first made, the East India Company had a monopoly of the trade.

14,981. At one time she paid very nearly the whole cost, did she not?—Yes.

14,982. Therefore the modifications, such as they have been, have been in return for the abandonment of the monopoly; there has been a very considerable decrease in the amount charged?—A decrease in the proportion of the amount charged, but a very large increase in the actual amount charged; it was then about 3,000*l.*, it was afterwards raised to about 20,000*l.*

14,983. That is accounted for by a very large opening up of the China trade?—Yes.

14,984. (*Mr. Buchanan.*) The same principles do not apply to any other part of the Empire except India?—No, that was the point I wished to bring before the Commission.

14,985. And all the monopoly that India enjoyed has been taken away from her?—Yes. I gave the figures at Q. 12,415: "Owing to the great increase in the total "cost of the establishments, the amount falling on "India rose from an average of 4,676*l.*, between "1835-6 and 1842-3, to 22,000*l.* or 23,000*l.* from "1867-8 to 1871-2." There has been a considerable reduction since.

14,986-7. (*Chairman.*) In regard to the Persian mission, you handed in (at Q. 12,413, page 480) a statement obtained from the Foreign Office of the payments by the British Government. Have you any observations to make upon them?—As explained in the footnote on page 480, the statement was revised by the Foreign Office, and is now shown on page 403 of Vol. II. The average payments of the last three years have been 21,824*l.* by the Foreign Office, or 41·7 per cent., and 30,522*l.* by the India Office, or 58·3 per cent. India is, therefore, paying a good deal more than half; and, if the expenditure should be equally divided, her contribution of 7,000*l.* a year should be reduced to about 2,650*l.* Perhaps I should explain to your Lordship that I am now taking the point of equal division of the expenses, and not the ratio of 7 to 12, which has hitherto been adopted,

14,988. You are assuming that the ratio should be equal?—I am showing what the contribution by India would be if the expenses were evenly divided.

14,989. You are not maintaining that the present contribution is contrary to the arrangement which now exists, be it good or bad?—No.

14,990. With reference to Aden, have you anything to observe?—A question was put to Lord Wolseley in which there is an inaccuracy—page 521, Q 13,221, it is suggested that "Great Britain only pays Rx. 16,000" for the cost of Aden. She pays nothing towards the annual expenditure. The only payments she has made are a moiety of the Special Defences and Armament, up to a certain amount, and this is now drawing to a close. The point is, that it was taken in that question rather as if the Special Defences contribution was an annual payment, and not an accidental one which is passing away.

14,991. (*Sir Ralph Knox.*) The payments have been made towards the works?—Yes, but not towards the annual expense of Aden.

14,992-3. (*Chairman.*) And does the sum of 277,000 Rx. in the Accounts simply refer to the maintenance charges of Aden?—That is the total payment from Indian revenues for the cost of Aden in 1894-5; I think it did not include the expenditure on the special defence works. Mr. Caine's question set the annual expenditure in India against the capital expenditure which England was bearing in that year.

14,994. Quite so; the point is that the 277,000 Rx. includes nothing on account of Special Defences, and therefore we are not comparing the sums *in pari*?—I have not the statement before me at this moment, but I believe that is so*; at any rate my point is that for the ordinary maintenance of Aden England pays nothing.

14,995. Mr. Jacob, in a Memorandum which Sir H. Waterfield handed in, and which is printed in Appendix 48 (page 371), we have had the views of the Secretary of State in Council regarding Aden. Do you wish to add anything thereto on the part of the Government of India?—(*Mr. Jacob.*) I should like to be permitted to say something about the Indian view of the question of England bearing a share of the cost of Aden. Our view is that the discussions of this question have been prejudiced by introducing into them the question of the transfer of the control of Aden. It seems to us in India that these two questions are independent of each other, and that it does not

* *See* Appendix No. 72.

* See Q. 15,004.

follow that England should bear no share of the cost because the control is in the hands of India, any more than it would follow that India should bear no share of the cost if the control were transferred. There may be reasons on the one hand why India should retain the control (even as a trustee for British interests), while, on the other hand, those interests may be sufficient to justify England's bearing a share of the cost. These questions may, therefore, be kept separate.

The grounds on which India has urged that England should bear some share of the cost are that England is very largely interested in the maintenance of Aden from many points of view. The commercial interests involved have been laid before the Commission at some length, and I have very little to add as far as that point is concerned. The necessities of trade, especially since the opening of the Suez Canal, have rendered Aden peculiarly valuable to England as a commercial nation. It has been well called the key of the commercial highway to the East; and it is no exaggeration to say that the whole commercial world is interested in its maintenance, and, most of all, England, the principal commercial nation of the world. But from a naval, and consequently from a military point of view, Aden is equally important to England. In the event of war it would furnish our Navy with a fortified coaling and re-fitting station on a main line of Imperial communication, and would thus form a naval base for defending communications in the East England has indeed admitted her interest in this respect by bearing a share of the cost of the fortifications and armaments of Aden; and it may be urged that she is equally interested in the maintenance of an adequate garrison.

Then, further, politically Aden derives a considerable part of its importance, not from the consideration of Indian interests, but from its relation to the general foreign policy of the Empire. It is a centre from which influence is exercised, not in the interest of India alone, on the Arabian and African coasts; questions thus arising affect wider interests than those of India, and their settlement will not and cannot be left to the Government of India. The policy must be decided at home, and India thus may become involved in diplomatic matters in which she has very little voice and over which she has no exclusive control; her action will merely be limited to carrying out at Indian expense a policy which she has not laid down, and whose aim would be complicated by British and European rather than by Indian considerations. India, in fact, runs the risk of becoming entangled in troubles arising in Africa, and of incurring demands in the way of men and money to support a policy which will not have purely Indian interests for its object.

On such grounds India has urged more than once that England should bear at least half the cost of the maintenance of Aden both as a civil and military station.

As regards the question of control, India would urge that there is something to be said for her retaining the control, even though she does not bear the whole cost.

1. Geographically Aden is so situated that in case of menace India should furnish succour; and, if communication by the Suez Canal were stopped, Aden would naturally fall under the control of the Indian Government.
2. The native portion of the garrison must be furnished by India; and even the European garrison must be paid on the Indian scale, and can most conveniently be supplied by dropping troops on their way home from India.
3. Aden is practically an Indian town; the labouring population, the traders, and the capitalists are Indian; and the administration has hitherto been on the Indian system, to which the bulk of the people are accustomed, and is probably cheaper on that system than it would otherwise be.

I should add, that when the matter was last discussed in 1890-91, the Government of India were given to understand that the British Treasury would not under any circumstances accept any additional charge through the transfer of Aden. Their decision to oppose the transfer of control was accordingly influenced by the impression that the utmost that India could expect from the Treasury would be that she should continue to bear the cost on the existing scale, England possibly bearing any future additions to that cost.

14,996-8. May I ask the ground on which you call our attention to this point? It rather leaves upon one's mind the impression that there is a difference of view between the India Office and the Indian Government. But the paper to which you refer was put in by the India Office, and in it the attention of the Commission is called to the fact (after many reasons have been brought forward why England should contribute to the cost of Aden), that "so long ago as 1861 the Government of "India urged the propriety of the expenses of Aden "being divided between Great Britain and India." It appears to me that the Government of India, as represented by yourself, and the Secretary of State, as represented by Sir Henry Waterfield, are arguing in the same line?—There is one point, at any rate, which was not brought out in the evidence that was given before, and that is that the question of control has been introduced and mixed up with the question of England bearing any portion of the expense.

14,999. You want entirely to separate the question of control from the question of expenditure?—It seems to me that the question of the division of the charge has been prejudiced by the introduction of the question of the control.

15,000. Sir Henry Waterfield, would you look at that paper of the India Office, which I think you handed in, page 372?—(*Sir Henry Waterfield.*) Yes.

15,001. I see that that gives these figures of Rx. 277,000 and Rx. 16,000, and that Special Defence Works form part of the Rx. 277,000?—Yes, you are right. I had not the figures before me when I was speaking just now, and I think, as applied to the year 1894-5, the figures that should be given are that India spent Rx. 32,000 on Special Defence Works in that year and England Rx. 16,000, and that for the maintenance India spent Rx. 245,300 and England nothing.

(*Chairman.*) That rectifies, but, of course, it does not affect very largely your contention.

15,002-3. (*Mr. Mowbray.*) Did India pay Rx. 32,000 and Great Britain Rx. 16,000? It appeared to me from that memorandum that England had paid half of the Rx. 32,000 charged originally to India?—That is so. I did not explain it clearly. It is that the cost of the Special Defence Works was Rx. 32,000 in that year, of which India paid Rx. 16,000 and England Rx 16,000.

15,004-6. So that, including Special Defence Works, the total of Indian payment would be 261,000*l.*?—Yes. The Special Defence Works are a temporary charge, the ordinary annual maintenance was 245,000*l.*, which was paid entirely by India. The special defences in that year amounted to Rx. 32,000, of which Rx. 16,000 was repaid by England.

15,007. (*Mr. Buchanan.*) But, according to this memorandum, it was not repaid in full owing to various objections urged by the War Office; is not that the case?—I am not the author of that memorandum, and I am not quite certain of the meaning of these exact words; but I believe that they mean that we had at the time closely approximated to the maximum limit which was to be charged on the United Kingdom, and, therefore, it was thought that, perhaps, the whole of that might not be recovered; but, speaking generally, the expenditure on the Special Defences has been divided between the two Governments equally.

15,008. (*Chairman.*) It is part of your statement, Sir Henry, is it not, that that Special Defence expenditure is coming to an end?—Yes.

15,009. And has the British Exchequer paid up the 16,000 Rx.?—They have paid up the half that we charge them. I am not able, without reference, to speak to the particular charge in 1894-5; they have paid the portion of the cost that is due by them.

15,010. You are familiar with this matter, Mr. Ryder; do you remember the repayment of the half of the cost of these Special Defence Works?

(*Mr. Ryder.*) I think so. The arrangement was that the cost should be equally divided between the two Governments.

(*Chairman.*) Both the cost of the Special Defence Works, and the cost of armaments.

15,011. (*Mr. Ryder.*) I think so?—There are limits in each case. The amount that may be charged upon England for works is limited to one-half of the original estimate. The amount that may be charged upon India for armaments is also limited to one-half of the estimate.

15,012. (*Chairman.*) And the 32,000 includes both armaments and works, does it?—I am afraid I cannot answer that without reference. May I refer you to the exact figures which are given at page 484, Q. 12,505. Perhaps I may read the answer I gave then?

Sir Henry Waterfield, K.C.S.I., C.B., and Mr. Stephen Jacob, C.S.I.

22 Feb. 1897.

15,013. If you please?—The works were estimated to cost about 213,000*l*; the United Kingdom agreed to pay a moiety, or 106,573*l*., and she has paid that. The accounts are being received from India, and rather fairly bear out the estimate, although it is possible that it may be somewhat exceeded; but the share of the British Government is limited. On the other hand, the cost of the armaments was to be borne by India to the extent of 52,655*l*., and for that accounts have practically been rendered, though I think it is still subject to some adjustment.

15,014. And that means that the Imperial Government have borne 52,655, I suppose?—Yes.

15,015. I think, Mr. Jacob, the question of Aden has been very fully discussed before the Commission—we have had it discussed on Sir Henry Brackenbury's evidence, and on that of other witnesses—and the pros and cons have been argued out; therefore, unless other members of the Commission wish to enter upon it, I do not propose to reiterate now what may be said *per contra*.

At Q. 12,296, the effect on Indian Finance of the reduction of the postage rates was discussed. Have you any further information, Sir Henry, to give us upon that point?—Yes; I wrote to India, and I have received a letter in reply. It is calculated that the reduction of the postage on letters in 1891, and on newspapers and book-packets in 1892, resulted in a loss to the Government of India in 1895-6 of approximately Rs. 4,80,000. The following note by the Director-General of Post Offices in India explains the calculation:—

"It is not an easy matter to give the information that has been asked for in any satisfactory or complete way, but I have had the figures carefully worked out, and now submit a note on the subject.

"2. The case, of course, can be stated clearly and simply, apart from the rather complicated question of our payments to London, and apart from exchange.

"The reduction in letter postage was introduced from the 1st January, 1891, and the reduction of packet postage from the 1st January, 1892. We have a regular record of the actual weights of the mail articles of different classes sent to the United Kingdom,* and the number of postage rates that go to a given weight have been carefully estimated, both in the past and since the reduction of weights took place. In its simplest form, therefore, the case can be stated as below, showing as a result, that the revenue derived from postage on the mails to the United Kingdom during the year 1895-6 was about a lakh and a half less than the revenue before the reduction of postage rates came into force.

Paid Letters.	In 1890 Jan. to Dec.	In 1895-6.
Weight - -	Ozs. 824,320	Ozs. 1,113,200
Number of letter rates -	2,349,312	3,295,072
Postage - -	Rs. 6,60,744	Rs. 5,12,855

Paid Packets.	In 1891 Jan. to Dec.	In 1895-6.
Weight - -	Lbs. 166,924	Lbs. 255,971
Number of packet rates	1,305,478	3,209,876
Postage - -	Rs. 1,22,388	Rs. 1,00,308.

"3. The growth of the mail matter, however, as shown by the figures given in the preceding paragraph, cannot be attributed solely to the reduction in the postage rates. A normal or average increase would have occurred in any case, and allowance must be made for this. The full financial effect of the change, therefore, can only be arrived at by estimating the income from postage that might fairly have been expected in 1895-6 if the reduction in rates had not been introduced, and taking this against the charges that would have had to be incurred in making payments to the General Post Office, London, and then comparing the result with our actual position, under present arrangements.

"4. In order to form an estimate of the extent to which the Mail matter would have increased if the postage had not been reduced, the average rate of increase during the three years preceding the change has been taken as the normal rate of growth since the reduction. It has further been assumed that the arrangement as to settlement of accounts with the British Post Office which had previously been in force would have continued. According to that arrangement a fixed sum of 40,000*l*. a year was paid by India towards the Peninsular and Oriental subsidy; and, over and above this, certain credits were given to the British Post Office on account of its inland share of postage, and on account of sea-postage and continental transit charges; while certain credits were received out of the postage collected in the United Kingdom as the inland share of the Indian Post Office.

"5. It is calculated that, if no change had taken place, the credit to be given to the British Post Office during 1895-6 would have amounted to 48,984*l*., while the credit to be received by the Indian Post Office would have been 26,449*l*., leaving a balance in favour of the United Kingdom of 22,535*l*. If the sum of 40,000*l*. be added to this, the net payment to be made to the General Post Office, London, would have been 62,535*l*., or Rs. 11,32,709 at 13$\frac{1}{4}$*d*.* to the rupee.

"The total postage collections on the main classes of correspondence sent to the United Kingdom at the rates formerly in force would, it is estimated, have amounted to Rs. 8,65,023, leaving a deficit of some Rs. 2,60,000 to be made good out of general revenue.

"6. Turning now to the actual results of 1895-6, under the reduced rates of postage, I calculate that the postage collected on the main classes of correspondence sent to the United Kingdom was Rs. 6,49,342† while the sterling payment made to London amounted to 77,044*l*.‡ This sum, at the rate of exchange mentioned above, is the equivalent of Rs. 13,95,513, so that the deficit to be made good out of general revenue was something like Rs. 7,40,000, in place of Rs. 2,60,000.

"7. It may, therefore, be said that so far as India is concerned the result of the reduction of postage has been that during 1895-6 the payment to be made to the General Post Office, London, on account of the transmission of the mails was in excess of the postage collected by about 4$\frac{3}{4}$ lakhs more than it would have been if the rates had not been reduced."

15,016. In what form are you putting that before us? Are you arguing that that was an expense forced upon India by the Imperial Government?—My object was merely to give the explanation for which the Commission called.

15,017. Mr. Jacob, Sir Henry Waterfield gave an explanation respecting the Zanzibar and Mauritius Telegraph Cable; have you anything to add to that explanation?—(*Mr. Jacob.*) The general view which I take of the matter (which is also, I believe, the view held by the Government of India) is expressed in the memorandum which has been printed as Appendix 64, in Vol. II. of the Commission's Report. I would merely add that I should demur to the view expressed in the answer to Q. 12,310. I do not think it can be said that the original proposal for this cable came from the Government of India. The proposal of the Government of India was for a cable from Ceylon *viâ* Mauritius to the Cape, with the view of giving additional telegraphic communication with England. The scheme proposed by the home Committee was an entirely new proposal; it did not afford any additional route of telegraphic communication between India and England. And I do not think that any liability can be attributed to India on the ground of its having originated an entirely different proposal with different objects from those secured by the existing cable. India considered the new proposal to be of importance to India, and in this view was willing to bear a moderate share of the cost; but it never expected to have to bear a yearly charge of 8,000*l*. or 10,000*l*. on this account.

15,018. But does that affect the question that India actually did propose a cable to the Mauritius?—They proposed a cable from India to the Mauritius, and from the Mauritius to the Cape, only as furnishing a new route from India to England.

15,019. But that was the result of the discussion that took place upon the proposal. Do you mean to say

* The Continental correspondence has been left out of account. Its inclusion would not much affect the main result.

* The official rate of exchange for the year.

† Including the postage on unpaid official letters which is not actually collected in India.

‡ £
60,600 fixed annual payment towards P. & O. subsidy.
16,444 credit on account of Continental train transit.
£77,044

that the Indian Government would not have accepted the enlarged proposal? I understand they did?—I say that the Indian Government thought that the new proposal was of importance to India, and they were willing to bear some share of the cost; but I do not think it can be said that they originated that proposal. They originated an entirely different proposal.

15,020. Quite so; but as the discussion went on the Imperial Government enlarged that proposal, and the India Office accepted, as I understood, the enlarged proposal?—I do not think they enlarged the proposal at all; they made an entirely different proposal which did not secure the objects which the Government of India had in view.

15,021. It involved a communication with the Mauritius, did it not? It gave India communication with the Mauritius, which India had proposed, only it was on an enlarged scale, and India acquiesced in the enlarged proposal, did she not?—India did not, in its original proposal, want communication with the Mauritius, except as a means of communication with England.

15,022. As the discussion went on, the proposal took an enlarged scope, and, as I understand it, India accepted the enlarged proposal of the Imperial Government?—It accepted the proposal; because the objects which it had in view in its original proposal had already been secured in another way.

15,023. But in that case, should we not have expected to find India protesting against and refusing to subscribe to the new proposal?—They expressly said that they were willing to bear a moderate share of the cost. They have been made to bear one-half of the cost.

15,024. But they wanted to have the cable; it was not forced upon them, was it?—It was practically forced upon them by the communication to them of the decision of the Treasury only to vote the other half.

15,025. But I mean it was in the power of India to have declined, was it not?—Yes, and then the scheme would not have been carried out at all.

15,026. Therefore India wanted to have the scheme carried out, and for that reason she assented?—I have said that the Indian Government thought the scheme was of some importance to India, but they did not consider that they were equally interested with England in it.

15,027. Still it was in the power of India to have declined altogether; whereas for reasons which were, no doubt, satisfactory to India, India assented. She was a free agent in the matter?—She did protest against such a large share being put upon her; it was only under compulsion that she assented.

15,028. I want to bring that word "compulsion" to an issue between us. It was in the power of India to have declined altogether if she had liked?—I do not think she could have declined.

15,029. No, exactly; the scheme was to be of so much value to her that she assented?—She gave an unwilling assent.

15,030. But she did assent. She could have declined if she had liked?—I do not think she could have declined.

15,031. Because it was of so much value to her to carry it out?—Because the India Office considered that it should be carried out. (*Sir Henry Waterfield.*) Mr. Jacob draws a distinction between the India Office and the Indian Government in this case.

15,032. But anyhow, although they did assent, they did not accept the arrangement as satisfactory?—Not at all.

15,033. (*Mr. Courtney.*) Was a cable constructed from Mauritius to India?—No, there is no cable from Mauritius to India.

15,034. (*Chairman.*) And that was the original proposal of the Government of India?—(*Mr. Jacob.*) Yes, but merely as a means of alternative communication with England—so that we should not be confined to one means of communication with England.

15,035. (*Mr. Courtney.*) It was constructed *viâ* Zanzibar to Mauritius?—Yes.

15,036. But the link was not constructed, I think, from Mauritius to the Cape?—(*Sir Henry Waterfield.*) No.

15,037. So that you do not get by that route round to England?—(*Mr. Jacob.*) No.

15,038. (*Chairman.*) I think, Mr. Jacob, that you have some explanations to give us under the head of Increase of Expenditure in certain Departments, as to which the facts were not fully laid before us when you were under examination before?—(*Mr. Jacob.*) Yes. A few explanations are, I think, required to supplement the evidence as to the rise in expenditure between 1884–5 and 1893–4, where it appears to be either incomplete or inaccurate, owing to sufficient information not being available at the time it was given.

15,039. Have you any further explanation to give about the increase in the grants for station conservancy referred to in Q. 5002?—The station conservancy charges consist of grants in aid to cantonment funds for conservancy and sanitation. Generally cantonment rates and cesses provide the funds required to meet these charges, but in some cases it is impossible to levy rates sufficient to meet the charges for improvement in sanitation, &c., requisite to secure the health of the troops. In such cases the cantonment funds are supplemented by Imperial grants; and in recent years it has been found necessary to somewhat increase these grants, partly owing to the opening of new cantonments as in Upper Burma, &c., and partly owing to the necessity for improving the sanitary conditions of certain of the older and poorer cantonments. The largest increase has occurred in Bengal. Attempts are now being made to limit the total yearly grant to a fixed sum, which is distributed by the Commander-in-Chief at his discretion, but is not to be enlarged. The charge in 1893–4 was specially large, Rx. 20,416; in 1894–5 it amounted to only Rx. 16,718; in 1895–6 to Rx. 13,971, and the Budget grant for 1896–7 was only Rx. 12,732. I may add that these charges have been transferred since 1893–4 to grant 7 "barrack establishments, supplies, &c.," and not to grant 9 "medical" as stated in A. 5002.

15,040. In making the comparison between 1893, 1894, and 1895, is it not the fact that you are taking the charges as they actually stand in the Accounts?—Yes, under whichever head they occurred.

15,041. What is the meaning of the phrase "Conservancy Charges." What is "Conservancy" in that connexion?—It is the charges for the keeping of cantonments clean.

15,042–5. Have you any more detailed explanation to give of the increased charge in the Remount Department?—The following is a detailed comparison of the charges for the Remount Department, &c., in 1884–5 and 1893–4:—

	1884–5.	1893–4.	Increase + Decrease −
	Rx.	Rx.	Rx.
Supervising Staff and Establishments.	2,778	3,371	+ 593
Reserve Depôts - -	13,912	26,415	+ 12,503
Remount Depôt - -	2,238	2,178	− 60
Veterinary Inspection -	7,205	9,772	+ 2,567
Horse-breeding Operations -	4,434	—	− 4,434
Station Veterinary Hospitals and Veterinary Schools.	—	32,246	+ 32,246
Total Establishments -	27,789	70,611	+ 42,822
Purchase of Remounts, &c. -	104,967	146,740	+ 41,773
Feed of Cattle and Remounts, &c.	9,185	35,414	+ 26,229
Miscellaneous - -	14,069	41,432	+ 27,363
	158,788	297,568	+ 138,780

15,046. Then I believe you have some explanations to give in respect to these large increases?—Yes. The increase under Reserve Depôts is due to two new depôts having been established and an old one re-established and enlarged, partly owing to the system adopted of purchasing and rearing young stock with a view to encourage horse-breeding in India, and partly owing to the increased number of remounts required yearly

Sir Henry Waterfield, K.C.S.I., C.B., and Mr. Stephen Jacob, C.S.I.

22 Feb. 1897.

owing to the augmentation of the mounted branches. The number of remounts required yearly has risen by 20 per cent. (from 1345 to 1618) owing to the last cause. The purchase of young stock has further largely increased the numbers at the depôts, where also ordnance mules are now kept in reserve, and there are a large number of bullocks for siege trains, and for the cultivation of the farms attached to the depôts. Then the Station Veterinary Hospitals and Schools have been started since 1884–5; the charge was at first taken under the Medical Grant (9), but was in 1887–8 brought to this head.

15,047. In 1884–5 did the expenditure from the Medical grant on veterinary hospitals and schools at all correspond to that 32,000 Rx., or has there been a very large increase?—There was no expenditure on that account in 1884–5.

15,048. But under the head Medical; it was first charged to the Medical grant, was it not?—Yes, when it was first started; but that was after 1884–5. The charge is a new one since that year. Then the increase in the purchase of remounts is due to the increased number of remounts owing to the augmentation of the mounted branches, to their increased price, and to the inclusion of the charge for purchase of young stock, mules for mountain batteries, and bullocks for siege trains, as well as for the cultivation at the depôts. The details are :—

——	1884–5.	1893–4.
	Rx.	Rx.
Remounts - - - - -	103,837	114,931
Young stock - - - - -	—	21,528
Mules for Mountain Batteries -	—	9,745
Ponies for Mounted Infantry (Burma)	—	276
Contingent and Miscellaneous - -	1,130	260
	104,967	146,740

"Feed of Cattle, and Remounts, &c." and "Miscellaneous" must be taken together, as "Miscellaneous" includes charges for cultivation of the grain (for feed, &c.) raised at the depôts instead of being purchased in the market. The rise is due to the increased number of animals at the depôts.

15,049. Now, does not part of that very large increase arise from what Sir Henry Brackenbury spoke of, viz., the steps that have been taken to increase transport?—No; I do not think that any of the transport charges come under this heading.

15,050. (*Sir Donald Stewart.*) But you refer, I think, to the increase in the number of the cavalry branch. The Native cavalry does not involve any remount charge?—In Madras it does.

15,051. Oh, yes; only to that extent, though?—Yes, only to the extent of the Madras Cavalry.

15,052. (*Sir Ralph Knox.*) Is there not a larger number of animals now being maintained with reference to mobilisation transport?—Yes. The charges do not, however, come under the Remount head; they come under Commissariat and Transport.

15,053. But are not some of the horses raised at these remount depôts for transport purposes?—I do not think any horses are used for transport purposes.

15,054. (*Chairman.*) Then with reference to the Clothing Department, Appendix 18 (to which reference is made in the footnote to Q. 5026 (merely indicates the sub-heads under which the increase in the expenditure of the Clothing Department has occurred, but does not elucidate the causes of the increase under those heads. Can you give us any information as to these causes?—Taking the figures in that Appendix, the following are the explanations :—

Superintending Establishments, Manufacturing and Store Establishments.—Decrease due to abolition of Bombay factory, the Madras factory supplying both Bombay and Madras. The Calcutta and Madras factories have both been enlarged, but there is a net saving on the whole.

Clothing, supplies and services: Factories: Regimental.—It is convenient to take these together; but it will be well to separate off the charges for locally purchased stores and for clothing for reserve forces. The figures then are :—

——	1884–5.	1893–4.
	Rx.	Rx.
Locally purchased stores - -	56,644	101,492
Clothing for reserve forces - -	—	6,708
Other charges - - -	26,646	32,706
	83,290	140,906

Taking the stores purchased locally with the English stores, and omitting exchange, the total charges for comparison would be (233,959 + 56,644) 290,603 in 1884–5 against (200,699 + 101,492) 302,191, an increase of only 11,588, which is more than accounted for by the increase in the number of the forces.

The increase under "Other Charges" is also due to the augmentation in numbers.

15,055. When you say "omitting Exchange," in what figures do you state the stores got from England?—The stores got from England were in 1884–5 233,959*l.*

15,056. Those are pounds?—Yes, those are pounds.

15,057. And in the last year they were 200,000*l.*?—200,699*l.*

15,058. Then there was compensation in lieu of clothing?—That is fixed in sterling, so that the rupee charge has been largely enhanced by the fall in exchange. The augmentation of the forces accounts for the rest of the increase, but there has also been a change of system from 1st April 1893.

15,059. Have you any supplementary information to give us with regard to the Barrack charges?—About Rx. 20,000 of the total increase of Rx. 40,000 is due to items transferred to this head from other heads of charge between 1884–5 and 1893–4. The balance of Rx. 20,000 amounts to very little over 10 per cent. on the charge in 1884–5, and is more than accounted for by the increased strength of the army and the annexation of Upper Burma.

15,060–2. There is a large increase in the charges for the administration of Martial Law. I think you have got something to add upon that, have you not?—Yes. It appeared in the answers given on this point that there had been a very large increase under that head; but the fact is that there has been a real and substantial decrease, the apparent increase being due to the alteration in the procedure for bringing to account the charges for military prisons, as illustrated by the following detailed figures :—

——	1884–5.	1893–4.
Charges on account of military prisons	1,163	192,491
Other charges - - - -	282,538	215,301
Total - - -	283,701	407,792

The alteration which was introduced in 1888 consisted in bringing to charge the gross amount for the military prisons, and not charging the pay of the prisoners against Grant 3, while previously their pay was drawn and charged against Grant 3, and made over to the prison authorities, who met the charge for military prisons out of it, debiting to army only the net charge in excess.

15,063. Therefore there ought to be a corresponding decrease under the item of pay?—Yes.

15,064. Next, I will draw your attention to the Medical Department?—There was a large increase of Rx. 172,000 in the charges of the Medical Department between 1884–5 and 1893–4. The increase in Establishments is, however, not large, it amounts altogether to Rx. 59,058, of which about Rx. 11,000 are accounted for by the new Nursing Service, and about Rx. 26,000 by the Exchange Compensation Allowance, while about Rx. 3,000 are for training of military pupils at medical colleges and schools, about Rx. 2,000 for grants in aid to Cantonment Hospitals, and Rx. 7,000 for improvements in the Army Hospital Corps. This leaves only Rx. 10,000 for general increase, which is fully accounted for by the augmentation of the army and the occupation

of Upper Burma. There have been re-organisations, but the extra cost of them has been met by reductions elsewhere. The remainder of the increase is made up as follows :—

	Rx.
Medicines and Medical Stores (deducting issues to Civil)	40,000
Dieting Sick	40,000
Medical Comforts	20,000
Hospital Equipments	12,000
Other Charges	1,000
Total	113,000

The "issues to civil" of medical stores were unusually large in 1884–5, and decreased the net charge by 48, or 18 more than in 1893–4. The charges for stores are very fluctuating, as they are for the actual purchases, not for the issues, and it is hardly possible to compare one individual year with another. The charges do, however, show a tendency to increase, though not to the same extent as would appear from comparisons of single years.

The charges for dieting the sick, medical comforts, and hospital equipments have increased more than proportionately to the increase in the army, &c.; and the increase in the last few years has been specially large. The local purchase of stimulants has increased the charge; there was, however, a much larger number of European troops sick in 1893–4 than in 1884–5, the daily number of sick per 1,000 having risen from 67 to 87, or by 30 per cent.; there was a fall in the corresponding figure for native troops from 35 to 32; but, on the whole, the increase was very considerable.

15,065. When you say the "issues to civil," do you mean by that the Civil Departments?—Yes, to civil hospitals and dispensaries; they have no separate store department; they procure their stores through the Military Department, and repay the charges to that Department.

15,066. (*Mr. Buchanan.*) There is going to be an increase, is there not, in the pay of army medical officers in India, from this year onwards?—(*Sir Henry Waterfield.*) Yes, there is.

15,067. Will that substantially increase the expenditure?—I cannot say at this moment.

15,068. (*Sir Donald Stewart,*) It has not come into operation yet?—No, but the question was, I think, whether there is going to be an increase.

15,069. (*Mr. Buchanan.*) It has been announced in public by the Secretary of State?—It has been accepted. I find that the additional expense is estimated at Rx. 13,900 a year.

15,070. Has the movement demanding that increase come from the Government of India?—No. I think the movement has come from home.

15,071. Because I see Mr. Jacob, in his former evidence, in answer to Q. 5043, stated, on behalf of the Government of India, that there was no increase of medical pay anticipated?—It has occurred very lately in consequence of representations made by the War Office as to the necessity of adding to the pay; and the Government of India have accepted it.

15,072. Is this another of those increased charges that we have heard something about?—It is an increased charge; but in this case the Government of India have agreed to it. I think it is admitted to be a necessity—that the officers cannot be obtained without it.

15,073. Is it the same sort of assent that they gave to the Zanzibar and Mauritius Cable?—I do not think there was any reluctance expressed in this case.

15,074. (*Sir Ralph Knox.*) The demand has come, not from the War Office, but from the medical authorities, has it not?—Yes, I believe that is so.

15,075. (*Mr. Buchanan.*) And it is satisfied at the expense of India?—Only in regard to the officers employed in India, not in regard to the British officers.

(*Sir Ralph Knox.*) It is equalising the pay in India to what it is out of India.

15,076. (*Mr. Buchanan.*) But the movement came from the medical authorities at home in general, and it is satisfied at the cost of the Indian Exchequer?—I thought that there had been an increase also in the pay of medical officers in the British regiments.

15,077. (*Sir Ralph Knox.*) The increase to the British pay was made some years ago?—Yes.

15,078. (*Mr. Buchanan.*) The Indian pay is still greater than the British pay?—There are allowances in India, but the pay, I believe, is the same.

15,079. And they make it much higher than the British pay.

15,080. (*Chairman.*) On the Ordnance Department I think you have something to add to your previous evidence?—(*Mr. Jacob.*) Yes, the increases in charge there have been mainly in stores, and the wages of labour for working them up. The establishments have been very slightly increased; I can give details if it is desired.

15,081. Well, I observe that the total increase is Rx. 333,000 upon Rx. 500,000 in 1884–5, and is made up first of all of increase on local supplies Rx. 92,000. Can you give us any explanation on that head?—There is also a large increase in local supplies for arsenals and depôts of Rx. 58,000.

15,082. You class those all together?—Yes.

15,083. That would be very nearly half the increase?—Yes, the increase there is fully accounted for by the much larger return which Sir Edwin Collen referred to in his evidence.

15,084. That is to say, stores are much more largely manufactured in India now than they were before?—Yes.

15,085. And I suppose there is very much the same explanation of such an increase as Rx. 41,000 upon arsenals and depôts; in order to carry out this increased manufacture you want larger establishments, I suppose?—Yes, and the increase has been very small in the superior officers. There has been an increase of five ordnance officers, but the main increase has been in the subordinate officers and in the subordinate establishments.

15,086–7. I see the issues to Civil Departments vary very much and must tend to throw out your estimates, do they not? Rx. 98,000 in 1884–5, and Rx. 31,000 in 1893–4. Does not that imply very varying demands upon the Department?—Yes, but I think the Department generally has notice beforehand, so that it provides for them in its estimates.

15,088. Is there any other point on this estimate to which you would like to call attention?—I do not think there is any point of importance.

15,089. Can you explain the large increase in pensions to European officers payable in India?—They were referred to in Qs. 5021 to 5085, and some surprise was expressed at the large increase in the amounts paid to European officers in India. The following are the details of the charges, in 1884–5 and 1893–4.

——	1884–5.	1893–4.
	Rx.	Rx.
Commissioned Officers' pensions	12,835	9,624
Amount of such pensions capitalized	7,979	32,868
Other pensions to Europeans	63,492	73,092

It will be seen that the increase is chiefly accounted for by the increase in the capitalised pensions, the capital value always being paid in India. It may be noted that the total of the pensions to commissioned officers residing in India has decreased, and that the bulk of the pensions are payable to warrant and non-commissioned officers residing in India. The increase in these pensions is due to the fall in exchange, the pensions being fixed in sterling, and paid at the official rate of exchange of the year. The amount of pensions capitalised has fluctuated considerably from year to year, and the figure for 1884–5 under that head is exceptionally low. The amounts for each year have been :—

	Rx.		Rx.
1883–4	22,482	1889–90	55,132
1884–5	7,979	1890–1	44,706
1885–6	22,594	1891–2	32,054
1886–7	27,348	1892–3	26,137
1887–8	44,803	1893–4	32,868
1888–9	22,733		

Sir Henry Waterfield, K.C.S.I., C.B., and Mr. Stephen Jacob, C.S.I.

22 Feb. 1897.

The fluctuations appear to be purely fortuitous. The rules under which officers may commute a portion of their pensions are given on page 273 of the India List.

15,090. Then there is an increased charge for pensions to natives?—Yes. The details for 1884–5 are not available, but comparing the estimate for 1886–7 (which corresponds very closely with the actuals for 1884–5) with the actuals for 1893–4, the increase of Rx. 61,000 is thus shown:—

Pensions of combatants - -	31,000
,, of Sub Medical Department -	1,000
,, of regimental followers -	8,000
Compensation for dearness of food -	15,000
Gratuities - - - -	1,000
Family pensions - - -	5,000
	61,000

The increase in the pensions of combatant officers and men is 31 on 559, or only about 5½ per cent. in nine years. This is not large, considering that improved pension rules were introduced in 1878, and that there has been a reconstitution of several regiments in the last few years. The main part of the increase has occurred only since 1890–1, when this reconstitution commenced. There has been some tendency to increase the number of regimental followers, to whom pensions are granted. Compensation for dearness of food is granted to pensioners only in Madras. It has risen with the rise in price of food grains.

15,091. (*Sir Ralph Knox.*) Are these pensions of the native officers and men?—Yes.

15,092. Not of officers of the Staff Corps?—No; they come under the head "Europeans."

15,093. You have not been dealing with those?—I dealt in my previous answer with their pensions, but only with the pensions of those residing in India; the commissioned officers residing in India are very few.

15,094. You said something about the pensions always being capitalised in India?—Yes, if European officers capitalise their pensions they are obliged to take the payment in India in rupees.

15,095. (*Chairman.*) Can you give us any more detailed explanation of the increased charge under Grant 3, Regimental Pay and Allowances, between 1884–5 and 1893–4?—Yes, the increase in the European army charge was Rx. 1,068,000, and in that for the Native Army Rx. 651,000. Of the increased cost in the European Army, Rx. 668,000 was due to the increased rate at which the British soldier was paid, owing to the fall in exchange from 1*s.* 8*d.* to 1*s.* 2⅜*d.*, and Rx. 87,000 was due to exchange compensation, so that Rx. 755,000 out of the Rx. 1,068,000 was due to the fall of exchange, leaving a balance of only Rx. 313,000 as due to all other causes, including the augmentation of the Army. The charges for Staff Corps, General List, Unattached and Unemployed Officers, and for the Veteran and Invalid Establishments, and Colonel's Allowances, have, however, been reduced, and there were also in 1894–5 large charges for bounties for extending service, which account for a further reduction. Taking, therefore, the regimental charges (artillery, cavalry, infantry, and engineers) alone, and excluding exchange on British soldier's pay and exchange compensation, the total cost has risen from Rx. 2,530,000 to Rx. 2,951,000, or by Rx. 421,000. The following table gives this increase in detail, compared also with the augmentation of the strength of the force:—

EUROPEAN ARMY.

Branch of Service.	Established Strength, all Ranks.				Cost (Thousands of Rx.).			
	1884–5.	1893–4.	Increase.		1884–5.	1893–4.	Increase.	
			Actual.	Per Cent.			Actual.	Per Cent.
Artillery - -	11,337	13,318	1,981	17·5	688	774	86	12·5
Cavalry - - -	4,302	5,679	1,377	32·	269	303	34	12·5
Infantry - -	45,656	53,713	8,057	17·6	1,563	1,867	304	19·5
Engineers - - -	292	339	47	16·1	10	7	— 3	— 30·
	61,587	73,049	11,462	18·6	2,530	2,951	421	16·6

It will be seen that the increase in cost is proportionately less than the increase in strength, and that is true in the case of every branch except the infantry. In the case of the infantry, this is due to the fact that the actual strength was in 1884–5 considerably below the established strength, while in 1893–4 the actual strength was above the established strength. The increase occurs entirely in the pay of non-commissioned officers and men. Of the increased charge of Rx. 651,000 for the Native army, Rx. 95,000 arose out of exchange compensation. Details of the balance of Rx. 556,000, together with particulars as to the augmentation in strength are given below:—

NATIVE ARMY.

Branch of Service.	Established Strength of all Ranks.				Cost in Thousands of Rx.			
	1884–5.	1893–4.	Increase.		1884–5.	1893–4.	Increase.	
			Actual.	Per Cent.			Actual.	Per Cent.
Artillery - -	1,984	4,543	2,559	129·	28	48	20	71·4
Cavalry - - -	18,824	23,426	4,602	24·4	951	1,240	289	30·4
Infantry - -	101,926	113,702	11,776	11·5	2,098	2,231	133	6·3
Sappers and Miners -	3,210	3,965	755	23·5	107	125	18	16·8
Other heads - -	—	—	—	—	101	197	96	—
Total - -	125,944	145,636	19,692	15·6	3,285	3,841	556	17·

15,096. You might give us the percentage?—The percentage of increase of strength is 15·6, and of increase of cost 17. In this case the charge has increased at a slightly higher rate than the strength, but this is due entirely to the specially large increase in the cost of the cavalry owing to the grant in Bengal and Bombay of 4 Rs. extra a month to all but commissioned ranks. This charge alone accounts for an increased charge of Rx. 98,000 calculated on the strength in 1893–4; but for this change, therefore, the

increased percentage for the cost of the cavalry would be only 20, and the increase in the total cost would be reduced to Rx. 458,000, or just under 14 per cent. Of the increase under "other heads" Rx. 51,000 arise out of the creation of the Reserve Forces, and the balance of Rx. 45,000 occurs mainly on account of—

	Rx.
Recruiting Depôts - - -	7,000
Kit money for recruits - -	20,000
Annual grant in aid of half-mounting	17,000
	44,000

15,097. (*Sir Ralph Knox.*) When was the increase to the pay of the cavalry granted?—In 1891-2.

15,098. (*Chairman.*) Well, under this head of Pay and Allowances we should naturally look, apart from the increase in the Army, for some decrease owing to those transfers of which we spoke earlier in the day; you will remember there were Rx. 192,000* transfers under the head of "Prisons"?—Yes.

15,099. Therefore, to a certain extent there have been transfers from this grant which were not savings, and which, if they had not taken place, would have left a much larger increase upon the grant?—Yes, they would have increased the percentage of cost.

15,100. Therefore, we must not take too literally the proportion between the increase of strength and the increase of charge?—No; of course, those proportions would have to be corrected by the transfers from this head.

15,101. Quite so?—But they would also have to be corrected by certain other transfers to this head which have been made.

15,102. Then, on the whole, you would represent that, leaving out the increase due to the fall in the rate of exchange, the increase in charge both in the case of the European and the Native Army is less than proportionate to the increased strength? That is, after you have allowed for such transfers to and from the grant as we have been talking of?—Yes. I think that upon the whole the increase in cost would be slightly less than proportionate to the increase of strength.

15,103. And the bulk of the increase is due to the fall in exchange?—Yes.

15,104. (*Mr. Courtney.*) In what items has there been a real decrease?—There has not been any real decrease, any absolute decrease, but there has been a decrease in proportion to strength. The army was increased in 1885-6.

15,105. If you increased the Army 20 per cent. and the charge only 15 per cent., upon some items there must have been a real decrease; what are those items?—One of the increases to the Army was made largely by increasing the numbers of men in each individual regiment, so that the number of officers was not increased in proportion to the increase of the strength. That accounts for a considerable amount of the decrease of the proportion of the cost.

15,106. Has there been any decrease of the cost of any branch of the service?—This grant that I am dealing with now deals only with the pay of the officers and men.

15,107. And there has been no decrease of pay at all?—There has been no decrease in pay; but the proportion of officers to men is smaller, so that the increase in cost is less than proportionate to the increase in the strength.

15,108. (*Chairman.*) The total increase in cost, as you have shown in these two tables, is for the European Army Rx. 421,000, and for the Native Army Rx. 556,000, is it not?—Yes.

15,109. Those sums together make Rx. 977,000?—Yes.

15,110. Now, supposing you were to add that to the Rx. 192,000,* which, I think, was the figure transferred under "Prisons," was it not?—Yes, about Rx. 191,000 had been added.

15,111. Rx. 191,000; that would carry you on to an increase of Rx. 1,069,000?—Yes.

15,112. That would go very far to bring those two percentages together, the increase in force being 18·6 per cent., and the increase in cost 16·6 per cent? If you were to add on that transfer, it would bring those two percentages together?—Yes, it would bring them very nearly together.*

15,113. I only give that as an example, with reference to what Mr. Courtney was asking you, to show that probably the difference in the percentage between the strength and the cost is more due to changes which have taken place in the grant than to the fact that the increased force costs less than the smaller force that was there before?—My point, however, was, not that there has been an actual decrease to any great extent, but rather that the increase has not been greater than would be proportionate to the increase in strength.

15,114. (*Sir Ralph Knox.*) And that increase was in the cheapest part of the force?—Yes.

15,115. (*Chairman.*) In Appendix 18 figures are given showing the details of the increase in commissariat charges (Grant 4) between 1875-6 and 1893-4. Can you give us similar figures comparing the charges in 1884-5 and 1893-4?—I have a table here which gives similar figures. The table gives details of the increase for the last 10 years from 1884-5 to 1893-4, including in 1884-5 the charges for compensation for dearness of provisions, which in Bombay and Madras were in that year shown under Grant 14, Miscellaneous. This increases the total for 1884-5 in round numbers from Rx. 2,200,000 to Rx. 2,300,000.

	1884-5.	1893-4.	Increase
Establishment.	Thousands of Rx.		
Supervising staff - -	34	38	4
Executive Establishment, including transport branch and ambulance transport.	265	291	26
Subordinate establishments -	149	174	25
Khedda establishments - -	11	9	−2
Cattle farms - - -	4	4	—
Agent for Government consignments.	—	−2	−2
Total Establishment -	463	514	51
Supplies.			
Provisions for Europeans -	485	732	247
„ Natives - -	103	233	130
Compensation for dearness of provisions.	147	274	127
Compensation for dearness of forage.	21	32	11
Malt liquor purchased locally -	204	317	113
Rum - - - -	—	9	9
Dairy farms - -	—	1	1
Purchase of reserve stock -	66	31	−35
Contingent expenses - -	7	—	−7
Total Supplies -	1,033	1,629	596
Services.			
Sea and inland water charges -	21	32	11
Railway charges - -	289	413	124
Feed of horses and cattle -	148	239	91
Purchase of live stock - -	1	62	61
Implements, Godoun furniture, &c.	14	46	32
Transport branch (chiefly feed of transport cattle).	253	341	88
Other heads - -	104	127	23
Total Services - -	830	1,260	430
Grand total -	2,326	3,403	1,077

The increase under Establishments is only 51, and is entirely due to the augmentation of transport; the increase under Subordinate Establishments occurs mainly in Cattle Establishment and is due to the increased number of transport cattle maintained.

* *See* footnote in the next column.

* *Note.*—It escaped my notice, when under examination, that the table in Q. 15,060-2 is stated in *Rupees*, not in Rx. The figure to be added on account of the transfer from regimental pay to the prison grant is only Rx. 19,000, a sum which will not materially affect the percentage (16·6) of increase of cost.—S. J.

Sir Henry Waterfield, K C.S.I., C.B., and Mr. Stephen Jacob, C S.I.

22 Feb. 1897.

15,116. Is that the answer to the question I put to you before, as to whether under the Ordnance Grant the increase of transport was included, and you said, "No; it is included under another heading"?—Yes. The increase of establishments due to increase of transport occurs under this heading. The charges for provisions for Europeans have risen as follows:—

——	1884–5.	1893–4.	Increase.
	Thousands of Rx.		
Bengal and Punjab -	290	393	103
Madras - - -	79	190	111
Bombay - -	116	149	33
	485	732	247

The increase is proportionately much the largest in Madras, where it is mainly due to the largely enhanced expense on account of the increased number of troops in Burma, and especially in Upper Burma. Taking the cost in each year against the established strength, the figures work out as follows:—

——	1884–5.			1893–4.		
	Cost in thousands of Rx.	Established Strength.	Cost per Head in Rx.	Cost in thousands of Rx.	Established Strength.	Cost per Head in Rx.
Bengal and Punjab.	290	36,972	7·85	393	43,553	9·01
Madras -	79	11,169	7·04	190	13,285	14·32
Bombay -	116	11,077	10·45	149	13,673	10·89
	485	59,218	8·18	732	70,511	10·38

The great increase is in Madras, where the cost rose from 7·04 in 1884–5 to 14·32 in 1893–4.

15,117. There is a considerable increase of cost per head?—Yes. The actual strength was considerably below the established strength in 1884–5, while it was slightly above the established strength in 1893–4. Allowing for this difference, it may be said that the increased cost in Bengal and Bombay is very slightly in excess of what is proportionate to the increased strength, and may be fully accounted for by a slight rise in prices. The main increase in cost in excess of increased strength arises in Madras, and is due to the increased cost in Burma mentioned above.

15,118. I do not gather that you have given a reason for that increase. Is it increase in the cost of provisions?—Yes; I explained that it is largely due to the increased strength.

15,119. The increased strength would not explain it because it is cost per head. The cost per head in 1884–5 was Rx. 8 odd, and in 1893–4 Rx. 10 odd?—Yes, of course, the increase per head would be due to the increase in the cost of provisions.

15,120. And do you know at all how that arose; is there such a marked increase as that in the cost of provisions?—I do not think the increase is very marked. In Bengal and the Punjab it is only an increase from 7·85 (which is almost Rx. 8) to Rx. 9 in 1893–4, and in Bombay from 10·45 to 10·89. The increase is almost entirely in Madras, and is due to Burma.

15,121. (*Sir Donald Stewart.*) That is entirely due to the occupation of Upper Burma?—Yes.

15,122 (*Chairman.*) And are provisions very dear in Upper Burma?—Extremely dear.

15,123. That accounts for it?—Yes.

15,124. (*Mr. Courtney.*) It is an increase of something like 13 per cent. in Bengal?—Yes. I should say that the increase in prices quite accounts for that.

15,125. (*Chairman.*) While in Bombay you could hardly say it is an increase at all, it is so small?—It is an increase of about 4 per cent. in Bombay.

15,126. Then provisions for natives?—The charges for provisions for natives have risen as follows:—

——	1884–5.	1893–4.	Increase.
	Thousands of Rx.		
Bengal and Punjab -	18	64	46
Madras - - -	23	125	102
Bombay - -	62	44	– 18
	103	233	130

In most cases Native troops ration themselves, receiving compensation when prices are exceptionally high; they are rationed by Government only when on foreign service, when serving beyond sea, and when travelling by sea or river. Service in Upper Burma, in Beluchistan, in the Eastern Frontier Districts of Assam, at a few other frontier stations, and at Aden, is reckoned as foreign service, or service beyond sea, and the Native troops in these districts and at these stations receive either rations in kind or a money allowance equivalent to the cost of the full ration. The main part of the increase occurs under Madras, and is accounted for by the larger number of troops stationed in Burma. In 1884–5 there was only one military district in Burma with four Native regiments; in 1893–4 there were 15 regiments, out of which nine were stationed in Upper Burma (Mandalay and Myingyan Districts) where the cost of food grains, &c., is greater than in Lower Burma, and several of these were stationed at small frontier stations, the rationing of which is extremely costly.

Bombay and Bengal must be taken together, as Beluchistan was for commissariat purposes included in the former in 1884–5, and in the latter in 1893–4. The increased cost here is mainly accounted for by the increased strength of troops stationed in Beluchistan (six regiments of Native infantry in the earlier year against eight regiments in the latter year) and by the fact that these troops are distributed over a much larger number of stations (17 against 8), several of the new stations being small frontier stations where the expense is greater. The commissariat arrangements in Kashmir and Gilgit have also caused increased charges. And there has been generally some rise in the cost of provisions.

15,127. Did you say Beluchistan was in Bengal?—For commissariat purposes.

15,128–30. (*Mr. Courtney.*) It has been transferred, then?—Yes, for commissariat purposes.

15,131. (*Sir James Peile.*) It is under Bengal only as being under the Bengal Army?—It is included in the Bombay Command, but for commissariat purposes only it is in the Bengal circle of control.

15,132. (*Chairman.*) We now come to compensation for dearness of forage?—Compensation for dearness of forage is given to Native cavalry only in Bengal and Bombay; it is based upon a rate of Rs. 13½ per mensem for feed and keep of horse; the excess over which, as determined by price lists furnished by the civil authorities, is granted as compensation. In Madras the horses of the Native cavalry are the property of, and fed by, the State, the charge coming under "Feed of Horses." The details for Bengal and Bombay are as follows:—

——	Thousands of Rx.		
	1884–5.	1893–5.	Increase.
Bengal and Punjab - -	10	6	–4
Bombay - - - - -	11	26	15
	21	32	11

The decrease in Bengal is due partly to the revision of the rules for the grant of this compensation in 1890, and partly to measures commenced in the same year for giving assistance to certain Bengal regiments to induce them to grow grass for themselves.

The assistance so given amounted to Rx. 6,000 in 1893–4. In Bombay the charges have fluctuated con-

siderably from year to year with changes in prices; the charge in 1893–4 is lower than in any previous year since 1886–7 (though it was lower than in 1894–5, being then only 20) owing to the low prices prevailing in that year. A very large proportion of the charges occurs in respect of Beluchistan, which accounts for four out of the six in Bengal, and for 10 out of the 26 in Bombay in 1893–4. The other stations in Bombay in which amounts in excess of Rx. 1,000 were paid in 1893–4 were—

Aden	1·3
Bombay	1·4
Deesa	2·5
Poona	3·8
Sirur	3·2
	12·2

The average rate of compensation drawn in Bombay at stations at which, and for periods for which, compensation was drawn, was about 9½ Rs. per horse per mensem, but the average varied from 1 Re. to Rs. 15 at different stations, the highest rate being paid at Aden.

15,133. Then compensation for dearness of provisions?—Yes; compensation for dearness of provisions was referred to in Qs. 5115–5150. The figures on which these questions were based were to some extent erroneous, as was explained in my answers numbered 5339–5344 (p. 221). Such general explanation of the increase in the charge as then seemed possible was given in the same answer; but since then I have been furnished with an analysis of the payments made on this account in 1893–4, and I can, therefore, give some more details. The total figures by provinces are :—

	Thousands of Rx.		
	1884–5.	1893–4.	Increase.
Bengal and Punjab	33	127	94
Madras	70	88	18
Bombay	44	59	15
	147	274	127

It will be seen that the increase occurs mainly in Bengal and the Punjab; but it may be noted at once that, comparing the present cost with the established strength, the cost is proportionately less in those provinces than in Bombay and Madras, so that the increase would appear to be due not to an absolutely higher range of prices prevailing, but to a greater proportionate rise in prices in the former provinces than in the latter.

Before pursuing this point further, however, it seems desirable to give some further details of the charge in 1893–4. And first it must be noted that compensation is granted not merely to fighting men, but to native followers also, while in Madras it is also given to family certificate holders (*i.e.*, to families of men living separately from them, when they are absent on foreign service or over sea). The amount paid in 1893–4 for compensation is thus distributed between these various classes :—

	Thousands of Rx.				
	Bengal.	Punjab.	Madras.	Bombay.	Total.
Fighting men	70	43	66	55	234
Followers	9	5	14	4	32
Family certificate holders	—	—	8	—	8
	79	48	88	59	274

The proportion of the compensation paid to followers to that paid to fighting men is higher in Madras than elsewhere, because in Madras followers are entitled to compensation on the scale applicable to fighting men, while in the other provinces they receive it on a lower scale.

As regards fighting men, the following table gives particulars of the compensation drawn at the various stations, specifying the number of men, the amount drawn, and the rate at each station where more than 400 men on the average drew compensation.

COMPENSATION FOR DEARNESS OF PROVISIONS, 1893–4.

Presidency or Division.	Station or Number of Stations.	Average Number of Men.	Total Amount passed (Thousands of Rx.).	Average Rate of Compensation per Mensem.
				Rs. A. P.
	Above Rs. 5 per Mensem.

It will be seen that compensation was paid to 98,777 fighting men out of a total established strength of 141,213; that the compensation was paid at 245 stations (the amounts being in excess of Rx. 1,000 at only 64 of these), and that the average rate of compensation was Rs. 2 per mensem.

In a few stations the rates are very high, but these are all undoubtedly very expensive stations; and the propriety of the rate has formed the subject of special inquiry.

It is not possible to make a detailed comparison with 1884–5 or with any other year; but the following points may be noted.

(1.) In Madras the rates are much higher than in the other provinces, because rice is the food grain which is the basis of the calculation, and is generally much more expensive than wheat.

(2.) A reference to the totals for given years shows that there is some general relation between the scale of prices and the amounts of compensation paid. Thus 1894–5 was a cheaper year than 1893–4, and Government effected a saving in the cost of rations which it supplied directly; there was also a large saving in the compensation for dearness of provisions. The figures are as follows:—

	Thousands of Rx.
1893–4 - - -	274
1894–5 - - -	224

(3.) A comparison of the scale of prices in 1884–5 and in 1893–4, seems to justify the large increase in the amount of compensation paid in the latter year. It is not possible to compare the prices for all the stations at which compensation is drawn, but the increase is greatest in Bengal and the Punjab, and the following table compares the prices of wheat in 1884–5 and 1893–4 at the principal stations in those provinces at which compensation was drawn.

Wheat.	No. of Sers per Rupee (Retail Prices).	
	1884–5.	1893–4.
Calcutta - - -	16	12¼
Benares - - - -	18½	14
Allahabad - - -	18¾	13
Dehra Dun - - -	19	14
Fyzabad - - -	19¾	14¼
Bareilly - - - -	19¾	13¾
Lucknow - - -	21¾	15
Cawnpore - - - -	22	15½
Delhi - - - -	20	16½
Agra - - - - -	18¾	14¾
Meerut - - -	20⅓	16
Rawal Pindi - - -	30¾	14¾
Jhelam - - -	28	16⅔
Sialkote - - - -	27	14¾
Peshawar - - -	28	13
Dera Ismail Khan - -	23¾	16⅓
Umballa - - -	23¼	18⅔
Multan - - - -	18	14
Jullunder - - -	26	18

It will be seen that in all these cases the rise of price has been considerable; in those stations which are in *italics* the prices in 1884–5 were so low that no compensation at all can have been drawn in them in that year, though in 1893–4 the amounts drawn were considerable.

Sir Henry Waterfield, K.C.S.I., C.B., and Mr. Stephen Jacob, C.S.I.

22 Feb. 1897.

15,134. Those prices point to a very considerable rise in retail prices, you may almost say throughout India, might you not?—Throughout Bengal, not India.

15,135. This is confined to Bengal?—Bengal and the Punjab.

15,136. Well, they point to a rise of close upon 25 per cent., would they not?—Yes.

15,137–9. Twenty to 25 per cent., I think?—Yes; and then, further, there is the point that the soldiers do not begin to get compensation until the price rises above a certain point, so that at stations where nothing was paid in 1884–5, there might be a considerable amount paid in 1893–4. You cannot, therefore, apply the percentage to the increase of price.

15,140. They show an increase in the price of food of something from 20 to 25 per cent., do they not?—I should think rather more than that on the whole.

15,141. (*Mr. Courtney.*) But you say they do not make the allowance for the rise in the price immediately?—Yes; they make the allowance immediately.

15,142. I thought you said they did not until they got beyond a certain limit?—Not until the cost of the standard ration gets beyond a certain limit. Compensation is given with reference to an assumed cost of 3½ rupees a month, and, unless the price of provisions makes the monthly charge exceed that, they do not get any compensation at all.

15,143. So that the apparent increase in price in 10 years may be much more than the real increase?—Than the real increase in compensation.

15,144. Well, if I understand you aright, it is something after this way: supposing a thing costs 4 rupees as the standard price—we will assume a standard price—and it rose to 4½ rupees, you would make no allowance—I am only giving you that in the rough—if it rose to 5 or 6 you would make an allowance, and the allowance would refer back to the standard price of 4 rupees?—Yes.

15,145. If that is the case, if it rose to 4½ or 5 at one period, and no allowance had been made, and then it had risen to 6, the apparent increase would have been from 4 to 6 in the second interval, whereas it would not have been so; in the second interval the increase would have been from 5 to 6?—Yes; but on the other hand the compensation would be nil in the earlier case, and it would be a considerable amount in the other; so that it would be infinitely larger in the later than in the earlier period.

15,146. Exactly; that is the conclusion I draw, that those figures do not show the real increase of price; they exaggerate the real increase of price?—They do not exaggerate the real increase of price; those are the actual prices.

15,147. The increase the allowance starts with is considerably beyond the increase of price in the last 10 years?—No; I should say the prices taken alone under-stated the increase in compensation, because, you see, if the compensation rises from nothing to one, you have an infinite increase in that.

15,148. Let us have figures which will simplify it. If I understand you aright, in the year 1880, something is at its normal price of 4 rupees. In 1885 it has risen to 5 rupees?—Yes.

15,149. But no allowance is made. In 1890 it has risen from this to 6 rupees. An allowance is made referring back to the original 4. Well, according to your returns, it would show between 1885 and 1890 an apparent increase from 4 to 6. Really from 1885 to 1890 it was from 5 to 6, because you took no notice that it had risen from 4 in the previous quinquennium?—Yes. (*Sir Henry Waterfield.*) The moment it exceeds the 3½, they begin to give the allowance; it might have been only 3 the previous year.

15,150. (*Sir Ralph Knox.*) Does the increase of price to which you have alluded vary from a price which was below the 3½ up to a price which is above the 3½?—(*Mr. Jacob.*) Yes, that is what I said; I have indicated in the table the stations in which no compensation at all was drawn in 1884–5.

Sir Henry Waterfield, K.C.S.I., C.B., and Mr. Stephen Jacob, C.S.I.

22 Feb. 1897.

15,151. (*Chairman.*) There is a large increase in the charges for the purchase of malt liquor. Is that accounted for by the policy adopted by the Government of India of purchasing stores locally as far as that may be possible?—It is chiefly accounted for by this policy, as malt liquor is now exclusively purchased in India. In 1884-5, malt liquor purchased in England cost (including freight) 48,794*l.*, while in 1893-4 no charge at all was incurred for liquor so purchased. This alone would account (at the rate of exchange current in 1893-4) for an increase in the local charge of about Rx. 80,000. The balance is more than accounted for by the increased strength of the European forces.

15,152. (*Sir Ralph Knox.*) But the actual charge is cheaper than it was in the former period, that is to say, the malt liquor obtained in India was cheaper than the malt liquor imported?—Yes; the total net result is that there is a decrease per head in the charge, a decrease in the cost per gallon.

15,153. (*Chairman.*) In Q. 5533-5535, the fact was brought out that, while the charge in India for clothing stores had very largely increased between 1875-6 and 1895-6, there was no counterbalancing decrease in the corresponding charge in England. Can you give any further explanation of this point?—The questions referred to were based on a comparison of the actuals of 1875-6 with the estimate of 1895-6. The actuals of this last year are considerably below the estimate, and they do show some considerable decrease in the English charge. But I pointed out before that in a case of this kind a fair comparison cannot be based on the actuals of any two individual years. Clothing is not issued regularly, some supplies are annual and some biennial, and the expenditure proceeds even less regularly than the issues. I have now taken out the charges for each year from 1875-6 to 1895-6, and, taking quinquennial periods, the average figures for England and India work out as follows:—

	England.	India.	Total.
	£	Rx.	
1875-6, Actuals - -	235,171	38,695	273,866
1875-6 to 1879-80 Average -	276,100	35,322	311,422
1880-1 „ 1884-5 „ -	269,851	57,508	327,359
1885-6 „ 1889-90 „ -	252,756	95,268	348,024
1890-1 „ 1894-5 „ -	211,925	154,248	366,173
1895-6, Actuals - -	210,613	143,818	354,431

It will be seen that (without taking any account of the fall in exchange) the increase in the charge for 1895-6, which appears to be a fair average charge, is not more than proportionate to the augmented strength of the troops.

15,154. The troops were augmented by one-sixth?—(*Sir Henry Waterfield.*) One-sixth: 60,000 to 70,000.

15,155. From 273,000 to 304,000 is rather more than that?—(*Mr. Jacob.*) I was comparing the average for the period from 1875-6 to 1879-80 with the actuals for 1895-6. I say it is not fair to take an individual year, but in the case of 1895-6 there is not very much difference. You may, for purposes of comparison, take either the average from 1890-1 to 1894-5, or the actuals for 1895-6.

15,156. But, you see, during the period from 1890-1 to 1894-5, there was no increase of force. The increase of force had already taken place. The object of my question is to suggest that getting clothing in India does not appear to have led to an economy?—I should say it has led to economy.

15,157. No doubt there is a reason for it; but the increase of the army took place in 1885-6, and therefore in the quinquennial period 1885-6 to 1889-90 you really have got the charge of the increased army, and there the charge is 348,000*l.* Meantime you are carrying out this policy of getting clothing in India, and in the next quinquennial period 1890-1 to 1894-5 it has risen to 366,000*l.*; showing that so far there is not a proof of economy by making the clothes in India, because, though the army during that time had not increased, the charge for the clothing had?—I have not gone into the question of the intermediate increase. The previous question was with reference to the increase from 1875-6 to 1895-6.

15,158. Quite so; but you observe what I mean?—Yes, I see there was an increase there which I cannot explain at present.

15,159. I think we come to some questions of yours now, Sir Henry Waterfield, do we not (Q. 5100, at page 213). Mr. Jacob was asked for the details of the calculation you gave, that the cost of the addition made to the army in 1885-6 was Rx. 1,617,000. Can you explain this?—(*Sir Henry Waterfield.*) The calculation is that which is shown on page 3 of Sir Donald Macfarlane's return (No. 20, of 1894), namely:—

British - -	10,753 men at Rs. 891 =	Rx. 958,092
Native - -	19,220 „ „ 343 =	659,246
Total for 29,973 men - -		Rx. 1,617,338

The calculation of the cost of each unit was made by the Government of India in 1892, the exchange for the British pay of non-commissioned officers and soldiers being taken at 16½*d.* per rupee. Local corps were excluded. Provisions and ordnance charges were taken at the average cost. Furniture, hutting, pension, and transport charges were omitted. The cost, if thus divided under the several heads, is—

	European.	Native.
	Rs.	Rs.
Pay and allowances - - -	543	276
Commissariat - - -	97	21
Remount - - - -	73	26
Clothing - - -	40	5
Barracks - - - -	29	—
Medical - - -	73	1
Ordnance - - - -	36	14
	891	343

Applying these figures to the number of the additional troops, the increase in the grants is thus divided:—

	European.	Native.	Total.
	Rx.	Rx.	Rx.
Pay and allowances -	583,888	530,472	1,114,360
Commissariat - - -	104,304	40 362	144,666
Remount - - -	78,497	49,972	128,469
Clothing - - -	43,012	9,610	52,622
Barracks - - -	31,183	—	31,183
Medical - - - -	78,497	1,922	80,419
Ordnance -	38,711	26,908	65,619
Total - - -	958,092	659,246	1,617,338

The question was how that total ought to be divided among the several grants.

15,160. That was a calculation made at the time when exchange for British pay of non-commissioned officers and soldiers was taken at 1*s.* 4½*d.* per rupee?—Yes.

15,161. What would be the effect of the further fall, supposing that calculation were made again now?—I have not worked that out.

15,162. But the charge would be higher, I suppose, would it not?—Oh, yes.

15,163. What I mean is that, given that increase of force, we must not take the Rx. 1,617,000 as anything like a constant figure?—No; the unit has been taken for this purpose at 891 for British, and 343 for Indian troops, but it is, of course, increased in the case of the British by a fall in the exchange.

15,164. If a pious hope that the rupee might rise to 1*s.* 4*d.* were realised, we might go back to that as a constant figure?—Yes.

15,165. On question 5483, it was stated that the capitation rate is calculated on the actual numbers in India. Is that accurate?—The error is a trifling one. Not now; the old capitation rate was so reckoned, but now it is taken on the establishment of British officers, non-commissioned officers, and men in India, according to the War Office estimates.

15,166. That is an estimate for the year, is it?—An estimate for the year.

15,167. The numbers actually vary. Just when the reliefs are received, I suppose, the numbers are rather over the establishment, and some time before that they are below, are they not?—Yes.

15,168. Do you consider that the War Office estimate fairly represents an average?—Yes. We examine it to see that it does not differ materially from the Indian establishment. It may differ from our Indian figures very slightly, but not seriously. You will remember you have already had evidence, I think it was from Sir Henry Brackenbury, that the establishment was recently exceeded. It is, perhaps, a point of interest that the capitation charge was not enhanced in consequence; we only paid on the establishment.

15,169. Exactly?—The payments under the capitation rates were not increased.

15,170. But you are satisfied that the War Office estimate is a very fair one?—It is a very fair one. Of course, we examine it; we do not pay it without looking to see that the number given as the establishment is a proper one.

15,171. At page 232, Q. 5630, an inquiry was made as to the unusually low payment of 320,000*l.* for Effective Charges in 1875–6, can you explain this?—The advances made by the India Office on account of Effective Charges in the five years from 1870–1 to 1874–5, after the cessation of the old capitation rate, amounted to 2,170,000*l.* But when the actual claims of the War Office were received they aggregated only 2,129,740*l.*, and of this the India Office raised objection to 157,729*l.* Thus the advances exceeded the claims by 40,260*l.*, and they exceeded the amount so far admitted by 197,989*l.* Hence the advance for 1875–6 was reduced to 320,000*l.*, which was not an estimate of the sum due on account of that year, but a liberal estimate of the balance altogether due up to that time. As the claim afterwards sent in for 1875–6 was 442,385*l.*, the India Office had actually advanced, including that year, more by 75,604*l.* than had been admitted to be due.

15,172. Some questions were put respecting the amount which you reckon as the annual charge for exchange on the pay of the British soldier; do you wish to make any further remarks upon that?—In 1873, a Royal Warrant was issued, prescribing for the British soldier revised rates for daily pay and stoppages, and new rates of pay were thereupon issued in India, based generally on the rate of exchange of 1*s.* 10½*d.* to the rupee. In 1883 memorials were submitted on behalf of the soldiers in India that they were entitled to the equivalent of the English pay, which they were not receiving owing to the fall in the value of silver; and, this view being accepted, from the 1st January 1884 their pay has been issued at the rate of exchange fixed for the year. The additional charge, namely, the excess over a 1*s.* 10½*d.* rate, is not merely an alteration of an old convenient method of calculation (as suggested in Q. 5565), but is an increase of expenditure entailed on the Government of India by the fall in exchange.

15,172*a*. On page 228, Q. 5517, attention was drawn to the great increase in the pensions of Indian officers. What explanation would you give of this?—By section 56 of the Act for the better government of India, commonly called the Henley clause, all officers of the Indian army were guaranteed their pay, pensions, and privileges, as if they had remained in the service of the East India Company. And this was repeated when the local army was abolished by 23 & 24 Vict. c. 100. A Staff Corps was then formed in each presidency, mainly from the officers of the local army; no officers were placed on half pay, and a certain number of the older officers were invited to retire on largely increased pensions. Complaints having been made of grievances suffered by the Indian officers, Lord Cranworth's Commission was appointed in 1863, and, as the result, measures were taken which considerably accelerated promotion. But the grievances were not fully removed, and, owing to a motion carried in the House of Commons in 1865, another Royal Commission, under General Sir John Aitchison, was appointed. When passing his decision on their report, the Secretary of State in 1866 ordered the adoption of further measures, among which were the grant of colonels' allowances, after 10 years in the grade of lieutenant-colonel, to the regimental lieutenant-colonels of cavalry and infantry prior to 1862, and of the staff corps prior to its formation; the grant of additional pensions of 600*l.* after 35, and 750*l.* after 38 years' service; the admission to the staff corps of any local officers as from 1861; and the succession of all staff corps' officers to colonels' allowances after 12 years' service in the rank of lieutenant-colonel. These concessions, which were forced on the Government, or were deemed essential, in order to remove all grievances, and which were far beyond the expectations in the Company's service, have caused the great increase in Indian pensions.

15,173. Now these pensions, I suppose, are beginning to diminish very rapidly, are they not?—I can hardly say that, but I think we are just coming to the maximum. As far as I can calculate, I do not think we have yet quite turned the point.

15,174. And therefore it will be a very long time before their effect upon Indian finance comes to an end?—Yes; a great many of them did not come into force for some time. The officers would be now taking the larger pensions after 35 and 38 years' service, who had entered the army only about 1858 and 1860, so there may be still some who have not yet come on the list, although, of course, there are comparatively few now who have not yet received the maximum advantage.

15,175. But still a very large number of men who in the early days availed themselves of this colonel's allowance, must now be dying out, must they not?—Yes; many took the better pensions that were offered to induce them to retire, and increased the non-effective charge for a time; and, as they die out, there will be a considerable reduction.

15,176. You say 35 years?—Yes, 35 and 38 years; and therefore I think we must now be as nearly as possible at the maximum.

15,177. (*Sir Ralph Knox.*) The Henley clause was intended to secure to the officers their expectations under the old regime?—That was what was intended at the time.

15,178. But you say the result was that the officers obtained very much more than under the old regime?—Yes; for instance, officers of the East India Company could only succeed to colonel's allowances to the extent of the limited number of regiments. There were, say, 70 regiments in Bengal; there could, therefore, only be 70 colonels, and succession only arose as vacancies occurred. But the concession given under these orders was that every officer should succeed to a colonel's allowance if he stayed long enough, irrespective altogether of there being vacancies.

15 179. That was due to the recommendations of those Commissions, was it not?—It was due to the recommendations of those Commissions, the agitation in the House of Commons, and the decision of the Government to remove all grievances.

15,180. Whether they were well-founded or not?—If they were pronounced by the Royal Commissions to be substantial or even quasi-substantial; the Secretary of State undoubtedly went beyond the mere remedy of what the Commissions recommended as positive injuries.

15,181. (*Sir Donald Stewart.*) But the grant of colonel's allowance after 38 years' service in the Staff Corps is not due to the act or recommendation of any Royal Commission?—It was not due directly; but I think the correspondence shows that it was due to the decision of the Government in consequence of the two Commissions which pronounced on the effect of the Henley clause.

15,182. I do not think so. I think it is due to the act of the Secretary of State alone, and not to any grievance or demand put forward by the officers of the Staff Corps themselves?—Yes; but I think that the act of the Secretary of State was in consequence of his consideration of the report of Sir John Aitchison's Commission. The despatch of the 8th August 1886 will be found on page 120 of the Appendix to the Report of Sir William James' Committee, presented to Parliament in 1870. After mentioning the measures taken in consequence of the recommendations of Sir John Aitchison's Commission, it proceeded to make further most important concessions in respect of the colonel's allowances.

15,183. (*Chairman.*) Then it was what I may call a domestic arrangement between the Secretary of State and the Indian Government?—Yes. The object of my putting in this explanation is that it was not given at the time the question was put by your Commission, and it appeared rather as if there was no explanation which

Sir Henry Waterfield, K.C.S.I., C.B., and Mr. Stephen Jacob, C.S.I.

22 Feb. 1897.

could be given of the great increase of the pensions of the Indian officers.

15,184. Was any calculation made as to the charge for colonels' allowances?—I find that in 1882 General Hannyngton estimated the maximum charge for colonels' allowances at 709,749*l.* for 631 officers, to be attained in 1897. The amount on July 1st 1896 was 647,885*l.* for 576 officers, which is less by 20 officers and 22,496*l.* than the estimate for that year.

15,185. But we have not yet on General Hannyngton's estimate reached the maximum?—No; we should have one year more to complete his maximum; but we have a margin of 22,000*l.* for it, so I do not think it will be exceeded.

The witness withdrew.

(Adjourned till Wednesday next, at 11 a.m.)

At the India Office, S.W.

THIRTY SIXTH DAY.

Wednesday, 24th February, 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.	Sir JAMES PEILE, K.C.S.I.
Sir E. W. HAMILTON, K.C.B.	Mr. G. L. RYDER, C.B.
Sir RALPH KNOX, K.C.B.	Mr. DADABHAI NAOROJI.
	Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Sir Henry Waterfield, K.C.S.I., C.B.

24 Feb. 1897.

Sir HENRY WATERFIELD, K.C.S.I., C.B., recalled and further examined.

15,186. (*Chairman.*) I am very sorry to hear that Mr. Jacob is ill, but I propose to put the questions which I have before me, prepared by you and him, to you, and you will be able to answer so far as lies in your power?—I will do so.

15,187. If anything stands over we must take an opportunity at some future time of having a further conversation with Mr. Jacob, but I think in all probability we shall be able to dispose of the questions?—Yes.

15,188. At Q. 5640 Sir Ralph Knox asked whether the non-effective charge for the British troops in 1884–5 could be divided between officers and men. Are you able to give this?—The payment of 830,994*l.* in that year consisted of three items:—

	£
(1.) Payment for 1884–5 under the new system.	
Officers	21,072
Soldiers	15,217
	36,289
(2.) Arrears under the old system	763,711
(3.) Non-effective colonels of Royal Artillery	30,994
	830,994

15,189. May I ask you in passing how these non-effective colonels of Royal Artillery come to stand separate from officers of the Queen's regiments generally?—The reason is that up to the year 1881, I think it is, their pay was an effective charge, and, owing to a transfer of the accounts by the War Office, it was then made a non-effective charge, and recorded separately. It is a payment not made under the capitation rate, but the actual payment for the colonels' allowance.

15,190. I understood that these were the old honorary colonels; but, if so, why should this payment apply to the Royal Artillery colonels alone, because the same reason should apparently apply to the old honorary colonels of the line?—I think the colonels of the new line regiments are paid direct at the India Office.

15,191–2. (*Sir Ralph Knox.*) No, that is not so?—I find that the colonels originally appointed to the new line regiments received their pay at the India Office at Indian rates; but their successors came under the rules of the British service and have been paid by the War Office. Every effective officer of the old Indian Artillery is entitled in turn to succeed to colonel's allowance at the Indian rate, and so long as there are any such they will be paid at the India Office. These allowances do not come under the capitation rate of 7*l.* 10*s.*; but, so far as any of the officers would be entitled to pension under British rules, the amount thereof is divided between the two Governments, in proportion to his service on the respective establishments, under the general non-effective arrangement.

15,193. (*Chairman.*) Then perhaps you will go on?—It is not practicable to divide the arrears in this particular payment, but the following is the division of the total payments from 1870–1 to 1883–4 (of which these arrears formed a part):—

	£	£
Officers.		
Retired pay	1,447,245	
Unattached and half pay	839,128	
Rewards	16,695	
Wounds	16,764	
Widows and children	335,486	
		2,655,318
Soldiers.		
Pensions	6,158,251	
Rewards	10,982	
		6,169,233
Total		8,824,551

15,194. (*Sir Ralph Knox.*) What period does that cover?—From 1870–1 to 1883–4, the whole of the old capitation rate.

15,195. (*Chairman.*) Those were the capitalised sums paid?—During the period when we paid the capitalised sums.

15,196. And that, of course, was sterling?—That was sterling.

15,197. You had in addition to that to find the exchange?—Yes, when measured in tens of rupees it would be much more.

15,198. (*Sir Ralph Knox.*) But the exchange did not amount to much in those days, did it?—Not to so much as it is at present.

15,199. (*Chairman.*) You had probably not a very big sum to find in those days, because up to 1875–6 the rupee had hardly begun to fall, had it?—No, not very materially before that; but this statement comes down to 1883–4, and at that time the rupee had fallen to about 1*s.* 7½*d.*

15,200. As regards the extent to which the cost of pensions to soldiers has been reduced through the short-service system, do you wish to make any observations?—I have no reason to doubt the figures given by Sir Ralph Knox in Q. 5645, nor do I in the least deny that a very considerable reduction in pensions must arise from the short-service system. But I think that part of the decrease shown in the figures must be attributed to other causes. The payments by India under the system of capitalization of pensions to soldiers were as follows:—

Year.	Amount.	Year.	Amount.
	£		£
1870–1	210,427	1877–8	507,066
1871–2	203,605	1878–9	733,477
1872–3	232,108	1879–80	611,406
1873–4	298,707	1880–1	520,686
1874–5	329,641	1881–2	496,813
1875–6	466,784	1882–3	434,334
1876–7	651,705	1883–4	271,321

The benefit of the short-service system would not be much felt till 1891–2. The heavy payments from 1875–6 to 1879–80 must have been largely due to the abnormally numerous enlistments 21 years before for the Crimean and Indian Wars, and the charge had by 1883–4 fallen below that of 1873–4. The number of permanent pensions granted between 1876 and 1882 averaged 5,800 in a year; in the following seven years (before the short service affected the pension list) the average was only 2,672.

15,201. That 5,800 a year represents the number of pensions that were capitalised each year in those years by a payment made to the War Office?—Yes.

15,202. It would appear from those figures as if between 200,000*l.* and 300,000*l.* was the normal amount upon a normal force?—Quite so.

15,203. Because you see from the years 1870 to 1874 the figures rise from 210,000*l.* to 298,000*l.*, and in 1883–4 they fell again to 271,000*l.*?—I think so. If it were possible to eliminate those very numerous enlistments which took place during the Crimean and Indian Wars, I think it would be found that something between 200,000*l.* and 300,000*l.* was a normal charge.

15,204. (*Sir Ralph Knox.*) It is admitted, I believe—at all events I admitted it—that the charge which was represented as the maximum amount was due very largely to the fact of the heavy enlistments during the Crimea and Indian Mutiny?—Yes, I think you gave that in your evidence.

15,205. And it is not claimed by the War Office that that amount would at all represent the constant charge; but are you aware that immediately on the introduction of the short service, a considerable number of men were allowed at once to pass to the reserve, although they had enlisted under the long-service system. For instance, in the first year, upwards of 2,000 men converted, as it was called, their long service into a short service with the colours and a service in the reserve?—That would, no doubt, be one of the measures affecting the reduction.

15,206. Quite so, and also the fact that the men continued to pass into the reserves during the period intervening between 1870 and the date at which the men were due for the reserve?—To that extent, my remark that the benefit of the short-service system would not be much felt, is qualified.

15,207. Then, further, the Indian Mutiny and the Crimean War combined to raise the establishment of the army to not only very far in excess of the old normal and considerably in excess of the normal which was maintained afterwards, did it not?—Yes.

15,208. And immediately after the conclusion of those operations the establishments of the army, both in India and at home, were reduced?—Yes.

15,209. And the result of that reduction of establishments was that very few recruits, abnormally few recruits, were taken for the army for some five or six years, are you aware of that?—I believe that to be the case, but I am not sure that that would affect the pensions of those years.

15,210. Well, if it be the case that the enlistment of an abnormally large number of men during the Indian Mutiny created 21 years after that an abnormally large number of pensioners, surely it would follow that if you enlisted only 8,000 men the year after the Mutiny, and 10,000 men for a series of years, that would reduce very considerably the charge that was created at a period of, say, 21 years afterwards, regard being also had to the fact that practically the short-service system was introduced as soon as the Act was passed?—Yes, my argument is valid as regards the recruitments 21 years before 1883–4, but not for subsequent years; that is to say, short recruitments, accepting what Sir Ralph Knox says, in the years 1860 and 1861 would have affected it, but, when you come to later years, 1863 and 1864, that would not have affected the period that I am speaking of.

15,211. Would it not?—(*Chairman.*) No, because the effect of short recruitments in the later years would fall after 1883–4, would it not, that is your reason?—Yes; short recruitments in 1860 and 1861 would affect the charges after 1883–4, but not those for the dates that I was giving. Men recruited in 1863 would not have completed their long service and come on the pension list in ordinary course till 1884.

15,212. (*Sir Ralph Knox.*) No, they would not. The period for which you have given us figures is not subsequent to 1884?—No; my great reduction was from 1878–9 to 1883–4; I did not give figures for a later date than that.

15,213. But those years would have been affected by the years which I have referred to?—Yes; the first year or two, but you mentioned five or six years, and the later years would not have affected the period that I took.

15,214. But those first one or two years represent a very considerable drop?—Those years would undoubtedly affect it.

15,215. Therefore, the fact that 8,000 men were taken as recruits in 1860 or 1861 would account for a very considerable drop 21 years afterwards for the pension charge?—Yes; I think that very likely may explain to a considerable extent the great reduction from 434,000*l.* in 1882–3 to 272,000*l.* in 1883–4.

15,216. (*Chairman.*) You do not happen to know what the rise of the following years was, without giving any minute figures?—I am afraid I can give you no figures that would be useful, because it was exactly at that time that we changed the system of paying a capitalized sum.

15,217. In fact, you slipped down then to a very small sum?—Yes, a mere nothing the first year.

15,218. That is given in those tables?—Yes, you have them before you, I think.

15,219. Sir Ralph, was the army reduced after 1860–1 to about the level that it was before the Crimean War?

15,220. (*Sir Ralph Knox.*) No; not to what it was before the Crimean War, because of the enormous increase in the army in India. The army in India was doubled practically, and that has been maintained, fairly maintained, up to the present time; but the army at home was considerably reduced.

15,221. (*Chairman.*) In Q. 5552, on page 229, there was an inquiry respecting the charges for Special Expeditions. How far has it been the practice to show these separately?—This was first done in the Accounts for 1878–9, and the cost of the operations in Afghanistan was separately shown in each year to 1882–3. The same course was followed in regard to the expedition to Egypt in 1882–3 and 1883–4. A proposal was made to treat the movement of a force to Beluchistan in 1885 in a similar manner, but this was not adopted. The expenditure on Minor Expeditions is not distinguished in the Accounts; but approximate calculations can, in some cases, be made from the entries under Miscellaneous Expenditure in the Accounts and Estimates, and I may mention that it is in that way that we made up the figures which are given in Sir Donald Macfarlane's return. In making up the cost of the Chitral Expedition the Government of India found the system defective, because the stores issued in India had already been

Sir Henry Waterfield, K.C.S.I., C.B.

24 Feb. 1897.

charged for, and would be replaced from England only in ordinary course. In future, therefore, it has been decided, when field operations are contemplated, to earmark the indents sent to England to replace those issued for the operations, an estimate being forwarded for the purpose, and to record the expenditure separately. In his answer to Q. 5544, Mr. Jacob mentioned that that subject was under consideration, and it has been decided to adopt that course.

15,221A. That would rather correspond with the course which, I think, Sir Ralph Knox pointed out would be followed in this country when he said, speaking of stores for an expedition, "we should value the stores as they "were issued; that is what we always do when they are "shipped abroad, and in that way we get a very fair "approximation."

(*Sir Ralph Knox.*) Yes, quite so.

15,222. (*Chairman.*) That would make your system approximate to the system here?—Yes, I think so.

15,223. Is the cost of the Special Defence Works included in your table with that of Special Operations?—No, the two are kept separate; but there seems to have been some confusion in the examination of these figures on page 229. They are taken from Table IV. on page 63 of Vol. II., in which the expenditure on Special Defence Works from 1886–7 to 1895–6 is shown in column 10. The outlay on Special Operations is in column 3, in which the figures correspond with those given in Sir Donald Macfarlane's return, except that, as they are here shown net, the cost is reduced by the receipts. You will not find the figures exactly correspond, because receipts are taken off, but they are approximately the same.

15,224. But did the Special Defence Works only begin in 1886–7?—Yes.

15,225. And from that time you have kept a separate column for them?—Yes.

15,226. Those Special Defence Works are coming to a close, are they not?—They are coming to a close. The charge for last year is very small, and, I think, in the estimate for the coming year it will be quite trifling; we hope so.

15,227. On page 390, questions were put respecting the system of purchase in the old Local Army. Will you describe that system?—The system in the Local Army consisted in the officers of a regiment contributing from time to time a sum of money as a bonus for a senior officer, in addition to the pension to which he would be entitled, for which sum they hoped to receive an equivalent, either in the shape of actual promotion, immediate or prospective, or by the receipt of a similar contribution in the event of their own retirement from the service. This practice was virtually terminated by the measures connected with the formation of the Staff Corps and the re-organisation of the Indian Army. Although Lord Cranworth's Commission did not consider this to be an infringement of the guarantee, the Secretary of State, being desirous of removing any general ground of complaint, directed that in each case an account should be prepared, showing on the one hand the amount so contributed, and on the other hand the money value of the advance in rank or position obtained, and of any bonus or special annuity given on the officer's retirement; and the difference was paid to him from Indian revenues on his resignation of the service, if he were then below the rank of regimental lieutenant-colonel, or of colonel commandant if in the Artillery or Engineers. In 1875 the deductions were for the most part withdrawn, and it was determined to repay the sums contributed. I think there was a suggestion in the former evidence that the British Government had contributed towards the abolition of that system, but the cost was entirely borne by Indian revenues.

15,228. (*Sir Ralph Knox.*) But when that system was wound up on the abolition of purchase, the annuities practically guaranteed under that arrangement were taken up by the Home Government, at the same time that they took over the bankrupt funds; was not that the case?—The calculation was made when the officer retired of the amount that was due to him for what he had paid, but the cost borne through this local system of purchase was entirely charged to India.

15,229 But since the abolition of purchase these officers have received those payments as they have retired, have they not?—Yes.

15,230. And they have been charged against the British Exchequer, have they not?—No, not the part of which I am speaking, for which they had subscribed under the old pension system; that is paid entirely by India.

15,231. Not as regards the Artillery and Engineers?—I believe that in the case of the officers of the Artillery and Engineers a calculation was made of the value of their step.

15,232. Quite so; but the funds that were in existence at the time of the abolition of purchase to which no further contributions could be made, those funds were practically bankrupt, were they not? Or at all events, there were very small balances in hand?—They came to an end through the want of further contributions.

15,233. So that any payments that have been made since then have been borne by the British Exchequer—have formed a charge against the Home Revenues—is not that the case?—I think that they have been entirely charged to Indian Revenues.

15,234. I think you are mistaken?—I thought that my answer was correct; but on referring to Act 37 & 38 Vict., cap. 61, I see that certain payments are borne by Imperial revenues.

(*Sir Ralph Knox.*) Payments that are now made by the Army Purchase Commissioners to the old officers who retired from the Indian Army, the Engineers and Artillery, those are borne by the British Vote in the Army Estimates.

(*Chairman.*) I think we might clear that up; perhaps, Sir Ralph, the best way would be to get a memorandum from Mr. O'Dowd?

(*Sir Ralph Knox.*) Yes, quite so.

15,235. (*Chairman.*) Perhaps, if you will kindly do that, it might be put in?—Certainly. For a time, I do not know for how long it was going on, but certainly for a time it was borne by India.

15,236. In Qs. 5850–1, on page 391, the average payment of 8*l.* per man before 1857 is taken as a fair comparison with the present capitation rate of 7*l.* 10*s.*; do you agree in that?—No. The 8*l.* rate included colonels' allowances and furlough pay, which came to about 2*l.* 5*s.* a head. It must, therefore, be considered as only 5*l.* 15*s.* for comparison with the present capitation rate, which does not include those charges.

15,237. When you were under examination, Sir Ralph Knox, was not that question rather more closely gone into?

(*Sir Ralph Knox.*) No, I do not think that this comparison was made.

(*Witness.*) I think those are the only questions, Nos. 5850–1, in which a comparison was attempted with the 8*l.* rate.

15,238. (*Chairman.*) I thought some of the witnesses did afterwards analyse more minutely than is done here the different changes which had taken place with the object of instituting such a comparison as that suggested here?—The reason that I put in this explanation was to try and bring out the point that I think the 8*l.* rate was rather assumed to compare fairly with the present 7*l.* 10*s.*; and it appeared to me that it ought to be taken at something under 6*l.* for such a comparison.

15,239. But you see the question is simply an *obiter dictum*. We took the actual sums before us and dividing them by the number of men brought out 8*l.*, and it was merely asked whether that result was a fair sum to compare with the 7*l.* 10*s.*?—Yes; and I only wish the Commission not to be misled by the comparison, through the changes which have taken place in the accounts since.

15,240. I think we were warned afterwards to be careful in drawing such a conclusion, as the changes had been so considerable that the different charges must be closely looked into before attempting to draw any conclusion based upon the payments?—Probably that would be the case.

15,241. (*Sir Ralph Knox.*) I should like to ask Sir Henry Waterfield here one question. You make a certain deduction on account of certain charges in order to effect a better comparison, and those deductions are furlough pay and the pay of the colonels, are they not?—Yes.

15,243. The amount of furlough pay you have taken from the statements in the report contained in the last return in 1862, have you not?—It is from the House of Lords paper 165 of 1862, page 30.

15,244. And you have added to that the colonels' pay; at what rate does the amount not agree with the calculation which I made. Can you say at what rate

you have calculated the colonels' pay?—I estimated that the pay and allowances for the colonels of four cavalry and 25 infantry regiments would amount to about 31,000*l.* or 32,000*l.* a year; it was a little over 1,000*l.* a year on the average.

15,245. But at that time the colonels were paid differently from the way in which they have been paid for some time past. They received their emoluments in two parts. One was 1*l.* 5*s.* a day as a general officer, about 456*l.* a year, and the remainder was regarded as colonels' pay, or his old off reckonings, which amounted to 500*l.* a year, in one or two cases 600*l.* a year; and that was the charge which was made against the Indian Government, included in the agency charge of that period. That being so, the rate at which you have calculated the colonels' pay is somewhat in excess of what the actual charge was; would not that be so?—I am not sure that I appreciate your point. The first part which you take would be the effective charge included in the effective capitation rate. It was not made non-effective till 1881.

15,246. The pay of a general was always non-effective; the 1*l.* 5*s.* a day which an officer received as a general was always non-effective pay?—I do not know how the War Office treated it, but we paid it under the 10*l.* capitation rate, not under the 3*l.* 10*s.* rate.

15,247. In the time of the 10*l.* capitation rate you paid 3*l.* 10*s.* a year for non-effective; but in the old days—the East India Company's time, in fact, which is covered by this—the payment for a colonel was 500*l.* a year?—Yes; but then there were the off-reckonings besides.

15,248. Those are the off-reckonings?—I beg your pardon, I thought you were referring to the other portion.

15,249. Those are the off-reckonings; his pay as a general officer he receives as non-effective pay?—Then you mean that it was covered by the 60,000*l.* a year which the East India Company paid.

15,250. Quite so?—If you tell me that, I accept it. I do not know how that was. Finding that it was covered by the 10*l.* effective rate from the time of General Tulloch's Committee, I thought it had been so before.

15,251. That considerably affects the calculation, and would bring up the East India Company's payment to about 6*l.* 10*s.*?—Yes; it would be about that, if that correction is made. There was, as you have stated, a payment of 1*l.* 15*s.* a day to general officers without regiments; but I believe that the colonels of regiments were paid at an annual rate, which was treated as an effective charge. If, however, you say that it was not so, I must accept it on your statement; I have not the means of checking it myself.

15,252. Quite so. Then, however, that 6*l.* 10*s.* does not compare with the 7*l.* 10*s.*, because the 7*l.* 10*s.* includes a good number of services which have arisen out of the system which has developed since, and for which nothing was included in the former charge, and mainly that for the education of officers?—Yes. I do not think that quite affects the question that I was endeavouring to answer, because the point that you are bringing out is that you only charge India with a higher rate on account of services for which you did not charge her before. I am quite ready to accept that as a statement, as I think it is correct.

15,253. But the educational charges were practically non-existent before. For instance, there was such an institution as Addiscombe in former days, was there not?—Yes.

15,254. Which was a charge which was borne by the East India Company?—Yes.

15,255. That was a fixed charge, was it not?—Yes.

15,256. That is not included in the 6*l.* 10*s.*?—No.

15,257. The equivalent charge to that is the charge for Sandhurst and the Royal Military Academy, is it not?—Yes; but do not misunderstand me. I am not disputing that there are reasons for bringing it up to 7*l.* 10*s.*, but, as a matter of comparison, there may be reasons for which the extra 1*l.* or 30*s.* is reasonably borne.

15,258. But, really, the rates are not comparable. As regards that point, if the Indian Government paid charges for Addiscombe, then, so far, it is fair to eliminate from the present charge the charges for Sandhurst and the Royal Military Academy?—Yes, if you can do so. I do not think you can make a comparison in that manner. I think the only way is this: the 5*l.* 15*s.* or 6*l.* 10*s.* formerly, compares with 7*l.* 10*s.* now paid; but you are giving extra services, for which you charge the difference.

15,259. Surely to the 6*l.* 10*s.* ought to be added the expense of Addiscombe and any training which was then given to officers?—You cannot distribute the cost of Addiscombe over the British force, all the 240,000 men mentioned in General Tulloch's report. I do not think it is possible to make a comparison in that manner.

15,260. Well, to drop that, since the period covered by the 6*l.* 10*s.*, which is now put forward as compared with the 7*l.* 10*s.*, the pay of the soldier of infantry has practically been increased something like 30 to 35 per cent., has it not?—Probably.

15,261. Further, in this price of 6*l.* 10*s.* there was no charge for the training of recruits for either the field artillery or the horse artillery, was there?—No.

15,262. And those are the most expensive part of the Army, are they not?—Yes.

15,263. The highest charges are raised now on account of them?—Yes.

15,264. So that the increase from 6*l.* 10*s.* to 7*l.* 10*s.*, considering those increases, does not seem disproportionate?—No, I think not at all; I did not wish to urge that.

15,265. Further, I do not know whether you have calculated in your 6*l.* 10*s.*, what the cost per man was of those that were shipped at that time—actually embarked?—No. I have divided it on the strength, as given by General Tulloch's Committee.

15,266. I have not been able to get absolutely accurate returns of the numbers embarked during that period, but I have been able to make a fairly satisfactory calculation of the number that must have gone out, because I have ascertained the casualties during that period, and I find that the casualties, which were replaced, represent something like 1,800 a year of men sent out. Dividing the total cost, reduced as you propose, by the colonels' pay, and so forth—the same sums, in fact, as are represented by the 6*l.* 10*s.*—I find that the charge per head for each man embarked was 87*l.* You would admit, for the purposes of comparison, that that is a fair way of making a comparison per cost of men sent out?—Yes, that is another mode of comparing it.

15,267. Quite so. I find that, without considering increase of pay, or artillery, or any points of that kind, the cost per head was 87*l.* Do you know what the cost per head per man shipped amounts to at the present time, taking the 7*l.* 10*s.*?—I think it is something like 45*l.*

15,268. Yes; 45*l.* Well, that does not compare badly with the bill of 87*l.* for the East India Company period, does it?—No.

15,269. That is to say, calculated, at all events, upon the number of men shipped, the cost at which the men are turned out, and on which they are charged against India, is considerably reduced, as compared with what the cost was in the former time?—Yes.

15,270. That is to say, in the former time it was 87*l.*, and now, including all the expense of field and horse artillery, it amounts to 45*l.*?—Yes; I am accepting your figure of 87*l.* I have not the means of checking that.

15,271. (*Chairman.*) I think, on the other side, the India Office rely on this point, do they not, that in the old time you sent out so much fewer recruits?—Yes; that would, of course, make a great difference.

(*Sir Ralph Knox.*) I am only taking the cost per man which is charged. Of course, what we say is that we admit that there is a very largely increased number of recruits, and an increased charge must be contemplated on that account; but as the result of the system there are more than equivalent reductions to balance that increase.

15,272. (*Chairman.*) But, Sir Henry Waterfield, would you not be justified in bringing forward the fact, that under the old system of long service much fewer recruits were sent out, and that, therefore, though there had been a decrease of expense throughout per man, yet there had been an increase of the total expense of furnishing reliefs?—Yes.

(*Sir Ralph Knox.*) I was endeavouring to meet the charge that our system was an extravagant system in raising and training the men as compared with the old

Sir Henry Waterfield, K.C.S.I., C.B.

24 Feb. 1897.

system, and the figures I have given now show practically that notwithstanding that the force is enormously enhanced in cost to us, both as regards pay and the period for which the man is trained, we do it for pretty nearly about one half the money.

15,273. (*Chairman.*) I quite followed your object, and the only reason why I put that further question to Sir Henry was to bring you, so to speak, into line, and show that while you were able successfully to show that the cost per man was less now, at the same time that was entirely reconcilable with the ground which had been put forward by the India Office, that there had been a total increase of charge owing to so many more recruits being sent out now?—Yes, that is so.

15,274. Page 397, Qs. 6011–4. Can you explain why the Government of India's despatch of March 1890 was not laid before Lord Northbrook's Commission?—I think Lord Northbrook himself has explained it, but a full explanation is to be found at pages 27 to 31 of a return made to the House of Lords in 1893 (No. 137). The India Office required that the arguments of the Government of India should be laid before the Commission, if the claims for the years 1887–8 to 1889–90 were prepared by the War Office in a manner differing from those on which the Commission had already adjudicated for previous years. The Treasury thereupon sent the despatch to Lord Northbrook; but, subsequently, the War Office amended its claims so as to make them conform to the lines adopted in former years; and then the arbitration was effected without a discussion, either of the arguments of the Government of India or of the replies of the War Office.

15,275. Therefore it was not the case that the wishes of the Government of India were neglected and that the despatch was not laid before Lord Northbrook's Commission. But the circumstances were changed under which the Indian Government desired that that despatch should be taken into consideration?—Not exactly the circumstances under which the Indian Government desired that it should be taken into consideration; but there was a sort of compromise that if the War Office abandoned its claim, which referred specially to the cavalry and mounted artillery depôts, the India Office did not wish to press for a consideration of the arguments of the Government of India in the despatch of 1890; and then Lord Northbrook's Commission arbitrated on the old lines.

15,276. But, following your words, the India Office did require that the arguments of the Government of India should be laid before the Commission if the claims for the years 1887–8 to 1889–90 were prepared by the War Office in a manner differing from that in which the claims for previous years already adjudicated by the Commission had been prepared, but the War Office did not prepare their claim in a different manner, as I understand?—They abandoned an alteration which they had put forward.

15,277. And, therefore, the circumstances under which the Indian Government required that despatch to be laid before Lord Northbrook's Commission did not arise?—My point is that it was the India Office that withdrew the application that the despatch should be sent to Lord Northbrook's Commission. The Government of India would still have wished, I believe, that their claims should have been considered; but the Secretary of State did not press it, in consideration of the War Office not pressing its views on the other side.

15,278. Exactly—I am anxious to make it clear that there has undoubtedly from time to time been some difference of views between the Indian Government and the India Office; and many questions have been asked implying or suggesting that the Home Government has not complied in such a case as this with the wishes of India?—That is so.

15,279. I think it very necessary to make clear those cases in which the Home Government have complied with the request, as addressed to them by the India Office, because I think in fairness it must be looked upon that, if the Home Government complied with the request of the India Office, they have done really practically all that is necessary?—I think that the British Government cannot be expected to do more than the Secretary of State in Council puts before them. In some cases he has put the full views of the Government of India; in some cases he has thought that those views were not such as he would wish to press, and he has not pushed them to their extreme point.

15,280. Quite so; but, having regard to the comity of Departmental intercourse, we should all be agreed that if the Home Government complies with the wish of the Secretary of State everything has been done by the Home Government that could fairly be requested of them?—I think so; certainly the India Office would not complain.

15,281. Have you any remarks to make respecting the average age or length of service of the British soldiers in India under the present system?—I have nothing to add except to bring together the figures. Sir Edwin Collen's answer, 6042 (page 398), shows that it was on the average of the men returning home in a single trooping season that he gave (Q. 6093) the average service of men in India as $5\frac{1}{3}$ years. From such data the average would not be affected by the number of men of longer service remaining in India, as suggested in Q. 6100, for it must be assumed that those returning would include a fair proportion of the men of longer service. But Appendix 56 shows that the 7,307 men on whom Sir Edwin Collen's calculation was based did not include 3,432 men who returned with their corps, among whom most of the long-service men would probably be found. Figures quoted from Appendix 57 are given in Q. 6099 which give the average age of men in India as 24; this is equal to $5\frac{1}{2}$ years' service for men enlisted between 18 and 19, as stated in Q. 6111. At Q. 6273 Sir Ralph Knox gave ages which produce an average of $25\frac{3}{4}$, or $5\frac{3}{4}$ years for service in India after the age of 20. The figures do not exactly agree, and I have merely brought them together that, in case the Commission wish to prosecute the inquiry at all, they may see what figures have been put before them.

15,282. Would you rely, with reference to that answer, upon the argument that the average age of men in India is 24?—I find that the figures for it given in Q. 6099 give that average.

15,283. My difficulty in following that out is this: My recollection is that about one-third of the men in India were shown to be above the age of 25 or 26—the seven years?—There was a large number; I forget what the exact proportion is.

15,284. But just take it for my purpose. If my recollection is right they represent about one-third?—Yes.

15,285. If one-third of the men are over 25, it seemed to me rather difficult to arrive at the conclusion that the average must be higher than that. You see, when you take 24 as the average age of the men who are actually in India at the time, a considerable proportion were younger men and going to serve on. You do not get from that statement, do you, the average period of service at which men come home?—No.

15,286. I do not know if you follow what I mean?—I think so; but the table from which the age of 24 has been deduced on that assumption will include a good many long-service men.

15,287–8. Quite so. I see it does, but what I mean is this: If, we will say, there are a thousand men, of whom 700 go away at the end of seven years and 300 stay on for one year longer, then, apart from deaths and invaliding, which may have a very great effect on the result of the figures, you have 700 men who stopped seven years and 300 men who stopped eight years?—Yes.

15,289. The consequence of that must be that, apart from deaths and returns home, the average service in India must be somewhere between seven and eight years?—Yes, but I think you misunderstood what I said about the long-service men. I mean that there must still be remaining many men who enlisted before the short-service time, and that they will increase the average. In order to see the effect of the short service you must eliminate those. We have not got the means of doing that at present.

15,290. You have not got the means?—No.

15,291. These figures are influenced by that fact?—That is what I wished to bring out.

15,292. But in the end you would come to this, would you not, supposing there are a thousand men, I will say 800 return at the end of seven years, and 200 stay for the eight years. Then your average service, apart from deaths and invaliding, must be over the seven years, must it not?—Yes, the average.

15,293. At the time when they return?—At which they return, yes, but not the average age of those in the country.

15,294. That is the point where I rather demur to those figures, because I do not think the average age at the moment in India quite gives the facts. You will get an average service of something between seven and eight?—Yes.

15,295. But then, I suppose, that average service would be very much reduced by the number of deaths and invaliding home?—Undoubtedly.

15,296–7. Now, do you know whether the number of deaths and invalids sent home is of such amount as would materially alter those facts and lower the average of service?—I think all I can say is that the figures which were given, and which would, of course, allow for the men of quite short service who were in India, would bring out an average of about 24 years of age; and I tried to deduce from that what their probable service was. I think some figures give four years over 20, and some nearly six years over the age of recruitment, which was put at 18 and 19.

15,298. Supposing that out of the thousand men which I have taken, in the seven years 20 men die a year, which is not an uncommon average, of course the 20 men who died in the first, second, and third years would have very short service?—Yes.

15,299. And those deaths would very much reduce the average service of soldiers in India, would it not?—Yes.

15,300. If, then, you applied that correction, what would come out as the average service; do you think that would reduce it to as low as five years or four years?—I am quite unable to say. I do not think that the figures which we have give sufficient data for that.

15,301. (*Sir Ralph Knox.*) You said just now that you had some *remanets* of the old long-service system, men who were serving in that year, 1895—we had the 1895 returns, I think?—I daresay you are right.

15,302. I quoted the year 1895?—I think very likely it is.

15,303. But as the Short Service Act was introduced in 1870, there would be hardly any, I should say none, of the men who had enlisted under the long-service system remaining, would there?—Not of the old 21-year men; but I think there were men who had renewed. Had they not the power of renewing their engagement and going on?

15,304. Up to 21 years?—Yes.

15,305. With very small exceptions; they were discharged, then, at 21 years?—But what I mean is that men who have enlisted since 1870 have the power of renewing, have they not?

15,306. Oh, yes, everybody under the short-service system has the power of renewing?—Yes.

15,307. (*Chairman.*) Only for a limited period?—For a limited period.

(*Sir Ralph Knox.*) Yes; everybody can extend—anybody can extend who likes.

(*Chairman.*) I mean, would you allow men to stop on till 40 if they wished.

(*Sir Ralph Knox.*) Yes; and do. Everybody who wishes to renew may do so. He must have some good-conduct badges, and be a fairly respectable man.

(*Chairman.*) Have you many men of a long service of that kind?

15,308. (*Sir Ralph Knox.*) Yes?—That is what I referred to. I think you will find the fact mentioned in one of the answers I have quoted.

15,309. But that is part of the short-service system?—I think it is shown in Appendix 57 that there are a very large number of men over the age.

15,310. (*Chairman.*) But then, if that is the case, you have got the short-service system into full play, and you do not want to make any reduction on account of the men of longer service. It is part of the short-service system, and 10 years or 20 years hence, if the system remains unchanged, the same results will accrue?—Yes; I wanted to show you that the figures which Sir Edwin Collen has put in had been taken on a single year; you will find them in Appendix 55, page 386 of Volume II., where he there says that a certain number of men (something under 2,000, I think) who had from 10 years' service up to 21, were still in the army; and on those figures he has compiled his average service. Therefore, I wish to show you that the one return did not include the long-service men, and the other did.

15,311. But we must regard this return which you have just called our attention to, No. 55, as representing a normal state of things?—I think so.

15,312. There is no *remanet* from the old long-service system?—Not of the enlistment before the short-service system came into force; but of the renewals up to 21 years there is.

15,313. (*Sir Ralph Knox.*) There will always be that; that is part of the system?—Yes, there will always be that.

15,314. (*Chairman.*) My point rather was that the inference that five years is the average service, drawn from the age of the men on a certain day, does not give you a true view of what the average service of men in India is?—I think your point is that the average service when men retire is the true average.

15,315. Yes; that is the average service they give?—No; this is merely the whole service on a particular day.

(*Chairman.*) It has been put before us at various times that the ages of the men serving in India on a certain day—the 1st January 1895—are so much.

(*Sir Ralph Knox.*) Yes.

(*Chairman.*) And then from that it is argued that the average of the service in India is five years.

(*Sir Ralph Knox.*) Yes.

(*Chairman.*) But then I say that is not a true average, because the only way in which you can get the average service given by the Queen's troops in India is by taking it when they retire.

(*Sir Ralph Knox.*) For that you must have special returns.

(*Chairman.*) The figures are not here, but I want to know whether you agree with me that that is the only way in which you can get the actual service given by men in the Queen's regiments in India.

(*Sir Ralph Knox.*) I do not think that would give it you correctly.

(*Chairman.*) Why not?

(*Sir Ralph Knox.*) Because men do not go out at fixed ages; we do not enlist them at a fixed age. We enlist them at 19, 20, 21, 22, 23, 24, and so on.

(*Chairman.*) But still, the majority enlist between 18 and 19, for India, do they not?

(*Sir Ralph Knox.*) No; the men who are soonest ready for India are the men who enlist just at 19, as it were, because in a year's time they have completed their training, and they are 20 years of age.

(*Chairman.*) Therefore, you want to get men at 19?

(*Sir Ralph Knox.*) Yes; but, of course, we cannot make up the number of men who are required from those at 19, and we therefore take men who enlist at 18; but we also have men who enlist at 20; we also have men who enlist at 21, so you cannot ascertain the amount of service given by each man going to India, except by regimental returns stating it.

(*Chairman.*) But you observe that has not touched my point, that to get a true account of the service given in India you can only take it upon the service of the men when they retire; you cannot base it upon the actual ages of men on a given day.

15,316. (*Sir Ralph Knox.*) No; you cannot?—I think the returns prove the point that your Lordship was putting. The average service shown in Appendix 55 of the whole of the non-commissioned officers and men somewhat exceeded five years, and it follows that those who retire, who return home having completed their service, must exceed five years, and then the Appendix 56 shows that by the measure of a single trooping season the average service in India was 5 years, 4 months, and 19 days. The army service would be, of course, in excess of that, because part of it had been rendered in England.

15,317. (*Chairman.*) There is the training time, the 12 months?—Yes.

15,318. And if you add that on you would find it carries it up?—I think it brings out the figures which were put in before the Commission.

15,319. No, that will not make the thing complete. The average would be less than the service so calculated, because that will not take into consideration the deaths?—You will have to allow for that; if it were possible to do so, you would, no doubt, have to allow for it.

Sir Henry Waterfield, K.C.S.I., C.B.

24 Feb. 1897.

(*Chairman.*) Quite so.

15,320. With reference to Qs. 6092-7 (page 399), should you say that the cost of transport has been increased through the 'short-service' system?—At Q. 6715 (p. 423) Sir Ralph Knox said that he would admit 50,000*l.* a year, as the excess in the cost of transport, owing to short service. So far as I can judge, this is a liberal estimate. I find the number of adults annually conveyed from 1871-2 to 1877-8 was 20,983. Adding one-sixth in consequence of the increase in the Army, this would be made up to 24,480. The average of the eight years from 1887-8 to 1894-5 is 27,802, showing an excess of 13½ per cent., which may be attributed to short service. The average cost of the troop service from 1871-2 to 1878-9 was 292,695*l.*, which an addition of 13½ per cent. would raise to 332,209*l.*; in recent years the net cost has averaged 256,059. Hence it may be taken that short service increased the cost by about 40,000*l.* a year, but that there is a reduction of 76,000*l.* from other causes.

15,321. (*Sir Ralph Knox.*) I generally agree with that. We made a little allowance for the new system which has been introduced, the hiring of ships; we thought that it might be a little more expensive, the rate per man, than the system which was previously in vogue?—I took the cost over an average of years, in order, as far as possible, to obtain it apart from the question of the cost of hiring transports.

15,322. (*Chairman.*) I see that in answer to Q. 6176, page 402, it is rather implied that the whole charge of the Perak Expedition was thrown upon Indian revenues; was that correct?—No; India bore the ordinary, but the Colonial Government bore the extra expense.

15,323. That is an important consideration, because, I think, on various occasions when we have been considering the cost of the expeditions, Perak has been mentioned as if the whole cost was thrown upon India?—I think it is from the fact that there was no vote in the House of Commons for it, and therefore it was supposed that India had borne the whole cost.

15,324. How would you summarise the views of the Government of India on the question discussed at Q. 6117-94 (page 400), of the division of cost when troops on the Indian Establishment are employed in expeditions out of India?—They are expressed in the papers laid before Parliament respecting the Suakin Expedition (C. 8131). The Government of India object to any part of the expenses of troops employed out of India for purely Imperial services being charged to India, on the ground of want of reciprocity, since India is charged with the whole cost of troops needed for an emergency in India, from the day that they quit England, as well as with the cost of training them for service; because special or temporary service does not, in its nature, differ from ordinary service abroad, when soldiers recruited in India are lent to England, the latter then bearing the whole charge; because, by Act of Parliament, Indian revenues cannot, without its special sanction, be applied to the payment of troops out of India; because India, while denuded of troops needed for the establishment, in running risks; because politically it is inexpedient to encourage the belief that wars can be waged in other countries at India's expense; and because countries with representative institutions are not so treated. India is willing, when she can, to lend the troops for which she has undergone the expense of training, and for whom, as in the native army, she will have to bear the cost of ordinary pensions; but she objects to going further, unless, as in the case of danger to the Suez Canal, her own interests are threatened.

15,325. On this point I should be very glad, Sir Henry, to come to an understanding on facts with you, which, I think, ought not to be difficult to establish. You say there is want of reciprocity; but I think the only case which has come before us in which England has lent troops to India is that of the Mutiny. You were not present when Lord Northbrook was examined?—No, I was not.

15,326. We went into the question, and he, I think, dwelt upon the want of reciprocity. The understanding on which the demand is now made by England, is, I think, that either country should lend troops to the other, bearing the ordinary cost of pay, and so forth, if the troops so lent are not replaced?—That is the understanding on which troops have been lent in past years; but I am not quite sure that the Government of India have yet agreed to that as a general principle.

15,327. I only want to take the facts?—That has been so when Parliament has voted it.

15,328. I am now arguing on the question of reciprocity?—Yes.

15,329. In the case of the Indian Mutiny, I think, it has been shown that fresh battalions were raised to a very large extent?—Yes.

15,330. And, further, that militia was embodied?—Yes.

15,331. And that, of course, resembles very much raising fresh battalions. Would you agree that the understanding would not be transgressed if India was asked to bear the ordinary pay of those troops which were lent, so far as they were replaced, as in the case of these expeditions in the Red Sea, and so forth?—As regards the ordinary pay, it may be a mutual understanding; and in that case the interests of the other country would be safeguarded if the pay of the troops raised to replace the troops lent were allowed for by the country borrowing; but that does not seem to me to cover the whole question; because there are the training expenses.

15,332. Before you pass on to that, per contra, I want to make an allowance which, I think, Lord Northbrook established, and which we were disposed to admit, namely, that where troops are so lent, even though they are replaced, the replacement does not take place simultaneously with the loan?—Quite so.

15,333. And to whatever extent that was the case in the instance which I put before you, there would not be reciprocity?—Yes.

15,334. Therefore we shall put that aside; we should be in agreement upon that?—Yes.

15,335. But during the time that fresh troops were actually raised to replace those which were being lent, it would not be a breach of the reciprocity if India was asked to pay for the ordinary charges of those troops that were so replaced, and for the period during which they were replaced?—So far as regards the pay, I think it would not be.

15,336. This argument has been put forward very often without that qualification, and I think it has been assumed by India, until we came to talk the matter out, that there has been a real breach of reciprocity; but India lost sight of the very large number of men raised to replace those lent to India during the Mutiny. Having arrived at that, I am ready to go on with your further reason against the view that there has been reciprocity?—I do not think that India has complained that there is no reciprocity if the occasion arises; the point of the Government of India is that the occasions always arise on the one side, and that for the last forty years there has not been an opportunity for reciprocity, I believe.

15,337. We understand that, in fact, it is an arrangement between the two partners beforehand, which in practice is found always to affect one of them only?—Just so.

15,338. That is your point?—That is one point. Another point that I wanted to put before you is this: the one great case of England affording assistance to India was in the time of the Mutiny. At that time regiments were raised undoubtedly in place of regiments that had been taken. Sir Ralph Knox will correct me if I am wrong, but I believe that the East India Company paid the training and depôt charges for all such troops as were raised; so far as it was necessary to replace those that had been borrowed, they were not charged with the departmental expenses which had been incurred, but the actual pay of the men at the depôts and their cost while they were being trained to be sent out to India were, I think, all charged to the East India Company.

15,339. That is to say, you mean that every charge connected with those 40 battalions that were sent out to India was brought against India?—I think so.

15,340. Your words might have implied that India was called upon to pay some of the charges of the new battalions that were raised?—No; that was a mistake of mine, if I put it in that way. I meant that, of the troops that were actually sent to India, India bore the pay from the date of embarkation, and also the training expenses, in so far as they could be directly attributed to the troops that were sent. India was not charged with the departmental expenses, but of the actual training and depôt charges I believe, that the East India Company paid the whole of.

(*Sir Ralph Knox.*) That is so. Under the old arrangement to which we have been alluding, the 8*l.* arrangement, whenever a regiment proceeded to India the depôt charge at once became chargeable to India. That depôt was maintained for keeping on foot and reinforcing the regiments that were in India, and when the regiment went to India or any special regiment was formed with a view to going to India, the depôt from that time became chargeable to India. Of course the charges were heavy during the Indian Mutiny time, which lasted for the three years from 1857 to 1860, because from that time the 10*l.* capitation rate came into force.

15,341. (*Chairman.*) Well, now, Sir Henry, will you tell us how that affects the question. I take it that what is in your mind is this, that in consequence of those charges the demand upon India was heavier than would be the demand upon England, in a reciprocal case?—My point is that, while India was charged with the training expenses of the troops that she borrowed, England pays nothing for the training expenses of the men that she borrows from India.

15,342. That is to say, of the native regiments?—Or for the British regiments; India has paid for them and lends them without any reciprocal treatment.

15,343. In order to put the two cases exactly parallel, you mean, England, when she borrows troops, ought to pay a portion of the training expenses of the native troops, and repay a portion of the expenses of training the English troops which India has paid?—I think it would be necessary in order to establish complete reciprocity.

15,344. (*Sir Ralph Knox.*) Under what circumstances have European regiments been withdrawn from India, across the waters from India as it were, and India continued to pay? Do you remember?—Do you wish me to give the list of the expeditions?

15,345. Yes; those in which India continued to pay the European troops?—At page 364, Volume II., in paragraph 19, there is a list of various expeditions in which European troops were borrowed for the purposes of the British Government from India, and for a time India lost their services. There was no payment by the British Government in consideration of the training given to those troops.

15,346. No; but the English Government paid the regiments, for instance, that went to New Zealand in 1860 or 1861?—Yes, in that case the regiments were struck off the Indian establishment.

(*Sir Ralph Knox.*) Yes.

15,347. (*Chairman.*) And England bore all the charge?—England or the Colony (I do not know how it was divided) must have taken the whole charge in that case.

15,348. (*Sir Ralph Knox.*) But in all the other cases?—I think in a few cases the regiments did not go back to India, and in those cases they would have been struck off from the time that they left for the expedition.

15,438A. I think it would be well, do you not think so, Lord Welby, to have it discriminated, because it would appear as if India had continued to pay for the whole of the expeditionary force.

15,349. (*Chairman.*) I think so. Sir Henry, do you think you could discriminate it?—I am not sure that I understand the point. During these expeditions, in some cases—it is mentioned in paragraph 21—India continued to bear the ordinary expenses; in some cases England took the whole of the expenses. But whenever the regiment returned to the Indian establishment I think I am correct in saying that for the time of the expedition India lost the services of the British regiment and received no compensation for the expense of training.

15,350-1. But this paragraph appears to point to the fact—I may be mistaken—that India continued to pay the whole of the pay of those forces that were employed beyond the shores of India?—No, I think you will see, from paragraph 20, that that paragraph is written, not with reference to the question of pay, but on the question of how far India uses England as a reserve to supply her needs upon occasion of special emergencies.

15,352-3. (*Chairman.*) It would be very useful, if we saw to what extent India was called upon to contribute in lending those troops, and I think it would be perfectly fair that, in stating that, you should bring forward your point that no allowance was made for the training of those troops?—Yes, I will put in a note to explain it. If I understand the point, the Commission wishes to know to what extent the regiments mentioned in paragraph 19 returned to India or were struck off the Indian establishment.

15,354. And, also, if we could know in which of those cases India continued to make payment; for instance, in the New Zealand case I presume you say that India did not pay ordinary pay from the time the regiment left the Indian shore?—No, I think that regiment was struck off the establishment at once. After the Abyssinian expedition, if I remember aright, some regiments came home, I do not think they all went back to India. But I am not sure that it would be a very useful statement, because if a particular regiment came from Abyssinia to England, another regiment must have gone from England to India in its place; the Indian establishment was not reduced.

15,355. But the Indian establishment was probably only made up at the close of the expedition, would that not be so?—That may be or may not, I do not know. I will do the best I can, but I rather doubt whether the paper will give you the full explanation you want.

(*Sir Ralph Knox.*) I think it is necessary that we should be clear on this point, because the point is that when the troops, as the other day, were moved from India to Suakin, India continued to pay that force, and remonstrated against being compelled to do so. While, as regards these other expeditions, it might be thought that they were all treated in the same way and that India had continued to pay those forces after they were despatched from India; otherwise they are not apposite.

(*Chairman.*) That is the point I understand you to raise, and which, inasmuch as we have used this paragraph very much in evidence and turned to it as an authority, should be brought out, namely in what cases India paid and in what cases she did not.

(*Sir Ralph Knox.*) To show, of course, if India paid at all for the European troops.

(*Chairman.*) I understood that India paid the whole.

15,356. (*Sir James Peile.*) Is there not a statement anywhere else of the expeditions, showing who paid, and what proportion in each case?—I think it is in those paragraphs 19 and 21.

15,357. I thought there was a statement somewhere else?—Oh yes, it is also stated in the enclosure to the despatch of 1890 (p. 269), but it is only the same information again. The point which you wish to elucidate is, I think, whether the establishment was reduced; but, as I say—take that case of the regiment which was sent to New Zealand—if another regiment was sent out in place of it, it does not at all help India. The Government of India in an emergency met the want of the British Government by despatching with great promptitude the regiment to New Zealand. If another regiment is sent out in place of it, the fact that the first regiment was struck off the Indian establishment does not relieve the revenues of India at all.

15,358. (*Chairman.*) No; because in that case the establishment in India is kept up at its normal?—Yes.

15,359. It is a mere question of departmental convenience. Inasmuch as the regiment in India was comparatively close at hand, it was sent to New Zealand at once, whereas the relieving regiment went out to India more leisurely to take its place?—Yes.

15,360. Therefore the Indian establishment was kept up, and, beyond the fact that the Indian Government did the courtesy of sending the regiment quickly away, it is not affected?—No; and therefore I may say at once that I think that in no case in the expeditions mentioned in paragraph 19 was any reduction of the Indian establishment made.

15,361. Oh no; I have not understood that any reduction took place?—I think that rather meets Sir Ralph Knox's point.

15,362 (*Sir Ralph Knox.*) If it was practically a relief, if the regiment that was taken away and sent to New Zealand was replaced in India, there would here been no charges; I mean that India would not have been charged with the expense of raising and training that regiment we sent out, and India would not pay for the regiment that came home in any respect. It would be simply a relief; there might have been an interim during which India would have saved money?—Yes.

15,363. (*Chairman.*) That is only Lord Northbrook's argument; when we quoted to him the raising of troops

Sir Henry Waterfield, K.C.S.I., C.B.

24 Feb. 1827.

here to replace the regiments sent out to India during the Mutiny, he said, "Oh yes; but they were not "replaced on the day that the regiments sailed from "here"?—Yes.

15,364. He thought that probably three or four months passed by, and we admitted the argument as far as it went?—Yes, I may find that this is a similar case.

15,365. Of course, there is one point in your recent answer which has been very fully discussed, and I do not know whether you will care to go into it very much; but it is one as to which we might come to a certain amount of agreement. You say the Government of India object to any part of the expenses of troops employed out of India for purely Imperial services being charged to India. May we agree so far that that raises the very point for which Lord Northbrook was anxious to find a solution, namely, whether the service has been a purely Imperial service, or one in which India was interested?—Yes.

15,366. Very often the Indian Government took the former view; but that is exactly the point in dispute?—Yes; I think the argument of the Government of India is well illustrated by Perak. There India bore the ordinary expenses, but the Government of India maintain that they were in no way whatever interested in the expedition.

15,367. Of course we know that there is any amount of difference of opinion regarding these different expeditions, and various people who would hold that on one or two of them India might fairly contribute, would think that upon others India had been unfairly charged?—Yes.

15,368. It is not entirely a separation between English and Indian opinion?—No; there is a great difference of opinion in England upon the point.

15,369. And that is the point to which so much of Lord Northbrook's evidence was directed, namely, to endeavour to find the solution for this difference of opinion which has so constantly arisen between the two Governments?—Yes.

15,370. Under the system of India's paying for the depôts, what charges were imposed on her at the time of the Mutiny?—That is the point to which I was referring just now.

15,371. It is really an amplification of what you have just now been telling us?—Yes. The East India Company were charged with payments—

(1) for depôts and recruiting districts, pay of men, levy money, &c., proportion of staff, barrack accommodation, and forage.
(2) for regimental agents' expenditure, pay of officers, and agency, and pay of non-commissioned officers and men of regiments during voyage out and home.
(3) clothing.
(4) difference in number of men embarked for, and disembarked from, India with regiments, to compensate the British Government for the cost of replacing soldiers who volunteered to remain in India, &c.

When the great increase in the strength of the infantry depôts was occasioned by the demands for India during the Mutiny the East India Company was charged with the additional expense of the men, but not with the increase caused in the departmental expenses.

15,372. (*Sir Ralph Knox.*) With regard to the charges for the regiments that went to India during the Indian Mutiny, there was no direct charge made against India for the 40 regiments that were sent there? On the sending of these regiments there was no bill sent into India on account of the 40 ready-made regiments having been sent off to India?—I believe that a fixed rate was paid for the men who were sent out under the head of "Difference of passage"; but the charge for the depôts came in afterwards.

15,373. Quite so; but immediately on their despatch the depôts that were started to maintain and keep them going became a charge against India?—Quite so.

15,374. (*Chairman.*) Therefore you cannot say that in the case of the 40 battalions that were actually sent out any charge was made upon India for their training?—No special charge.

15,375. The training of the men to replace and recruit them was charged to India, but not that of the men who were actually sent out, is not that so?—It was a different system. In the answer that I have just given I stated that we paid for the depôts and the recruiting districts, and the regimental agents' expenditure, but we did not pay, as on the present system, for the training of the men sent to India with those 40 regiments.

15,376. What I meant to say was this; whatever the 40 regiments represented, 30,000 men or whatever it was, those actual 30,000 men were sent out to you, and no charge was actually made to you for the training of them; but, from the moment they started, the training of all the men put into training to fill up the gaps was charged for?—Yes, that, I believe, was the system at that time.

15,377. At Questions 6402–5 (p. 411), it is pointed out that, when soldiers go out after a long training, England has had to bear much more than the payment for six months. Do you wish to make any remark on that statement?—I think that it should be borne in mind that the recruitment is not especially for India, but for the army generally; and that, if it happens that the British Government has had to train the soldier an unusually long time, India, in return for her regular payment, will obtain only four or five, instead of six or seven, years' service from the man, and then will have to bring him home, and pay for another.

15,378. (*Sir Ralph Knox.*) But, in that case, India does not pay the full charge for the men at the calculated rate?—You mean that there is a rebate?

15,379. Well, there is a reduction in the charge made for the man, if he has only shorter service to give?—We pay for the full six months' or nine months' training for the man who is going out.

15,380. Not if the man has only a comparatively short service to give?—No, I do not mean when he has only to serve for a comparatively short period. If he had been enlisted for several years, we should not pay the full amount; but the point that was raised in these questions was, that the training went on for more than six or nine months, and, therefore, India was getting a very cheap man who had been trained for twelve or eighteen months; but I think, if he has the requisite service for India still to give, we would pay the full amount. I do not think there is any reduction in that case, is there?

15,381. That is the point in which Lord Northbrook took so much interest, and which I complained of, that, although the man was a very much better man, he always docked off something from the charge, if the man had not his full six or seven years' service to give?—Then my point is not so strong as I thought it was; but still, we should have the cost of bringing him home after a comparatively short time, and sending out another man.

(*Sir Ralph Knox.*) Yes, quite so; there would be that.

15,382. (*Chairman.*) That really is what it comes to, that you would have to replace the man sooner?—Yes.

15,383. As to the establishment in India, do you question the figures laid before us at Q. 12,608?—Yes; it is a mere question of numbers. It was said that there are now 73,000 men in India. That must be understood to include officers; the establishment in 1894–5 was: Officers of artillery, cavalry, and infantry, 2,266; non-commissioned officers and men, 70,563; total, 72,829. In Qs. 13,140 and 13,175 it seems to be assumed that the number of men to be recruited is from 72,000 to 74,000. It is rather an exaggeration.

15,384. The number on the establishment is 72,900?—That is the total establishment, whereas the number of men is very slightly over 70,000.

15,385. Next, we come to the question of rebate, upon the fringe of which we have just been touching, Qs. 12,678—81, page 494. Have you any observations to offer upon Sir Ralph Knox's evidence?—I merely wish to say that, as it appears to me, if India pays the gross charge for the man, and receives a rebate when she returns him as effective, that is, when she has not had from him the full value for which she paid, she really does pay the full value of the services which she receives. I thought Sir Ralph Knox rather seemed to imply that we did not pay the full value, if we got the rebate.

15,386. (*Sir Ralph Knox.*) The point really which I wished to bring out was, that the earlier months of a man's service were practically the period of training; that India, with a view to letting her off as cheaply as possible, was charged with only six months' training; that, if the soldier recruited was a young soldier, the Home Government, the British Government, went on

training him as a youngster till, say, the end of the year—he could not be shipped to India until he was 20 years of age, but during the first year of his service the charge for him would have been divided practically between India and the Home Government—but that, inasmuch as the Home Government had paid for half of his training on that assumption, it was hard to charge the Home Government over again with a portion of the charge which India had paid, because the man returned to give four years' service in the reserve. Practically the period of training had been already divided between the two, and the Home Government should not be surcharged on his return because the man came home to give his service in the reserve?—I think, perhaps, my answer was directed more to page 513. Qs. 13,054–7; but I merely wish to point out that I think there is a reply to the statement that India is being liberally dealt with by the rebate. I think she is paying the full value, nevertheless, of the services which she has received.

(*Chairman.*) Sir Ralph, taking Sir Henry Waterfield's argument there, I will just repeat his answer:—"If "India pays the gross charge for the man and receives "a rebate when she returns him effective; that is, when "she has not had from him the full value for which she "paid, she really does pay the full value of the services "of the man which she receives." That is true, is it not?

(*Sir Ralph Knox.*) Well, calculated upon this basis of six months as the training—if you assumed that that is all the training which a soldier gets at 18 years of age, the argument would be a sound one; but what I hold is that with a young soldier like that, the period of a man's training cannot be taken at less than a twelvemonth.

15,387. (*Chairman.*) And on that extra six months you do not get any payment?

(*Sir Ralph Knox.*) No, we do not; we keep him for two years in fact, and some might hold that during these two years he was not fit, as being undertrained. After that we admit he is a soldier, fit for service in this country. India we charge with only six months of that training. The Home Government pays the remaining six months, and from that point of view the Home Government ought not to pay any rebate when the man comes back. I am only arguing this in the abstract. We are quite willing to agree to the other arrangement; but in agreeing to that other arrangement we say that we treat India in the most liberal manner possible, on the assumption that she is to pay anything like the cost of raising and training the men in her army.

(*Chairman.*) May I put your argument in this way. We have heard from the military authorities considerable stress, I think, laid upon the value of a fully-trained soldier; we have had comments made upon the inefficiency of soldiers of very short training. Lord Wolseley gave us some evidence on that point, of his having seen how the young recruits in old times, as he expressed it, "died off like flies" in their training; and your argument is that, if the man has a full training here, and India is only charged for the short training, she receives a much more valuable article, and is not asked to pay a considerable part of the expense which has been laid out in making him so valuable. I should like to ask Sir Donald Stewart whether he agrees with that view?

(*Sir Donald Stewart.*) That is true; but is it not the case that a great number of men go out who have not got the six months' training?

(*Sir Ralph Knox.*) Well, it has from time to time happened that men have gone with less. Once especially, on the occasion when India made an addition to her establishment. Of course, it is a very difficult thing under those circumstances to provide the additional men; but India has wanted the men, and men have gone out with less than the required amount of training, especially if we have been able to cull them from those men who have been enlisted at a more mature age; under those circumstances, India being very anxious to have the additional number of men, in those cases men have been sent off with five and six months' training instead of nine.

(*Sir Donald Stewart.*) And even with less than that, I think, in some cases.

(*Sir Ralph Knox.*) Well, I do not think so, but there were cases, I know, to which attention was drawn by Sir Thomas Seccombe in the examination of these matters. What was found in those cases was that those men who had been sent out with apparently a very short training with the Army had received training with the Militia, which training is practically the same as the Army training. A man joins the Militia, and, after he has done his Militia training of three months, he can elect to pass on to the Army if he likes. He then passes into the ranks of the Army, and, of course, three months on the top of his Militia training would practically make six months; but in all the returns that were made up the period of service was limited to that which was given actually in the ranks of the Army.

(*Chairman.*) Then, you would meet Sir Donald Stewart's criticism by saying that practically the man, either in the Militia or Army, had had six months service; though you would admit that men are not infrequently sent out with less than six months' service, you say that it would be found on examination that they had six months or more.

(*Sir Ralph Knox.*) Quite so.

(*Sir Donald Stewart.*) Of course, I can only speak of facts; complaints used to be made that men were sent out to India knowing nothing or hardly anything.

(*Sir Ralph Knox.*) The cavalry principally have been complained of.

(*Sir Donald Stewart.*) Yes.

(*Sir Ralph Knox.*) That was because they did not know much of the cavalry work, and there is no doubt that the old cavalry depôt system of training, and the very short period that was allowed for training, did send the men out incompletely instructed; but in a great number of those cases the men had had a year's service, but were even in that very incompletely trained.

(*Sir Donald Stewart.*) Just so. Then was any reduction made in the capitation charges on account of those men?

15,388. (*Sir Ralph Knox.*) During the whole time that Lord Northbrook's Commission sat, a reduction was made in the case of all of them?—I have a return here which would answer Sir Donald Stewart's question as to the numbers incompletely trained in the particular years. It is one prepared at the Horse Guards in 1891, and it shows all the men who went out in the first quarter of their service, that is, not having completed three months in the infantry; in 1886, there were 212; in 1887, there were 548; in 1888, there were 854; and in 1889 there were 300; and there are similar returns for the next quarter.

15,389. (*Sir Donald Stewart.*) So that it was a common thing at one time?—Yes, but it passed away owing to the complaints that were made, and in 1890 I find no such short service.

15,390. (*Chairman.*) India is said, at Q. 12,768, p. 500, to have borne the pay of the whole of the troops borrowed during the Mutiny, from the date of their arrival in India. Do you wish to qualify that?—There is a slight inaccuracy in the words "from the date of arrival in India." The statement is correct as regards the troops on their way to China, which were intercepted; but, in reference to the bulk of the regiments sent from England, their pay was charged to India from the date of embarkation here.

15,391. Can you say when the existing tables for the calculation of the non-effective charges were introduced?—Up to 1884–5 the capitalization was effected on the old London life tables. The new tables were in existence before the change, but they were first applied in 1884–5 when capitalization ceased. They were afterwards revised and brought into their present shape, and applied in 1887–8, being then divided into tables for long and short service, the latter including men under long service, who were invalided after a short period.

15,392. The object of your explanation there is to make more exact the answers to certain questions which were put about the tables that were used?—It was merely to answer a question (No. 12,921), to which no answer was given.

15,393. On the Chelsea and Kilmainham Hospitals questions (Qs. 13,030–48, p. 512) do you desire to add any remarks?—The claim of the War Office is given in Volume II., page 384, the reply of the India Office at page 385, and then there is a Treasury note by Mr. Ryder, at page 378, in which the penultimate paragraph, in speaking of a certain sum of 600,000*l.* of unclaimed prize money, says: "No part, however, of the above 600,000*l.* belonged to India." I think there is a little misunderstanding there. I wish to say that the

Sir Henry Waterfield, K.C.S.I., C.B.

24 Feb. 1897.

India Office does not claim that the 600,000*l.* "belonged to India." The argument is that it did not belong to the Treasury; that is to say, that, had it been devoted to Chelsea Hospital instead of to the British revenues, the Hospital would be self-supporting; and therefore, that there is no ground for now claiming a share of the expense of the hospital, as a set-off to India's claim for prize money accrued since 1861. It is rather a question of the language that is used.

15,394. (*Sir Ralph Knox.*) But the object of the Chelsea Hospital, or the Chelsea Hospital revenues, as originally established was, or ultimately developed into, a system of paying out-pensions as well as in-pensions, did it not?—Yes.

15,395. And in fact, when the old establishment was full and no more of the old men could be taken in, the out-pension system commenced by their practically paying a man something while he was waiting for a berth inside; was not that the arrangement?—I daresay it was so; I did not know that that was the way in which it had arisen.

15,396. And those allowances were paid out of the Chelsea revenues?—Yes.

15,397. But subsequently the out-pension system considerably developed and very heavy charges came into existence for providing for these pensions?—Yes.

15,398. And the provision for those pensions was borne upon the Home estimates?—Yes.

15,399. When these sums of prize-money were taken in aid of the Army estimates, they practically went to cover, in a broad sense, the Chelsea Hospital expenditure, including in that definition the out-pension charge as well as the in-pension charge?—That is so; it was borne on the British estimates.

15,400. It was borne on the British estimates, and it was taken, in relief of the British estimates, to meet the charge which arose out of the Chelsea Hospital system?—It was taken in relief of the British estimates, and partly no doubt it was for that charge, but it was taken as if it belonged to the British Government entirely.

15,401. But as a set-off against their heavy expenditure for out-pensions?—Yes.

15,402. (*Chairman.*) That you maintain, Sir Ralph, is a set-off against the argument of Sir Henry Waterfield that the money does not belong to the English Government?—(*Sir Ralph Knox.*) Quite so.

15,402*a*. (*Chairman.*) At Q. 13,060 (p. 513) it is said that the instances of men going to India with unduly short training were few, and have now practically ceased? That I think we have discussed.

15,403. In the questions put to Lord Wolseley (Q. 13,153, page 518, and Qs. 13,346-66, page 527) an endeavour was made to ascertain the saving in the Home military expenses if "India did not belong to us." What do you say on this point?—I do not attach much importance to the question at all, but it seemed to me that, if the expense of recruiting for the British Army in India is 1,100,000*l.*, and it is desired to estimate what England would save by not incurring that charge, the answer must be that the saving would be shared between the two countries. One half of this charge, or 550,000*l.*, is equal to a capitation rate of 7*l.* 10*s.* on 73,333 men; so that the calculation, for what it is worth, seems to justify the existing arrangement. I think it was Mr. Naoroji's question, if I remember rightly, of what saving would arise if there was no British Army in India—if India did not belong to us. Undoubtedly, I suppose, the British Government would not have to recruit for so large an army, and therefore there would be a saving on its part. India would not have to pay for the Army, and therefore there would be a saving on her part. I thought that the only way to estimate it was to say that the saving must be divided between the two Governments. If that argument is accepted, it shows that the saving to India is half the total charge, and that India is therefore fairly charged with half that total charge while she keeps up this force.

15,404. (*Sir Ralph Knox.*) Broadly, the circumstances are these: the War Office holds that quite a million is borne upon the War Office estimates to meet the extra charges arising from the Army having to be maintained in India; at present that charge is divided between the two Governments, and India practically pays half of it?—Yes.

15,405. The other half remains as a charge against the British estimates because no claim on account of it is made against India?—Yes.

15,406. Of course, if the Indian Army had not to be kept going in this way, the whole charge would disappear and India would be relieved of her half a million, and the Home Government would be relieved of her half-a-million?—That is what it comes to.

15,407. (*Chairman.*) Are there any other points in Lord Wolseley's evidence on which you wish to remark?—I think that one or two sentences require qualification in order to avoid misunderstanding. At Q. 13,235 (p. 522) his Lordship said that, while India sends two or three battalions to a place like Suakim for a few months, the British Government keep a large garrison of 72,000 or 73,000 English troops in India permanently; it seems an important point in the argument that this garrison is kept by England entirely at India's expense. His words were "once in a way India sends one or two "or three battalions to a place like Suakim for a few "months, whereas we keep a large garrison of 72,000 or "73,000 English troops in India permanently." My point is that it is kept at India's expense. At Q. 13,262–4, he advocated the maintenance of the full strength of the Army as a reserve, but said that the cost of raising these recruits for India would be got rid of. In the circumstances that he was putting, it would only be by the cost being thrown upon England, because his hypothesis was that England would not be able to reduce the force. Then at Q. 13,251 he described the very great navy we maintain as one of the obligations due to our possession of India. It seems to me that, if India were in the hands of a foreign power, we should need a yet larger navy for the protection of our Eastern trade.

15,408. I think it must fairly be held that the defence of India is a claim on our Navy which cannot be put aside?—I question very much whether the British Government would be able to reduce the Navy in the Eastern seas if India were in the hands of Russia, we will say.

15,409. (*Sir Ralph Knox.*) Supposing India were entirely separated from this country and an independent power, one would certainly contemplate the necessity on the part of India to maintain a navy; if India were a separate power from all the European nations she would have to maintain a navy as China does?—But that is another point altogether. The point that Lord Wolseley was putting was that England had to keep up so large a navy because she owned India. I say that I think that, if another nation, a European power, held India, England would have to keep up a still larger navy; or else she would have to give up her Eastern trade and her position.

15,410. (*Chairman.*) But is it not a fairer way of looking at it to regard India and England as partners? In such a case the service we render to India saves her keeping a large navy; that is a very great service to India, is it not, as Lord Wolseley put it?—I am not arguing respecting the way your lordship is putting it, but simply the way Lord Wolseley has put it.

15,411. (*Mr. Naoroji.*) But if India had to find its own navy or army it would be an Indian Navy or Indian Army, not English Navy or foreign army?—Yes.

15,412. That would be for their own advantage?—I am not sure that it would be to her advantage; India would have to spend the money.

Yes; but India would have to maintain her own men, not other people's men coming and eating their bread.

15,413. (*Chairman.*) Will you go on, please?—At 13,285 Lord Wolseley suggested that, if it were not for India, we should not have troops in Egypt, or perhaps in Malta; but, while England, having India, tries to discharge her duty to India, she certainly has acquired and holds India for her own, not for India's sake. I do not think that Lord Wolseley's argument is a good one—that it is for India's sake that England maintains troops in Malta and the Mediterranean.

15,414. It is not for me to put an explanation upon Lord Wolseley's words, but I should have taken his meaning to be that, if we did not hold India, it is a question whether it would be necessary for us to hold the Mediterranean?—Yes.

15,415. I feel that that is rather outside our Commission; the only point in which it fairly comes in is, I think, that for instance, when the Indian Government quite reasonably argues that a part of the cost of Aden might be thrown upon the Imperial Government, the Imperial Government may reply "We are obliged *to*

" keep the Mediterranean on account of the communica-
" tion with India, and if you ask for that we shall ask for
" a contribution from you towards Malta." That does not close the question, but I do not think that we can argue it further than that before this Commission. The only question, that now remain on which you have any remarks to make relate to the Navy or Marine. Can you explain the objects for which the " Lawrence " was provided, regarding which some discussion arose ?—As explained in the letter which Sir Donald Stewart read at Q. 8531, the " Lawrence " was a despatch boat, provided for the use of the Political Resident in his judicial and political duties. Its substitution for one of the gun-vessels was merely proposed for greater accommodation and usefulness, for it was to be strictly non-combatant, merely carrying small guns for saluting and signalling. When some larger guns were subsequently put on board, under an impression that this was authorised by the Indian Marine Act, the Secretary of State wrote that such a step must not be taken without the sanction of Her Majesty's Government, and he directed that the armament should be returned into store at Bombay. I state this simply to elucidate a point in Captain Hext's evidence which there was some difficulty in understanding.

15,416. I thought that Captain Hext rather looked upon it as an undue interference on the part of the Admiralty in stopping the " Lawrence " carrying this armament, did he not?—He rather implied that the " Lawrence " was obliged to carry this armament, in order to protect herself against pirates; and in the correspondence there is no justification for that view.

15,417. At page 436, and in subsequent passages, there was a discussion about the arrangements between the Admiralty and the India Office in regard to docking expenses. Will you explain this?—In 1875 an arrangement was made with the Admiralty that, in addition to the actual disbursements for labour and materials, 10 per cent. should be added in all claims for dockyard labour and stores, including coals, and 2½ per cent. on victualling yard labour and stores, the percentage being in both cases charged " on the gross value of the stores, *i.e.*, on the value of issues and on that of returns." Orders were given in 1879 that vessels of the Royal Navy on the East India Station, not comprised in the squadron on account of which the contribution is paid to the Admiralty, should be treated on those terms as regards repairs, docking charges, fees, &c. The six vessels forming the Indian Squadron were to have the free use of the dockyard; and for the three employed exclusively in the Persian Gulf and adjacent waters, India was also to pay the expense of labour incurred and materials supplied, as well as the cost of the coals consumed. When Lord Gilford's Committee was appointed in 1889 to determine commuted rates which India should pay to cover the working expenses of the service, they pointed out that the rates for the charges of the dock and victualling yards fixed in 1874 were meant to represent the *extra* cost which would not have been incurred but for the work to the Indian troopships; but that a similar course had not been followed in regard to the rate charged for the loan of a ship to the Admiralty, or for the conveyance of Imperial passengers, and they considered that only actual extra outlay should be charged in both cases. In agreeing to this, the India Office abandoned all ordinary expenses incurred on behalf of the British Government, in return for the ordinary facilities rendered by the British dockyards to the troopships. As the trooping service is now given up, there is no opportunity for India any longer to receive in English dockyards reciprocal treatment; and allowance on this account ought, in some manner or other, to be given to India. For otherwise she suffers in a twofold manner; she gives docking facilities to the Royal Navy, while she has no longer any vessels to receive similar treatment in return; and she is allowed only to charge extra cost for the loan of a ship or the conveyance of a passenger, while she gets no corresponding receipt.

15,418. You lay stress upon the fact that the arrangement as made is one based on reciprocal treatment?—Yes.

15,419. And that the arrangements made have practically put India into the position of not being able to claim her advantage out of it?—Quite so, owing to the abandonment of the troop service.

15,420. On the other hand, it is to be assumed that the fact of docking facilities being found in India was taken into consideration in fixing what India should pay for the Navy. I think that the India Office had the full power of bringing that forward when the case was laid before Lord Rosebery, had they not?—Oh no, the docking question did not arise then at all.

15,421. Did you not mention in any way then that the Royal Navy had access to the Indian dockyards?—I do not think it was mentioned at all in the discussion as to the charge.

15,421A. Was it not mentioned as one of the advantages which India gave to England? I thought that India had a full opportunity of stating her case, and that no doubt incidentally it would have been stated (I had better put it in that way) that England had the advantage of using these dockyards. My recollection also was that this was placed before the Imperial Government; was it not so, Mr. Ryder?

15,422. (*Mr. Ryder.*) I think so, and I think the Treasury was familiar with the fact?—When the discussion first arose and the papers were originally prepared with a view to arbitration, the troopships were still running; I do not think the point could have arisen.

15,423. (*Chairman.*) Did not the India Office always tell us, and from time to time point out, that the Royal Navy ships were entitled to docking facilities?—I think it is very possible that it may have been mentioned. You have the papers before you in the Appendix, but the question of docking facilities formed no part of the original charge of 70,000*l.*; it was quite independent of that.

15,424. Oh, quite independent?—Consequently, I do not think that it could have been brought in.

15,425. I am speaking from memory, but you would admit that to whatever extent that was put forward by the Indian Government, it would be put forward as a ground to be taken into consideration in fixing the amount of the contribution? To whatever extent it was put forward it probably was taken into consideration. And further than that I would say, that, if the Indian Government relied upon it very much, I think it lay with them to say in preparing their case for arbitration, " Remember that the Royal Navy has the advantage of our docks." If they did not do so, the omission lies with them, not with the arbitrator?—I think, if your Lordship remembers the manner in which the contribution was assessed, you will see that that rather lies outside the argument. The question submitted to arbitration was as to the extent of the squadron needed for Indian purposes. That being granted, the Indian Government agreed to pay the effective and non-effective charge of the ships that were so needed; but there was no question of a set-off in the shape of docking facilities.

15,426. No, but I thought that in the award a distinct allusion was made to the service rendered by England to India by her Navy being always at hand for the defence of India, as a circumstance which must come into consideration?—Captain Hext, on page 435, Q. 7048, said: " With regard to Lord Rosebery's award, it appears " that sufficient attention has not been drawn, on the " Indian side of the controversy, to the services per-" formed by India for the Royal Naval Squadron, and " the large expenditure willingly incurred by India to " make the dockyards thoroughly efficient." I should say from that reply that I think Captain Hext shows that we did not draw attention to the point; but I am not prepared to admit that it ought to have been so drawn, because I think that it was one which lay outside the question that was then under discussion.

15,427. But, at all events, it was within the power of the India Office to bring it forward; and, if it was not brought forward, the omission lies rather with the India Office than with anybody else?—No; I do not accept that view, because at that time the troopships were running; we were receiving reciprocity, and, until the abandonment of the troop service occurred, we had no ground for saying that we were not receiving such reciprocity.

15,428. (*Sir James Peile.*) I think that the reference to Lord Rosebery was on one specific point—what were Indian purposes?—Yes. Lord Welby is putting before me that, when the contribution was assessed, we ought to have brought it forward: but I think that the question of docking lay entirely outside both the amount of the contribution and the arbitration. We had agreed under the decision of the Foreign Office Conference to pay the total charges for the ships that should be employed, and there was no question as to whether we could make a reduction on account of the use of the docks.

Sir Henry Waterfield, K.C.S.I., C.B.

24 Feb. 1897.

15,429. (*Mr. Ryder.*) But is it not true to say that these dock facilities diminished the actual charge incurred by the Admiralty in maintaining those ships?—Yes; if India charged for the docks, the Admiralty would pay more for maintenance.

15,430. Would pay more; and therefore you may assume that a proper allowance was made for those facilities. When the Admiralty made up their bill and calculated what the ships really cost them, they calculated that they cost them about 117,000*l.* a year?—That is so.

15,431. And the payment is fixed at 100,000*l.*?—Yes. I think that, if the Admiralty had then made any addition for docking, India would certainly have disputed it.

15,432. But I think that they made an abatement; I mean that they base their claim upon what they actually found they were spending, and they were spending so much?—What they were spending on the ships, but not the docking charges in addition.

15,433. Yes, but I mean that the docking facilities which India gave to the Admiralty diminished the Admiralty expenditure on the ships, and therefore diminished the Admiralty claim against India?—Yes, but the Admiralty claim was made up of specific charges for the ships, and the question of whether the ship went to the Bombay dockyard or the Trincomalee dockyard was not brought in at all. The charge might have been made more, but we should have disputed that, and we should have said, "We are already giving "those facilities," and we could not have admitted any such claim.

15,434. These facilities must have diminished the Admiralty expenditure?—No doubt; but I think you will find that, if the Admiralty were to look into it, some of the docking charges must be incurred elsewhere than at Bombay, but that those charges were not brought in at all. I do not think that the question of docking was included in that calculation, so far as we had details before us of the cost of the ships.

15,435. (*Chairman.*) In Captain Hext's evidence, at Q. 7033 (page 434), reference was made to a letter from yourself to Sir David Barbour, which is on record in India. What letter is that?—It was a purely private letter relating to various subjects, and I was quite unaware that any portion of it had been officially recorded. It has no authority, and is merely of interest as giving my own impressions of the Foreign Office Conference which had taken place two days before. I can read it, if desired. I see that I said that "we," *i.e.*, the Indian Authorities, "shall specify the "kind and number of vessels." I did not know that my private correspondence had been put on record to be quoted.

15,436–7. Do you wish to say anything more about the relative duties of the Indian Navy and the Royal Navy?—At Q. 8236 (p. 442), Mr. Cuming, to show that the Indian Navy had to protect the trade of India "generally," quoted a letter from the India Office to the Admiralty of October 20th, 1862. Sir Donald Stewart, at Q. 9530, showed that the insertion of a comma materially altered the meaning of that letter. If it be omitted, the passage reads rather against than for the view that the protection of India's trade "generally" had been hitherto undertaken by the Indian Navy. And there are various sentences confirming this view in the despatches written at that time, which show what at any rate was in the mind of the Secretary of State for India. For example, in the despatch of November 28th, 1862, which abolished the Indian Navy, it was said that the wisest course would be "to provide other-"wise for the performance of such duties afloat as "cannot advantageously be undertaken by vessels of "the Royal Navy. Such services as are required from "ships of war in the Persian Gulf will for the future "be performed by the Royal Navy." And then the despatch provided for "the floating defences of the "Indian ports and harbours," all the expenses of which "will, of course, be defrayed out of the revenues of India." The inferences are twofold. (1.) That all services which it was intended that India should in future perform would "of course" be paid for by India. (2.) That the services on the high seas should be entirely transferred to the Royal Navy, and that none of them should be paid for by India. The previous correspondence shows this even more clearly. The Government of India having objected to the abolition of their navy without some force being left at their disposal, Sir Charles Wood replied on the 30th of August, 1861, "You recommend that Her Majesty's Government "shall place a force of ships at the disposal of your "Government for the naval defence of India, which "shall never be withdrawn without your consent, and "the cost of which shall in part be defrayed out of the "revenues of India; that the Indian Navy shall then "be abolished; and that a transport service shall be "created in its place. There are, in my opinion, "insuperable objections to the first of these proposals. "It is contrary to the true principles of naval warfare "that any portion of the naval force of a country should "be confined to the defence of one particular place. "In a naval war no policy could be so suicidal as to "distribute small squadrons over the vast area of Her "Majesty's possessions in different parts of the world, "leaving the enemy at liberty to concentrate his "strength upon the attack of any one point. The "power of wielding the whole naval force of the "Empire must rest absolutely in the hands of Her "Majesty's Government, who must be responsible for "the defence of India against any serious attack by "sea. This defence, indeed, could probably be far "more effectually provided by means of operations in "the Channel, the Mediterranean, the Baltic, at the "Cape, or on the coast of Tartary, than by such a "squadron as you propose to station upon the coast of "India; and, as India cannot be permitted to exercise "any control over the disposition of the Imperial Navy, "so she cannot properly be charged with any portion of "its cost." And again, "the nature of the services "required to be performed by vessels of war in the Red "Sea and upon the Eastern Coast of Africa has recently "been much changed, in consequence of the extension "of the foreign slave trade, and the more frequent "presence of foreign ships of war. Her Majesty's "Government, therefore, consider that, for the future, "vessels of the Royal Navy should be employed in "those seas instead of vessels of the Indian Navy; and "that, as the purposes for which they are employed "are Imperial, so their cost should be borne by the "Imperial Exchequer." "There remain, however, "duties of considerable importance which must be "performed at the charge of the Indian revenues"; and these were described as "the police of the Persian Gulf"; "the protection of her forts against a small "attacking force from the sea, by batteries on shore or "by defences afloat"; the completion of certain surveys; the transport of troops and stores; and the maintenance of the navigation of the Indus. If it had been at that time the view of the Admiralty that India ought to contribute towards the cost of the squadron, it is incredible that they should have allowed seven years to elapse before preferring any claim for payment.

15,438. "He is of opinion, therefore, that as regards "India, the general defence, the protection to trade "generally, and the measures for putting down the "slave trade on the eastern coast of Africa, which have "hitherto been performed partly by Her Majesty's "Navy and partly by the Indian Navy, should be "undertaken altogether by Her Majesty's Navy." What is the point to which Sir Donald called attention?—You will find it on page 471, Q. 9530; he read the paragraph again; it is a comma after the word "Africa," and it is whether the words "which have "hitherto been performed partly by Her Majesty's "Navy and partly by the Indian Navy" should be read as applying to "the measures for putting down "the slave trade on the eastern coast of Africa" only, or also to the previous words—"the general defence, "the protection to trade generally," and so on.

15,439. Of course, in dealing with the question we must not take the expressions of the Indian Secretary of State as final?—No.

15,440. The Indian Secretary of State states the case of India, and it is not sufficient for him to say that India would have the service of the British Navy without paying for it?—That is so. My point is this: the Admiralty representative quotes a letter as showing what was the view of the India Office. I say that, if that comma is left out, there is a different view given, and that the despatches written by Sir Charles Wood at that time certainly show that he held a totally different view.

15,441. Would not that be answered by the original document? I think that Sir Donald will agree that we must not place and replace commas at discretion. If the original document has the comma, that would settle the question, would it not?—No, it would only show that the copyist who wrote it inserted a comma; I do not think you could trust to that.

(*Sir Donald Stewart.*) I think that, to understand the case, you must go into all the previous papers; and we have gone through them all, and I think that there is plenty of evidence to support the view which I have taken of it—if you refer to the original drafts, the original notes of the document—and I have not the slightest doubt that at that time Sir Charles Wood was giving the decision of the Cabinet.

15,442. (*Chairman.*) When he was First Lord of the Admiralty?—No; he was Secretary of State for India then; he was First Lord of the Admiralty at a later date.

15,443. When he was First Lord of the Admiralty he gave a decision which you reckon was favourable to India; I think we must take that as the decision of the Government. I do not think I would take his decision from what he wrote as Secretary of State for India, because there he was arguing the case of India?—May I sum up my point in this way: as Secretary of State for India he wrote despatches which I have read showing clearly that Sir Donald Stewart's view was the one which was held at the time by Sir Charles Wood; therefore Mr. Cuming's argument on a letter from the Admiralty, on which a different interpretation can be put by inserting a comma, falls to the ground. Then I come to the question of what was in the mind of the Admiralty itself.

15,444. I want to interrupt you there. There must be an original of that letter?—Yes.

15,445. You say that it may be a copyist's mistake. I think the first thing is to go to the original letter, as it stood. I do not think it would do to assume that that matter, as it stands, is a mistake. Some authority usually reads over a letter before it is signed, and most of us who have to sign letters ought to know what the meaning of the letter is and correct such a thing as a copyist's mistake. I think that the original letter must decide?—I do not know how it was actually written, because the original is, of course, in the possession of the Admiralty, not of us; but I do not think you could lay stress on the fact that a comma had been inserted in a letter which had been given to the Under Secretary of State to sign, when you find that Sir Charles Wood in his despatches held a different view. But then I come to the Admiralty point. If the Admiralty believed that a comma ought to have been inserted and that the meaning thereby conveyed should have been acted upon, why did they not make any claim for seven years?

15,446. The argument is this: it is perfectly clear that they did not make a claim, and so far, your argument is, I think, fair. On the other hand, you must recollect that India at that time was only just emerging from the Mutiny, and it is, I think, perfectly arguable that the Imperial Government might not have wished at the moment to press India, without meaning to give up such a fair charge against India when she got into sufficiently better circumstances to enable her to bear, at all events, as much cost for a navy as she did before? —May I reply to that point of your lordship's that the suggestion was made by one of the Admiralty witnesses —I think it was Admiral Kennedy—that it was on account of India's financial embarrassment that the Admiralty temporarily waived their claim. I reply to that that I am not aware of any authority for such a suggestion; it is quite opposed to the action of the War Office, at that time; and no help was given to India as regards her debt, so that the Treasury did not take that view. Moreover, by 1862-3, when this discussion with the Admiralty occurred, India had fairly overcome those difficulties, having in that year a very large surplus of revenue over expenditure (Rx. 1,820,000).

15,447. (*Sir Donald Stewart.*) Besides this, the Governor-General of India, in bringing to the notice of the Secretary of State his proposal to abolish the Indian Navy, offered to pay a certain contribution to Her Majesty's Navy, for the maintenance of the ships required for Indian purposes in the Indian seas; I think Lord Canning offered to pay one-half?—Of the cost of the squadron which should be maintained specially for India; it was a different proposal.

(*Sir Donald Stewart.*) But it was in that year, 1862. The question of the inability of India at that time to contribute to the Navy, I think, falls to the ground.

(*Chairman.*) You think that India had sufficiently emerged from her difficulties, as Sir Henry Waterfield says, and that the Imperial Government would not have felt called upon to spare her?

(*Sir Donald Stewart.*) Certainly not; and there is the fact that the Governor-General distinctly offered to pay and thought that India ought to pay a share of the cost.

15,448. (*Chairman.*) That is a good argument. I cannot quite admit Sir Henry Waterfield's argument that, because a concession was made in the case of the Navy, therefore that concession ought to have been made also in the case of the Army; or an argument drawn from the fact that neither the War Office nor the Treasury made a concession. I do not quite admit that argument?—All I say is that there is no evidence of the British Government having been very tender to India at that time.

(*Sir Ralph Knox.*) Did not the English Government accept the 10*l.* capitation and the 3*l.* 10*s.* capitation just about that time?

15,449-50. (*Chairman.*) I think that was Colonel Tulloch's Commission of 1860, was it not?—Yes.

15,451. (*Sir Ralph Knox.*) The Home Government always considered that they had let India off pretty easily by accepting those terms; do you not think so? —No, I am not aware that they did; I do not think you will find that it was considered to be generous treatment; it was considered to be fair treatment.

15,452. (*Sir James Peile.*) To go back to the payment for the Navy. Is there not a different explanation of the payment by India? In 1862 the Royal Navy undertook the protection of trade, and for seven years no charge was made?—Yes.

15,453. At the end of seven years a charge was made for the first time?—Yes.

15,454-7. Do you recollect the circumstances? What I have in view is this: You will find in the correspondence, which we have before us, that the Government of India at the end of that seven years suggested that for the police of the Indian coasts—quite a distinct object from the protection of trade generally—they should be allowed to establish a special service. They were told in reply that they could not be allowed to establish a service of their own, but that the English Government would supply ships of the Royal Navy; and the Government of India agreed to that proposal and offered to pay seventy thousand pounds for that service. Is not that a perfectly distinct thing from the protection of trade generally?—In the memorandum of the India Office case the words are emphasised "*for these purposes;*" that that 70,000*l.* a year was paid for these purposes, that is, "the maritime police of the "coast and the repression of piracy and of the local "slave trade." There is no mention of the protection of trade.

15,458. I know it is in the correspondence somewhere? —It is on page 310.

(*Sir Donald Stewart.*) And I think the Secretary of State arranged, in 1869, to make this payment without any reference to the Government of India.

15,459. (*Sir James Peile.*) The Government of India had asked to be allowed to have a service of their own, and they were told that they could not have it—it is all in the papers that we have before us—and it seemed to me that Lord Rosebery entirely overlooked the fact that this was a special arrangement for the defence of the Indian coasts, which India paid for?—Yes.

15,460. And had nothing to do with the general protection of trade?—Yes. Without disputing Lord Rosebery's award, I think I may again quote distinctly that the 70,000*l.* a year was given for "the maritime "police of the coast and the repression of piracy and of "the local slave trade."

15,461. While the English Government was paying for the general defence of trade and up to that time made no charge at all?—Yes, that is so, in our view, distinctly and clearly.

15,462. (*Chairman.*) As far as it goes, the question that you ere arguing now is not the immediate point, is it? The immediate point is, so far, this, that the award is now given not upon the idea of a general contribution to the Navy, but upon the ships necesssary to be maintained on the coast?—Not to be maintained on the coast; to be maintained in Indian waters.

15,463. In Indian waters. So far, it is an academic discussion, because the Imperial party have not put forward a claim that India ought to contribute to the Navy generally, which the India Office give reasons for demurring to?—I think not an academic discussion, because I think one of the points distinctly referred to the Commission is what the contribution is to be.

Sir Henry Waterfield, K.C.S.I., C.B.

24 Feb. 1897.

15,464. What the contribution is to be; but at the present moment the contribution is not supposed to be a general contribution to the Navy?—It is a contribution for the keeping of the squadron in Indian waters.

15,465. There is only one other point I should like to draw attention to here; you quote passages showing, I think, that, as in the case of other dependencies, no contribution should be asked for the Navy generally?—Yes.

15,466. Have not circumstances rather moved forward since then? Without going into the question that India originally kept a navy for her own purposes, but merely taking the present state of things, is it not the case that the Imperial Government has in recent years been moving in the direction of trying to get other dependencies to contribute?—Yes, that is so.

15,467. And therefore that point should be taken into consideration when it is submitted that there is no general contribution from other dependencies?—Yes. I have no doubt that the British Government would like to get a contribution from other colonies as from India.

15,468. You claim generous treatment of India on account of the value of the Indian Marine to the Admiralty?—Yes. I wish to draw attention to Admiral Kennedy's statements on this point, in Qs. 8459 (page 449), 8483, 8495-6, and 9439-41. He there shows that it is worth the while of the Admiralty to pay large subsidies to the private steamship companies, and that the Indian Marine is of great value for a similar purpose: and therefore I contend that India is entitled to similar generous treatment, and that the value of the Indian Marine vessels ought to be taken into consideration as being available for service to the Admiralty in an emergency.

15,469. Do you know the facts about the supposed services of the Indian Navy in China and New Zealand?—A claim for the services of the Indian Navy in China was preferred by the India Office, and admitted on condition that India would allow a counter-claim for the services of the Royal Navy during the Indian Mutiny; both claims were eventually withdrawn. If any services were rendered by the Indian Navy in the conveyance of troops to New Zealand, no claim appears to have been made on that account. Captain Hext mentioned that there was some claim which was never satisfied; but we certainly did not prefer a claim.

15,470. Do you agree that the Indian Navy was maintained by the East India Company for the protection of their trade?—Not in later years. The right of the East India Company to a monopoly of the trade with India was withdrawn from them by Parliament in 1813; but the monopoly of the China trade was confirmed till 1833, when it was abandoned. After that date the Company had no private interest in the protection of Indian trade.

15,471. But in the interval she kept the Navy, which may be supposed to have been intended for the protection of her trade?—No; that is my point; the Company had no trade to protect. India kept the Navy for the protection of her own interests, not for the protection of the Company's trade.

15,472. If India kept her own Navy, it may be fairly assumed that she kept it for the protection of her trade?—She had no trade.

15,473. She had no trade?—I do not mean that there was no Indian trade. The question (No. 8712, on p. 459) was as to the supposed personal interest of the East India Company—their profits from the trade.

15,474. I think the argument would be that her own interest as a trading company was gone, but at the same time she kept her Navy, and that Navy was charged with the ordinary duties of a navy on the Indian coast, including the protection of her trade, just as much as the English Navy is kept for the protection of English trade?—The protection of India's trade, but not the protection of the private interests of the Company.

15,475. No?—That is my point.

15,476. Can you give us any explanation of the reasons why a different rate of exchange is taken in the Budget for the calculation of the equivalent in rupees of the British soldier's pay and the exchange compensation allowance?—(I may mention that these are Mr. Jacob's answers, and I will read what he has written.) The British soldier's pay is converted from sterling into rupees at the rate fixed for each year for the adjustment of transactions between England and India, which is generally, for brevity, called the official rate. That rate is fixed for the ensuing official year some time before the Budget, and is based on the average rate of exchange during the current year up to date. When once fixed it is not an estimate, but applies absolutely to all sterling payments made to the British soldier during the year for which it is fixed.

On the other hand the actual rate at which the exchange compensation is paid is fixed quarterly, and is based approximately upon the actual average rate of exchange in the preceding quarter. It is, however, necessary to take some figure for the purposes of the Budget estimates, and accordingly the best estimate possible is made at the time the Budget is framed. That rate being framed at a somewhat later date than that at which the official rate is fixed, and being based on later information, may sometimes differ from the official rate; but it is an estimate pure and simple; and it in no way affects the rate at which the compensation allowance is paid. The figures for the official rate of exchange and the estimated and actual rate of exchange for the purposes of the compensation allowance in each of the last two years are:—Official Rate, 1895-6 $13\frac{1}{4}d.$; Exchange Compensation Rate—Budget, $13d.$; Actual Quarterly, (1), $12\frac{25}{32}d.$ (2) $13\frac{9}{32}d.$ (3) $13\frac{7}{32}d.$ (4) $13\frac{3}{4}d.$; Average for year, $13\frac{1}{4}d.$

15,477. And that rate is rather better than the $13d.$ which you put under the Budget?—Yes, and it happens to coincide exactly with the official rate. In 1896-7 the official rate was $13\frac{1}{2}d.$, and the Budget rate $13\frac{3}{4}d.$, but the actual quarterly rate for compensation was much higher, viz., $14\frac{7}{32}d.$, $14\frac{3}{32}d.$, $14\frac{5}{32}d.$, and $14\frac{25}{32}d.$, giving an average for the year of $14\frac{5}{16}d.$

15,478. That would be to the advantage of the Indian revenue, would it not?—Yes, in this case.

15,479. Is the soldier, then, paid at the official rate?—The compensation does not apply to the soldier's pay at all; it applies to the officer's pay. The soldier is paid at the official rate, the officers are paid an exchange compensation which in that year gave them the difference between $14\frac{5}{16}d.$ and $18d.$ on half their pay; the estimate was that they would get the difference between $13\frac{3}{4}d.$ and $18d.$, and therefore they got less than had been budgeted.

15,480. And the revenue profited to that extent?—It was to the advantage of the revenue.

15,481. Is it the case, then, that in a time of falling exchange the rate at which the soldier's pay is calculated is a little disadvantageous to the soldier?—At a time when exchange is falling below the official rate fixed for the year, the soldier's pay is converted at a rate which gives him a smaller number of rupees than he would receive if his pay were converted at the current rate of exchange; but the converse would be the case when exchange is rising; and on the whole the method adopted is not disadvantageous to the soldier. As the official rate is the actual average for the period immediately preceding, the soldier in the long run is paid approximately at the actual average rate; he is always a year behind the actual rate, but over any period embracing several years the difference between the rate at which he has been paid and the actual average rate of exchange would be very small. It will be seen that in 1896-7 the rate at which the soldier's pay was converted was more than $\frac{3}{4}d.$ below the average rate of exchange prevailing during the year. The rate for 1897-8 will, however, be $1d.$ above that fixed for 1896-7.

15,482. The question is, whether the military authorities are satisfied with the method upon which the rate is computed?—Yes.

15,483. I assume it to be clear, that you could not pay the soldier upon the basis of a daily fluctuating rate of exchange; you must get some average upon which to pay him, and if the military authorities are satisfied that the present system is fair, the civil authorities may be satisfied also?—Yes. It was agreed with the War Office in 1884, I think it was, that the best way was to take the actual rate which had prevailed for the previous 12 months, and to fix it at that rate for the coming year.

15,484. (*Sir Ralph Knox.*) But that might be disturbed if the fluctuation was very great through a year?—It would come round again in the long run. Undoubtedly, during recent years the soldier's pay in rupees has annually increased in consequence of the rate falling year by year. If the rate were to rise year by year, he would receive less rupees; but in either

case, unless exchange very materially altered, a man who served in India five or six years would certainly get a fair average pay.

15,485. (*Chairman.*) But I take it that the soldier paid at the official rate has during the past two or three years made a very good thing of it?—In 1896-7 he received more rupees under the official rate than if he had been paid at the current rate.

15,485A. That is to say, there is a very large difference—unduly large, one might say—between the actual and the official rates—the official rate being 13¼; in the first year the average was the same, but in the last one it was 13½ against 14*d.* and getting on for 14½*d.*

15,486. (*Sir Ralph Knox.*) But in all these variations in economical questions it is not always the same person who benefits as the one who loses?—That is so; but in this particular case last year, the soldier received a great advantage; it went against the Government.

15,487. (*Chairman.*) And similarly, I suppose, that in the long run the difference between the official rate and the rate at which the exchange compensation is paid would be very small?—That is certainly the case. The rates may differ at any given time; but the main difference is that one of the rates is fixed for a long period, the other for a short period, and they are based accordingly on the actual average of preceding periods of corresponding length. In the long run the net outcome of the two sets of averages must approximate to each other.

15,488. And the only criticism really that can be put upon it is that which Sir Ralph has just mentioned, viz., that it is not always the same men who are affected, that is to say, with the regiments changing, it is not always the same men that get the advantage and the disadvantage?—Yes, that is so; but in practice we find that the official rate, which is calculated on the preceding 12 months, is quite as near as the budget rate, which is a guess of what is going to take place.

15,489. In the answer to Q. 14,477 it was stated that the rules of business of the Governor-General's Council are issued by the Council. I observe, however, that the rules which were placed before us purport to have been issued by the Viceroy himself. Can you tell us how they are issued?—They are issued by the Governor-General, not by the Governor-General in Council. Perhaps I may be allowed also to explain, with reference to Qs. 14,480 and 14,481, that the rules of business have been altered since Sir Donald Stewart was a member of the Governor-General's Council, and this accounts for the difference between his and Sir H. Brackenbury's opinion as to the powers of the Viceroy under those rules.

15,490. In this connexion, perhaps, you can also give us some further information as to the point raised in Qs. 14,524–8, about the power of the Viceroy to refuse to bring up certain matters in Council?—I can only invite the attention of the Commission to the fact that Rule 22, which was referred to in these questions, relates only to cases in which the Governor-General concurs with the initiating Member of Council. In any such case the Governor-General may consider the matter of sufficient importance to be brought before the whole Council, or he may consider it unnecessary that it should be so brought. He has an absolute discretion to decide "whether and when" any such matter shall be brought before Council. For cases in which the Governor-General differs from the Member of Council Rules 23 and 24 provide; and in any such the matter must come before Council sooner or later, if the Member adheres to his view, and the Viceroy to his.

15,491. Then does the rule provide absolutely that in such case the matter must come before the Council—that the Governor-General cannot stop it?—I believe that that is so, but I have not brought the rules with me.

15,492. Therefore, according to your belief, the Governor-General has not the power of stopping a Member from bringing a question before the Council?—No; it must, sooner or later, come before the Council.

15,493. (*Sir Ralph Knox.*) That is to say, if the Member presses it?—Yes.

15,494. (*Chairman.*) I notice that Sir Henry Brackenbury stated in his evidence (Q. 14,494) that the Accountant-General in the Military Department is really an officer of the Finance Department in the Military Department. This is not exactly the impression conveyed to us by the evidence given by yourself and Mr. Jacob. Have you anything to say on that point?—I will read Mr. Jacob's answer—If I may venture to say so the statement you quote expresses what *ought* to be the position and status of the Military Accountant-General; but I do not at all understand how it can be held to represent his present actual position. He is an officer of the Military Department, appointed by and responsible to that Department, and he is in no way directly under the Finance Department, and, indeed, he has no direct communication with that Department. In proof of this, I put in some further papers* relating to the position and duties of the Military Accountant-General, and the Controllers of Military Accounts. It will be clear from this that, while the Military Account officers are, as to certain account matters, in subordination to the Comptroller-General, they are in all other respects officers under the administration and control of the Military Department; both the Accountant-General and the Controllers are appointed by the Military Department; and even in matters of audit it is to the Military Department and not to the Finance Department that the Controllers are directly subordinate. The only exceptional power conferred on the Accountant-General, Military Department, is that he may not be over-ruled upon a question of financial rule or procedure by the Military Department without reference to the Finance Department (*See* Military Account Code, p. 5); but even then the reference to the Finance Department is made by the Military Department, and the Accountant-General cannot have any direct and formal communication with the Finance Department, whether official or unofficial. I would submit, therefore, that the Accountant-General cannot be described as an officer of the Finance Department. In respect to this matter I may refer to Sir D. Barbour's evidence (Q. 2135 especially) in which he refers to the appointment of the Military Account Officers by the Military Department as theoretically, at any rate, a weakness in the system.

15,495. I think that that answer makes the position very fairly clear. I confess that I was very much surprised at Sir Henry Brackenbury's description, and I was under the impression that he was only giving us a description of the officer in order to make his duties more intelligible to us, saying, "This officer is a "purely financial officer. I might describe him as an "officer of the Finance Department put into the "Military Department"; because I could not understand how under the constitution of the office he could be described as an officer of the Finance Department. I can quite understand it being said that Sir Ralph Knox is a financial officer, but I do not think he would be very ready to describe himself as an officer of the Treasury?—I think that the point is one upon which there has been a little difference of opinion between the Military and the Finance Departments in India. The Finance Department would rather hold that the Military Accountant-General ought to be under them.

15,496–7. Of course, that is a difference. As a general rule it is a very bad thing for one minister to appoint a subordinate to another office? That is a cardinal rule of administration; and I should have thought that Sir David Barbour was perfectly wrong in thinking that this officer ought to be appointed by the Finance Member. There is one other point in Sir H. Brackenbury's evidence on which I should like some further explanation from you. He states (Q. 14,592) that, when the Military and Finance Members of Council meet to discuss the new items of military expenditure to be introduced into the Budget, the latter is accompanied, as a rule, not merely by the Financial Secretary, but also by the Comptroller-General. I have understood you in previous evidence to demur to the view being taken that the Comptroller and Auditor-General is practically an officer of the Financial Secretariat, and as much an executive as an audit officer; and I should like to ask you whether this statement does not militate against your view?—Here, again, I must give Mr. Jacob's words, because it turns upon his own personal experience. He says, "I can only say that the "statement as to the Comptroller-General attending "such conferences must have been made under some "misapprehension. I was Comptroller-General when "Sir H. Brackenbury took charge of the office of "Member of Council, and in four of the five years "during which he held office I was on duty at the

* Appendix No. 73.

Sir Henry Waterfield, K.C.S.I., C.B.

24 Feb. 1897.

"time the estimates were framed, either as Comptroller-"General (for three years), or as Acting Secretary to "Government (for one year), and I never attended "any such conference except on the single occasion on "which I was acting as Secretary, and on that occa-"sion the officer who was acting in my place as "Comptroller-General did not attend the conference. "It would indeed be quite foreign to the duties of the "Comptroller-General to take part in any discussion as "to the propriety or admissibility of new military "expenditure. His examination of the military esti-"mates is confined to their comparison with the actuals "of previous years, and of the expired months of the "current year, and applies far more to the revised "estimate of the current year than to the budget "estimate."

15,498. The point that Mr. Jacob wishes to bring out being that he was not so much an active consultative officer of the Finance Department as Sir Henry Brackenbury's answer would rather lead us to suppose?—Yes.

15,499. In speaking of the cost of the Indian Contingent sent to Egypt in 1882, Lord Northbrook, at Qs. 14,124 and 14,160, said that he had been informed that the total cost was 1,700,000*l.* Have you anything to say regarding this?—I am responsible for the information given to Lord Northbrook; but I have not been able to find how the figure he mentions was arrived at, and there seems certainly to be a confusion between tens of rupees and pounds sterling. According to the best calculation that I am able to make, the total cost of the Indian Contingent may be put at Rx. 1,410,000, including Rx. 72,000 for the ordinary expenses. Towards this England paid 500,000*l.*, besides about 50,000*l.* in repayment of specific charges, and, at the exchange of 20*d.* to the rupee, these would amount to Rx. 676,000, leaving India to bear Rx. 734,000. So that in this case there was a much closer approximation than usual to equal division of the expenditure, although it arose fortuitously, not under the application of such a principle.

15,500. (*Sir Ralph Knox.*) But what was the total cost?—That was the total cost.

15,501. Including the extraordinary expenditure?—The extraordinary as well as the ordinary, which was Rx. 72,000, I calculated.

15,502. That is to say, on that occasion India bore not only the ordinary charges but a large portion of the extraordinary charges?—Yes.

15,503. But in the recent expedition India bore only the ordinary pay?—That is so.

15,504. (*Chairman.*) You wish, I think, to refer to a point in Mr. Morgan Browne's evidence as to Sir James Westland's financial statements?—In replying to Q. 13,778, stress was laid upon Sir James Westland's having attributed the deficit for 1894–5 to "one cause, and one alone, namely Exchange." I think that, in justice to Sir James Westland, I should point out that, after referring on the 1st of March 1894 to the increased cost of the army, and the charges for Upper Burma, and the necessity that had arisen in 1888 for imposing taxation to cover that expenditure, he said, "Again our "revenue is falling seriously short of our expenditure, "but of this there is now one cause and one cause "only," the fall in the gold value of the rupee. Now the charge for exchange in 1888–9 was Rx. 6,383,100, and in 1894–5 Rx. 14,615,300, an increase in the six years of Rx. 8,232,200. The total increase of net expenditure from 1888–9 to 1894–5 is shown in Sir Henry Fowler's return to have been Rx. 7,016,882 including exchange; so that apart from exchange there would have been an improvement in the 6 years of more than Rx. 1,200,000. I am compelled also to demur to the inference drawn in answer 13,738 that, because in 1888 Sir James Westland summarised the Indian and English figures "excluding exchange," and then added "exchange on home expenditure," he was unaware that the former included the addition to the British soldiers' pay, which was the result of the fall in exchange.

15,505. I do not quite follow from the figures before me how you arrive at that Rx. 1,200,000, as the improvement in the six years?—There was an increase in the exchange of Rx. 8,232,000, and the total increase, including exchange, was Rx. 7,016,000, therefore there was a saving otherwise of Rx. 1,216,000.

15,506. Mr. Buchanan is not able to be present to-day, and he put this paper into my hand in order that on his behalf I might put a question to you. He wished to ask you why no resolution was moved about the Perak Expedition in 1875?—I was not connected with the Financial Department at that time, and I can find no record at all on the subject; but I think the explanation lies in the fact that less attention was paid to the language of the Acts of Parliament in those days than has been the case since. The same thing arose in the case of China; although Indian troops were lent on that occasion and the ordinary expenses paid by India, there was no vote in the House of Commons to cover it. I suppose that, if the question did not escape attention altogether, it was held that the language of section 55 of the Act for the Better Government of India did not require it. The words are, "Excepting for preventing or repelling "actual invasion of Her Majesty's Indian possessions, "or under other and urgent necessity, the revenues of "India shall not, without the consent of both Houses "of Parliament, be applicable to defray the expenses "of any military operation carried on beyond the "external frontiers of such possessions by Her Majesty's "forces charged upon such revenues." In the case of Perak, the Secretary of State from the first stipulated that no expenses arising out of the operations should be charged upon India. He consented to the ordinary expenses being charged which would have been incurred if there had been no such operations; and I think it is perfectly arguable, or, at least, I think it may be held, that at that time it was not thought that there was any infringement of the Act, if expenses arising out of the military operations were not charged on the Government of India.

15,507. (*Sir Ralph Knox.*) That was a sudden military emergency, was it not, which would be covered by those terms?—Yes, I think that it might have been held to be covered by those words, but it was not a sudden and urgent necessity to continue to charge it; it would have justified the despatch of the expedition before the Houses of Parliament could be asked to consent, but I am not sure that that would have justified—it certainly is held now that it would not have justified—the charge of any portion of the expenses on the revenues of India without the consent of Parliament.

15,508. (*Chairman.*) Is there any provision that in the event of the Indian troops being used for a sudden emergency the assent of Parliament should be asked to cover this act of the Imperial Government?—The only provision on the subject at all is in sections 54 and 55. Section 54 requires that, if hostilities are ordered to be commenced by Her Majesty's forces in India, the fact of such order having been sent shall be communicated to the Houses of Parliament within three months; and section 55, which I have just read, requires that the consent of Parliament shall be obtained for any portion of the expense being charged upon Indian revenues.

15,509. Was any communication made to the Houses in regard to Perak in 1875?—No; not in that case at all.

15,510. Then the only explanation that can be given for it is that for some reason unknown the Act of Parliament was not complied with?—No, unless, as Sir Ralph Knox put it, the words with reference to a sudden emergency cover the case.

15,511. That would not cover section 54, which requires that a communication should be made within three months?—No.

15,512. (*Sir Ralph Knox.*) Was there telegraphic communication in existence at that time?—Oh, yes. The troops were despatched immediately, and I noticed that in Lord Northbrook's evidence he spoke of the remonstrance of the Government of India upon the subject; but that remonstrance was based on what he considered the inequity of charging India with any portion of the Perak expedition, not on the illegality; that point, I think, did not arise at all.

15,513. (*Chairman.*) How came it that that omission was not noted by the Audit Department?—There was no expense whatever in this country, and therefore the Auditor of home accounts had no *locus standi* for reporting to Parliament.

15,514. No; but the Auditor in India?—I think that upon that I must say that at that time there was no such system of audit as we have now. Your lordship will remember that the whole position of the Comptroller and Auditor-General, as he is now called, was changed after the Afghan War; and when the Perak expedition

took place, there was a very simple system of audit for reporting to the Government of India.

15,515. Are the ordinary pay and expenses of Indian troops serving outside the boundaries of India separately audited, as they should be under the provisions of section 55 of the Government of India Act?—I think that the ordinary expenses of troops serving out of India are not separated unless they are to be charged to the British Government. In that case it is necessary to keep a distinct account, but we have here no return of the ordinary expenses, and the figures which I have in one or two answers put before the Commission have only been arrived at on a calculation of what is probably the approximate cost. No doubt the accounts of the Government of India would enable such a return to be made up, but it is not usual to do it.

15,516. But at the present moment is it within the power of the Auditor in India to report if expenditure has been incurred by the Indian Government without the resolution of the House of Commons having been obtained? — He would report if the consent of the Secretary of State had not been given. I am not sure whether the Auditor in India would think it necessary to go behind the Secretary of State, and see whether the Act of Parliament had been infringed.

15,517. What I wanted to know was whether it would be possible. I do not quite gather from your answer whether the accounts were kept so far separate that the Auditor would see upon the face of the accounts that expenditure had been incurred outside India?—Yes, that would certainly come before him.

15,518. And therefore it would be in his power to see it?—Yes, it would be in his power to say so.

15,519. Mr. Buchanan has a further question as to whether he would feel it his duty to report?—I gave an answer to a question somewhat to that effect put, I think, by Sir Andrew Scoble. He asked me what would be done in such a case, and my answer was that I thought the Secretary of State was the responsible person. I am not sure whether the Auditor in India would take it up.

Sir Henry Waterfield, K.C.S.I.,C.B.

24 Feb. 1897.

15,520. That, of course, touches the question which is to a certain extent at issue between us, the view of the Auditor's duties that we should take here and the somewhat more restricted view which I think the Indian authorities generally take of the duty of an Auditor?—Yes. The Auditor-General in India is not, as at present constituted, an officer responsible to Parliament.

15,521. No, but he has been put before us as an officer very much corresponding in his powers to the Comptroller and Auditor-General here. I have not the least doubt that the Comptroller and Auditor-General here, under his responsibility to Parliament, would call attention to any infraction, whether of Acts of Parliament or of orders of the Secretary of State, in fact any departure from recognised authority. I do not think that you in India think that that is the duty of the Comptroller and Auditor-General?—It is not at present, but it may be made so; the Comptroller and Auditor-General at present holds himself responsible to see that the orders of the Secretary of State are carried out. If the Secretary of State were to instruct him to see also that the orders of Parliament were carried out, he would do so.

15,522. You think, supposing the Secretary of State gave an order infringing an Act of Parliament, the Comptroller and Auditor-General in India would be going beyond his duty if he called attention to it?—I think that at present it would not be his duty. He is responsible to the Secretary of State. But I think that an order could be given by the Secretary of State, if it were thought fit, that in any such case he should include it in the report that he makes; there is nothing to prevent that.

15,523. There is nothing more you wish to call attention to?—I think not.

The witness withdrew.

Adjourned till Monday next at 12 o'clock noon.

At the India Office, S.W.

THIRTY-SEVENTH DAY.

Monday, 1st March 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Field-Marshal LORD ROBERTS, V.C., G.C.B., called in and examined.

Field-Marshal Lord Roberts, V.C., G.C.B.

1 Mar. 1897.

15,524. (*Chairman.*) Would you tell us the posts that you have held in India, and also the administrative posts you have held here?—You mean of recent years?

15,525. Of recent years, yes?—I was Commander-in-Chief in Madras from November 1881 until August 1885, and I was Commander-in-Chief in India from November 1885 until April 1893; and, since I have been in this country, I have been in command of the forces in Ireland from the 1st of October 1895.

15,526. I think, previous to that time, you had a very long service in India, had you not?—Yes.

15,527. This Commission is appointed to inquire into the administration and management of Military and Civil Expenditure in India, and the apportionment of charge between the Government of the United Kingdom and India for purposes in which both are interested. We have taken evidence on the checks to which military expenditure is subject, and we should be glad to learn your Lordship's opinion on various points which have arisen in the course of that evidence?—I understand.

15,528. Have you seen the evidence of Sir E. Collen, of Lord Wolseley, Sir R. Knox, Lord Northbrook, and Sir H. Brackenbury?—I have.

15,529–30. There are two military representatives on the Council of the Viceroy, viz., the Commander-in-Chief, who is an extraordinary member of the Council,

Field-Marshal Lord Roberts, V.C., G.C.B.

1 Mar. 1887.

and the Military Member of Council; other branches of administration have only one representative. The question has been raised whether there is not, in consequence, too great a preponderance in the Council of the military element. What is your opinion upon that point?—I am quite certain that there is not too great a preponderance in the Council of the military element. The Military Member has no military authority, as General Brackenbury said (Q. 14,425), he is "absolutely, purely, and entirely a civilian;" and I have experienced quite as much, if not more, opposition from the Military Members with whom I have had to deal, when I brought forward any measures which entailed spending money, as from any of the civilian members of the Viceroy's Council

15,531. Do the duties of the Commander-in-Chief prevent him from being regularly present at meetings of the Council?—They do. From the latter part of October until March the Commander-in-Chief's time is chiefly spent in travelling about the country, inspecting, and attending camps of exercise, concentration of troops, &c. Were he to remain with the Government of India during those months he could not possibly become acquainted with the country, or gain that personal knowledge of the troops under his command which it is so desirable he should possess. During the 7½ years I was Commander-in-Chief I travelled, on the average, about 12,000 miles yearly.

15,532. And during your absence from the Council would the Military Member represent your views to the Council if you had occasion to bring any particular points before the Council?—I should communicate with either the Viceroy or the Military Member.

15,533. Is it not the case that the Military Member has never been a civilian?—So far as I am aware, it is.

15,534. And I suppose the Military Member has always existed as a member of the Council since the formation of the Indian Executive Council?—All the time I was in India.

15,535. Sir Henry Brackenbury has described to us the position of the Military Member of Council and his relation to his colleagues and to the Viceroy; would you describe the duties and responsibilities of the Commander-in-Chief in respect to military expenditure?—My duties and responsibilities as to military expenditure I conceived to be to take the utmost possible care that no money was wasted on unnecessary works; and never to recommend any measure entailing expenditure to be undertaken by Government, unless I thought it to be absolutely essential to the efficiency of the Army, for which I was responsible. In order to be quite certain about what was or was not necessary to this all-important end, I visited every station in India, made myself acquainted with the officers and troops, inspected the barracks, saw that the men were made as comfortable as circumstances would admit; that sanitary arrangements were attended to; that there was a sufficient supply of pure drinking water; that the hospitals were properly managed; that there were suitable means for instructing the troops in their various duties; in fact, that everything was done to ensure the several regiments, battalions, and batteries being ready to take the field at the shortest possible notice, but with the least possible cost. I made notes during the tour of all points on which expenditure would have to be incurred. If the cost were small I merely communicated with the Controller of Military Accounts to see if it could be met; but if at all large, I always brought the matter to the notice of the Government of India in the Military Department, and occasionally I wrote privately to the Viceroy or the Military Member, to ascertain their views; and on any big question, such an an increase to the pay of the native soldiers, I used to discuss the matter with the Financial Member. I did so with Sir D. Barbour while I was getting up the case about increasing the pay of the cavalry soldier. I wished at the same time to increase the pay of the sepoy, but refrained from making any recommendation, as I found that Sir David did not consider it desirable at the time, although he acknowledged it was a measure which would soon have to be carried out. Whenever I found that the Viceroy or the Military Member were opposed to my views, I never pressed them, unless I was convinced that the efficiency of the Army would be impaired, if they were not adopted.

15,536. Therefore, every question connected with the organisation of the Army that was brought before the Viceroy or the Council would come through you?—Yes.

15,537–8. What would you consider would be your duties from a financial point of view as a member of Council on questions brought forward? My question is directed to a point, upon which perhaps I may ask you a question further on, whether sufficient general attention is given to finance in Council; and I, therefore, ask what you consider would be your duties from a financial point of view as a member of Council?—To ascertain what the Financial Member or the Viceroy thought of it.

15,539. That is to say, you would not have thought that your duties were entirely confined to the question of the desirability or undesirability in themselves of changes in military organisation?—Certainly not.

15,540. (*Mr. Courtney.*) Sir William Mansfield took great pains to bring the subject of the currency before the Council, did he not?—Yes, he did.

15,541. Do you consider that to have been overstepping his pure duty?—Well, it would be outside mine, certainly. I do not understand it.

15,542. (*Chairman.*) But what I mean is, that the Commander-in-Chief, *quâ* Member of the Council, would feel himself at liberty to take part in the settlement of any question of administration that might come before the Council?—Certainly he would on questions, for instance, like the Public Service Commission, or matters of that sort, which he knew anything about.

15,543. And what were your relations, as Commander-in-Chief, to the Military Member of Council on questions of expenditure?—The financial duties of the Commander-in-Chief as Member in Council are, in my opinion, to support the Viceroy and Financial Member on all general questions, and on all military questions to accept their decision after having placed them in possession of the reasons which caused expenditure to be recommended.

15,544. Therefore, if you found the Viceroy and the Financial Member opposed to you, that difference of opinion from you would have very great weight with you?—Quite so. In my reply to a previous question (15,535), I have partly explained the relations of the Commander-in-Chief to the Military Member of Council on questions of expenditure. I may add that all proposals for expenditure not authorised by regulations are submitted by one of the two departments (Adjutant-General's and Quartermaster-General's) under the orders of the Commander-in-Chief to the Secretary to the Government of India in the Military Department. By him they are placed before the Military Member of Council or the Viceroy, or both, as may be considered advisable. If the matter is not one to be brought before Council—and of this the Viceroy is the judge—the decision of the Government is conveyed to the Commander-in-Chief, his recommendation either being accepted, modified, or refused.

15,545. I think we have gathered that the Viceroy has not the power in the long run of preventing a Member of Council from bringing questions before the Council, has he?—I do not think he has. Personally I always spoke to the Viceroy before I brought forward any subject, and I would not have done so without his consent. I did so only on two occasions, which I will mention afterwards.

15,546. There was formerly in the Home Government a Minister specially responsible for army finance, the Secretary at War, and it has been suggested that, as a general analogy, the position of the Military Member of Council rather corresponds to that formerly held by him?—So far as I know the duties which the Secretary at War had to perform in former days, I think that, as a general analogy, the position of the Military Member of Council corresponds to that which he held, *i.e.*, he is specially responsible for army finance.

15,547. The Military Member, then, would, at least in theory, be expected rather to check than to originate or encourage military expenditure?—Yes, in practice as well as in theory, so far as my experience goes, the Military Member does check rather than originate or encourage military expenditure. My experience extends over a good many years, for, besides being Commander-in-Chief in Madras for nearly four years, and Commander-in-Chief in India for seven and a half years, I was in the Quartermaster-General's Department at Army headquarters off and on for some 13 years. During all those years eight different officers held the appointment of Military Member of Council, and the bent of all was decidedly towards economy in military expenditure.

15,548. Would you explain to us the relations of the Commander-in-Chief to the Military Department, *i.e.*, to the Military Secretary and to the Military Accountant-General?—The relations of the Commander-in-Chief to the Military Department are much the same as towards the Military Member, except that he would usually be on more confidential terms with the latter. The Commander-in-Chief has no direct communication with the Accountant-General.

15,549. We have been informed that the Commander-in-Chief communicates with the Military Secretary, and that it would be in the power of the Military Secretary to communicate thereupon with the Viceroy, without reference to the Military Member. We understand that no doubt in practice he would communicate with the Military Member, but that he has a right—that all the Secretaries of the different Departments have a right—to go to the Viceroy, if they think proper?—Yes, that is the case; but, as a rule, I imagine that the Military Secretary would in the first instance refer any communication from the Commander-in-Chief to the Military Member.

15,550-1. I call attention to that point, because it is so very different from the organisation of our Departments at home, in which the Secretary of a Department is the subordinate of the Minister, and has no right practically to communicate with anybody except the Minister?—Quite so.

15,552. Whereas we gather that the Secretaries in the different departments of the Government of India, and of course among them the Military Secretary, have a certain independence of action if they choose to exercise it?—Yes, I think it is almost more than that, because on the Viceroy's table you find the schedule of the hours and days in the week in which each Secretary of a department will attend upon him.

15,553. Quite so?—It is a matter of course, I think, that they do go to the Viceroy.

15,554. And, therefore, it is a possibility that communications on military subjects might reach the Viceroy without the Military Member being aware of them?—I should not think it at all likely to happen; I think the Military Secretary is, practically speaking, the Secretary to the Military Member of Council, but at the same time he does go to the Viceroy.

15,555. As a matter of practice, one quite understands that that would very rarely happen?—I should think so.

15,556. (*Sir Andrew Scoble.*) He can go to the Viceroy if he is not satisfied with the decision of his immediate chief?—I think he does more than that. I think he goes regularly to the Viceroy.

15,557. Oh, yes, he does, he can; but, if there is a difference between him and the member in charge of his Department, he can bring the matter to the Viceroy on his own initiative?—No doubt.

15,558. (*Chairman.*) And what would be the relations of the Commander-in-Chief to the Finance Member of Council?—I think I have described the relations of the Commander-in-Chief to the Financial Member in my reply to a previous question (15,535). While it is the duty of the Commander-in-Chief to bring forward proposals involving expenditure which he believes to be necessary for the efficiency of the Army, he should act, as far as possible, in accord with the opinion of the Financial Member. I never found any difficulty in doing so, for the reason, I believe, that I was as anxious to avoid unnecessary expenditure as he was, though occasionally our views as to what was necessary and what was not necessary to the efficiency of the Army might differ. I may say that the Financial Member was always ready to meet my views as far as was compatible with the general requirements of the Budget.

15,559. And lastly, how would you describe the relations of the Commander-in-Chief to the Viceroy?—The relations of the Commander-in-Chief to the Viceroy should be of the most cordial and intimate nature. As the head of the Army in India, the Viceroy is almost as responsible for its efficiency as the Commander-in-Chief; and if the Viceroy, for some reason or another, objects to this or that proposal made by Army head-quarters, the Commander-in-Chief is bound to accept his decision without demur. The Commander-in-Chief should keep the Viceroy acquainted, by personal communication when they are at the same place, or by demi-official correspondence when they are separated, of all that is going on in the Army, and should endeavour to make the Viceroy interested in his plans and proposals for the well-being of the troops under his command. In Council, on questions in which the Commander-in-Chief may have no particular concern, he should, in my opinion, support the Viceroy. The Viceroy is the responsible head of the Government, and as he is in constant communication with the Secretary of State for India, he should know better than any of the Members of Council the feelings of the Cabinet and of the people in England in regard to any special matter that may be brought forward for discussion. So strongly did I feel the importance of supporting the Viceroy that I only remember two instances in which I obtained his Excellency's sanction to bring for a second time before the Council questions on which I had been out-voted, the Viceroy being with the Members who opposed me. One was the removal of ball ammunition from the pouches of soldiers, British and Native. The majority, of the Council thought that, in the event of a sudden disturbance, dangerous delay might occur in arming the soldiers. The matter to my mind was so important that I obtained the Viceroy's sanction to its being brought up a second time. I was then able to satisfy the Members that there were no grounds for the fear they had expressed, and that arrangements could be made by which ammunition could be served out as quickly as the men could be fallen in. My proposal was then agreed to, and the result was a remarkable decrease in the number of cases of murder, and suicide, and attempts at the same. In the year 1886–87, before the ammunition was taken away, there were 110 cases. In the first year after its removal there were only 63 cases, and in the second year still fewer, only 38 cases. The second instance was a difference of opinion between the Military Member, who was supported by the Viceroy, and myself as to the desirability of fortifying Multan. I pointed out that the value of Multan had gone by, that the advance of our frontier to Quetta had reduced its importance, and that it would be better to spend the money in strengthening the defences of Rawul Pindi. The case went against me on the first occasion that it was brought before Council, but at the second discussion I gained my point, and it was decided to fortify Rawul Pindi instead of Multan.

Field-Marshal Lord Roberts, V.C., G.C.B.

1 Mar. 1897.

15,560. Then may I take it that the Military Department is rather the department of the Military Member than of the Commander-in-Chief?—It is entirely the Department of the Military Member.

15,561. And perhaps I might sum up what you have been telling us thus: the Commander-in-Chief, rather than the Military Department, advises the Viceroy on military policy, while the Military Member is responsible for the estimates required to give effect to that policy, and the Financial Member explains the financial consequences of that policy, shows whether the revenue can be relied upon to meet it, and criticises the estimates in detail from the financial point of view?—The Commander-in-Chief is the military adviser of the Viceroy on all matters connected with the Army; but whether he is the adviser on military policy would depend, I imagine, on his personal character, and his knowledge of the country and the people. A Commander-in-Chief strange to India, without any acquaintance with the inhabitants, and with only a very general idea of our position in India, both as regards internal and external affairs, would be a very unsafe adviser, nor, I imagine, would any Viceroy be inclined to depend upon such a man for advice in the matter of military policy. As Lord Cromer stated more than once in his replies, the position which a Member of Council holds towards the Viceroy and his colleagues depends very much on the member's personality.

15,562. Of course the military policy includes all questions of organisation?—Yes, the Commander-in-Chief would, of course, be the adviser on questions of army organisation.

15,563. Did your experience lead you to think that these financial checks worked satisfactorily—that is to say, that they were such as are essential to sound finance—or did they hamper you?—From a financial point of view they were certainly satisfactory, but from the point of view of a Commander-in-Chief they were often a bitter disappointment, in that they effectually interfered with my carrying out many things which would have enhanced the efficiency of the Army.

15,564. But you were ready to defer, as I understand, to the financial authorities, if they convinced you of

Field-Marshal Lord Roberts, V.C., G.C.B.

1 Mar. 1897.

the difficulty of providing ways and means for that expenditure?—Quite so.

15,565. Sir David Barbour and Sir A. Colvin thought that the power of financial control entrusted to the Finance Member is theoretically complete, but that it is not so complete in practice. I do not think that Lord Cromer shared that view, at least as stated in general terms, and Lord Northbrook inclined towards Lord Cromer's opinion. What would be the result of your experience upon that point?—My experience leads me emphatically to endorse Lord Northbrook's and Lord Cromer's opinion.

15,566. Your experience on that point is the more important, because it may be assumed that the financial check, if weak at all, would be weak on questions of military expenditure?—Financial check is certainly not weak in matters of military expenditure. It checkmates many desirable moves.

15,567. Sir Auckland Colvin thought that the financial check had not been so strong of late years as it had been previously. As far as I could gather, he thought that it had been stronger in the period before, we will say, 1884 or 1885, than it was subsequently. Does that opinion to any extent tally with your observations?—In my opinion Sir Auckland Colvin has no grounds for saying that the financial check has not been so strong of late years as it had been previously—since, in fact, apprehension of Russia (the date of which was 1885) has given an impetus to military expenditure. I am supported in this view by the extract from a speech of Sir James Westland, the present Financial Member of Council, quoted by Sir Henry Brackenbury in his reply to Q. 14,593. Sir James shows clearly that what Sir Auckland Colvin calls a want of financial check may be more correctly described as a difference of opinion in regard to the policy by which the Government of the day were guided. I gather from the evidence given by Sir Auckland Colvin and Sir David Barbour before this Royal Commission, and also by their writings and speeches, that they considered the Financial Member did not, in their time, carry sufficient weight in the matter of directing the general policy of the country. But, surely, the power exercised by any Financial Member must depend upon his own personality, and the amount of influence which his opinion would have with his colleagues in Council. I do not see how more authority could be given to any particular Member of the Governor-General's Council without placing him in a position to exercise undue control over the policy of the Government, which, in the case of the Financial Member, might mean subordinating the safety of the country to financial considerations.

15,568. Could we put the evidence of Sir David Barbour and Sir Auckland Colvin as going further than this: that, seeing of what importance sound finance is in India, they thought that the objections of the Financial Member, if persisted in, should have a very great weight, if not almost impose a veto upon expenditure, That does not go quite so far, I think, as your definition of what they were desiring, namely, a greater influence in the policy of the Government of India?—What they suggested was that they should have a greater power in Council than the other members.

15,569. No; I have given my view of what their evidence was; and I asked you whether you thought that they went beyond this, that, being very keenly alive to the necessity of sound finance in India, they thought that their objections, if strongly expressed and persisted in, should have a peculiar weight, and, though they did not say so in so many words, practically amount to a veto?—I gathered that from the replies they gave.

15,570. I mean that is what they aimed at, rather than that they ought to have a greater influence, as I thought you were saying, in the policy?—Well, that would give them a greater influence, would it not?

15,571. It would in one sense, but only from a financial point of view?—I mean that.

15,572. (*Mr. Courtney.*) On financial questions the Finance Minister ought to be the predominant partner?—But he is.

15,573. As against the Military Member?—Certainly. I have said that he checkmated me in several moves I wanted to make.

15,574. You think he has prevailed too much?—Well, I do not say that. I think from his own point of view he was quite right.

15,575. They think they do not prevail quite enough?—Exactly; they think so, whereas I know that I always had to give in.

15,576. It depends, you say, upon the character of the members on each side?—Very much so: you may judge of my opinion by the replies I have given to some of the previous questions which have been put to me.

15,577. Would it not also depend a good deal upon the view of policy of the Viceroy, who might be said to hold the balance between the two?—I think the Viceroy generally supported the Financial Member against the Military authorities.

15,578. And his support would be a very great element in the decision?—Very great.

15,579. And that, of course, refers back to the policy of the choice at home of the person to be sent out as Viceroy?—Decidedly.

15,580. (*Chairman.*) In fact, I gather, Lord Roberts, that you agree with both Lord Cromer and Lord Northbrook that you really come in grave matters to the question of the personality of the men?—Quite so.

15,581. I think that both Sir Auckland Colvin and Sir David Barbour explained to us that whenever the Viceroy was with them they needed nothing more; or rather let me put it in this way: when the Viceroy was of an economical turn of mind, they wanted nothing more; but the financial check was deficient when the Viceroy, with his great power, was, I will not say uneconomical, but had a tendency to think that a policy, perhaps an expensive policy, was indispensable?—Yes, but the Viceroy, in forming any opinion of that sort, would not, probably, go entirely by his own views. He would, of course, have the assistance of the views of the other Members of Council, of whom there are three civilian members, besides the Financial Member; and if he was supported by those three civilian members, and by the Military Member and also by the Commander-in-Chief, the Viceroy would have good reason for supposing that the policy he was advocating was the right one.

15,582. (*Mr. Courtney.*) You referred only to official members?—I had nothing to do with the others. I am talking of the Executive Council.

15,583. Not of the Legislative Council?—Not of the Legislative Council.

15,584. Should not a person have some regard to the opinions of the Legislative Council?—I have very little to say about the Legislative Council. I was hardly ever present at any meetings of the Legislative Council. They were generally held in the winter when I was away.

15,585. (*Chairman.*) I think our conversation has hitherto related simply to the Executive Council?—Entirely.

15,586. Which we look upon as equivalent to the Cabinet here?—Yes.

15,587. Now taking that last point on which you were giving us evidence, namely, that the Viceroy would consult with other members of the Council, and the weight that the opinion of the majority of them should have with him. Both Sir David Barbour and Sir Auckland Colvin seemed to think it a source of financial weakness that in the Council sufficient interest was not taken in finance, that Members of Council confined themselves to their duties as heads of departments and did not sufficiently consider, as I understood them, the effect which the policy of the different departments represented in the Council would have on finance. Here again Lord Cromer did not share these views. Would you give us the result of your observations on the question?—My experience and observations lead me to agree entirely with Lord Cromer, that there are no grounds for the belief of Sir Auckland Colvin and Sir David Barbour that Members of Council unduly press the requirements of their several departments, without sufficiently considering the effect which their demands would have on finance. As stated by Lord Northbrook (Q. 14,031) anyone connected with the Government of India is so strongly impressed with the difficulty of raising fresh taxes, that there is no Member of Council who would not give full weight to financial considerations.

15,588. That implies that the Members of Council are fully alive at all times to the difficulty and dangers that attend a deficit, accompanied with a possible necessity for increasing taxation?—Most certainly, and on this point the several members of Council with whom I was associated were all in accord.

15,589. And therefore, I take it, as your deliberate opinion, that you always found full weight given to the representations of the Financial Member?—I cannot remember any proposal for expenditure being urged, when the Viceroy and the Financial Member were opposed to it. Nor do I remember any expenditure being urged when the Finance Member alone gave good reasons why the money should not be granted.

15,590. For instance, in a case of expenditure the principle of which had been accepted, would there be willingness to spread that expenditure over a number of years, even at some inconvenience, in deference to the recommendation of the Finance Member?—Yes. And I am sure that Lords Dufferin and Lansdowne will bear me out when I say that, in deference to the representation of the Finance Member, scarcely a year passed without items, which I considered of importance to the efficiency of the Army, being altogether postponed or spread over a number of years. I always recognised that this was a necessity, and, from one cause or another, the budget had frequently to be reduced when the estimates came to be finally considered.

15,591. Then, admitting fully the supreme importance of sound finance in India, do you think the Finance Department is strong enough?—Yes, quite strong enough. I think that the Finance Department has the matter of expenditure pretty well in its own hands.

15,597. Supposing that the Viceroy agrees with the Military Authorities in what we may call a forward policy, is there any possible danger of sufficient attention not being paid to the warnings of the Finance Member? I am only putting it as a possibility?—I do not think so, for besides the Financial Member there are three civilian Members of Council, making four votes against three, who would not be likely to be influenced by the Viceroy and the Military Authorities, unless they shared their views as to the propriety of the forward policy. If they shared those views as opposed to the views of the Financial Member, they might reasonably be supposed to be in the right. It would not be wise to give the Financial Member the power to upset the forward policy because he alone does not approve of it. A forward policy does not necessarily mean undue expenditure. It may in the long run prove to be sound economy.

15,593. I am only putting the supposition with a view to obtain your opinion upon what I think was in the mind of Sir David Barbour, that in such a case as I have mentioned the Finance Member should be able to rely at all events upon the special consideration of the Secretary of State being given to the point?—As I have already explained, the Finance Member has in Council three other civilian Members who can back him up if they think it desirable. I would not interfere with the constitution of the Council by giving any one Member power to get the aid of the Secretary of State against the views of the other Members.

15,594. (*Sir Donald Stewart.*) But he has the power of recording a dissent on any question of that sort?—Of course, he can do that; he can record a dissent and his opinion would come before the Secretary of State.

15,595. (*Chairman.*) Yes; but the power of recording a dissent is a formal method of proceeding. It means putting on paper things which might hereafter be published; Sir David Barbour had in his mind whether in such a case the Secretary of State should not exercise extra vigilance on proposals for expenditure. That, I think, was what was in his mind?—Well, I have said I do not think that any further power is necessary to the Financial Member. He has the option of recording his dissent, which dissent would necessarily come before the Secretary of State.

15,596. (*Sir Andrew Scoble.*) And he might have his opinions stated in the despatch which goes home to the Secretary of State on the subject?—Certainly; there is every opportunity to Members of Council to state their opinions, and bring them to the knowledge of the Secretary of State.

15,597-8 (*Chairman.*) You, at all events, see no reason whatever for, even in theory, establishing the idea of such an appeal to the Secretary of State?—No, I do not.

15,599. Do you consider that the Finance Member always received information of cases involving expenditure early enough to enable him to give his warning of financial results before the Government were irrevocably committed?—So far as I know, the Finance Member always received information of cases involving expenditure early enough to enable him to give his warning of financial results before the Government were irrevocably committed. Moreover, from my experience of the Government of India, no large measure is even initiated, and certainly never carried into effect, without the concurrence of the Secretary of State. He is made thoroughly acquainted with all the pros and cons, and, if he approves, it may reasonably be supposed that he has carefully considered the cost.

Field-Marshal Lord Roberts, V.C., G.C.B.

1 Mar. 1897.

15,600. Lord Cromer, without attaching importance to the necessity of giving the Financial Member more influence than he has at present, did allude to the fact that governments might commit themselves to a course of action very early in the stage of their discussions, and that, in those cases, before any formal report could be made to the Viceroy by the Financial Member, the Viceroy might be practically committed?—I do not quite understand. By the home authorities?

15,601. No; I mean that he might have committed himself to the policy?—I should think that most unlikely.

15,602. At all events, you do not know cases in which the Finance Member might feel that he had not been warned in time?—No; certainly not. I think the Viceroy would always consult the Finance Minister before committing himself to any line of policy.

15,603. And I suppose you would say the same of a number of questions which are not of such immediate urgency as that, I mean changes in organisation. The Finance Member would know of changes in army organisation, such as increased pay, in full time to be able to represent to the Viceroy their effect, and also in time for his views to be communicated to the Secretary of State, in case the Viceroy were against him?—Certainly; no change in army organisation would take place without a despatch going to the Secretary of State, which the Finance Member would either sign or record a dissent to.

15,604. Do you consider that we must expect a further gradual increase of expenditure on frontier military railways, such as marks the financial history of the last 10 or 12 years?—I think that very likely there will be perforce a further extension of railways on the north-west frontier of India. To what extent, or in what direction, must depend upon matters regarding which it would be difficult, if not impossible, to form any opinion.

15,605. That is to say, you do not think that the scheme of military defence on the north-west frontier is yet completed?—No, I am afraid not.

15,606. We have been struck by the increase of late years in the number of frontier expeditions which now seem to occur yearly. Must we look upon expeditions of this kind henceforth as a constantly recurring head of expenditure?—I am glad that this question has been put to me, because I think that the Royal Commission are under a misapprehension as to the number of frontier expeditions having increased of late years. I have no doubt of being able to satisfy you, my Lord, and the other members, that the contrary is the case, and that there have been unusually few frontier expeditions of late years. I hope, too, to be able to show that in each case the expedition was declared necessary by the Government responsible for the security of the frontier, and that in no single instance was an expedition initiated by the military authorities. I desire to lay stress on this fact, because I gather from some of the questions put to witnesses that these expeditions are supposed to have been undertaken, more or less, at the instigation of the military authorities.

In order to place the Royal Commission in possession of all the circumstances on which I base my statement, it is necessary to go back to the time when we first occupied the Punjab; we shall then see that during the first 40 years of our contact with the tribesmen expeditions were more frequent, that our relations with the tribesmen were more unsatisfactory than they are at present, and that the system of resultless reprisals which then obtained was most unprofitable.

It is not, perhaps, generally known that throughout those 40 years the troops which were employed on the frontier were under the direct orders of the Provincial

Field-Marshal Lord Roberts, V.C., G.C.B.

1 Mar. 1897.

Government, and altogether independent of the Commander-in-Chief, who on only one occasion was even referred to, so far as I am aware, when an expedition was about to take place, and who did his best to prevent that expedition being undertaken, because he considered the season unfavourable, and the force inadequate for the service it had to perform. I allude to Sir Hugh Rose and the Umbeyla Expedition in 1863.

15,607. (*Mr. Courtney.*) What were those 40 years before you go further?—1849 to 1889.

During the greater part of the time I have mentioned, the policy in favour was to keep to ourselves, and to interfere as little as possible with the peoples living across the border; nevertheless, scarcely a year passed without one or more of the tribes being blockaded, and no less than 35 expeditions were carried on between 1849 and 1878, 20 of which were considered of sufficient importance to deserve a medal.

In 1878 the Afghan war commenced, and lasted until the end of 1880, and all border expeditions during those years were included in the general account of that campaign.

For the next four years there was a comparative lull; still three expeditions took place, one in 1881, another in 1883, and a third in 1884.

Now, during the first five years of my command, from 1885 to 1890, there was only one expedition, that against the Black Mountain tribes in 1888, to avenge the murder of two British officers. We then, contrary to what I thought wise, hurried out of the country, as had been the custom on former occasions, without making the tribesmen feel our power, and the consequence was that a second expedition had to be sent against the same people in 1891.

It was found necessary in the same year to send troops against the tribes on the Kohat border on account of a long series of raids and depredations committed in our territory.

On both these latter occasions the work was thoroughly carried out, and we remained long enough to convince the tribesmen that opposition was useless, that we were determined to have peace and order in our immediate neighbourhood, and that it was to their advantage to be on good terms with us, with the result that six years have passed since then, and there has been no further trouble with these same tribes.

I beg it may be clearly understood that I had nothing whatever to say to the initiation of these three expeditions. They were proposed by the Provincial Government, and I knew nothing of them until my opinion was asked as to the strength and composition of the force necessary to attain the desired object. Each time I advocated a column being sent sufficiently powerful to overcome all opposition, and I strongly urged that the practice of rushing across the border, burning a few villages, and then scuttling out of the country, should be discontinued.

On each occasion the question of the expedition was discussed in Council, and in no instance, so far as I can remember, was a dissent expressed by the Financial or any other Member of Council.

15,608. (*Chairman.*) The point on which I based my question was this, that we have before us a return which shows that, taking a certain number of recent years, there have been several expeditions yearly?—I do not think that is the case.

(*Chairman.*) It is in Sir Donald Macfarlane's return.

15,609. (*Sir Andrew Scoble.*) I think, Lord Roberts, in your answer just now, you confined yourself to the north-west frontier?—Yes. Entirely to the north-west frontier. I was not alluding to Burmah.

15,610. You did not include Manipur, or the operations on the Burmah frontier?—I did not, because I thought that the questions put to those who gave their evidence before me, referred to expeditions on the north-west frontier. General Brackenbury, when speaking of a "bunch of operations" in 1890–94, certainly alluded to that part of the Empire.

15,611–3. (*Chairman.*) If you look in that return at what are named "Smaller expeditions and Field operations" from 1875 to 1884–5 you may say the expenditure under that head is *nil*?—Well, there is a good deal in 1885, I see.

15,614–6. From 1884–5 forward you see that expeditions form a considerable item of expenditure—I think if you exclude Burmah, and take the north-western frontier, you find that there was very little in 1886–7. There was nothing in 1887–8. There was a very small sum in that year for Sikkim, which is a different part of the frontier altogether. That was a political question which arose about Thibet, I think. In 1888–9 there was Hazara, 121,000; Lushai, 49,000; Sikkim, 204,000.

15,617. That is 370,000?—Well, but the only one of those that had anything to do with the north-west frontier was 121,000 for Hazara; Sikkim and Lushai—that is the eastern part of Bengal—are different questions altogether.

15,618. But still, they form part of this question of expeditions, upon which I was asking a question?—I do not think so, quite. The allusions made by the Financial Members and Sir Henry Brackenbury all referred to the north-west frontier.

15,619–21. My question is put in rather a more general form. Our attention has been called to this return, and to the fact which I think you will see there, that, if you take the years 1888–9 forward, there are considerable sums, sufficient to derange the Budget, occurring almost every year; and I was anxious to ask you whether from your experience you thought that that was likely to be, from circumstances no doubt, beyond the control of the Government of India, a constantly recurring source of expenditure. To have the sum of 400,000, or more, added every year to your Budget is a serious financial question?—Excluding Burmah, I see in 1888–9 there were expeditions in Hazara, Lushai, and the Chin Hills—the Chin Hills form part of Burmah, and the Lushai expedition was for the protection of some tea gardens situated on the north-east frontier of Bengal. I suppose there will always be a certain amount of frontier disturbances as tea and other industries are pushed forward, and our people come into contact with tribes that have not been met with before. Then Sikkim; I think that was with reference to trade differences with the Thibetans. That will not occur again, as far as I know; I think we have settled it. If you take the next year, 1889–90, you see there was the same thing in Lushai, 300,000, and Sikkim, 66,000. There was nothing at all on the north-west frontier in that year, nor was there the year before or the year before that. Then, in 1890–1, there was 52,000 for Hazara and Miranzai, the two expeditions I have been talking about; one against the Black Mountain tribes and the other on the Kohat border; and the same in 1892. But, as far as I know, on those parts of the frontier matters have settled down. For six years there has not been a shot fired in these two places, and I hope there will be no more. It is not always easy to predict, but I think there is less chance of trouble on the north-west frontier of India now than there was formerly, so far as the tribesmen are concerned.

15,622. That was what I wanted to obtain from you?—A great deal less chance.

15,623. Looking at it as a Budget question?—As a Budget question the whole frontier from Afghanistan to Burmah must be taken into account. It is rather a wide area.

15,624. What I want to get your opinion upon is, whether the policy which is now being pursued is one which is likely to prevent frontier expeditions being necessary, or whether for one reason or another we are likely to have such items as these constantly recurring in the future?—I think the policy now being pursued of making the tribesmen feel our power, bringing home to them that opposition on their part is useless, and that we are determined to have peace and order along the whole border, will prevent frontier expeditions being necessary both on the Eastern Bengal and the north-western frontiers.

15,625. (*Mr. Courtney.*) Would you say as much for Burmah?—Expeditions on the Burmah frontier have, of course, been necessary, but the country is apparently settling down very rapidly.

15,626. And you would not say that a prudent financier ought to look forward to an annual charge, an average charge?—I hope not. I say we are settling the country, both on the north-east and north-west frontiers, and becoming more friendly with the people. I think there is much less chance of expeditions now.

15,627. I suppose that hope has been expressed and felt before?—No doubt it has; but the facts I have stated show, I think, that there is hope for the future. Since 1890–1 there has not been a single shot fired

against the Black Mountain tribes on the Kohat border, nor, I believe, has there been in Lushai, on the frontier of Eastern Bengal.

15,628. (*Chairman.*) Passing now to apportionment, you are aware that the rates which India should pay for the home charges of the Queen's regiments serving in India have been long under discussion?—Yes, I am aware.

15,629. Under a compromise recommended by a committee, over which Lord Northbrook presided, India now pays in respect of those charges a capitation rate of 7*l.* 10*s.* per each effective man of the line regiments on the Indian establishment?—Yes.

15,630-2. Sir Henry Waterfield, in a memorandum which, on behalf of the Indian Government, he laid before the Commission, stated that it was not desired, on the part of the India Office, to re-open the calculations upon which the rate of 7*l.* 10*s.* was arrived at by the Northbrook Committee; but he added that there are general principles of great importance to which they desired to invite the attention of the Commission, as militating against the equity of a merely arithmetical revision of the charges. I will mention these general principles in order to obtain your Lordship's opinion upon them. In the first place the Indian Government do not think it politic or just to lay upon the revenues of India the entire cost of an organisation for furnishing recruits to that country, which experience has shown to be far beyond what is needed for that particular purpose. On the other hand, Sir Ralph Knox has given the reasons of the Imperial Government for holding that that organisation is not beyond what is required, contesting the argument of the Indian Government, that its cost is much in excess of the cost of the old East Indian recruiting establishments at Warley. What is your opinion?—It is very difficult, I think, to draw any comparison between the system by which recruits are turned out now for the different branches of Her Majesty's service and that which prevailed in the days of the East India Company. Leaving out of calculation the age and physique of the recruits, the men now sent to India are very different from those landed there before the amalgamation of the two services. That is to say, the present men are assumed to be trained soldiers, whereas formerly they were raw recruits. The cost of the better article must of course be paid for, and I assume that India is not called upon to pay more than Her Majesty's Treasury would pay for men similarly trained for regiments, battalions, and batteries at home or in the colonies. That is 7*l.* 10*s.* per man.

15,633. Of course, at the present moment, a soldier is a more expensive article to turn out than he was in the days of Warley, is he not?—Certainly.

15,634. The India Office considers that short service has imposed a heavy additional charge on India for transport, although Lord Cardwell expressed his conviction that the system would not entail any additional charge on India. The India Office memorandum does not furnish figures by which to support this statement. On the other hand, Sir Ralph Knox has laid before the Commission figures to show that the short service system has caused a saving to India, after allowing for the fall in passage charges. You are aware that the sums paid for conveying soldiers now are per man much less than they were?—Yes.

15,635. And, eliminating that decrease so as to understand fairly what the increased charge of freight is, still Sir Ralph Knox shows a saving?—I do not think that the question of rates can be taken into account when considering the point at issue, because, whether the men are long or short service, the cost of transport would be the same; but I think it is impossible to dispute that the frequent relief caused by short service does impose an additional burden upon India.

15,636. That, I think, is admitted so far, but, on the other hand, Sir Ralph Knox's figures went to show that on the whole India had saved by the short service system?—Well, then, on the other hand, India loses by the exchange. I do not think you can take into consideration what India has saved by the rates being less than formerly. India loses tremendously by the rate of exchange being lowered. In former days, when the transport rate was high, the rate of exchange was very favourable to India. Now, when the transport is low, the rate of exchange is very unfavourable.

15,637. I was putting it much more generally than that. The argument, as I understand it, is this: The India Office point out that Lord Cardwell expressed his conviction that the system of short service would not entail any additional charge upon India and they say this: "It has entailed an additional charge upon India in respect of the transport of troops." Sir Ralph Knox, in replying to that, takes the whole effect of the short service system, and has put before us figures to show that the effect of the short service system, increased transport and all, has been a net saving to India?—Yes, but I do not think that is quite a fair way of putting it as regards India, because the transport rates might rise to-morrow. A short service system must undoubtedly entail greater expense to India than a longer service. If a man stays only five years in India, instead of seven or eight years, more men must go backwards and forwards.

15,638. (*Sir Ralph Knox.*) That is to say, as regards transport and the number of men who have to be shipped there must be an additional charge against India?—Yes.

15,639. That is what you claim?—Yes, that is what I claim; the rates must be left out of the question.

15,640. I think that is admitted; but, on the other hand, the great result, the principal result of the short service system is, that you are relieved, or you will be relieved, of a very heavy charge for pensions?—I admit that, of course, but that was not the question put to me.

15,641. (*Chairman.*) I beg your pardon. You misunderstood my question. I wanted to put it as broadly as possible to you, and I would just venture to repeat that the India Office memorandum states that, although Lord Cardwell expressed his conviction that the system would not entail any additional charge upon India, it had imposed an additional charge under the heading of transport; but that is not altogether a complete way of putting the question, because Lord Cardwell's statement was that the system of short service would not entail any additional charge; and it is in proof of that that Sir Ralph Knox brought a number of figures together, showing a saving on pensions and on various other items on the one side, and the increase of transport on the other, with the net result that short service has been a saving rather than an increase of expense to India; would you contest that?—Well, that is very difficult to answer without having all the figures before me; but I think, looking at it from a general point of view, that the more soldiers that have to travel backwards and forwards, the greater the cost will be to India.

15,642. That, I think, is admitted?—What the result would be as regards pensions it is very difficult to answer without having all the figures before one. Probably Sir Ralph Knox is quite right. I would not wish to discuss that.

15,643. (*Mr. Courtney.*) But it is clear the difference of cost of transport per man ought not to be taken into account?—I think not; that is a variable quantity.

15,644-5. And you ought to compare what would be the cost now under the short service system, and the cost now of the old long service system?—Exactly; at the same rate of transport.

15,646. (*Chairman.*) The India Office suggest that the principal advantage of the short service system is that it enables the battalions at home to be varied from a low peace establishment to full field strength; but that this advantage is not shared by India, where the battalions are always kept at full strength. Do you attach importance to this contention?—I think the reason advanced by the India Office is sound.

15,647. But is not the reserve in question a reserve for all emergencies; and, if India in emergency demanded assistance, would it not be afforded by means of these reserves? England, in that case, could not part with the low peace establishment. She would have to call in reserves, and practically, therefore, reinforcements would be furnished to India by means of the said reserves?—India cannot, I think, be called upon in fairness to pay for a reserve maintained for the purpose of raising regiments (which are not fit for service) in England to full field strength. India pays full price for what she gets, but is not concerned in the source of supply, which is purely an Imperial question.

15,648-9. But you would admit that it is important that, if India were suddenly to want troops, she should be able to get them?—Certainly, but the question of

Field-Marshal Lord Roberts, V.C., G.C.B.

1 Mar. 1897.

the reserves does not concern India. You ask India to pay for the reserve.

15,650. Yes?—I said I did not think she ought to be called upon to pay, in fairness, for the reserve.

15,651. The India Office contention is, as I understand it, that the reserve that the short service creates, which is a great advantage to England, is no advantage to India, because the Indian battalions are kept at full strength: but I say that, supposing an emergency arose and British troops were required in India, the only way in which England could supply them, and at the same time retain a sufficient number in this country, would be by calling up the reserves, would it not? In that case is not India interested in there being trained men at home, who can be called up and enable England to send out troops to assist India in an emergency, and to that extent is not India interested in these reserves?—India is certainly not interested to the same extent as England is, because it is very seldom that the reserves would be called out when regiments have to be sent to India, very seldom, I think, indeed; but they would have to be called out, I understand, in the event of any expeditionary force being despatched from this country. Troops in any numbers have rarely been sent to India; only once, I think, during the Mutiny time. For the Afghan war very few battalions were sent to India, and there was no necessity then for calling out the reserves. The regiments went in the ordinary course of relief, and the regiments that would have been relieved, remained in India. That is the only assistance that India received, so I do not think that she can be said to have the same interest as England in the matter of the reserves.

15,652. I did not venture to put it that she had the same interest, but still she would be interested?—In a modified form.

15,653. In the case of a very great emergency arising, it would be a considerable interest?—A very great emergency, yes.

15,654. Is it quite a correct statement of the case to say that the principal advantage of short service is the reserve? How far did the very largely increased demand of India for recruits, in order to maintain the established strength of the large European force now kept there, make a change of system necessary?—No doubt the greater number of men required yearly by the Imperial Government, when it was called upon to keep up an army in India, added to the difficulties of recruiting; but I have always understood that the primary object of short service was to form a reserve.

15,655. Do you think that we could have got the necessary number of men that we now require yearly under the old system?—I must accept, of course, what the recruiting people say: "We could not," they say. I have had no experience myself of it.

15,656. If India, in the case of emergency, asks for extra troops from home, and is required to pay home charges for those troops, ought England to pay in like manner home charges of Native troops, if in emergency she borrows them from India; that is to say, in this respect, ought there to be reciprocity?—I am strongly of opinion that there should be reciprocity, in so far that England should pay all ordinary, as well as extraordinary, expenses of the troops borrowed from India for Imperial purposes, just as India pays all ordinary, as well as extraordinary, expenses of troops borrowed from England. India pays, moreover, I believe, on such occasions all home charges, that is to say, 7*l.* 10*s.* per man; I do not enter into this part of the question except to show that, under the reciprocity I propose, India would pay more than England, for up to the present nothing has been laid down as to what the home charges of a Native soldier amount to. I feel sure that this reciprocity would be the most satisfactory arrangement that could be made, and would prevent the heart-burning and much-to-be-regretted correspondence which take place whenever India is called upon to provide troops for Imperial purposes.

15,657. That is to say, upon that somewhat limited point of the home charges, you think that there ought to be distinct reciprocity; and that, if England borrows troops, she ought to pay exactly in the same way for the Indian troops that she borrows as India pays for the English troops that she borrows?—I think the same rule should hold good for both. Of course, India would pay, in addition to all the extraordinary charges, the 7*l.* 10*s.* per man for their previous training.

15,658. And should any corresponding charge be made by India?—I do not think India expects that. That question, at all events, has never been raised.

15,659. (*Mr. Courtney.*) But you think she would be entitled to more?—No, I say that England should pay for troops borrowed from India the ordinary and extraordinary charges in the same way that India pays now to England for troops borrowed from England. As I have said, India pays in addition 7*l.* 10*s.* per man. I am inclined to think, however, that India would not raise the question as to the training charge of her soldiers, and would be satisfied if England paid the ordinary and extraordinary charges when she employs Indian troops out of India.

(*Mr. Courtney.*) But do you not think that when they borrow troops from India, the Home Government ought to pay something in addition?

15,660. (*Sir Donald Stewart.*) On account of training?—No charge has hitherto been made for training.

(*Sir Donald Stewart.*) We could make up a bill on that account.

15,661. (*Mr. Courtney.*) You have not calculated it out; but there must be a charge?—There must be a charge, of course, but, if you let that charge alone and England paid ordinary and extraordinary charges, I think India would be satisfied.

15,662. (*Chairman.*) I shall have to ask you a question soon upon the evidence, which, as I have no doubt you saw, Lord Northbrook gave on the subject of the employment of Indian troops?—I have.

15.663. I have so far confined myself to the limited view that, if India pays home charges on the British regiments that she employs, England ought to pay home charges on Native troops when she employs them?—Yes, quite so.

15,664. Do you attach importance to the argument that India affords the best training ground for the British Army during peace, as a ground for reducing the home charges of British regiments in India?—I think that everyone who has served in India of late years must admit that it affords by far the best training ground for troops, and this fact should not be lost sight of when the apportionment of charges between England and India has to be considered. I doubt if any country is so peculiarly well adapted for training troops as India is. At all large centres ground can be found where artillery can conveniently carry on practice with the present far-reaching guns. In the immediate neighbourhood of nearly every station, in some places at the very door of the barracks, ranges exist where soldiers can practice with their rifles at any leisure moment. Vast tracts of ground are available for manœuvres on an extended scale, and owing to the amount of transport obliged to be always kept up, these manœuvres can be carried on as nearly as possible, on service conditions. Then the general state of readiness for taking the field at a moment's notice, which is the normal condition of troops in India, renders that country an admirable school of instruction for the Queen's troops serving in India, and does not in any way cause them to imbibe false notions of what active service in Europe is like. The lives of British soldiers in India are too valuable to be risked to no purpose, and it would be the height of folly to require them to perform such offices as cooking when Native labour is cheap. The men are taught to cook, and can look after themselves and their officers when occasion requires, and the fact that life in India is more luxurious than in more temperate climates, does not in any way detract from military efficiency, or make troops less fitted for war in other parts of the world. I think it has been proved that British soldiers from India who have taken part in campaigns in Egypt and South Africa were quite as well able to look after themselves as were their comrades who came direct from England; and as regards efficiency they were, to say the least of them, not inferior. There is another advantage, too, which India possesses, and that is, that officers, especially young officers, are oftener placed in positions of responsibility then they are in the United Kingdom. This is especially the case as regards Royal Engineers, but it holds good also with all the branches, and only those who know from experience how heavily responsibility weighs upon men when they suddenly find themselves in positions of difficulty can, appreciate the value of this kind of training. The fact is, that from a training point of view, India is a very great strength to the army of the United Kingdom.

15,665. Would you agree that England and India are partners, and that India may be expected to pay the charge for her own defence?—Yes, most certainly.

15,666. (*Mr. Courtney.*) Do you deduce any practical conclusion from the answer which you made just now?—I think it should be taken into consideration in the apportionment. What I said was this: "This fact "ought not to be lost sight of when the apportionment "of charges between England and India have to be "considered."

15,667. You would not venture to define how it should be taken into account?—I could do so. I do not think I could say roughly now what it ought to be.

15,668. (*Mr. Caine.*) You think it could be fairly assessed?—I think so.

15,669. (*Chairman.*) You understand, Lord Roberts, I am taking you through these points to which the Indian Government has specially called the attention of this Commission?—I understand.

15,670. And on each of these we are anxious to get your opinion, with your immense experience in India?—I quite understand.

15,671. With the progress of military science the cost of efficient defence has become more expensive in every country. In consequence many changes have taken place in army organisation, increasing the cost of the defensive force to the taxpayer. Does it not follow that India, like other countries, must bear her share of the cost of such changes in organisation?—Yes, I think so.

15,672. Do you consider that the abolition of purchase tended to make the Army more efficient?—On the whole, yes.

15,673. But the abolition of purchase necessarily entailed an increase in the charge for pensions to officers; and must not India bear her share in the cost of this improvement in organisation?—India had no concern or voice in the abolition of purchase; but as the measure is admitted to be an improvement in the organisation of the Army, India should, in my opinion, bear her share of the cost.

15,674. I think it is pretty generally understood that no charge has been placed upon India arising out of the absolute carrying out of the abolition of purchase, that is to say, the compensation of officers?—No, I believe not. I understand that the charge to India arose in regard to the pensions—from the carrying out in the future of the policy.

15,675. In carrying out this and other changes in organisation, do you consider that India has been unfairly treated, and is it your opinion that she has not been sufficiently consulted in the discussion and carrying out of these changes?—I think that India has been unfairly treated, inasmuch as I believe that in many instances changes have been made in army organisation which have entailed considerable expense to India, without the Government of that country having been consulted.

15,676. We have had some difficulty in obtaining full information upon that point. A table has been put before us of the occasions on which India has not been consulted; but some confusion took place in this way, that I think the Government in India mentioned cases in which they had not been consulted, but in which it appeared that the War Office had consulted the India Office?—Yes.

15,677. I suppose in such cases you would agree that the War Office, for instance, or the Imperial Government can only consult the India Office; and, when it has consulted the India Office, it has consulted the Government of India?—I think that in a case of that kind the India Office should consult India. Of course, no blame can attach to the War Office if the India Office has been consulted.

15,678. That is a question between the Secretary of State and the Government of India?—Entirely.

15,679. So that it does not reflect upon the War Office?—No.

15,680. (*Mr. Courtney.*) Can you indicate any loss which has actually occurred in consequence of the consultation not having been carried further?—Take the organisation of my own regiment, the Artillery; it has been changed twice since the amalgamation, and I am not sure that India was consulted. Second captains were formed; then the second captains were done away with and majors were formed. It had to be done, and it was believed to be the best thing for the Artillery, and India had to accept it; but I do not know that she was ever consulted. The organisation of the Medical Department has also been changed, but I do not think that India was consulted about that.

15,681. And you are not sure that, if India had been consulted, there would have been any modification?—I do not think there would have been.

15,682. Then it is a question of proper respect, rather?—I certainly think that, as the changes increased the estimates and India had to bear the cost, she should have been consulted.

15,683–4. (*Sir Donald Stewart.*) In the case of the Artillery, I think the Government of India for a considerable time absolutely refused to accept the change, and would not pay for it?—I do not think they were consulted until it was settled.

15,685. They eventually gave way?—I am afraid they must always do so.

15,686. (*Chairman.*) That shows which is the predominant partner?—Yes. There is no doubt about that.

15,687. But we have had assurance on the part of the War Office that there is every intention to consult India upon those cases, and they admit fully that, if on any occasions she has not been consulted, it was an omission on their part; but I think the belief of the War Office is that, if the cases were really examined, it would be found that there would be very few cases upon which they have omitted to consult India?—I cannot say.

(*Sir Ralph Knox.*) That is, upon which they have omitted to make reference to the Secretary of State.

(*Chairman.*) Quite so.

15,688. (*Mr. Buchanan.*) In this memorandum, prepared by the Government of India, it is expressly stated that in some cases the Secretary of State was not consulted?—I, too, thought that was the case.

15,689. (*Chairman.*) You have seen Lord Wolseley's and Sir Henry Brackenbury's evidence; are there any points on which you would wish to supplement the views which they laid before the Commission?—Not especially; I think perhaps that I have a higher opinion of the capabilities of the Army in India than Lord Wolseley expresses. I consider it a remarkably efficient army, and, composed of a certain proportion of British and Native troops, I think that the Army in India might be depended upon to assist the Imperial Government in many places out of India, even in Europe.

15,690. You are aware that there has been much discussion on the terms on which India has been asked to lend forces in the case of expeditions outside of India; would you desire to see some definite understanding between the two Governments upon those terms?—It would, I think, be better to have some definite understanding on this subject, for, in cases that have occurred, India's interests have not always been sufficiently considered.

15,691. Have you seen Lord Northbrook's suggestion on this point? How far would you agree with him?—I would come to a definite understanding with India as regards general principles, but in matters which cannot be determined beforehand, such as the extent to which India and England may be directly or indirectly interested in the operations to be carried on, I approve of Lord Northbrook's suggestion to refer to arbitration, provided the decision is placed in the hands of some high judicial authority having no official connexion with England or India. I would not have a board composed of War Office and India Office officials.

15,692. (*Mr. Courtney.*) What do you mean by "judicial authority"? Somebody connected with the organisation of the Courts of Justice?—A judge.

15,693. You mean a member of the Court of Judicature?—Yes.

15,694. (*Sir Ralph Knox.*) Is it in any way a question of law?—It is a question for a man who has no bias one way or the other, who would come with a free mind altogether on the subject.

15,695–6. (*Chairman.*) I think Lord Northbrook divided his recommendations, or his suggestions, under two heads; first of all, he took those cases in which policy is concerned, in which the English Government, or the Indian Government, may desire to borrow troops. I think on a question of policy he saw difficulty

Field-Marshal Lord Roberts V.C., G.C.B.

1 Mar. 1897.

in referring the question to any authority outside the two Governments; and he suggested that, where India lends the troops, India should not be put to any charge on their account, except with the consent of the Indian Government; but on the understanding that the Indian Government was to agree to contribute to the cost if Indian interests were concerned?—Yes.

15,697. Thereupon arises the question of what are Indian interests; and he thought, as I understood, that it might be possible for the two Governments to agree upon some general definitions of what are Indian interests, and that these definitions might be embodied in a Treasury Minute: that the definition laid down in that Treasury Minute should be the guide to the Government of India in determining whether an Indian interest was concerned: and, taking one obvious case, he pointed out that an Indian interest would be the Suez Canal, that Indian interests would be involved in any expedition in defence of or affecting the Suez Canal. It was on that point that I wanted, first of all, to know whether you would agree with him?—Yes; I agree generally with Lord Northbrook. Only I think that as regards general principles it would be better to come to some understanding beforehand that, so far as is compatible with the safety of the two countries, each should at once give troops if they were wanted; that India should provide England with such troops as she could spare for any purpose and to go anywhere; and that the payment—the ordinary payment, as well as the extraordinary—should be found by England. Then any question as to what particular interest India might have in the locality or in the sphere of the operations, which could not be settled between the two Secretaries of State, should be referred to an independent arbitrator.

15,698. No; I do not think that Lord Northbrook meant to refer to arbitration this question with regard to the payment by India of any contribution towards the cost of such troops as England might borrow?—I mean the question as to what interest India might or might not have in the country.

15,699. I do not think he meant to leave that question to the judge. The idea of a reference to judicial authority he confined entirely to those cases in which there was a dispute between the two Governments on what I call administrative charges, such as the capitation rate, the amount which should be paid for the force of English ships stationed on the Indian coast, how far and to what extent India should contribute to the consulates in China. Those are the questions, which I call administrative questions, upon which Lord Northbrook thought that a reference might be made to a person of judicial standing; and I think he took exactly the ground which your Lordship has taken, namely, that the reference should be to a person who would weigh evidence without bias to one side or the other, whose decision therefore would be more satisfactory than arbitration by any leading politician, because the leading politician might be thought to have a bias one way or the other?—That is quite my idea.

15,700. (*Sir Andrew Scoble.*) Am I to understand, Lord Roberts, that you have a particular predilection for a judge, or that you would take any person upon whose independence of judgment you could rely?—I thought that judges were peculiarly educated to deal with questions in an unbiassed and judicial form, and that, therefore, they would be more suitable, perhaps, for the difficult task they would have to undertake; but I should be very happy to put the arbitration into the hands of any person who would be an impartial judge.

15,701. You mention a judge as a person who would be likely to be impartial?—Well, a judge's training would, I imagine, enable him to deal with questions more on their intrinsic worth, without any feeling for one person or another person.

15,702. With regard to another question the Chairman put to you as to a definition of Indian interests, do you think there could be any exact definition of Indian interests? or in your opinion would they be likely to vary from time to time according to circumstances?—They would vary from time to time. We ought, as I have said, to come to some understanding as regards general principles. The question as to whether the cost of a particular expedition should be borne by one or the other country, or what share should be borne by each, must depend on circumstances.

15,703. (*Sir Ralph Knox.*) There has been considerable variety in the method of charging India in the matter of these expeditions, has there not? For instance, in some cases (I do not know whether there is more than one) India has paid the whole cost of the troops that have left her shores, both ordinary and extraordinary expenditure. In other cases India has paid half. In other cases India has merely paid the ordinary charges, that is to say, continued to bear upon her accounts the ordinary pay of the troops lent, and has borne no portion whatever of the extraordinary charges. There has, therefore, been considerable discrimination as to the interest of India in the various so-called expeditions that have left her shores. Is not that the case?—Yes.

15,704. That would denote that there has been considerable discrimination on the part of the home Government in its views as to the extent to which India should bear the charge?—I am not sure that India appreciated that discrimination.

(*Sir Ralph Knox.*) That I can quite understand.

15,705. (*Mr. Buchanan.*) It has always gone against India?—Always, I think.

15,706. (*Sir Ralph Knox.*) It has not gone against India, if there has been such a variation as from levying the whole charge to bearing only the ordinary charges?—I think India felt that she was not the predominant partner in the decision.

15,707. (*Mr. Buchanan.*) Lord Northbrook, too, expressed the opinion in his evidence that the decision had always gone against India?—Yes.

15,708. (*Chairman.*) It has been represented to us that the Imperial Government should bear a share of the charge of Aden. Have you formed any opinion on this point?—I think that England might reasonably bear a share of the charge of Aden, which cannot be said to be of value to India alone. It is of value as a coaling station for steamers trading to China, Japan, Australia, New Zealand, the Straits Settlements, Mauritius, and the East Coast of Africa. It is a place of Imperial importance, and will probably become even more so in the future than it is at present.

15,709. The chief value of Aden appears to lie in the control over the Suez Canal traffic, which it confers; and the Suez Canal traffic is, I think, generally admitted to of great importance to India. Is it not a fair apportionment between the two Governments that the Imperial Government should take the whole charge of Gibraltar, and Malta, and the Indian Government of Aden?—It seems to me that the idea of Gibraltar and Malta acting as a counterpoise to Aden is somewhat far-fetched. The two former were taken possession of by England for the maintenance of British supremacy in the Mediterranean a great many years before the overland route to India and the Suez Canal were ever thought of. Aden was not occupied until 1838; and I cannot see that England's paying for Gibraltar and Malta in any way lessens her responsibilities as regards Aden.

15,710. Gibraltar and Malta are important stations towards preserving our interests in the Suez Canal. are they not?—Of course.

15,711. And so far it is a fair subject for consideration, is it not, that, as England keeps these stations on her side of the Canal, India might keep hers on the other?—But England would have to keep those stations whether India existed or not, in all probability.

(*Chairman.*) In all probability.

15,712. (*Mr. Mowbray.*) And would not you also say that if India is interested in the Suez Canal, Australia and other countries that you have mentioned are also interested?—Certainly, the question of Aden is an Imperial question, not an Indian question alone.

15,713. (*Mr. Caine.*) Whereas Lord Wolseley thinks that no portion of the charges of Aden ought to be borne by the British Exchequer, do you not think that the whole charge of Aden ought to be borne upon the Imperial revenues, and that none of it ought to fall upon India?—I would not say that the whole charge of Aden should be borne by the Imperial Exchequer, because I look upon Aden as a sort of outpost of India.

15,714. How is it any more an outpost of India than it is an outpost of Australia or the Straits Settlements?—It is very much nearer to India than to the Straits Settlements or to Australia.

15,715. It is nearer. I do not know that that makes any difference?—To Australia it would not be very much further by long sea than it is by Aden. It is much further going to India by long sea than by Aden.

15,716. (*Sir Donald Stewart.*) Is not the population of Aden entirely Indian or Asiatic?—I think almost entirely Indian and Arabian. The shopkeepers are all Indian.

(*Mr. Caine.*) The population is either English troops or Arabs.

15,717. (*Chairman.*) The garrison of Aden is supplied from India, is it not?—Yes, from India.

15,718. Are you on the whole satisfied with the organisation of the Indian Army, or do you consider that in the present state of military science further changes are impending?—I think the present organisation of the Indian Army is on the whole satisfactory, and I do not know that any changes in that respect are impending; but, in order that it may continue efficient, it must keep pace with the times, and be equipped with any new guns or rifles that may be considered necessary for the home army. But I cannot say that I see any immediate expenditure necessary.

15,719. And therefore, so far, you would not give us to understand that we must expect any notable increase in the Indian Army estimates?—I think not.

15,720. Sir Henry Brackenbury has described the changes which have taken place within the last few years, and he seemed to think that there were some others of importance—of urgent importance. Would that be your view?—I read Sir Henry Brackenbury's evidence. I think that on the whole he stated the matter very fairly. There are always certain things in India that have to be done which could only be done by degrees, such as, for instance, water supply. That is a very important matter for the health of the troops, and there has been great difficulty in carrying out the many schemes of water supply that I and my predecessor and my successor have recommended, in consequence of the expense. The expense of providing pure drinking water will have to be incurred annually, until all the proposals have been carried out.

15,721. And then there is another very important question, is there not, of adding officers to the Native regiments?—I am entirely in favour of having a reserve of officers available to supplement the present establishment in case of war, but I would not advise more officers being attached permanently to Native regiments. There is no necessity for having more British officers with Native regiments in time of peace; they would not have enough to do, and they would interfere with the work, which Native officers are very advantageously required to perform. But in war more British officers are undoubtedly required.

15,722. Then you would not incur so much expenditure, as we understood Sir Henry Brackenbury would, in adding officers?—I rather think Sir Henry Brackenbury would add the officers at present. I do not go so far as that. I think a reserve of officers ought to be available to be attached to Native regiments in case of war, but I am satisfied that the present establishment of officers is sufficient in peace time.

15,723. (*Mr. Caine.*) How would you make that reserve?—That is not an easy question to answer.

15,724. (*Mr. Buchanan.*) That reserve, of course, would mean increase of expenditure?—To a certain extent it would, of course.

15,725. (*Chairman.*) But it is one of the military questions impending?—I think that the question how to augment the number of British officers with the Native regiments in the event of war must be considered.

15,726. (*Sir Ralph Knox.*) Would new officers, young men from home, be sufficient for that purpose—from Sandhurst, for instance, or from the Militia?—A very large number would be.

15,727. They would?—Yes.

15,728. That is to say, 50 or 100 officers drawn from Sandhurst or our Militia regiments would furnish the reserve which you think necessary?—A proportion of it. Fifty or even 100 officers would certainly not be enough, but I think that a sufficiently satisfactory reserve would probably be obtained by sending out an adequate number of young officers

15,729. (*Mr. Caine.*) Are you opposed to creating any portion of the reserve from Native sources?—I do not think that Native sources would furnish the kind of reserve that is wanted. The reserve (or augmentation perhaps more correctly expresses what is required) should consist entirely of British officers.

5,730. Supposing you created an Indian Sandhurst?—I should think it would be a great mistake.

15,731. (*Chairman.*) Looking over a considerable period of time, I suppose there are very few countries in which railway and telegraphic communication is being made so complete as in the immense area of India. Might we hope from that that any diminution of force might be possible in India?—I am not in favour of reducing the present establishment in India.

15,732. You think it is at a minimum?—I think so. It is sufficient for internal purposes and for the safety of the borders all round India, but it is not too large.

15,733. If you compare the present time with 1860, I suppose the power of moving troops now to any point where they are required must be treble or quadruple what it was then?—Yes, internally. On the other hand, a greater external danger has to be guarded against.

15,734. Because there is an equal facility of moving troops on the other side?—Yes.

15,735. I think you said that you had desired to pay more attention on the frontier to completing the means of communication than to increasing fortifications. Did I gather that?—When the defence scheme was first considered, I advocated the construction of frontier roads and railways in preference to fortifications.

15,736. But did you consider that, apart from communications, there will be required any large expenditure on fortifications?—No.

15,737. Or entrenched encampments?—No, I think that is pretty well finished.

15,738. Are there any other points on which you would like to say anything?—No.

15,739. (*Sir William Wedderburn.*) I should like to ask a question on the subject of the payment of troops borrowed between India and England. I understood you were of opinion that there should be reciprocity as regards the payment of the ordinary expenses of those troops?—Yes.

15,740. It would be equally reciprocity whether the ordinary expenses were in both cases paid, or whether in both cases they were not paid?—Well, that would depend, I think, upon whether England or India was likely to make the demand oftenest.

15,741. That is what I was coming to. It would equally be reciprocity in either way, whether neither paid or whether both paid?—Reciprocity; yes.

15,742. But, if both paid, that would be advantageous to England, because India borrows regularly, annually, and a very expensive force?—I was not alluding to the force ordinarily maintained in India, or to the reliefs necessary to keep up that force to its full strength. I was only alluding to cases when troops were specially required for one country or the other for certain expeditions. There is no question, I think, as to the payment of the ordinary troops that leave England to go to India in the course of relief. India of course pays that. On the other hand, Indian troops never come to England under any circumstances. They are only demanded by England for the purpose of expeditions.

15,743. (*Mr. Caine.*) You expressed some opinion about the military element in the Councils. Do you approve of the recent policy that has deprived the Councils of the Governors of Madras and Bombay of the military element?—I do. I was Commander-in-Chief in Madras for nearly four years, and I do not remember a single military case ever coming up that could be settled by the Madras Government.

15,744. And you think nothing could be gained by the re-establishment of the Military Member?—No, I do not think so.

15,745. I just wanted your opinion upon that. You spoke of the defence of the North-West frontier not being completed; and that certain necessary railway extensions are still required. Do you think that, when those necessary railway extensions are completed, finality will be reached in the permanent defences of the North-West frontier?—I think I said "may be required."

Field-Marshal Lord Roberts, V.C., G.C.B.

1 Mar. 1897.

15,746. Oh, may be required?—And I said that to what extent or in what direction, nobody could give an opinion.

15,747. Then you see no finality in the expenditure on the North-Western frontier?—I do not; but it is a question that depends on other people as much as on ourselves.

15,748. I should just like to ask you a little further upon that point of the employment of Indians as officers in the Native Army. I suppose we may take it for granted that all military authorities are agreed that the Indian portion of the Army requires strengthening in the matter of officers. Have you any reasons to give why some portion, at any rate, of that increase of strength should not be drawn from native sources?—I think there are enough native officers in the regiments as they are now.

15,749. Still, you were talking of creating a reserve, were you not? Your view is that a reserve should be created?—Yes, but I think that a reserve of Indian officers would not be of the same value as a reserve of British officers.

15,750. They would not have received the same training?—I do not think they possess the same capabilities for war.

15,751. But do you not think that, if they had the same advantages, you might produce better material in every way, a material that might be used for officers of the Indian Army?—Not to take the place of British officers.

15,752. Do you consider that the entire strength of the British portion of the Army in India is needed for the sole purpose of keeping that country in a state of peace?—It is not there for that sole purpose; it is required also to assist in the defence of 5,000 miles of frontier.

15,753. Would it be fair to say that the work of the Army in India might be divided into three sections; first, the maintenance of peace and order in India, secondly, matters circulating around the apprehension of Russia, and thirdly, frontier work, possible hostilities on the part of Afghanistan, and Indian frontier tribes?—Yes.

15,754. Then, would it be right to say that an appreciable portion of the military expenditure of India is incurred in consequence of our apprehension of Russia?—Yes; perhaps it would be to a certain extent.

15,755. Could you at all indicate to what extent?—I might refer to 1885, when Sir Donald Stewart was Commander-in-Chief, and when, in consequence of news of Russia's approaching, we increased the army by about 10,000 British, and 20,000 Native, troops.

15,756. Then (to put it in another way), if that apprehension were removed entirely, would you recommend any reduction in military expenditure?—I should like to see the apprehension removed first.

15,757. That would lead up to another question. If it were removed, would you remove those 10,000 men, for instance?—I do not know about that; that is a difficult question. I think that, if you could make perfectly certain of a peaceful Afghanistan, of no troubles arising on our North-Western frontier, and no encroachments on our North-East frontier, in the direction of Burmah, then a reduction in the British portion of the Army might be made.

15,758. But I want to ask you specifically on the apprehension of Russia?—No, I should not.

15,759. You would still maintain your present force, even if the apprehension of Russia were removed altogether?—Well; I cannot conceive its being removed. I am not prepared to give an answer to that.

15,760. You do not think it would be possible to indicate any portion of expenditure as incurred from the apprehension of Russia?—No, not beyond what, as I have said, did happen.

15,761. I should just like to ask you a little further on the matter of Aden; does Canada pay for our fortification, for the British garrison at Halifax, and Esquimault?—I cannot tell you; Sir Ralph Knox might.

(*Sir Ralph Knox.*) It pays for Esquimault.

(*Mr. Caine.*) It does bear some portion. You do not know what portion?

(*Sir Ralph Knox.*) No, I do not.

(*Mr. Caine.*) At Halifax, nothing.

(*Sir Ralph Knox*) Nothing.

15,762-3. (*Mr. Caine.*) Why ought Canada to be free of the cost of Halifax? It appears to me absurd to treat Aden as an integral portion of India, and India bear the whole of the burden of Aden or any portion of the burden of Aden?—I am afraid I cannot give any answer in regard to Canada, because I do not know what the arrangements are about it. I think that India is so far interested in Aden that it is quite reasonable that she should pay a share of the expense of the garrison of that place; and, I believe, when the defences of Aden were made, India paid half and England paid half. I thought that was quite reasonable, myself.

15,764. Why not divide the troops as well? Why should the troops be paid for entirely by India?—The troops belong to the Army of India, and are available for India. But, as I said before, I think England should pay a share.

15,765. A substantial share?—Yes. England paid half, as her share of the defences; she might pay half as her share of the garrison.

15,766. Has there not, by the way, been a considerable expenditure lately in the improvement of barracks for the benefit of the men by the establishment of recreation rooms and temperance recreation rooms?—There has not been a very considerable expense.

15,767. You believe it has been very profitable expenditure?—Yes, very profitable.

15,768. I think one third of the British Army in India are now total abstainers?—They were when I left; that is to say, nearly one third were abstainers; but what are called "Temperance men" were included in the number.

15,769. And you stimulated a good deal of useful expenditure in the barracks to encourage that movement?—Yes.

15,770. You once told me in Calcutta, in a private conversation, that that expenditure—I attach the success of the temperance movement to that expenditure—added two battalions of effective men to the Army of India?—Yes, I think it did. That is to say, crime was much less amongst the temperance men, and there were fewer men in prison.

15,771. And you thoroughly approve of any expenditure, either at home or abroad, I may say, in the encouragement of temperance in the Army?—I am greatly in favour of it. I have advocated that there should be a separate room for temperance men in all barracks.

15,772. (*Sir Donald Stewart.*) Referring to Mr. Caine's question as to how India could reduce her garrison; is it not a fact that the greater portion, or a very large portion, of the increase of the Army that was made in 1835 was absorbed by Burma?—Yes, by Burma.

15,773. And it would not be possible to reduce the existing garrison?—No.

15,774. (*Sir Ralph Knox.*) Do you think it would be possible to reduce the number of regiments of infantry in India, retaining the garrison, in its total numbers, the same as at present?—By increasing the strength of each battalion?

15,775. Yes?—I am opposed to reducing the number of battalions, because that means a reduction in the number of officers; and, owing to there being very few British officers with Native regiments, great difficulty is experienced in finding a sufficient number of officers for staff, transport, and other duties, whenever a force has to take the field.

15,776. Did you find in your military proposals which you thought it your duty to lay before the Council that you were able to carry the Military Member of Council with you generally?—I very often found the Military Member of Council against me on the score of economy.

15,777. As regards the interests of India in these expeditions which have taken place from time to time beyond her shores, can you conceive cases in which India's interest may be regarded as involved beyond the shores of India? The Suez Canal is the only such case that has been mentioned. Do you think India's

interests are involved elsewhere in the eastern portion of the world?—Do you refer to China.

15,778. In the East generally?—Well, indirectly; not directly, I think.

15,779. But indirectly you think India is interested in, say, Arabia and Persia, the east coast of Africa, and the Straits Settlements?—Persia, undoubtedly. Persia joins on to our western frontier.

15,780. But the east coast of Africa?—No, I do not think India has got much interest on the east coast of Africa.

15,781. Lord Northbrook suggested that the Cape might be an Indian interest?—Yes, it is so far an Indian interest that, in the event of the Suez Canal being shut up, we should look to the Cape as a coaling station for our troops going backwards and forwards.

15,782. But still, you think that indirectly India is interested in some of these expeditions that might take place beyond her shores?—That is rather a vague question. I certainly think that India has not much to do with the east coast of Africa. She has with Persia. In a lesser degree, a greatly lesser degree, with Arabia; and she has a certain interest in the Straits Settlements; I should not like to see them interfered with.

15,783. (*Mr. Courtney.*) Zanzibar?—No, I do not think so.

15,784. Is not the trade there in the hands of Indians?—Yes, the commerce to a certain extent; but I do not think, taking India as it is, it is interested.

15,785. (*Chairman.*) But is not Indian commerce a matter of interest to India?—But it is a matter more for England than for India; and I suspect that the commerce with Zanzibar and other places is chiefly carried on by Europeans and not by Indians.

15,786. I can only judge from consular reports, and as I am speaking from memory, I do not put this view forward with any confidence; but my reading of the consular reports is that the Indian element in Zanzibar is strong; in fact, that the trade is Indian?—I know Indian ships go there; they trade backwards and forwards there; and indirectly, perhaps, India may be interested in Zanzibar.

15,787. (*Mr. Courtney.*) Were you not looking rather to military considerations than to commerce when you talked of the external interests of India in those several countries?—I was looking to the peace of India generally, and also to its commerce. Persia is much nearer to India than Africa. Karachi, an important port, is no distance from the Persian Gulf.

15,788. But from a military point of view rather than the commercial?—More military, but I think also commercial.

15,789. In rejecting the suggestion of the interest of India in China you had in view the fact that there was on military interest?—Quite so.

15,790. But there are strong commercial interests?—Undoubtedly, and in consequence India has more than once taken part in expeditions against China.

15,791. Would there be any disadvantage, do you think, in occasionally drawing the Military Member of Council from the Civil Service?—I think, from the Commander-in-Chief's point of view, there would; for, although the Military Member deals with civil questions in Council, his work is chiefly military; and, as the Commander-in-Chief is frequently on tour for months at a time, it is desirable that a military man should always be available for Council.

15,792. The Secretary of State for War is almost never a military man?—True, but he has the military element very close by him at all times. The Commander-in-Chief in this country does not go on tour for months at a time as the Commander-in-Chief in India should do. I was very seldom in Council from the middle of October till March, when I always made a point of joining the Government to be present at the discussions on the Budget.

15,793. The personal communication between the Secretary of State and the officer commanding in chief must be interrupted a good part of the year at home?—I do not know whether that is the case, or not; but the Commander-in-Chief in England cannot be absent from the headquarters of the Government so often or so long as the Commander-in-Chief in India is obliged to be: and for this reason I think the Military Member of Council should be a soldier.

15,794. Would there be any disadvantage in having a civilian?—I think so, for the reason that there ought always to be a soldier in the Council.

15,795. It is thought to be an advantage here that the Secretary of State for War should not be a military man?—Yes, but I think India and England are very different. The Viceroy, I think, ought always to have at hand a military man, whom he could consult on any questions that might arise very suddenly.

15,796. With respect to Mr. Caine's question; if the duty in India were confined to what may be called the police purposes of keeping peace and order within the borders of India, might the army be put on an entirely different footing?—The British or Native?

15,797. Both?—I do not think so. The army is a very small army as it is. There are only 70,000 British troops and about 150,000 Native troops amongst 300 millions of people, scattered over an immense area. I should not like to see that army lessened or made less efficient.

15,798. Having regard simply to the police duty of keeping peace in India?—Yes, keeping the peace in India and on the frontiers of India.

15,799. And, descending to particulars, would you say that, if that were the sole duty of the English Army, it would be necessary to have the same proportion of British troops?—I would.

15,800-1. Since the period of the mutiny, say the last 32 years, have the demands made upon the Army for the purpose of keeping peace and order within the Indian frontier been such as to require that proportion of British troops?—The Army has not been employed entirely in keeping peace and order within the Indian frontiers during those years; there have been the Burma war and the Afghan war.

15,802. Yes, I am putting those wars aside. Have the demands made upon the Army for police purposes, for the purpose of keeping the peace within the Indian empire, been such as to require the existing proportion of British troops?—Yes, I think that proportion is the minimum that ought to be in India.

15,803. Would you refer to any demands that have been made?—I cannot specify any particular demands, but I know it is the feeling of those who are best acquainted with India, that there should not be any less proportion of British troops than there is at present.

15,804. Well, but did not they take external causes into their mind when they expressed that opinion?—No, not altogether that, because a committee, which was assembled after the Mutiny, gave it as their opinion that we ought never to have a less proportion of European to Native soldiers in the country; and I do not think that that proportion is exceeded now.

15,805. You say it was not altogether the external causes which fixed that proportion; but the external causes were taken into consideration when that proportion was laid down?—I do not think so.

15,806. Not at all?—I do not think so.

15,807. (*Mr. Caine.*) May I ask just one question which I forgot to ask. Do you think that without reducing the total number of British troops in India, it would be safe to rely upon Indians entirely for cavalry?—I have a very high opinion of Indian cavalry, and I think for certain purposes they are better than any other cavalry that I know of; but we have only nine regiments of British cavalry in India, and I would not reduce that number.

15,808. Not even if other British troops were substituted for them?—No, I think we want that number to act with our native cavalry; I think you require a certain proportion of both. The nine regiments now in India are not too many.

15,809. You think no saving can be effected in that direction?—I do not think so.

(The witness withdrew.)

Adjourned till Thursday the 11th instant at 11 a.m.

At the India Office, S.W.

THIRTY-EIGHTH DAY.

Thursday, 11th March 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

The Most Hon. the Marquis of Lansdowne, K.G., &c

11 Mar. 1897.

The Most Honourable the Marquis of LANSDOWNE, K.G., G.C.S.I., G.C.M.G., G.C.I.E., Her Majesty's Secretary of State for War, called in and examined.

15,810. (*Chairman.*) Lord Lansdowne, will you tell us what posts you have held in India, or connected with India in this country or with the War Office?—I was Governor-General of India for five years, from 1888 to 1894, and I am now Secretary of State for War.

15,811. You have seen the evidence of Lord Northbrook, Lord Cromer, Sir David Barbour, and Sir Auckland Colvin?—I am aware of the general tenour of their evidence.

15,812. We have had a good deal of evidence on the powers and position of the Finance Member in India. Sir David Barbour and Sir Auckland Colvin thought that those powers were theoretically complete, but that in practice they were, to say the least, not so complete. Would you give us your opinion upon that point?—I think that both theoretically and practically the powers of the Finance Member are as complete as it is possible to make them.

15,813. They considered, I think, that the powers of the Finance Member varied with the attitude of the Viceroy, that if the Viceroy held economical views the Finance Member had nothing to desire, and that if, on the other hand, the Viceroy was not economical, the Finance Member's position was weak. Does that description represent fairly to you the position of the Finance Member?—I should be inclined to say that in no case was his position weak. The Finance Member must hold a strong position in the Viceroy's Council. The Member who controls the financial part of the administration must, I think, *ipso facto*, always exercise a potent influence in the counsels of the Viceroy. On the other hand, it is no doubt true that the personality of the Viceroy counts for a good deal, and that he could strengthen the position of the Finance Member by giving him a large measure of support.

15,814. Lord Northbrook and Lord Cromer admitted that the Finance Member is powerful, or not, according as he is supported, or not, by the Viceroy; but they considered that that is an inevitable condition of government in India. Lord Cromer did not seem to think that he wanted extra power—indeed, neither Lord Cromer nor Lord Northbrook thought so; they are opposed to Sir David Barbour and Sir Auckland Colvin upon that point. Perhaps I may take it from your last answer that you agree rather with Lord Northbrook and Lord Cromer?—Certainly. You cannot exclude the personal factor from the calculation; but I think that the view expressed by Lord Northbrook and Lord Cromer is a just one.

15,815. I think Lord Cromer summed up his opinion to the effect that the power of the man depends very much upon himself?—I think that is undoubtedly so.

15,816. Sir David Barbour and Sir Auckland Colvin thought that the Members of Council acted rather too much as heads of departments; they wished that the members generally could give more attention to the question of finance. Lord Cromer, I think, did not share this view. May I ask what is your experience of the working of the Council in that respect?—The Members of Council all have their departments to administer and to think of, and no doubt those departments make a great claim upon their time and attention. On the other hand, they certainly are not unmindful of financial considerations, and many of them, from their training and experience, are, I should say, able to deal very adequately and intelligently with the financial aspects of the matters which the Council has to dispose of.

15,817. Then, so far, your experience would not be that the members as a rule took a purely departmental view of the questions that came before them, but that they would take a general view of the financial effect of a measure, and of the consequences that financial effect might have upon the Government of India?—Oh, most certainly.

15,818. You would doubtless agree that in India finance is a subject of the first importance, and that peculiar danger may attend unsound finance there?—Certainly.

15,819. Would you say that the Council appreciated the gravity of that question, and that due weight was always given to the representations of the Finance Member?—I think so.

15,820. Sir Auckland Colvin thought that there had been a change in recent years, and that a more costly policy marked the period subsequent, say, to 1885. I understood him merely to state what he considered to be the facts of the case, not meaning thereby to imply that the policy was not right?—I think that comparisons of that sort would require to be made with very great care and discrimination. I do not feel able to state with confidence whether it is possible to say that there has been one period in which more liberal, or, if you like, extravagant views have prevailed, and other periods in which they have not; but I should say that, if there had been a tendency at one time more than another to liberal or too liberal expenditure, it was due, not so much to the peculiar character of the individuals concerned, as to the events which were passing at the time, and the conditions under which the Government of India was being carried on.

15,821. I am confining myself especially to facts; I think we all know that the tendency of modern government, wherever it is, is to increase of expenditure?—Yes.

15,822. The object of my question is to learn whether you are of opinion that that increase, which I think is patent on the figures, and to which Sir Auckland Colvin alluded, must be looked upon as a natural consequence of a changing order of things?—To a great extent it is a natural consequence.

15,823. Do you consider that the communications between the Viceroy and the heads of departments were such as to give the Finance Member a full opportunity of representing the financial consequences of proposed measures? I mean by that question to elicit your opinion as to whether the method of communication ensured to the Finance Member such early

information as to what was going on, as to give him time to make his representation?—Yes, I think so. The Finance Member of Council, and, indeed, all members of Council, when I was in India and, I fancy, during other Governments, always had the utmost freedom of access to the Viceroy. Speaking for myself, I may say that I always encouraged Members of Council to come to me and talk to me as freely as possible about any matters of importance. I do not know whether I can give it as an answer to your question, but it is also the case that the Viceroy has generally been in the habit of seeing the Secretaries to the Government of India in the different departments once a week, so that he has two opportunities of knowing what is going on in the different departments—one opportunity afforded by his constant meetings and communication with Members of Council, and a second afforded to him by the weekly visits of the Secretary.

15,824–5. That is a distinction which we have learned applies to the Indian Government, and which is somewhat novel to our experience here, namely, that the Secretaries to the different departments are not subordinate officers of the Member of Council at the head of the department, but are more immediately dependent upon the Viceroy, who holds independent communication with them?—I should not say upon the Viceroy, but upon the Governor-General in Council. But your view is strongly, and I believe rightly, held by Indian officials generally.

15,826. Lord Cromer pointed out that representations of financial consequences, in order to be effective, must take place in many cases at the initial stage of proceedings. A step may be taken of which the grave financial importance may not be appreciated at the outset. Were you satisfied that the Finance Member always knew of such steps in time to warn the Government, before the Government was committed?—The expression "the initial stage of proceedings" strikes me as perhaps a little ambiguous. It is not always very easy to say at what precise moment a particular line of action becomes inevitable. So far as the circumstances permit, I feel no doubt that the Viceroy would always endeavour to carry his Council with him, and particularly to keep the Finance Member informed of any events which were likely to have a disturbing effect upon the finances of India.

15,827. By the initial stage of proceedings, I mean those first communications which take place upon some event occuring, and these take the form probably of informal unofficial discussions. If matters are at all urgent, the Government may practically be committed in consequence of those informal discussions; do you think that in those cases the Finance Member might rely upon being told in time to make any representation he thought fit about the proposed line of action?—Certainly, with the qualification that I think I gave just now—so far as circumstances permit.

15,828. Of course, in the case of ordinary measures of administration that would not apply, because there is plenty of time for the consideration of every circumstance connected with them. I am rather alluding to emergencies in which very often decisions may have to be taken quickly?—Yes.

15,829. (*Mr. Courtney.*) If we might take such a grave matter as the annexation of Upper Burma, would there be anything like a Cabinet discussion on that with the Viceroy?—That took place before my time, but I should say undoubtedly there must have been.

15,830. And the Finance Member would not only have the power, but would be invited, to express his opinion as to what would be the effect of that act upon the finances of India?—I should think, certainly; but I am speaking hypothetically.

15,831. (*Chairman.*) It is, of course, possible that the Viceroy might not fully appreciate the financial objections to a policy which he adopts. The representations of the Finance Member might not in such a case receive sufficient attention. Sir David Barbour seemed to think that in such a case the Finance Member might with advantage look to the Secretary of State for support; would you think that such a check on the part of the Secretary of State would be an advantage, or would you prefer that such a check should not be looked to as a corrective?—I am not quite sure whether I understand the exact procedure to which your question points. If you mean that the Finance Member of Council should have a direct appeal—an appeal which no other Member of Council would have—to the Secretary of State, I should say that I saw no occasion for giving him that particular privilege.

15,832. I was coming afterwards to the point of the form of the communication. We had from a former Finance Member the important suggestion that the Finance Member should look for support from the Secretary of State in case of grave difference between himself and the Viceroy. That is a very important departure in practice, and I wanted to learn your opinion upon that suggestion, namely, whether the Finance Minister should look outside India in certain cases for the special support of the Secretary of State?—But in what way do you contemplate the Finance Member "looking to" the Secretary of State?

15,833–4. The Finance Member has at present the power of recording a dissent from the decisions of the Council, and in that case his dissent goes home, does it not?—That is so.

15,835. That, however, is a formal act. The Finance Member must be prepared for the publication of his dissent; and, further, the dissent may come too late for useful action on the part of the Secretary of State?—Yes, but the Finance Minister's power of recording a dissent is a power which is of very great value indeed. The Viceroy always knows that that power exists and can be exercised; and I think it pretty clear that, if he trusts the Finance Member and wishes to act cordially with him, he will give the Finance Member the fullest possible opportunity of urging his objections, and that he will go great lengths in order to render the record of a dissent unnecessary.

15,836. Quite so. There is this point about a formal dissent, that the Finance Member, like an ambassador, may have reasons that would make him reluctant to put his full views down upon a paper that might be published?—Quite so.

(*Chairman.*) And, of course, in looking to the efficacy of such a power as that of dissent, you have to look also to whether the person who has the power, can exercise it with complete freedom.

15,837. (*Sir Andrew Scoble.*) Is it not also the case that the Finance Member, in common with all the other members of the Council, has the opportunity of having his views, when they differ from those of the majority of his colleagues, stated in the despatch which comes home to inform the Secretary of State of the resolution which the Governor-General in Council has come to?—Certainly; that is occasionally done.

15,838. And that may be either a confidential despatch or one which is not strictly confidential?—That is so.

15,839. So that he would have the fullest opportunity of stating his views and his reasons for differing from his colleagues in an official document?—Yes.

15,840–1. (*Sir Ralph Knox.*) But the financial result, or probable financial result, of a policy may be stated in the despatch as a matter of fact, without the necessity of his expressing any dissent or any opinion with regard to the matter in hand, may it not?—Yes; but if the despatch is an important despatch, the draft will be circulated and will be discussed in Council; and the Finance Member will have an opportunity of suggesting the insertion of words which would cover the ground that he particularly wished to take.

15,842. And he could insist upon this financial view being shown in the report to the Secretary of State, without formally expressing his dissent or otherwise, from the particular measure?—Certainly.

15,843. Practically leaving it to the Secretary of State, with all the facts before him, to decide the question?—Yes.

15,844. (*Mr. Courtney.*) But, in anticipation of such a formal act as that of sending home a minute of dissent or even a despatch containing the views of the Finance Member, has it happened in your experience that telegraphic communications have been sent home, to some such effect as this:—"The Council deliberated "on such-and-such a matter; Finance Minister dis-"sented; so-and-so answered"?—I cannot at this moment recollect any case of the kind.

15,845. That is the stage at which the opinion of the Secretary of State at home might be of importance?—The Viceroy is in constant telegraphic communication with the Secretary of State; and upon a question where serious financial consequences were likely to arise, the Secretary of State would be very apt in his private communications with the Viceroy to raise points of that sort.

The Most Hon. the Marquis of Lansdowne, K.G., &c.

11 Mar. 1897.

15,846-8. (*Chairman.*) The forms in which the apprehensions of the Finance Member might reach the Secretary of State are these: first of all, a formal dissent; then a public despatch which has been, as your Lordship describes, discussed in Council; and, thirdly, unofficial communications of the Viceroy to the Secretary of State, in which presumably he would inform the Secretary of State of the objections that had been made to him by the Finance Member?—Yes. Of course you will remember that the unofficial communications between the Viceroy and the Secretary of State are private, and are not officially recorded. So that the record disappears when the then Viceroy and the then Secretary of State are no longer on the scene.

15,849. Quite so; and with reference to that it has been suggested that the Finance Member might have the power of putting his objections at any time into a confidential memorandum, to be submitted through the Viceroy to the Secretary of State. The object, I take it, of such a suggestion would be this:—Any person who entertained apprehensions about a certain course would prefer to be allowed to state his objections himself in his own language rather than that they should be represented by another person, even his chief, and even though he might be convinced that his chief would represent them as fully as possible. Do you think there would be any objection to that suggestion?—So far as my own experience carries me, I should say that there is no necessity for introducing any such new procedure into the administration of the Government of India; and I should deprecate it, because I think the tendency of it would be to create a certain amount of friction between the Viceroy and the Finance Member.

15,850. I think that at present communications take place between the Finance Member and the Financial Secretary at the India Office, do they not?—Yes, but such communications deal, I believe, entirely with matters of purely financial administration.

15,851. I take it so; but I mean there is that private method of communication?—Yes.

15,852. And, if there is that method of communication open, of course larger subjects may be mentioned in it. Would it not be safer, on the whole, that the Finance Member should communication through the Viceroy to the Secretary of State, than that there should be any chance of communication taking place of which the Viceroy is not aware?—My instincts are entirely against the proposal. I should dislike the idea of putting the Finance Member in that respect upon an entirely different footing from any other Member of Council.

15,853. I think those who made the suggestion would contemplate that the same power should be given to other Members of the Council; I do not suppose that they would actually wish to confine it to the Finance Member?—I see no occasion for the change, and I feel confident that its introduction would greatly weaken the position of the Viceroy.

15,854-5. We have gone through the different methods in which communications may take place with a view to obtaining the support of the Secretary of State; and, perhaps, I may now return to the question as to your opinion upon that suggestion which, I think, came from one or other, if not both, of the Finance Ministers who have been before us, Sir David Barbour and Sir Auckland Colvin, that it might be a good thing if the Finance Minister could in cases of difficulty look for support from the Secretary of State; that would be, of course, in cases where he is at issue with the Viceroy upon a financial question?—I am sorry to answer by asking another question, but what kind of support is he to look for?

15,856. I presume that what they mean is that, in such a case as that, the Secretary of State should take the financial question into his own consideration, and himself impress upon the Viceroy the weight of the financial objection that has been raised by the Finance Member; that is how I understand the suggestion?—I have expressed my opinion, I think, distinctly against the specific proposal that the Finance Member should have the power of putting his objections at any time in a confidential memorandum to be submitted through the Viceroy to the Secretary of State. That is the specific proposal. Then, I understand your Lordship to ask me my opinion upon some different procedure by which the Finance Member should look to the Secretary of State for support. I am a little in the dark as to what is meant by that.

15,857. I think the suggestions made by Sir David Barbour were somewhat vague. He thought that in certain cases the position of the Finance Minister was weak; that necessarily led to questions being put to him as to how he would strengthen it, and he could not propose any practical remedies; but he did suggest that in certain cases of difficulty the Finance Minister might with advantage rely more than at present upon the support of the Secretary of State. I quite understand the difficulty your Lordship has in answering the suggestion; but it has been put before us, and you see it is too important a suggestion to be put before us without being examined?—I should have said that, as matters stand now, the Finance Member can look to or rely upon the Secretary of State for support in this sense, that the Secretary of State does watch the financial administration very closely; and, if he finds that that administration is extravagant, the Viceroy is pretty sure to hear of it. In that sense the Finance Member would look to, and probably obtain, the support of the Secretary of State.

15,858. But I take it generally, from what your Lordship says, that this suggestion, which it is very difficult to put into practical shape, is not one which would have, in any shape, your Lordship's support?—No.

15,859. Taking the period of the last 13 or 14 years, there has been a considerable increase of charge consequent on the fall in the rupee, and due to increased expenditure on the army, has there not?—I believe that that is so; I have not considered the matter lately.

15,860. And, though the revenue during that period has been elastic, it has not sufficed to meet the demands upon it?—I presume the Commission has satisfied itself upon that point; it is a question of fact.

15,861. In fact there has been an increase of taxation?—Yes.

15,862. That, I think, is the answer to the question?—Yes.

15,863. And that increase of taxation has been attended by the dangers and difficulties that always accompany increase of taxation in India, I believe?—I do not know whether I should use the word "dangers"—difficulties, yes—taxation in India is full of difficulty, and any increase of taxation is a difficult matter.

15,864. I think there was a measure within the last four or five years which raised some dangerous questions, did it not? My question is intended merely to emphasise the great necessity of caution in regard to involving increased taxation in India?—There can be no difference of opinion upon that.

15,865. (*Mr. Mowbray.*) Has not one of the main difficulties with regard to Indian taxation arisen in England in the House of Commons? (*Sir Andrew Scoble.*) The cotton duties?—Yes, I should say that that was so; but I answer the Chairman by saying that any increase of taxation in India must always be a serious matter. I do not think that that can be denied.

15,866. (*Chairman.*) The increase of taxation was no doubt necessary; but in these facts we have a lesson, and a practical lesson, of the necessity of sound finance in India, and the desirability that due attention should be given to financial consequences, before a course of expenditure is entered upon?—I think that that is incontestable.

15,867. Do you think that we must look for a continuous increase of army expenditure?—No. I should be very sorry to assume that that was the case; but it is hard to say what the course of military developments and military expenditure is likely to be in the future.

15,868. You know of no reason to anticipate more increase than changes in organisation resulting from the increase in scientific knowledge are likely to entail upon every Government?—Quite so.

15,869. And about those no forecast can be made?—No. There is also, of course, the question of the pay of the soldier. I do not know that anybody could say confidently, that we shall be able to get our native troops a few years hence upon the same terms as those upon which we get them now.

15,870-1. But the pay to the native soldier has been increased of late years, has it not?—It has been increased slightly, I think.

15,872. We have also been told by the military authorities who have been before us, that there is a

question, though it does not seem to be a very pressing one, of largely increasing the number of European officers attached to native regiments. That would be an expensive step?—That would be a very expensive step; but I know that many high military authorities hold that the proportion of British officers to the native troops is not adequate.

15,873. (*Sir Ralph Knox.*) That increase of pay has been given to the native soldier, notwithstanding that the demand on the population to supply soldiers is a comparatively small one; that is to say, you look for a force of about 140,000 men out of a population of 300,000,000?—Yes.

15,874. Notwithstanding that, it has been necessary to increase the pay of the soldier, in order to get the proper men for the service?—But then you will, of course, remember that the part of the population from which we draw those soldiers is a very limited part. I mean, we cannot get the kind of men that we want for the Native Army except from certain portions of India—very limited portions.

15,875. (*Chairman.*) In view of the rapid communication established throughout the empire, both by rail and telegraph, might we not look for some diminution of force?—I am afraid I do not see my way very clearly to that.

15,876. As far as you know, is the scheme of frontier defence now completed?—I believe the scheme of frontier defence which has been in course of execution during the last few years, is complete; but I am afraid I can give you no opinion as to the possibility of that scheme being hereafter considered inadequate, and of its being thought necessary, on military grounds, to supplement it.

15,877. Of course, I am only speaking about the means of information existing at present?—Yes.

15,878. And, having regard to present military expenditure and its effect upon the finances of India, my question is entirely directed to the probabilities of the next few years, so far as existing information enables them to be foreseen?—Then, I think, I should answer that the scheme of frontier defence is complete. I am not speaking of railways, but of defence works.

15,879. We have been struck by the increase in late years of the number in small frontier wars, which must have a tendency to derange budget provisions. Do you think they are likely to prove more than in former days a recurring and permanent source of expenditure?—It is not very easy to prophesy. If I were to attempt to prophesy, I should say that that was likely to be a less recurring source of expenditure in the future than it has been in the past.

15,880. In the return which has been laid before the House of Commons on the motion of Sir D. Macfarlane, giving a comparative view of the military expenditure of India over a series of some 20 years or so, there come within the last 10 years or so, year by year, a considerable number of these expeditions, two, three, or four in a year, while in the previous period they were, if I may so call them, sporadic—an expedition here and there?—Without going through the table carefully, I do not know whether I could accept that view; but it is undoubtedly the case, that there was a moment when we had several frontier complications simultaneously on our hands. For example, I think there was one time at which we had trouble on the Black Mountain, and, simultaneously with that, operations at various points on the frontier of Burma. The annexation of Upper Burma naturally led to difficulties with the lawless people who adjoin Burma on each side, and, consequently, there was at one time an abnormally large amount of activity of that sort at different points of the frontier.

15,881. Do you think that the arrangements which have been made in consequence of these expeditions, have been such as to render their recurrence less likely than previously?—Most certainly I do. I think the frontier, if I may put it in that way, is now in a very much better shape than it was 10 years ago. I may, perhaps, say that I was allowed to see Lord Roberts' evidence, and I agree with what was said by him as to the much more thorough way in which recent military operations on the frontier have been carried out.

15,882. Without troubling your Lordship to go through the figures, I will hand you that return, because from the way I have scored the items you will see the figures upon which I based my question?—Yes, I think they show that you are quite correct in saying that there was a period when, apparently, there was a lull, followed by another period during which there was more than usual activity.

15,883. But, of course, the important point to us is that, in your opinion, the arrangements which have followed this outbreak of difficulties are such as to render their constant recurrence, at all events, less likely than heretofore?—I hold that view strongly.

15,884. (*Mr. Courtney.*) Have there not been these periodic lulls and outbreaks in the course of the last 50 years?—Yes. For example, I think Lord Roberts told the Commission in his evidence that there was a period of 40 years during which there were 35 operations, 20 of which were considered of sufficient importance to justify the grant of a medal; but I venture to repeat what I said to the Chairman, that I think the frontier now is in a much sounder state than it has ever been before.

15,885. Has not that hope been expressed by previous Viceroys, or ex-Viceroys, and been realised for a short period, and then a new situation has arisen by the necessity of things?—I do not think the hope has been expressed under circumstances similar to those which are present now. The old policy was much more a policy of going in and giving the tribes a severe lesson, and then coming away and leaving them to themselves until they broke loose again, and had to be once more punished. I think it was Lord Lytton who described that policy as a policy of alternate vengeance and inaction. The recent policy has been rather that of letting the tribes feel that they are in a sense our men, that they had a good deal to expect from us in the way of pay for road making, pay for levy services and things of that kind, and that it was to their interest to behave themselves properly.

15,886. (*Chairman.*) Then the remedy is still rather to make it their interest to keep the peace than to assume direct control over them?—It would certainly not be to assume direct control in the sense in which we exercise direct control within the frontiers of India; it is a control of a very light and elastic description, but still it is a control.

15,887. I wanted to ascertain the precise difference between the old period of inaction, which your lordship has described, and the present time. It has been for a very long time the policy to endeavour to make it the interest of the people to keep the peace by presents and subsidies of different kinds?—I think we used to set about it in rather a curious fashion. One feature in the old system, which always seemed to me to be a very bad one, was that a tribe which had misconducted itself had a heavy fine put upon it, and was given a certain number of years in which to pay that fine. The result of that was that the fine would be paid, if it was paid at all, not by the lawless members of the tribe who were the people you wanted to punish, but by the well-conducted and more orderly portion of the tribe, who were in the habit of coming across the frontier to carry on their business within the borders of India. Those fines, I think, kept up a very rankling sense of injustice, and rendered the pacification of the country more, and not less, difficult.

15,888. But in what form were those fines levied? Were the chiefs of the tribes required to come in at certain times and pay the fine?—I can tell you what I once saw with my own eyes. When I was on the frontier, I went one afternoon to a post which the caravans had to pass through, and I saw a number of tribesmen carrying wood on their shoulders. Each man, out of, say, his ten pieces of wood, had two taken away from him. I asked what it was for, and I was told that it was the arrears of a fine levied on the tribe for a raid which had taken place I am quite afraid to say how many years ago.

15,889. And no attempt was made to provide that the tribe generally paid the fine, but it was levied, as I think you described just now, upon the most orderly part of the tribe, namely, the traders?—They were the only people you could get anything out of. The men who remained up in their own fastnesses, cutting each other's throats and other people's throats, naturally were not likely to contribute anything.

15,890. And now, as I understand your Lordship, the system of fines has been replaced by services of different kinds?—The Government of India gives them service in what are called tribal levies, a very irregular,

The Most Hon. the Marquis of Lansdowne, K.G., &c.

11 Mar. 1897.

rough and ready sort of militia, on condition that they should keep the roads up, perhaps repair certain portions of them; sometimes it is part of the conditions that we should have posts at certain points; arrangements of that kind have been carried out with very great success—for example, in the Zhob valley.

15,891. (*Mr. Buchanan.*) Under the new system we make ourselves responsible for the maintenance of order within the tribal territory?—Yes, to a certain extent.

15,892. Whereas under the old system we left the tribes under their own government?—Under the old system we left them entirely to themselves.

15,893. Is not the new system a much more expensive system?—I do not think so, because I think it is a system to which the people adapt themselves, and under which they settle down very readily.

15,894. You mean that, from the point of view of cost, the chances of renewal of these frontier expeditions ought to be set against the increased cost to the Government of India of the additional territory, because practically we annex the territory?—Well, pardon me, it is not quite that.

15,895. We extend our own boundaries?—Annexation would mean that we should bring these people under a system of government identical with or like that which prevails inside the borders of India. We should not administer the Zhob valley, or places of that sort, in that fashion at all.

15,896. Of course, annexation may have various meanings; but we make ourselves responsible for the maintenance of order within that territory, and I suppose that we should consider that the boundaries of our Indian Empire would extend to the farthest limits of that territory?—We, no doubt, make ourselves to some extent responsible for conduct of the tribes, and we regard their territory as within our sphere of influence.

15,897. (*Mr. Courtney.*) Internal order?—Oh, no, not internal order; we should turn a blind eye to the telescope, if the case was merely one of internal disorder.

15,898. (*Mr. Buchanan.*) But if the internal disorder led to anything like a renewal of raids upon our own subjects within our own territory, we should interfere then?—Yes, certainly.

15,899. (*Chairman.*) Then may I take it that the difference now is that, whereas their internal administration, is left to the tribes completely, we require them to keep the peace as between themselves and their neighbours in our territory?—Yes, we teach them to look to us.

15,900. To settle their disputes?—Not to settle their internal disputes amongst themselves.

15,901. No, but between themselves and their neighbours, you mean?—Not in the case of minor, intertribal disputes, but in cases where the peace of the border was seriously threatened.

15,902–3. (*Sir Ralph Knox.*) But do the tribes make any payment to us of any kind?—Sometimes a light revenue is taken from them.

15,904. But the change of system is practically that, instead of their paying us a fine, we pay them wages, is not that about it?—The system varies very much. It would be a great mistake for me to suggest that the same system is suitable, let us say, on the Baluchistan border and throughout the Waziri country; that is not so. But I think your question suggests what is generally the case.

15,905. And it is cheaper to make this expenditure in the way of payment than to be liable to the constant outbreaks which were the result of the old system?—I have very little doubt about that.

15,906. (*Chairman.*) But if we insist upon the tribes keeping the peace with one another, will not that involve a good deal of interference with these lawless people?—I should not anticipate that.

15,907. (*Mr. Courtney.*) Do we really interfere in quarrels between tribe and tribe?—It depends upon what sort of quarrel you mean; we should not interfere unless they committed some very serious irregularity.

15,908. Unless it reacted upon ourselves?—Yes, I think you may put it in that way; while we should ignore a quarrel between one village and another village, or between a small section of a tribe and another small section of a tribe, we should not ignore anything that led to a general disturbance of the frontier, or to serious trouble affecting ourselves.

15,909. (*Chairman.*) The gravity of each case would be judged from its effect upon ourselves?—Yes.

15,910. And, therefore, the necessity for interference?—Yes.

15,911–2. (*Mr. Buchanan.*) Having regard to military expenditure in India, whether upon frontier expeditions, upon frontier defence, upon increase of the army itself, or expenditure upon the army, are we to take your evidence as coming to this, that, upon the whole, you can tell the Commission that we can look forward to the present military expenditure of India upon all those various points as being about normal, and not likely to be subject to rise or fall?—I see no reason for anticipating that under any of those heads the expenditure is likely to increase largely in the near future.

15,913. You think that the expenditure upon frontier defences, so far as you like to prophesy, is fairly complete?—Yes.

15,914. And the new frontier policy, you think, will in the end prove economical?—Yes.

15,915. And then, am I right in understanding you to tell us that, upon the whole, you do not think that there will be a great increase of expenditure upon the army in India?—That is a point as to which, speaking as a civilian, I feel some doubt whether I ought to say anything; so far as I can judge, I should say that there was no reason for expecting any large increase.

15,916. Lastly, you have told us that you did not think that the forces, either native or British, could be decreased; but are you of opinion that it is not likely to be necessary that they should be increased?—No reason occurs to me at this moment for which it should be necessary to increase them.

15,917. (*Sir Ralph Knox.*) But you did qualify your evidence on the point of pay; you were not quite sure that the pay could be maintained?—Yes, I made that reservation.

15,918. (*Mr. Mowbray.*) You referred also to the possible increase in the number of British officers in the native army?—Yes.

15,919. (*Chairman.*) I think you restricted your opinion to the near future, did you not?—I think we must all of us restrict our anticipations to that.

15,920. It has been suggested that the presence of two military members gives rather a preponderating weight to the military element in the Council?—I think that suggestion assumes that questions involving military expenditure are constantly disposed of in Council by a majority of votes; that, is not at all the case. And I think it also assumes that the two military members are always to be found voting solid in favour of proposals for increasing military expenditure; that also is not the case. The Military Member of Council, I should say, exercises as a general rule a very potent influence on the side of economy.

15,921. In fact, you confirm the evidence of Sir Henry Brackenbury and Lord Roberts upon that point. They, I think, were emphatic in their view that the views of the Commander-in-Chief and the Military Member were by no means identical on many occasions?—Oh, certainly they are not.

15,922. In drawing an analogy between administration here and administration in India, we have been told that the office of Military Member of Council corresponds in a very general manner to our old office of Secretary-at-War. Before the change of forty years ago was made, he was the minister who proposed the military estimates in the House of Commons, and he was always regarded in our administration as the check within the War Department upon military expenditure rather than the promoter of it?—Yes, at any rate, I would answer your question by saying that the function of the Military Member is upon the whole rather to check than to encourage expenditure.

15,923. In that case would you contemplate that occasionally a civilian might be put into that office?—I do not know that there is any fatal objection to it, but I should be inclined to say that, as long as you can get a good soldier for the post, it would be better to

put a soldier in it. The civilian would have a great deal to learn before he could get through the work properly. The Commission is, moreover, no doubt aware that the Commander-in-Chief is very frequently not able to be present at the meetings of the Viceroy's Council, and in his absence it is, I think, a distinct gain that there should be a military expert of some kind present. Questions constantly arise in the most unexpected way in which military interests are involved, and if there was no soldier in the Viceroy's Council, I think it would very often be a drawback.

15,924. (*Mr. Courtney.*) Would you bear in mind in those answers our possible analogy at home?—The analogy being that there is no soldier in the Cabinet?

15,925. Yes?—But the Cabinet can always send for the Commander-in-Chief. The Commander-in-Chief in this country is not as inaccessible as the Commander-in-Chief in India must, from the force of circumstances, very often be. The Viceroy's Council may be sitting at Calcutta, and the Commander-in-Chief may be on tour in the Punjab.

15,926. But the Commander-in-Chief only goes on tour during part of the year?—Part of the year.

15,927. Would the sittings in Council be required to be held so continuously throughout the year that it would be very greatly inconvenient for him to attend?—The Council sits once a week with the exception of the time during which the Viceroy is on tour in the spring and autumn.

15,928. And military questions are constantly arising?—I cannot say that; but you never can be sure that a military question will not arise.

15,929. (*Chairman.*) As I take it, your opinion is this: that, in the absence of the Commander-in-Chief, the Viceroy naturally looks for advice to the head of the Military Department who is, of course, the Military Member?—Yes, on military questions.

15,931. (*Mr. Courtney.*) But the Viceroy would always be in communication with the Commander-in-Chief, even though the Commander-in-Chief were away?—Yes, but I do not think that that would be a very convenient arrangement. A letter might take a week, and telegraphic communications are not very satisfactory under those circumstances.

15,932. (*Sir Andrew Scoble.*) And the Commander-in-Chief might be beyond the reach of the telegraph?—Certainly.

15,933. (*Chairman.*) At all events, without absolutely putting a veto upon the possibility of appointing a civilian to the post, you would always prefer that a good general, if he can be found, should hold it?—Yes.

15,934. My question does not so much suggest that a civilian should be put into the post, but tests how far military qualifications are necessarily required in the Military Member. The cost of civil administration seems hardly to have kept pace with the increase of population and the increasing demands of the present day. Do you think that these branches of domestic expenditure have been in any way starved in order to enable military demands to be met?—I do not think so.

15,935. You are satisfied, within your experience, that the fair demands for all domestic administration were reasonably met?—I do not know whether I should put it as strongly as that, because India is a country in which you could spend with very great advantage unlimited sums of money on domestic administration; but I think most people feel that, unless you were reasonably strong in India, there would be no domestic administration to carry on.

15,936. Quite so. I will take one department, the Judicial Department; did you find demands for an extension of it which you were not always able to meet?—I do not remember such a demand.

15,937. And I might ask the same question with regard to roads and bridges and irrigation; were those matters, for which, when you had the budget before you, you would very gladly have granted more money, but found that you were not able to give it?—Certainly; as I said just now, you could spend almost unlimited sums of money on such purposes as roads and bridges and other improvements.

15,938. (*Sir Ralph Knox.*) But such expenditure would not be reproductive to any very great extent, would it?—I think a good deal of expenditure of that sort is reproductive.

15,939. (*Chairman.*) Well, we have heard that, taking expenditure on irrigation as a whole, it is really reproductive?—I think you must get that from an expert.

15,940. I only mention that to you as the result of what we have heard in evidence?—Yes.

15,941–2. Then would you anticipate any large or continuous increase in expenditure in civil administration?—I am afraid I cannot answer that question.

15,943. Do you approve of the delegation of larger powers to Provincial Governments?—Yes, I do.

15,944. You consider that that system generally, which was begun by Lord Mayo, is successful?—I think so.

15,945. And economical?—I think so, on the whole.

15,946. In your opinion has the limit of such delegation been reached, or would you extend it further?—I do not know that I can offer any useful opinion about that. I am inclined to regard with favour the suggestion that the provincial contracts should be allowed to run for a longer term than they do at present; and I believe there is high authority for that view.

15,947. That is to say, it would give the Provincial Governments greater certainty as to their future powers of expenditure?—Yes.

15,948. At present the Provincial Governments are not certain that, at the close of the comparatively short period to which the contract extends, the whole of the increase upon the duties which are handed over to them may not be taken by the Imperial Government for Imperial purposes; that, I suppose, is the fear?—Yes.

15,949. This Commission is directed to report on the apportionment of charges between the United Kingdom and India for purposes in which both are interested. May I ask whether you have any opinion as to the principle upon which such apportionment should be made?—Does that question refer to what we commonly speak of as the home charges for the Army?

15,950. I think the home charges is the most convenient instance to take. As your Lordship is aware, there are a great number of services on which payments are made by India to England?—Yes.

15,951. But the home charge for the British regiments serving in India is such a large one that it is a convenient one, I think, to take?—Then, if I may answer with regard to the home charges, I should say that in my opinion we should begin by calculating the charge which can be fairly made against India on account of the men actually supplied to her; the charges which are directly dependent on the services of a part of the British Army in India; and that, having made that calculation, we should then consider whether, on account of the peculiar circumstances of India, her peculiar relations to this country, there is or is not a sufficient case for abating something of that charge.

15,952. Then may I take it as your view of the principle that, at all events at the outset of the calculation, India and England should be treated as two partners, and that the fair cost to which the War Office is subjected in providing men for India should be calculated and charged against India?—Yes.

15,953. Subject to such consideration of the circumstances of India as the Government for the time being may think right?—Quite so.

15,954. But that would assert as a principle that a fair apportionment of the charges should be made?—Yes.

15,955. You are aware that, owing to recommendations of the committee over which Lord Northbrook presided, the home charge of regiments serving in India is now represented by a payment of 7*l.* 10*s.* per head on the establishment. Have you any opinion to express upon that arrangement?—I think that arrangement, which, I understand, the India Office accepts, is a fair one; and I would not go behind that in endeavouring to calculate, as you put it just now, what would be the fair charge to be made by this country against India.

15,956. That is to say, you would accept that present arrangement, which was made by Lord Northbrook's committee, as a working arrangement which should run

The Most Hon. the Marquis of Lansdowne, K.G., &c.

11 Mar. 1897.

for a certain number of years?—As the point of departure, yes.

15,957. As the point of departure. Well, now that brings us to the question as it has been put before us by the two departments. The India Office have informed us that they do not wish to dispute the arithmetical calculations on which the capitation rate is founded, but they wish the Commission to consider certain considerations which, in their opinion, demand, or at least would justify, liberal treatment. On the other hand, the War Office dispute the force of the principle which the India Office put forward, and argue that the actual home charges of the regiments in India against the Imperial Government are much more than the amount which is recovered by the Imperial Government under the capitation rate. I do not like to press your Lordship for answers upon these points, because it is so long since you have had reason to actually consider them; but perhaps I may just run through the considerations which the India Office put forward and ask you whether on them you have any opinion; and after that I will give you the heads of the War Office reply, putting to you the same question. The main points put forward by the India Office are these: They say, first of all, that recruiting is too expensive. I will stop at each point?—So far as I am aware, the machinery by means of which we collect our recruits is not more costly than it was, but we pay more for our soldiers. On the other hand, India gets under the present system better trained men than she used to get.

15,958. The fact of the matter is, the recruit is more expensive for the home Army, and, therefore, is more expensive for the Indian Army?—Yes, and he is a better article.

15,959. Well, secondly, they say that short service has imposed a heavy charge on India for transport. That confines the question of the results of short service to only one incident of short service?—Yes, short service, in so far as it requires more frequent reliefs, has obviously increased the cost of transport. On the other hand, I am told that there is a very considerable prospective saving under the head of pensions; but that is a matter which Sir Ralph Knox no doubt could tell the Commission all about. Speaking generally with regard to short service, I should be inclined to say that it ought not to be represented as having been introduced either for the special advantage of India or for the special advantage of this country. It was introduced because the system which preceded it had hopelessly broken down, and it seems to me, therefore, that both India and England had an interest in the introduction of the system, which, whatever its faults, has certainly given us the required number of troops in a manner which the old system failed to do altogether.

15,960. Sir Ralph Knox has put before the Commission reasons for holding that, taking the financial results of short service, as a whole, it is actually a saving to India. That is quite apart from the point to which your Lordship has just called attention, namely, that the old system had broken down and had to be replaced by another; he holds that short service is a saving to India, or will shortly be a saving to India, in actual cash?—That is rather, I think, a point for the experts.

15,961. It is not a point that you would contest; I mean, you see no reason for contesting it?—I understand that the saving is mainly a prospective saving in respect to pensions; is that not so?

(*Chairman.*) Sir Ralph Knox, perhaps you would give those points upon which you found your opinion, would you?

15,962. (*Sir Ralph Knox.*) Under the old system a very large annual charge was created for pensions; that is to say, the annuity that was created amounted to between 50,000*l.* and 60,000*l.* a year in former years. That charge was regarded, and properly so, as abnormal, but the normal might be fairly taken at 42,000*l.* or 43,000*l.* a year. Well, that prevailed for some time; but now the annuity which is created for pensions to soldiers does not amount to much more than 13,000*l.* or 14,000*l.* a year. That, of course, of itself is a very considerable difference, that is to say, the reduction from 42,000*l.* or 43,000*l.* a year to 13,000*l.* or 14,000*l.* a year: and these are actual facts?—I do not question them for a moment.

15,963. But, of course, pensioners proverbially live a long time?—Yes.

15,964. And, at present, there are many men on the pension list that are the remnant of the old system, under which heavy annuities were created in former years?—Yes; that was what I meant when I said that the saving was mainly a prospective saving.

15,965. Yes, but this saving is taking effect now, inasmuch as the annuity, which is created every year, is not much more than one-third of what it was in former times?—Yes.

(*Mr. Buchanan.*) Should not deferred pay, which only comes in in short service, be put against the saving?

(*Sir Ralph Knox.*) Even if that were put against the saving, there is still a balance in favour of India; but it is not fair to put deferred pay against it. It is *post hoc*, and, therefore, in the view of some people *propter hoc;* but the increase of pay was given quite apart from short service, for very much the same reason as the increase of pay has been recently given in India, namely, to obtain the soldiers.

15,966. (*Chairman.*) Then the next point that the India Office puts forward is that the regiments in India have been kept up to full strength, and do not profit by the reserves which short service has established?—I am not sure that that is a fair way of stating the case. India gets the advantage of having battalions in a very high state of efficiency, battalions for the sake of which the battalions that we keep at home are, to a certain extent, sacrificed, or perhaps I ought to say for the sake of which the home battalions are subjected to a very constant drain; so that it comes to this: India gets the efficient battalions, we get weak battalions, but weak battalions which we can convert on mobilisation into extremely efficient battalions, by the addition of these army reservists; so that each of the partners gets its own advantage.

15,967. In fact, the reserve created by short service is a kind of second reservoir as far as India is concerned. The first reservoir, namely, the battalions at home, are depleted to make efficient battalions in India, and the second reservoir supplies, or might supply in case of emergency, the deficiency of what I call the first reservoir. In order to get the Army to its full strength, you would have to fall back upon these reserves?—The home army.

15,968. The home Army; and in the meantime the home army has depleted itself in order to make the Indian battalions efficient?—Yes; it is really the first business of the home Army to supply the necessary drafts for the foreign Army. Therefore, the Indian Army, which forms a part of the foreign Army, derives a very great advantage in that respect.

15,969. And the home Army could not supply those drafts if it had not got these reserves to fall back upon in case of emergency?—I would put it in this way, that we, the home partner, could scarcely accept an arrangement of that kind unless, as our share of the advantage, we gained by it a certain number of reservists, trained partly at home and partly in India, with which to fill up our weak home battalions in case of mobilisation.

15,970. That represents the view which I have endeavoured to put to you. Then the next plea of the India Office is that India is a good training ground for the English Army?—That, perhaps, is a point for the soldiers to speak to; but, as far as I can venture to have an opinion, that opinion is that India is of very great value as a training ground for the British Army, particularly valuable in respect of the opportunities which it affords to our younger officers; and also very valuable in this respect, that in India the military authorities can move troops about, can exercise them over large areas of ground, whereas in this country, as you know, we have been struggling to obtain even limited powers to manœuvre troops. We have to consider the feelings of the landed proprietors, and the hares and partridges, and so on.

15,971. Then the India Office say that the recruits at the depôt are used for the defence of England. That is a point upon which the India Office and the War Office have joined issue?—I do not think there is very much in that. In point of fact, the recruits on mobilisation, I take it, would remain at the depôt; the battalions would be made up to war strength by the addition of reservists, and the young soldiers, at any rate at the outset of the campaign, would not take the field.

15,972. It was represented to us by the military authorities that these troops, while in the course of training, would in the main be of very little use, as being very partially trained young men?—They would be young soldiers, and they would be only partially trained.

15,973. And, therefore, their value as a defence in England, though more than that of mere civilians is not very great?—Not a very valuable asset.

15,974-7. Lastly, the India Office say that the abolition of purchase was a heavy burden on India?—I understand that the officers' pensions, consequent on the abolition of purchase, involved a serious charge upon India; but I do not know that you can take the line of saying that India had no interest in the abolition of purchase. If it was for the good of the British Army, and if we are to regard India and this country as partners, I suppose it is fair to say that India has an interest in anything which renders the British Army more efficient. India, I think, certainly gains in one respect in consequence of the abolition of purchase, that it renders it much easier for the military authorities to select officers for important appointments according to their military fitness, and I think it is quite clear that that is a very valuable consideration indeed.

15,978. The War Office reckon the home charges to the Imperial Government as 1,100,000*l.*, whereas they do not recover from India much more than half that sum; and they consider that in this respect the treatment of India is very liberal. Lord Northbrook demurred to some of these charges, such as the share of the cost of the general staff at home; but, after making deductions on account of charges about which there is an argument, it would appear that the capitation rate of 7*l.* 10*s.* does not cover the whole charge to the Imperial budget. Would you allow Lord Northbrook's view, that it is pressing the argument a little too far to include, as I think Sir Ralph Knox does, something like 190,000*l.* as the Indian share of the central administration here?—Yes, I should agree with Lord Northbrook upon that point.

(*Chairman.*) Still that would leave, according to Sir Ralph Knox's calculation, something like 900,000*l.* against the actual charge of, roughly, 600,000*l.*, Sir Ralph, is it not?

(*Sir Ralph Knox.*) 540,000*l.* I make it.

15,979. (*Chairman.*) Therefore, excluding from the calculation the charge for administration, would you consider that the plea of the War Office is a fair one that the treatment of India is at present liberal?—I think it is difficult to answer that question without examining the items of the charge in detail. I understand the Indian argument to be something of this kind: that we ought, before we send our bill in, to consider certain general broad considerations, and not to exact the uttermost farthing. Sir Ralph Knox replies that we do not exact the uttermost farthing, we begin by letting India off so many hundred thousand pounds. But then I think the question which the Royal Commission has to consider is, whether those concessions, on which Sir Ralph Knox relies, are real concessions—whether, if I may put it so, public opinion would permit us, permit the Government of this country, to charge India with the whole or any part of these sums by which the sum is made up to 1,100,000*l.* I should rather have understood, from the attitude of the Treasury and the War Office upon this point, that we did not ask the whole 1,100,000*l.*, because we thought that it was an unfair and an unreasonable thing to press the whole claim.

(*Chairman.*) Would that quite represent the position? Each side made out and put in its plea before Lord Northbrook's Commission, and Lord Northbrook's Commission said, "Well, looking at this subject the "whole way round, with concessions on both sides, "7*l.* 10*s.* is a fair compromise." Would not that have been the attitude of Lord Northbrook's Commission, Sir Ralph?

(*Sir Ralph Knox.*) Well, I do not know that that was in Lord Northbrook's mind; it was in my mind.

15,980. (*Chairman.*) What I mean is that the 7*l.* 10*s.* was not supposed to charge India for everything that might be put into the bill against her?—If I might put it quite in a general way, I think the way in which the case presents itself to my mind is this: First, you make out your account as a fair and reasonable account between two partners, and that account gives you, I understand, the 7*l.* 10*s.* Then arises the question whether there are other considerations of a much more general kind, which would justify you in asking for less than the whole of that fair amount: Considerations of the kind which are mentioned, towards the conclusion of a despatch which was sent home by the Government of India in the year 1890, a despatch which I know the Royal Commission is aware of.

15,981. Then, may I gather that you would allow so much of the War Office bill of 1,100,000*l.* as, taking your words, "public opinion would permit the Govern- "ment of this country to charge" against India. Supposing that bill amounted to, what shall we say, 700,000*l.* or 800,000*l.*, you would not take the difference between that sum and the 7*l.* 10*s.*, which Sir Ralph Knox says amounts to 540,000*l.*, as liberal treatment on the part of England which should be set off against India's demand for liberal treatment?—I treat the two points as distinct. First make out your fair account between the two partners; and then consider whether there are any considerations, such as those which were touched upon in the 1890 despatch, which would justify you upon broad grounds of policy in making a remission to India.

15,982. But, as I understand it, your view is that the 7*l.* 10*s.* is a fair charge, and, therefore, you would not think that the English Government is in a position to say, "Oh, but we have let India off 250,000*l.* or whatever "the sum may be"?—Yes. I mean that. I mean that we should not take credit to ourselves for having let India off the difference between that which we do ask her to pay and the 1,100,000*l.*

15,983-4. And, therefore, any consideration that ought to be given to these six pleas of India in mitigation of the English claim, which we have just gone through, should come off the 540,000*l.*, and should not be set off against the difference between the 540,000*l.* and any reasonable sum?—Well, I was thinking not so much of those pleas which are, some of them, pleas of a rather technical character, as of the kind of plea which is pointed at in the 1890 despatch—I mean the plea that Indian foreign policy is really determined by Imperial rather than by Indian considerations: the plea that the Indian Army serves for Imperial as well as for Indian purposes: the plea that the liabilities of India are of a kind to which she would not be subject, but for the fact that she is an integral part of the Empire—pleas of that kind.

15,985. I understand you would entirely put aside these special pleas which the India Office puts forward; you would allow the 7*l.* 10*s.* for the time being as the basis of the re-arrangement between India and England, but then you think the Government here might take into consideration certain general pleas of policy which would justify England in making a concession to India?—Yes.

15,986. Sir Henry Brackenbury proposed to abolish accounts between England and India for army effective services, and to ask India only for a liberal contribution towards the Navy. As he would give a liberal contribution, the saving to India would not be so great as might at first be thought. He threw out the idea mainly as a suggestion, not as a scheme worked out. May I ask you how that suggestion strikes you?—It does not commend itself to me. I do not see, although I am entirely in favour of dealing very considerately with India, why she should not make a substantial payment for that part of the home Army which serves in India. She would not gain very much if she were let off all payment on account of the British troops lent to her, if at the same time she were saddled with a large payment towards the Navy. And I should also, looking at it from the Indian point of view, have this in my mind, that, if the naval expenditure were to increase very largely, India would find it very difficult to resist a claim for a larger portion than the one-twelfth which I think was Sir Henry Brackenbury's quota. Then, there would be inconvenient questions as to India's right to control any squadron that might be in Indian waters. If she paid, she would probably say that she ought to have a voice in deciding where the ships were to be. That, I think, would not be likely to commend itself very much to the naval authorities, who insist, and I think properly, that the movements of the fleet should be as untrammelled as possible. If India is to pay for anything, it seems more natural that she should pay for a part of the Army than that she should pay more than she does at present for a part of the Navy. I should, answering your question, say that the present

The Most Hon. the Marquis of Lansdowne, K.G., &c.

11 Mar. 1897.

system is more in accordance with precedent and tradition, and that we ought to endeavour to make it work as smoothly as possible.

15,987. There is no great difficulty at present in carrying out the Australian arrangement, is there, as far as your Lordship knows?—I am afraid I cannot tell you.

15,988. But you are aware that there is an arrangement between Australia and England as to a naval contribution, and I have not heard that there has been any friction in working it?—It is a terminable arrangement I think.

15,989. A terminable arrangement?—Yes.

15,990. You think that there is fair argument for the present system, inasmuch as it is a continuation of an old and a well-known system. India used in former days to keep a local force of her own, for which she paid every charge; she took at that time only a small number of royal troops, and for them she paid the whole charge; and that precedent and tradition is still maintained, is it not, under the arrangement under which she is now supposed to pay the full home charges of the troops she employs?—I think precedent and tradition are in favour of the present system; and I see no reason why it should not be made to work satisfactorily.

15,991. It is a fair consideration, is it not, that the burden on the British taxpayer would be made very heavy compared with former days, if he had to take the whole of the home charge for the large force which India employs?—That is certainly a material consideration.

15,992. And further that India in the old days kept her own special navy. It was not a large one, but she did keep her own navy; and I presume we might say, looking at the difference in the cost of ships and armaments since that day, that, if she had kept that navy, the cost would now very much exceed her present contribution?—I can scarcely express an opinion upon that.

15,993. It is said that India should be treated like the self-governing colonies; but is it not the case that the great self-governing colonies, the Cape excepted, cost the Imperial Government very little for army services, that the Imperial Government considered that they should contribute towards the navy, and that Australia has already set a precedent and made a contribution?—That is the case; but I should mistrust all analogies applied to India and drawn from the self-governing colonies. The position of the two is so very different.

15,994. I do not know whether I might ask you if you have considered the arrangement as to the cost of the ships supplied to India by the Home Government made under what is called the Rosebery award?—I am afraid my recollection upon that is not distinct.

15,995. And on the whole, you hold that India and England are two partners, and that in adjusting the accounts between them fair and real consideration should be given to the fact that England is responsible for the foreign policy of India?—Yes.

15,996. (*Mr. Courtney.*) Have you considered, Lord Lansdowne, from the point of view of India itself, whether, supposing she were isolated from the United Kingdom, it would be necessary to maintain a force such as is borrowed from the United Kingdom and in the same degree of efficiency?—I should say certainly not. The Indian Army is organised with a view to the possibility of its employment upon operations which have nothing to do either with the internal policy of the country or with the mere repression of tribal disorders upon the frontier.

15,997. Then would it be a fair suggestion that the difference in the cost of training that force so borrowed, between what would be necessary for Indian purposes and the standard which is kept up for Imperial and home purposes, should be borne by the home exchequer?—It is very difficult to express these things precisely in terms of money; but your question seems to me to point to the principle which I was endeavouring in my answers to the Chairman to enforce.

15,998. That we for home purposes, for Imperial purposes, are keeping the army at a higher standard of efficiency than India, taken by itself, would require, and that we should make that consideration an element in arriving at the settlement of charge between the two countries?—Certainly, an element.

15,999. That cannot be put into figures, but still it is an important element in the spirit in which we should approach this settlement?—That is my view.

16,000. There is another question which I should like to ask; supposing there were no India—we lend a certain force for the purposes of India—supposing there were no such purposes required, should we still want any part of that force, or could we dispense with it altogether?—The force which is now employed in India?

16,001. Yes?—I should say that we could certainly dispense with a very considerable portion of it. I hope I do not misunderstand your question.

16,002. I asked not whether we could dispense with a considerable portion, but whether we should still find it necessary to keep some of the force, or could dispense with it altogether? If, for example, we lent 70,000 soldiers to India and India did not want them at all, should we still want for our own purposes to keep some of them—to put them somewhere?—I hardly like to answer that question confidently; it is a strictly military question.

16,003. As Secretary of State for War you have a double power of answering the question?—I should say that we certainly could dispense, if not with the whole, at any rate with a very large portion of it.

16,004. Would it, in fact, be a valid argument from the point of view of India to say: "You are charging "us for 70,000 troops, but, in point of fact, it is a con- "venience to you, quite apart from India, to place "20,000 or 30,000 of those in India. You would have "to keep them even if there were no consideration of "India in the matter, and you ought not to charge "us for that portion"?—Would you mind repeating the question.

16,005-6. Would it be a valid argument on the part of India to say "you are charging us for 70,000 men "whom you are lending to us; but, if we did not want "them, you would not be able to disband them "altogether; you would still require 20,000 or 30,000, "and it is a convenience to you that we keep them "here; you ought not, therefore, to charge for the "whole 70,000, you ought to make an allowance for "those we keep, which you would have to keep in any "case"?—That would be assuming that there are in India 30,000 troops constantly available for other than Indian purposes. I do not think that is so.

16,007. No, no, no. I have not made myself understood. Supposing India were not a dependency of ours?—Yes.

16,008. Then, at first sight, the effect would be, that we should have 70,000 troops to bring home?—Yes.

16,009. Should we disband the whole 70,000 as being quite unnecessary, not wanted, or should we still for our own purposes keep 20,000 or 30,000 of them? And, in the latter case, would it be a valid argument on the part of India to say, "It is true you lend us 70,000 men; "but you would have to keep up 20,000 or 30,000 of "them, in any case, and you ought not to charge us "with the whole number; it is a convenience to you "that we take a certain part"?—I do not think that I should admit that in that case we should still require 20,000 or 30,000 of these troops for our own purpose. The Indian Army, as I understand it, is what is required for India, always remembering that India is called upon not only to provide for the internal police of the country, but also for other contingencies on or across the frontier. What would probably happen, I should say, in the contingency that you suppose, would be that our whole army system would be re-cast. The present army system is really in great measure contrived to serve the two-fold requirements of this country on the one hand, and India on the other; and I think it is quite impossible to say, supposing you could wipe India off the map of the globe, and release the 70,000 troops, what the result of that would be upon the military system of this country; it would alter it so fundamentally.

16,010. It would not be an argument worth considering, if advanced on the part of India?—I regard it as a very academical argument.

16,011. (*Sir Ralph Knox.*) It is the case that the army corps mobilizations which are now contemplated in this country, both offensive and defensive, could be absolutely completed without calling one single man from India; is not that so?—Certainly.

16,012. And therefore the emergency which would call for the use of European troops which are now serving in India would be something far beyond, at all events, what it has been contemplated that it is necessary for this country to provide for?—Yes.

16,013. (*Chairman.*) At the present moment none of the 70,000 men employed in India would be available for our service? The force required in India is considered to be necessary for India, is it not?—Yes, and no part of it ought, in my opinion, to be permanently withdrawn for our service. I am not speaking of temporary loans.

16,014. Therefore, Mr. Courtney's point really amounts to a proposal to increase the Army here by 20,000 or 30,000 men?—That is what it would come to.

16,015. If a claim is to be made by India upon the British taxpayer for anything representing the cost of that force, it would be rather a heavy demand upon the British taxpayer?—I think it would.

16,016. (*Mr. Buchanan.*) You have referred to the 1890 despatch which your Government sent home?—Yes.

16,017. That despatch was not laid before Lord Northbrook's Commission, I think?—I do not know.

(*Mr. Buchanan.*) I think Lord Northbrook told us it was not.

(*Sir Ralph Knox.*) It was not.

(*Chairman.*) Was there not a reason for that? Was it not put in evidence before us that the ground upon which that despatch was written, as far as Lord Northbrook's Commission was concerned, had been arranged, and, therefore, it was not necessary to put it. It was not that the despatch was withheld from the Commission.

(*Sir Ralph Knox.*) Yes. I think that the India Office did not press that the despatch should be laid before Lord Northbrook's Commission.

16,018. (*Mr. Buchanan.*) The Secretary of State for War declined to allow it. I think we had Lord Northbrook's evidence in respect to that. However, what I wanted to ask about is this. Do not the paragraphs to which you refer at the end of that despatch raise just the questions that have been put to you by Mr. Courtney? That is to say, that, accepting the capitation rate for the cost to India—I am not quoting the words—of getting the British troops, there are other considerations which then should be taken into account in abatement of that charge?—Yes.

16,019. And the two main considerations which the Government of India in 1890 laid, in paragraphs 20 and 21, before the Home Government were these, that the question should be treated as an Imperial one?—Yes.

16,020. That is to say, that it should be treated as a question of the cost of the army of the empire; and in the next paragraph, 21, we have the statement made, "Millions of money have been spent on increasing the "army in India to provide for the security of India, "not against domestic enemies, or to prevent the "incursions of the warlike peoples of adjoining "countries, but to maintain the supremacy of British "power in the East"?—Yes.

16,021. Well, what I gather from your evidence is that, without going into details as to the merits of the 7*l.* 10*s.* rate, you are prepared to accept the capitation rate as a basis?—Yes.

16,022. And that then, you think, the Government might fairly take into consideration abatements from that capitation rate, upon the two grounds of India being part of the Empire, and of the Army being an Imperial army, which exists also to maintain the general British supremacy in the East?—Yes.

16,023. (*Chairman.*) But even if there were no Imperial policy in question, it would be India's interest to defend herself from foreign complications?—Yes. I think the question is whether in that case India would have the same sort of foreign complications to look out for that she now has.

16,024. What you mean is that, though she would have, like every other nation which has neighbours, complications, she is liable to extra complications owing to her connexion with Great Britain?—Quite so. I might put an extravagant assumption; supposing that India were a dependency of the United States instead of a dependency of Great Britain, would she have the same external liabilities that she might have now?

16,025. Quite so; but, even in that case, she would require some force to save herself from foreign aggression?—Some force; but I should think that in that case her army would be organised in a different way, and probably on a much less expensive footing.

16,026–7. India must not, for her own sake, be in a position to tempt foreign aggression?—Oh, certainly not.

16,028. Because the first people to suffer from foreign aggression would be the Indian subjects?—Yes.

16,029. There has been much discussion as to the terms upon which the two partners should assist each other with troops as occasion arises; would you wish to see any rules laid down which would prevent that difference of opinion between the two Governments which so constantly arises when a loan of troops is proposed?—I think it would be very desirable to have a distinct understanding and rules so far as it is possible to provide them. The practice, as the Commission knows, has been very diverse. We have had disputes about sums which were not really of very great magnitude, but disputes which have nevertheless led to very considerable bitterness and acrimony on both sides.

16,030. Have you seen the strong opinion expressed by Lord Northbrook in favour of an arrangement for this purpose between the two Governments?—I have seen it, yes.

16,031. In certain cases the Indian Government has been asked to contribute the ordinary pay and allowances of troops borrowed for foreign expeditions. Lord Northbrook suggests as a solution of that difficulty that such a charge should not be enforced without the consent of the Indian Government, that the contribution should only be made where Indian interests are concerned, and that a general definition of Indian interests should be laid down by agreement between the two Governments and embodied in a Treasury minute?—It strikes me that there might be some difficulty in allowing the Government which lends the troops to be the judge in its own case. That is, I understand, what Lord Northbrook proposed.

16,032. Subject to certain regulations?—Yes, the lending Government would no doubt wish to be perfectly fair, but I doubt whether it would get the credit of being fair. Lord Northbrook's other conditions seem to me to be reasonable enough. I understand them to be that India should be asked to co-operate only if Indian interests were distinctly involved, and that some attempt should be made to define what Indian interests are. I am bound to say that I see some difficulty in the attempt to define Indian interests, unless it were done by describing a geographical area outside of which Indian interests should not be supposed to extend. I should almost have been inclined to say that, if you are to have an arbitral tribunal of any kind, it should be for the arbitral tribunal to decide whether Indian interests were or were not involved.

16,033. I think Lord Northbrook's objection to that course was that it would be almost impossible for two supreme Governments to put a great question of policy into the hands of an arbitrator. I understood that to be his objection to the idea of referring that particular question, to what he afterwards suggested as a good tribunal for differences on administrative questions, namely, a judge?—I see the force of that objection. It is, of course, *primâ facie*, a somewhat anomalous thing that a question of this kind, which is really a question of policy, should be decided by anybody except the responsible Government; but I feel so strongly, as Lord Northbrook does, the desirability of putting an end to these discussions and controversies, that I would not allow an objection of that kind to stand in the way.

16,034. May I take it that if such a proposal as that of Lord Northbrook was likely to find favour with the two Governments it would have your approval, from your experience as Viceroy of India, as closing the question?—Yes, with that one exception, that I should prefer to have an arbitral tribunal rather than to allow the lending Government to decide.

16,035. Then, though you admit to a certain extent Lord Northbrook's objection to letting a judge, we will say, decide whether an Indian interest is concerned, the difficulty of leaving the final judgment to the lending Government is so great that you would face the difficulty of letting this judge decide upon

The Most Hon. the Marquis of Lansdowne, K.G., &c.

11 Mar. 1897.

a question of policy?—I do not very much like the idea of the judge. The judge might be a most excellent judge, but be might not have a very good judgment upon a point of that kind. What occurred to me was a small standing commission. I should think there ought to be no great difficulty in finding a commission of, say, three men familiar with public life, who would look at the question, not from a legal or technical point of view, but on broader grounds.

16,036. I do not know, Lord Lansdowne, whether you have had any share—any responsibility—in endeavouring to find arbitrators up to the present?—I can assure you I do not know anything which has given my chiefs, over a long period of time, greater anxiety and greater trouble than the finding of arbitrators?—There is another solution of the difficulty which occurred to me. You might have a small standing committee of the Cabinet, choosing ministers, of course, who had no connexion with the departments involved.

16,038. Is there not this difficulty that has to be avoided? When a proposal of this kind is under consideration and there comes the question of going to the House of Commons for a vote, is not the temptation very great to find that there is an Indian interest concerned?—Yes, I think it probably would be better to go outside the ministers for arbitrators.

16,039. But at all events, without tying yourself down to Lord Northbrook's plan, if no other method, or practicable method, was arrived at, would you sooner take that course than leave matters as they are now?—I would.

16,040. (*Mr. Buchanan.*) Your proposal, Lord Lansdowne, as far as I understand, is quite different from Lord Northbrook's. Lord Northbrook suggested that the lending Government should always determine whether its interests were involved, but you do not agree with that?—No; I said at first that that seemed to me to be the weak point in Lord Northbrook's proposal.

16,041. I did not quite understand what your proposal was. You would like to have a standing committee here?—Yes.

16,042. Which should determine which of the two parties should bear the charge, or what proportion of the charge, I suppose?—Yes.

16,043. And that that committee should be a permanent body?—A permanent body.

16,044. And would these questions be upon all occasions referred to them? Whenever a question arose of the employment of Indian troops outside the limits of India, would it be of necessity referred, in your idea, to this permanent body?—I should say the moment the two Governments disagreed.

16,045. If the two Governments could agree, it should not be referred to them?—It should not be referred.

16,046. But only in the case of disagreement?—I should hope that it might be possible to draw up some sort of agreement which would meet most of these cases; then you would call in your arbiters only when there was still a difference.

16,047. Would you, then, look forward to appointing arbiters only in special cases, or would you have some standing body to whom you could always appeal?—I would prefer to have a standing body.

16,048. Would you propose then to alter the clause in the Government of India Act, clause 55, that compels, as you know, the resolution of Parliament to be obtained whenever expenses are put upon India for the use of troops outside its frontiers?—I do not see why you should not follow that practice, nevertheless; Parliament would decide that the troops might be used, and the tribunal would have to decide upon what terms.

16,049. You would not give this tribunal any legislative sanction?—I suppose they would have to be appointed by Order in Council, or something of that sort.

16,050. You do not contemplate any alteration in the Government of India Act?—No.

16,051. Would we really then be much further forward? Would you not still have of necessity the same sort of discussions in the House of Lords and the House of Commons that we have now?—I should have thought that a great many people would have been satisfied if the case had been fairly put to a tribunal of that kind and the tribunal had decided.

16,052. It might strengthen the hands of the Government of the day in their cases before the Houses of Parliament; but is it not the objection at the present moment to the system, that practically in these questions, whatever the Government of the day determines is decided on party lines, whatever the opinions of individuals may be; the view of the Government is carried, and that is the cause, is it not, of the dissatisfaction with the system which at present exists?—Are you not assuming that the tribunal would be constituted on party lines? I am rather assuming the contrary. Perhaps it is a vain thing to hope for, as the Chairman evidently thinks, but I was assuming that your tribunal would consist of, say, three men of very high position and authority, whose opinions would command very general adhesion.

16,053. Well, I can imagine that, supposing them to be established by some legislative authority; but if you maintained section 55 as it at present exists, and there were an obligation of getting a resolution from the two Houses of Parliament in the future as in the past, you would not really have remedied the political difficulty that prevails?—I rather like the idea of the tribunal.

16,054–5. You think that it would have some effect in avoiding the kind of dissatisfaction which we are told has existed in India with regard to the decisions which have been taken?—Yes, I think so.

16,056. You think it really would, even though the Government of India Act was not altered, and there were still discussions in Parliament similar to those that we have had in the past? You still think that the existence of this tribunal and its having given its judgment would obviate a certain amount of dissatisfaction?—A certain amount; a considerable amount.

16,057. But do you not think it would be better, if it could be done, to make some legislative change that would give a legislative sanction to the decisions of a tribunal of this sort?—You might constitute it by Act of Parliament; I should have thought an Order in Council would have been sufficient.

16,058–9. Well, I will put it in another way; section 55 of the Government of India Act is the section by which, wherever forces of India are employed beyond the frontiers of India, it is necessary that a resolution of the Houses of Parliament shall be passed, in order to sanction any expenditure being put upon the revenues of India. Do you think that the operation of that section in the past has been satisfactory?—No; I think with Lord Northbrook that you want something besides.

16,060. Yes; but do you not think that, in order to have any complete remedy, that section should be altered?—I have not considered that point; I would rather not give evidence upon it.

16,061. Do you not think that an alteration of that is an essential part of any proposal to do away with the present difficulties?—It had not so struck me.

16,062. Is it not a fact that the dissatisfaction in India has been due to the decisions which have been given in the Houses of Parliament under that section?—I see nothing in this section which would create a difficulty in the way of resorting to the sort of procedure which I contemplate.

16,063. No, I do not suggest that for a moment; but, if that section is left unchanged, the old procedure must also continue as before, and the institution of your tribunal would improve matters only slightly?—I think the tribunal would improve matters.

16,064. Do you think that that section 55 of the Government of India Act has acted beneficially for the financial interests of India?—I think that, in spite of section 55, the practice has been irregular, and there have been constant and very regrettable controversies.

16,065–6. Yes; that is not quite what I asked. I asked whether on the whole financially that section had been favourable to India or the reverse?—Whether it had been a sufficient protection to India?

16,067. Yes?—I do not think it has.

16,068. But still you would leave it as it is; you would not propose to alter it?—I would leave it as it stands, but I would resort to the tribunal.

16,069. (*Chairman.*) Do I understand you, Lord Lansdowne, to think that the opinion of the tribunal would be so powerful that it would be practically a

guide to the Houses in voting their resolution; and, that the Houses would probably not go against the recommendation of such a tribunal as you speak of?—I think so. I think it would to some extent meet the argument that these cases are decided by the Members of the Government, who are thinking, not of the interests of India, but of the interests of this country, or of their departments.

16,070–1. (*Sir William Wedderburn.*) Do you think that the Judicial Committee of the Privy Council might be employed for this purpose; it is not a party body at all, and it bears a very high character in India, I think?—I indicated in an answer that I gave to the Chairman, that I was rather looking for a tribunal which would not be too legal in its composition. The Judicial Committee of the Privy Council might be open to that objection.

16,072. As I understand, the general procedure would be that general principles would be laid down by agreement?—Yes.

16,073. And then it would only be a question of interpreting that agreement, and applying it to a particular instance in which the Government of this country differed from the Government of India?—Yes.

16,074. Therefore the interpretation might be made in a judicial spirit, subject to the correction that might be brought about in Parliament, when the decision or recommendation of that tribunal was reported to Parliament?—Yes, I think that is quite worth considering.

16,075. And I understand that the real evil of the present system arises from the idea that it is an interested proposal that is put before Parliament?—That is how I understand it.

16,076–7. And that evil would be got rid of by the arbitrating tribunal; and further, supposing that the verdict was an unpractical suggestion, it would always be in the power of the Government to ask Parliament on their responsibility to over-ride even that, though Parliament would be naturally and reasonably led by the unprejudiced recommendation?—Certainly.

16,078. (*Mr. Mowbray.*) But would you contemplate the possibility of the Government over-riding the decision of this tribunal, if this tribunal were appointed at all?—I think if you had the tribunal you would be virtually bound to follow it.

16,079. (*Chairman.*) We are now confining ourselves merely to this question of the loan of troops. Do you not think there would be a considerable difficulty—the difficulty which I think Lord Northbrook saw—in referring that question to the Judicial Committee of the Privy Council? The Judicial Committee of the Privy Council acts as a judicial body, and would there not be considerable difficulty in bringing before a judicial body a question as to whether there was an Indian interest concerned?—I think I indicated pretty plainly that I preferred a tribunal which should not be a legal tribunal.

16,080. Lord Northbrook endeavoured to follow the lines that had already been laid down in despatches of the India Office, and, if you remember, he quoted Lord George Hamilton's despatch, to the effect that, "if the circumstances are such that the Government "supplying the troops has a distinct and special "interest in the matter at stake, then, although that "interest may be less strong than that of the Govern-"ment requiring assistance, the Government supply-"ing the troops should be content to bear, in one "form or another, a portion of the burden which the "operations involve." He afterwards quoted Lord Cross, who said, "In the event of any occasion "hereafter arising for the employment of Indian "troops on duties not directly attributable to the "requirements of your Government or at a distance "from India, no portion of the expense should be "charged against India without your Excellency's "concurrence." This was a despatch of 1887, I think. He was endeavouring to base himself upon propositions which had already emanated from the India Office, and he saw that the India Office at that time thought that practically the Indian Government should be an assenting party, or rather not a demurring party, before any charge should be established against India. That was the basis of Lord Northbrook's proposal, was it not?—I suppose so.

16,081. The Home Government did not agree, I think, to Lord Cross's proposal. Lord Cross proposed that the Indian Government were not to pay unless it concurred. Lord Northbrook merely went a little bit further, and said that the Indian Government should be the deciding power?—Yes.

The Most Hon the Marquis of Lansdowne, K.G., &c.

11 Mar. 1897.

16,082. And I think Lord Northbrook was anxious to base himself upon the lines that had already been shadowed forth by the Indian Government?—Very likely.

16,083. You yourself do not quite like that idea of leaving it to that Government?—I see a difficulty in it.

16,084. The great objection to the tribunal is the actual difficulty that has occurred in finding men in political life that both parties can agree to, and, generally speaking, the decisions which have been made by arbitration have been objected to. I do not know anybody who is more likely to command the acceptance of both parties, than Lord Northbrook; he has always been looked upon as too favourable to India. Lord Rosebery's decision has been very much questioned, and a great number of people have been suggested as between the two Governments, and not accepted?—The difficulty of finding the three just men may be immense.

16,085. Your tribunal must consist, must it not, either of people of judicial standing or of men of the first rank in politics; there are no other people who would command confidence?—No, I should think not; I do not know that it would be absolutely necessary to look only to those two classes.

16,086. Are there any classes outside these who would command the public confidence? The public here does not understand anybody except the leaders of political opinion, does it?—You would look primarily to people of that sort; but I do not know that I would exclude others.

16,087. In such a tribunal as you speak of, you might take people of the second rank perhaps as second or third members, but the really motive power of it must be a man whom the public understands and knows?—Some man who has been in political life, but perhaps is no longer in political life, but is quite willing to take work of that sort, which would not make a very large demand upon his time.

16,088. There is this difficulty in referring the decision of a question of policy of this kind to an outside tribunal. The Government would be unwilling to make such a reference on a question of policy. A wide distinction must be drawn between administrative difficulties like the question of the 7*l.* 10*s.* capitation rate, which might perfectly well be given over to an arbitration, and this question of deciding whether a thing is an Indian interest or not?—I am afraid I do not quite grasp the question.

16,089. I will put it in another way: Lord Northbrook thought that a Government would not be willing to put any question of policy into the hands of an outsider?—Yes.

16,090–1. He thought that a question of administrative differences between two Governments might safely go to an outsider; the Governments could accept the decision of an outsider in the one but not the other; and therefore he endeavoured to devise a plan by which, where policy was involved, such as the definition of an Indian interest, it should be left to the Governments. That, I understood to be his position. I want to get your opinion upon it?—I agree that it is more difficult to refer questions of policy, which primarily concern the responsible Government of the day, to arbitration of that sort, than to refer minor points—whether, for example, a particular item is a fair charge for value received or not.

16,092. Well now, supposing a minute could be laid down that contained certain broad rules which defined Indian interests; in that case might not the two Governments say that, always acting on those rules and within those rules, the lending Government should have the deciding voice?—That is assuming that you could make your rules sufficiently precise and specific. What struck me was the great difficulty of framing rules that should be specific.

16,093. You have to apply them in some sense now, have you not? It is understood that India does not contribute unless there is an Indian interest, and somebody has to interpret on those occasions what the Indian interest is; only, there being no rules laid down, it is apt to be determined by the necessities of the

The Most Hon. the Marquis of Lansdowne, K.G., &c.

11 Mar. 1897.

hour?—Yes; these rules would be very difficult to draw.

(*Chairman.*) They would be.

16,094. (*Mr. Buchanan.*) You would propose that such rules as it would be possible to draw up, should be drawn up before this tribunal is constituted, would you not?—Yes, I suppose so.

16,095. (*Chairman.*) I think it would be essential that any such rules should be drawn up before the arrangement is made; the two Governments must see them?—First make your rules, and then see what tribunal you would require to carry them out.

16,096. (*Sir Ralph Knox.*) India may have an interest, although that interest may vary in extent, may it not, in various expeditions?—Certainly.

16,097. And that is the view that has been taken, in fact. In some cases India has paid the whole charge of the troops that have left her shores; in other cases India has paid half the charge, including extraordinary expenses, and in other cases India has merely gone on paying the ordinary pay of the troops that she would have paid in any case. That shows considerable discrimination in the charge which has been thrown upon India in reference to these expeditions, does it not?—Yes. The only question is whether the discrimination has been a proper discrimination.

16,098. (*Chairman.*) Whether it has been independent enough?—Yes.

16,099. Now passing on to the differences on questions of administration. That, I think, is an easier matter. You must remember well the long-protracted discussions which have taken place over adjustments between England and India; protracted discussions which became very nearly a scandal. I suppose your view of a tribunal would apply here. You would be anxious to see this question settled decidedly and quickly by such a tribunal as you have mentioned, would you not?—Certainly.

16,100. I think Lord Northbrook, when he spoke of a judge, was indicating the kind of person he required, that is to say, a man accustomed to weigh evidence and to base an opinion in a judicial spirit upon evidence; is not that the kind of man that is best fitted to express an opinion upon such questions as this? The two Departments, the Home Government and the Indian Government, would state their case to him, and on those he would judge, just as a judge decides upon a question brought before him; and a judge's decision generally commands confidence?—Are you now talking of cases involving differences as to charges, and things of that kind.

16,101. Yes, what I call administrative differences; for instance, shall India contribute, or in what proportion, to the consulates in China; is 7*l.* 10*s.* a fair capitation charge for the home charges here; is the 100,000*l.* now paid for a certain number of Indian ships a fair charge? These are what I call the adjustments of administrative differences They do not involve a policy?—I see much less objection to referring cases of that kind to a judge than I do to referring the other class of cases.

16,102. But at all events, may I not gather that you would share with Lord Northbrook the opinion that it is most desirable to bring these questions to a speedy and decisive conclusion?—Oh, yes.

16,103. It has been argued that the Imperial Government should contribute to the maintenance of Aden; on the other hand, it has been said that, if the Imperial Government maintain Gibraltar and Malta, which are garrisons of great importance to the Suez Canal, India should maintain Aden. Have you any opinion upon that point?—I think the arrangement under which India has to maintain Aden is a rough and ready arrangement which is not without its fairness. What I think has made India a little restless in connexion with its liabilities on account of Aden is the fact that so many questions have arisen in regions not very far from Aden, such as the Somali coast and places of that kind, and the Indian Government has a feeling that it does not want to be involved in those sort of difficulties; but, as regards Aden itself, I see no great objection to leaving matters as they are.

16,104. It has also been said that the Imperial Government does not sufficiently consult the Indian Government on changes affecting the two Governments. On the other hand, not many cases have been adduced in which the India Office, at least, were not informed; may I ask if you had any reason to complain on that score during your tenure of power?—I cannot give you chapter and verse; but I know there were some cases in which the Government of India thought the changes had been sprung upon it without sufficient consultation. I know that the War Office is extremely anxious that in future there should be no complaint on that score, and I think it is quite clear that India has a right to have the fullest opportunity of saying her say before changes are introduced.

16,105. But you think there has been some reason for complaint on the part of the Government of India?—I think there could scarcely have been so much smoke without a little fire.

16,106. (*Sir Ralph Knox.*) You distinguish between the Government of India and the Secretary of State for India, in that case?—I do; I am speaking of the Government of India.

16,107. (*Chairman.*) Therefore it may be that the Secretary of State here was consulted, and did not consult the Government of India?—Yes; I could not say, if the omission took place, who was responsible for it.

(*Mr. Buchanan.*) The Government of India say that in some cases the Secretary of State was not consulted; that is their grievance, is it not?

(*Chairman.*) I think the list that they put in was not quite a trustworthy list in all respects.

(*Mr. Buchanan.*) Well, the War Office witness said it was not trustworthy.

(*Sir Ralph Knox.*) I am going to put in a statement with regard to these cases.

16,108. (*Chairman.*) Are there any points to which you would wish to draw our attention?—No.

16,109. (*Mr. Buchanan.*) About Aden, is not the expense of Aden just one of those cases which under your despatch of 1890 might fairly be taken into consideration as an abatement of military charge against India; that is, assuming that India continues to be responsible for Aden, ought that not to be counted as one of these Imperial considerations which are mentioned?—Yes; I think it might be.

16,110. Aden is an Imperial fortress as much as an Indian one, is it not?—Certainly.

16,111. And, in the view that the military forces of India are part of our Imperial military forces, the Imperial authority might fairly be called upon to pay part of the charge, or, at any rate, to make an abatement against India instead of charging the full charge against India?—To take it into consideration.

16,112-3. (*Sir William Wedderburn.*) I wish to ask one or two questions about the position of the members of the Viceroy's Council. The different members in charge of departments are very much interested, are they not, in increasing the efficiency of the department under their charge? Very anxious to get additional expenditure to make their departments more efficient?—They certainly would be anxious to increase the efficiency of their own departments.

16,114. That is the natural feeling?—Yes.

16,115. And the member in charge of the Financial Dapartment is the one who rather comes into collision with all of them upon that particular point, does he not?—Yes; he may come into collision with them; it is his business to exercise a supervision over them all.

16,116. Then he is, so to say, one against a good number?—If you mean by that that the many combine against the one, I should not say that; but he is, just as the Chancellor of the Exchequer is here, the one Minister whose business it is specially to watch the financial administration of every department.

16,117. And is there any guarantee that the member in charge of the Financial Department shall be strong and independent, and that he will really defend the financial interests of the Government?—I do not quite understand what you mean by a guarantee.

16,118. He is appointed very often from the permanent Civil Service of India?—Yes.

16,119. And he hopes for promotion; he is eligible for a Lieutenant-Governorship?—Yes.

16,120. Therefore, it is his personal interest not to oppose the Viceroy; for example, supposing the Viceroy wishes expenditure, have we any guarantee that the Finance Minister will be strong enough and independent enough to oppose the Viceroy?—I think so; the man who is put in a position of that kind is a man who

has worked his way up to the top of the Civil Service, and his first idea, while he is in the position of Finance Member, will be to make his own financial administration a success. I cannot for a moment bring myself to believe that he would sacrifice the interests of his own financial administration on the chance that by so doing he would ingratiate himself with the Viceroy, and improve his prospects of obtaining some other appointment thereafter.

16,121. I refer to that, because a good deal of stress is laid upon that point in certain correspondence with the Government, printed in the Appendix, on the subject of the necessity of complete independence through no hope of promotion or fear of disfavour?—My answer to that is, that I do not think that those motives, which I think would be unworthy motives, would be allowed by the Finance Minister to weigh with him.

16,122. In the case of judges we arrange that they should have no possible promotion, in order that they may not in any way be suspected of their interest clashing with their duty?—It is obvious that the same argument would apply to other members of the Council. All the other members of the Council have a chance of going to high appointments after they leave the Viceroy's Council, and I should be very sorry to assume that they, all of them, or any of them, were likely to be too accommodating, merely because they thought that by so doing they would improve their own chance of promotion.

16,123. No; but, to a certain extent, the interest of the Finance Minister may come into collision with his duty, if he has to oppose a particular policy of the Viceroy?—I do not think that there is anything in that.

(*Sir William Wedderburn.*) I do not wish to press it, but I only wish to call attention to it.

(*Sir Ralph Knox.*) It is equally a reflection upon the Viceroy, is it not?

(*Chairman.*) It is not quite correct to say that the judges here have no promotion; they may become Lords Justices of Appeal, Lord Chief Justice, and so forth.

(*Mr. Mowbray.*) And Lords of Appeal in Ordinary.

(*Chairman.*) There is a considerable amount of promotion for the judges.

(*Mr. Naoroji.*) It is all in the judicial line; all in the same line.

16,124. (*Sir William Wedderburn.*) Then what I rather wished to get at was what assurance we have that the Finance Minister will really be a representative of economy, because he appears to be the only person whose business it is to try and check expenditure; and I do not see anything to prevent an official being appointed Finance Minister who has not got that rugged independence which is necessary in order to fight those to whom he looks for promotion; that is my point?—The only guarantee you have is that you look round and see who there is with financial experience whose career points to him as likely to fill the appointment best; you appoint him, and you expect him to do his duty.

16,125. Is there any other interest distinctly in favour of economy in the administration of India, except the unwillingness of the taxpayers to be taxed for this expenditure?—I think the Government of India, as a whole, is distinctly interested in the observance of economy. Nothing, I imagine, would more add to the reputation of a Viceroy than that he had left the finances of the country in good order. That would be a much greater feather in his cap than almost any other feather that you can conceive.

16,126. The taxpayers have a certain representation through independent members in the Viceroy's Council, I think?—Yes.

16,127. A sort of independent representation?—Yes; that change was made while I was in India.

16,128. I think you approved of that representation?—It was made on my recommendation.

16,129. And did you find that the result was to give a certain amount of useful influence towards economy?—I think so. The Budget was always discussed in the Legislative Council, and the debate which took place afforded a very valuable opportunity for men, whose position was certainly independent, to criticise the financial policy of the Government. You are aware, of course, that the members of the Legislative Council, the additional members, although they are not elected exactly in our sense of the word "election," are nominated by the Viceroy on the recommendation of certain constituencies which were devised for that particular purpose. Their position is, therefore, a very independent position, and some of the gentlemen who have been sent up to serve on the Legislative Council have been men of very great independence, and very wide popular sympathies.

16,130. Would you be opposed to allowing the independent members to move amendments at the time of the Budget, and divide upon those amendments?—Yes, I should.

16,131. You would not approve of that?—I should be opposed to it.

16,132. But would not that be a convenient way of formally, so to say, focussing public opinion, and having the Budget more definitely discussed on points in which public opinion differs from the propositions of the Government at that time?—The proposals contained in the budget must be made on the responsibility of the Government, and I do not think it would do to expose the Government to the risk of having an adverse vote on its own budget. I think the utmost that you can do is to afford opportunities for criticism. I think criticism is extremely valuable, because, if it is sound criticism, it is noticed, noticed in India and noticed in this country, and it certainly produces its effect. It may be that it may produce no effect upon that particular Budget, but if the criticism is fair and able it will probably produce an effect upon future Budgets.

16,133-4. I have no doubt that you have often considered the discussions that arise upon what is called the Indian Budget, that is to say, the East India Accounts in the House of Commons?—I have read them in the papers.

16,135. I think you will consider that they are not a satisfactory mode of dealing with the finances of India?—I am afraid the gentlemen of the House of Commons do not always take the close interest that they might in the finances of India.

16,136. Could you suggest any way in which there could be a more well-informed opinion in the House of Commons, and a more profitable discussion of these very important financial questions?—I am afraid I cannot.

16,137. Do you think that, if a select committee of those who have some experience of India, for example, were appointed as soon as the Budget arrives—a very long period will elapse before the discussion comes on at the end of the session—and considered these various questions, it would tend to a more well-informed debate, when the time comes on, if they reported to the House upon the various matters?—I have never been in the House of Commons, and I am not very familiar with its procedure, and I should prefer not to make a suggestion for what is, after all, purely a question of House of Commons procedure.

16,138. (*Mr. Naoroji.*) You explained that the character of the Executive Council of the Viceroy is so high that it must depend upon them, and it is not necessary that the voice of the people should be heard there, or that even the independent members of the Council should have the power of proposing any amendment. Now my question is this, here certainly the Government consists of men of the highest character that can be found, and yet the people here would not trust to them the entire settlement of the Budget, but would discuss every point in the Budget, and have any alteration made, as they would like to be done. Why is not the Government here entrusted in the same manner as the Government of India is trusted or should be trusted in India?—I am afraid, Mr. Naoroji, that raises the whole question whether you can apply to India, at the present time, modes of government which are suitable to this country and accepted in this country. I scarcely think that it would be desirable that I should, in my evidence, attempt to go into points of that sort.

16,139. Is it not important that under the British rule every attempt should be made that the people of India should be raised to the same political condition as the people are here, because that would be to the great advantage of the British supremacy there or British rule, otherwise if they are left in the same condition as the old despotism of the Oriental governments, there is no particular benefit derived by being under the rule, and that has been for 150 years now?—I would venture

The Most Hon. the Marquis of Lansdowne, K.G., &c.

11 Mar. 1897.

to submit that that is not a point that the Commission is engaged in investigating.

(*Chairman.*) I think that hardly falls within the reference.

(*Mr. Naoroji.*) No; because the explanation was given in regard to the Government of India that they were trusted in every way, that they are men of high character, and that therefore they do what is right only. Well, then, the men of high character in the Government here also do what is right. The question arose from that answer, otherwise I would not have asked it.

16,140. (*Sir Donald Stewart.*) It has been suggested that the Financial Member of Council has not sufficient opportunity of communicating directly with the Secretary of State when he holds different views from those of the Government of the day, the Governor-General in Council; is it not the case that under the existing system the Financial Member might have the whole of his views in full detail placed before the Secretary of State in a secret despatch which is not liable to publication?—That would certainly be possible.

16,141. (*Sir Ralph Knox.*) Your Lordship is aware that in the old East India Company's time the Company paid, as representing the home charges for the forces in India, the whole cost of the depôts in existence in this country, did they not?—I believe that is so.

16,142. And that they also had an institution at Addiscombe for the training and education of officers for the service in India. You are aware that that was the case?—Yes.

16,143. And that under that arrangement, excluding the educational establishments, the East India Company paid at least 200,000*l.* a year for the expense of the English depôts and the Warley depôt?—I have no doubt your figures are unimpeachable.

16,144. And under the Warley depôt system the recruits underwent practically no training at all. You are aware that that was the system of the East India depôt?—Yes.

16,145. Well, that was for a force of something like 35,000 or 36,000 men; for the present force of 70,000 men, developed as it has been and increased by forces which require very high training indeed—I allude especially to the mounted forces of artillery—and also having regard to the increase of pay, does 540,000*l.* appear to you an excessive charge as compared with what was paid in former times?—I think I have stated in my evidence that that seemed to me to be a very reasonable point of departure, but that I thought it was fair to consider whether for other reasons India was not entitled to some abatement from the full demand.

16,146. You are aware that the basis of the charge, say, for an infantry soldier, is that India pays merely the expense, or a portion of the expense, of six months' training; you are aware that that is the basis?—Yes, and rather more in some cases—nine months.

16,147. Nine months for the mounted forces?—For the mounted forces, yes.

16,148. Six months for the infantry. You are aware that the Indian recruit when raised in India has got to train at his local battalion for at least a twelvemonth before he is sent to his service battalion; we have had that in evidence?—I have no doubt that is so.

16,149. To make a charge based upon the maintenance of a soldier for six months would appear to be a liberal treatment in charging India, and to show some reduction as compared with the actual cost of training the man, do you not think so?—I quite understand that your 540,000*l.* does not include everything which you think might be charged, if the full pound of flesh was to be exacted.

16,150. Quite so; then you admit that the present charge is a discounted charge as compared with the actual cost on the Army Estimates?—Yes; the question is to what extent it is discounted.

16,151. Your view is that the point should be considered whether that abatement is the proper abatement that should be made, and whether some further concession could not be made?—Yes.

16,152. (*Mr. Mowbray.*) And made, as I understand, on what you would consider Imperial grounds?—Distinctly; the grounds described in paragraph 21 of the 1890 despatch.

16,153–5. (*Sir James Peile.*) On the point that the Viceroy sees each of the departmental secretaries for business once a week. I think Lord Welby said that that seemed to him a singular arrangement.

(*Chairman.*) It is novel to our ideas in this country.

16,156. (*Sir James Peile.*) Yes; I wanted to bring out the reason of that. The business of any department comprises business of various degrees of importance, does it not?—Yes.

16,157. The secretary brings the whole of the business before the member in charge?—Yes.

16,158. Such of the business as is of small importance, or routine work, the member in charge disposes of on his own authority?—Yes.

16,159. But any cases which are of importance or marks to go to the Viceroy?—Yes, he should.

16,160. Or the secretary himself may take to it Viceroy any papers that he thinks the Viceroy should s —Yes; the secretary may think that a particular c which the honourable member has not marked to Viceroy is so important that the Viceroy should see and then he takes it to him; but outside of that I thi the idea has always been that it was very desirab that the Viceroy should personally know and have a opportunity of conferring with the secretaries. One reason for that seems to me to be this: the member of Council may have just taken up his office, and may, in the early days of his tenure, not be very familiar with the position of affairs in his own department. The secretary, who does know all that, might, under such circumstances, very likely look at a good many matters from a point of view differing somewhat from that of the honourable member.

16,161. Then in the further course of business the Viceroy, if he agrees with the member, disposes of the matter then and there at once?—Yes.

16,162. But if he disagrees, or considers it a very important case, he marks it for circulation and Council, does he not?—Yes.

16,163. And whenever it is a case affecting the Financial Department expenditure, the rule is that the papers go to the Financial Member before they are placed before the Council. Before they are circulated to the Council he has them specially referred to him, has he not?—Yes, that is right.

16,164. (*Mr. Buchanan.*) With reference to Sir Ralph Knox's question, the considerations which were urged by him with regard to the period of recruiting, were all allowed for in fixing the capitation rate?—Yes, that is the way in which I understand that you arrive at a fair capitation rate.

16,165. And all those considerations have been allowed for when you fixed that capitation rate?—Yes.

16,166. So that any abatement due upon that ground has already been allowed for in the capitation rate?—Yes, that is how I look at it.

16,167. And the contention of your 1890 despatch is that, after that, there are certain larger considerations, political and other considerations, upon which India may have a fair claim to abatement, or at any rate, to consideration?—I do not know whether we brought them all clearly out in the despatch. That was in my mind when I gave my answers in chief.

16,168. And it should be borne in mind that in the despatch the capitation rate was taken at 5*l.* 10*s.* per head, and not 7*l.* 10*s.*?—Yes.

The witness withdrew.

Adjourned till Thursday next at 11 a.m.

At the India Office, S.W.

THIRTY-NINTH DAY.

Thursday, 18th March 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

The Most Honourable the Marquis of RIPON, K.G., G.C.S.I., C.I.E., called in and examined.

The Most Hon the Marquis of Ripon, K.G., &c.

18 Mar. 1897.

16,169–70. (*Chairman.*) Would you tell us the posts you have held in India and in England, connected either with the India Office or the War Office?—I will take them in chronological order. I was Under Secretary for War for some time, and I was then transferred for a period of about six months, when Mr. Sidney Herbert became a peer, to be Under Secretary for India. I then returned to the War Office for a short time as Under Secretary; and on the death of Sir George Lewis I became Secretary of State. Then in the year 1866, when the late Lord Halifax had concussion of the brain, which obliged him to resign, I became Secretary of State for India; I filled that office for the first six months of 1866; and in the year 1880, on the formation of Mr. Gladstone's Government, I was appointed Viceroy and Governor-General of India. I arrived in India at the end of May 1880, and I left India at the end of December 1884. That is my experience in regard to these two offices; but I should like just to say, in connexion with my official relations to India, that I left India at the end of 1884. It is, therefore, a good many years since I was in India. Now, Sir John Strachey, in a book which he published, stated that the India of Lord Ripon differed as much from the India of Lord Ellenborough as the England of Queen Victoria differed from the England of Queen Elizabeth. That will give an idea of the rate of change which has been going on in India, which probably has continued since I left; and all that I can speak to is the India that I knew from the years 1880 to 1884.

16,171. I think the Commission quite understand that changes have taken place in India, and recognise that a considerable time has elapsed since you were in immediate touch with Indian affairs. May I ask further, were you not for a short time First Lord of the Admiralty?—Yes, in Mr. Gladstone's Government of 1886.

16,172. Have you seen the evidence of Lord Northbrook, Lord Cromer, Sir David Barbour, and Sir Auckland Colvin?—Yes

16,173. We have had evidence on the power and position of the Finance Member of Council in India. Sir David Barbour and Sir Auckland Colvin think his powers theoretically complete, but not so complete in actual exercise?—My view of that would be that his powers are complete so far as is possible in the organisation of the government of India. As has been pointed out, I think, by previous witnesses, no Finance Member of Council in India could hold precisely the same powerful position that is held by the Chancellor of the Exchequer in this country. The reasons for that are obvious, and I need not take up your time dilating upon them; but, apart from that, I think myself that the Finance Member of Council's position is in practice very much what it is in theory. But, of course, in practice it depends greatly upon the man himself, upon the Viceroy with whom he has to deal, and upon the other Members of Council.

16,174–5. Then you would, I think, agree with Sir D. Barbour and Sir A. Colvin when they say that, if the Viceroy is economical, the Finance Member has nothing to desire. If, on the other hand, the Viceroy is not economical, the position of the Finance Member is weak?—It is weaker. That I should be prepared to say. I do not think I should be prepared to say from my own experience that his position is weak. It so happens that I had no differences of opinion upon questions of economy with any of the gentlemen who were Finance Members of Council in my time. I began with Sir John Strachey. He was there for a short time, until he was succeeded by Sir Evelyn Baring, the present Lord Cromer; and, when he went to Egypt, he was followed by Sir Auckland Colvin. We always got on very well, and I gather from the evidence, both of Lord Cromer and of Sir Auckland Colvin, that they had no complaint to make of any want of support on my part during the time that I held the office of Viceroy.

16,176. I think both Sir David Barbour and Sir Auckland Colvin did lay stress upon the view that in the case of an uneconomical Viceroy, I mean a Viceroy who lays great stress upon the policy which he is carrying out, and in consequence, perhaps, does not lay so much stress upon the financial result of that policy, the Finance Member is weak; but I gather from your Lordship that you would hardly say that, even in that case, he was weak. You would, I think, say that he was weaker than under an economical Viceroy?—That is what I say; but you touch there a point which is the real essence of the question. It is the question of policy, and it has often been said in one shape or another that policy determines expenditure. It does so eminently in India.

16,177. Both Sir David Barbour and Sir Auckland Colvin think it would be well to strengthen the position of the Finance Member; but they admit the difficulty of doing so, nor have they any practical suggestions to make which would effect their object, unless, indeed, it were possible to obtain for him more active support from the Secretary of State. According to your experience did the position of the Finance Member need such strengthening?—No, I do not think it did in my time: and I think that the evidence both of Lord Cromer and Sir Auckland Colvin, in regard to the earlier part of his administration as Finance Member of Council, tends in the same direction.

16,178. On that point, I think, Lord Northbrook, Lord Lansdowne, and Lord Cromer all admit that the Finance Member is powerful, or not, according as he is supported, or not supported, by the Viceroy. They think, however, that that is an inevitable condition of government in India. Lord Cromer was satisfied with the power he possessed as Finance Member, and neither he, nor Lord Northbrook, nor Lord Lansdowne supported on this point the views of Sir David Barbour and Sir Auckland Colvin?—I am inclined to agree on

The Most Hon. the Marquis of Ripon, K.G., &c.

18 Mar. 1897.

that point with Lord Cromer. It does depend mainly upon the man himself and upon the Viceroy that he has to deal with; but, Lord Welby, you know very well that all Chancellors of the Exchequer in this country are not equally strong, and are not equally able to guide the decisions of their Cabinets.

16,179. Of course the Chancellor of the Exchequer at home has always a powerful support behind him in Parliament?—Certainly; and that is the distinguishing point between his position and that of the Finance Member of Council.

16,180. And I gather that you agree with Lord Lansdowne, and Lord Northbrook, and Lord Cromer, in thinking that a good deal depends upon the men themselves?—Certainly. An immense deal depends upon them.

16,181. (*Mr. Courtney*). Is there not this distinction between the position of the Finance Ministers in the two countries? At home the Prime Minister chooses his colleagues, and the Chancellor of the Exchequer is selected by him as being imbued with the same policy and necessarily a support to himself. In India the Finance Minister may have been appointed at a totally different time from the Viceroy, and there may be a different policy at home?—Certainly, that is perfectly true.

16,182. (*Chairman.*) Sir David Barbour and Sir Auckland Colvin seemed to wish that more general attention could be given in the Council to the subject of finance, and to think that the members confined themselves too much to their special departmental duties. Would you concur with that view, or would you agree with Lord Cromer, who dissented from it?—I should agree with Lord Cromer. You must remember that Lord Cromer and I are speaking of the same time; the other witnesses may have been speaking of other times of which I know nothing; but I should agree with Lord Cromer. I do not think that the members of the Viceroy's Council in India are too much absorbed in their departmental business. Each of them has a department to look after, but my experience was that each and all of them gave close general attention to all the public questions that came before them. You must recollect that a great many more questions from all departments come before the Governor-General in Council in India than come before the Cabinet here. Of course, there are great differences in Cabinets in that respect. Some are much more departmental, by which I mean leave more to the departmental Minister than others; but in India all important business must come before the Governor-General in Council; and I have always found that all my colleagues made themselves generally acquainted with the questions that came before them, and were prepared to discuss them in all their aspects. Of course I do not mean to say that a Member of Council in charge of a particular department was not anxious to look after the interests of his Department, or that, if he wanted money to carry out his views, he was not anxious to get it; but I do think that, so far as the general questions that you have asked me about are concerned, the Members of Council in my time gave close attention to general questions, and to financial questions among them.

16,183. Your experience, therefore, would be that the Finance Member might not only look for support from the Viceroy, but also fairly for support from among his own colleagues in the Council?—For general support; yes. At the same time, this support would be subject, as I said before, to the member in charge of the particular department pressing for expenditure to which the Financial Member might object.

16,184. Quite so; but in that case the Finance Member might look for the support of other members who were not particularly interested in that particular branch of expenditure?—Quite so.

16,185. I presume it would be generally admitted that sound finance is specially required in India, and that there is a greater danger from deficits in that country than there is, for example, here?—No doubt, very much in consequence of the difficulty of devising new sources of taxation, and also because you have not the same almost unlimited power of raising loans as you have in this country.

16,186. Did the Council, in your time, appreciate the gravity of the financial question, and would you say that the warning or representation of the Finance Member received the attention due to them?—I think that the gravity of the financial question was undoubtedly appreciated by the Government of which I was the head; and I am quite sure that all the representations of the Finance Member received the utmost attention from the Council of the Governor-General. I claim for the Government with which I was connected, that we were an economical Government; we reduced expenditure and we reduced taxation.

16,187. Your time was a time, to a certain extent, of financial anxiety, was it not, for India had only just passed through the crisis of the Afghan War. Were you at that time at all anxious about the future of Indian Finance?—When I went out to India in 1880 there was an impression in this country that the condition of Indian Finance was extremely bad, and that the miscalculations which had been made in respect of the expenditure in regard to the Afghan War indicated a very unsound condition of financial affairs. When I arrived in India, I came to the conclusion that that alarm was much exaggerated. There had been undoubtedly a miscalculation, which looked serious, in regard to the cost of the Afghan War; but there was no such alarming condition of Indian Finance, as, I think, was supposed to exist by those whom I left behind me in England. You must be always anxious about finance in India, partly for the reason that the revenue in India increases very slowly, and a considerable portion of it—that, for instance, derived from opium—is very uncertain; and besides that we had already beginning in my time those difficulties brought about by the state of exchange, which have become latterly so great a financial evil in India; and, as I have said, the difficulty of finding new sources of taxation, without resorting to measures that might be oppressive, is always present. The finances of India are inelastic, and you have little to look to in the way of increase from ordinary taxation.

16,188. No doubt the revenue of India may be said, in a sense, to be inelastic; but I think we have been rather struck with the fact that for a good many years the elasticity has been sufficient to compare favourably with a very great many countries?—But you have nothing of the leaps and bounds of which we heard some years ago in regard to English finance.

16,189. No. At all events the figures show that during the time of which we are speaking a spirit of economy prevailed. There were very few frontier expeditions, and also, I think, Army expenditure was reduced?—The Government of India, at that time, went very carefully into the whole question of the organisation of the Indian Army, and, as the result of their examination, succeeded in reducing the military expenditure. With regard to frontier expeditions, there was only one expedition of any importance. There were a few little raids among the Lushais and other tribes on the north-eastern frontier; but the only important frontier expedition in which we were engaged was one in the Waziri country, undertaken with great reluctance, but with the conviction of its necessity. It was completely successful, and there may practically be said to have been no fighting at all.

16,190. Sir Auckland Colvin seems to think that a change occurred after 1885, which made the task of the Finance Member more difficult. As far as you have followed the course of Indian administration since the time when you were Viceroy, have you been aware of any such change?—That is a question I would rather not answer. I do not want to enter into any comparison between myself and my successors, and I would rather speak for my own time. You have had the evidence before you, and you must know the state of things better than I do.

16,191. I ventured to put that question to you in order to bring out, if possible, whether there was any reason for a large increase of expenditure at that time, which might account for the apparent change in the views of the Finance Member. We had from Lord Cromer an opinion, supported by Lord Northbrook and yourself, that the position of the Finance Member was previously strong enough. We had distinctly from Sir David Barbour and Sir Auckland Colvin an expression of great doubt upon that point. I was anxious to know whether there was any reason for thinking that there had been such a change of policy, leading to financial consequences, in the interval as to justify such doubts on the part of these later Finance Members?—No doubt there has been a more forward policy since 1885 than there was before. Personally, I have never been in favour of a forward policy; and, while I was connected with the Government of India, there was no forward policy. For various reasons which I do not want to

enter into, because I am not the person to speak to them, the military expenditure in India has increased since my time.

16,192. That, no doubt, would account in a great measure for the somewhat different tone which has been taken by the modern Financial Members, would it not?—I should think it would. I come back to what I said before, it is a question of policy.

16,193. Of course, in commenting upon increase of expenditure, we have to bear in mind a point to which your lordship alluded just now; namely, the very disturbing effect of the fall in the rupee?—Certainly.

16,194. And it has been very much more marked since your time. In your time the exchange was only just beginning to fall?—The fall in exchange had well begun in my time, but the rupee had not fallen to the extent that it has fallen now. It stands in the forefront of every consideration of Indian finance at the present time.

16,195. Yes; it began to fall in 1873, did it not?—I believe so; it was going on in my time, and it was getting worse before I left.

16,196. Do you think that the Finance Member had sufficiently early intimation of the intention to adopt measures involving expenditure, to enable him to place before the Viceroy the financial effect of such measures in time for the representation to be effectual?—I think, as far as my experience goes, he had. I can quite conceive that a sudden emergency might arise, in which it would be impossible to give him, or anybody else, much previous knowledge of a policy which might lead to expenditure; but in my time, I think, no such occasion arose. As I have said, there was but one important frontier expedition, which was very carefully considered by Council and by all the Members of Council, including the Finance Member. You may take a case, however, which formed an exception to that general rule. In the case of the Egyptian Expedition the Finance Member had no information at all, until the occasion arose, that any demand would be made upon India to send troops to Egypt or to take any part in the expenditure.

16,197. And in that case the demand came from this country?—Quite so, that is why the Finance Member did not know.

16,198. Of course, when the demand reached the Governor-General, the Finance Minister was in as good a position as the Governor-General from that moment to remonstrate, if he thought the demand deserving of remonstrance?—Certainly.

16,199. Lord Cromer pointed out that warnings of financial danger must in many cases take place in the initial stage of the proceedings if they are to be effectual. Do you think the Finance Minister ever found that the Government was committed to measures before he had the opportunity of commenting upon them?—Not in my time, with the exception that I have mentioned.

16,200. That danger which Lord Cromer pointed out could really only occur in the case of foreign complications, or in the case of a frontier expedition?—Yes.

16,201. In any case, like changes of organisation of course, the Finance Member would have plenty of time to remonstrate or to warn the Government before they were finally adopted?—That does not apply altogether to military expenditure. There have been—and I shall have occasion to mention the matter presently—cases, in regard to military expenditure, arising from changes in organisation at home, which have not been communicated at all to the Government of India.

16,202. There, again, we come to the question of charges made at home, or demands made from home?—Yes.

16,203. Sir David Barbour would like the Finance Member to be able to place somewhat greater reliance on the support of the Secretary of State, should he at any time seriously differ from the Viceroy on a financial question. Putting aside for a moment the obvious difficulty of reducing the suggestion to practice, do you think that the Secretary of State could in such cases make himself a more effective critic than he does at present?—That is not a very easy question to answer, I am afraid. I think that the tendency of some of the answers that have been given to you, and also of some of the questions that have been put to witnesses, displays a greater confidence in the Secretary of State for India in Council as a check upon Indian Finance than, I am afraid, I possess.

16,204. The difficulty, of course, is that the Secretary of State is at a distance from the spot, and might base his criticism upon insufficient evidence?—Certainly, that is quite possible.

16,205. And, again, in many cases his criticism might come too late, might it not?—Certainly. As I have said, in my opinion the question of finance in India is mainly a question of policy. The Secretary of State would be informed, of course, by the Viceroy of any important questions involving policy; even a frontier expedition, if it was of importance, would not be undertaken without telegraphic communication, at all events, with the Secretary of State. That is one of the reasons why I do not think the Finance Member would find strong support in the Secretary of State at home, because all questions of policy must go, in the first instance, to the Secretary of State at home, and be determined by him. The Finance Minister, if he objected upon financial grounds, would probably find that the policy to which he had objected had been approved by the Secretary of State at home.

16,206. But your Lordship has pointed out that, in the case of a frontier expedition of any importance, the assent of the Secretary of State at home would probably be necessary before the Government was committed to the expedition, "at all events," I think you added, "by telegraph." In the case of the assent of the Secretary of State being sought by telegraph, the Finance Minister would not have much opportunity of letting the Secretary of State know his objections?—Certainly not. That is quite true.

16,207. The Finance Member has the power of recording a dissent from the decision of the Council, and in that case his dissent goes before the Secretary of State, does it not?—Yes.

16,208. That, however, is a formal act, and he must be prepared for the publication of his dissent; can he express his views in such a case as freely and fully as might be desirable?—I should have thought he could. I should have thought, indeed, that if he had a strong opinion on the subject he was bound to do so. It is possible he might have some grounds for his opinion which he thought it not advisable, as a matter of public policy, to lay before the public; but it is quite in the power of the Secretary of State to lay his dissent before the Houses of Parliament in whole or in part; and I, myself, see no reason why the Financial Member should not express his views as freely as he pleases in the dissent, which is the constitutional mode of expressing them. I can quite understand a man not liking to dissent; and, of course, if any Member of Council was always writing dissents, and sending them home to the Secretary of State, he would be a very disagreeable colleague, and his other colleagues would not much admire him; but upon important points he has the right and, I think, the duty to record his dissent. That dissent is an official document which remains and which is placed upon record.

16,209. (*Sir Ralph Knox.*) There would be nothing invidious in such a course as to require the financial view always to be expressed on any proposed change, and to require from the Finance Minister the expression of his distinct opinion as regards the financial results of any measure that was proposed?—No, I do not see any objection.

16,210. That is to say, the financial view of any proposal would be presented as a matter of course?—Of course there are many different kinds of proposals. If you made that an iron rule, there would be a great many occasions upon which it would be the purest matter of form.

16,211. Quite so?—But I see no other objection to it.

16,212. But there would be nothing invidious if the financial view were always furnished?—Not the least, so far as I can see.

16,213. On the other hand, there would be something invidious in such an expression of opinion if it was special and exceptional?—I do not think that I should apply the word "invidious" to it. I always looked upon it that my colleagues had a perfect constitutional right to record their opinions and dissent, and I never thought of objecting or of complaining of any of my colleagues doing anything of the kind. If a man put

The Most Hon. the Marquis of Ripon, K.G., &c.

18 Mar. 1897.

something into his dissent which I thought misrepresented opinions, or was discourteous, anything of that sort, I should have spoken to him and asked him to take it out, and I am quite sure all the gentlemen I have acted with would always most willingly have listened to any representation of that kind. But I do not think myself that there is anything invidious in recording a dissent from the opinion of the majority. I was once beaten by my Council, and I recorded my dissent; and there I left it. I do not think any of them thought there was anything invidious in it.

16,214. (*Mr. Buchanan.*) But these dissents are unusual, are they not?—Yes, they are unusual, no doubt, and I hope that they always will be unusual.

16,215. (*Chairman.*) A dissent which has to be officially recorded in the India Office, and which may be produced by Secretary of State, is a very formal method of recording on the part of the Finance Member the reasons which induced him to dissent; are there not many cases in which the Finance Member would hesitate to take that formal step, yet would be very glad that his views, his apprehensions, should be made known through the Viceroy to the Secretary of State in a less formal manner, very much as in diplomacy, as I have always understood, there are letters which pass between the diplomate and the Secretary of State which are of an unofficial character?—Certainly.

16,216. Such letters convey information which it cannot be desirable to put upon record; and is there not a great deal of use in there being such a power of communication between the ultimate chief and the officers of a responsible administration?—I have no objection to the adoption of a system of that kind; but at the same time I think that in important matters a dissent is the correct method. That dissent goes before the members of the Indian Council here, a private memorandum need not go before them at all—it depends entirely upon the Secretary of State whether he shows it to the other Members of the Council or whether he does not—and it does not remain on record. It is one of the private papers of the Secretary of State, and it goes away with him when he leaves the office. Therefore, I think that in all matters of real importance I should prefer the course of dissent. It never happened to me, but if the Financial Member in my time had said to me, "Now, I want this memorandum which contains "my views upon the question sent home to the Secre- "tary of State," I should have sent it home at once without the slightest hesitation, and I am sure that any Viceroy would do the same.

16,217. The Viceroy, no doubt, in writing to the Secretary of State, and in recommending that a certain policy should be adopted, would state the objections which the Finance Minister had brought before him, even though the Finance Minister had not thought it necessary to record the dissent?—Certainly, in all probability he would; but, of course, you may say that a man states his objections better himself than they would be stated by somebody who differs from him.

16,218. That is the point I was going to put before you, and to ask you whether, in such a case as that, it would not be more satisfactory if the Finance Minister was given an opportunity of stating in his own language his own objections?—I should say I see no objection to that course, but at the same time I do not think that it supersedes the dissent; and I hold that, in important cases where men have serious differences from the policy that is going to be pursued, the dissent is the right course.

16,219. (*Sir Donald Stewart.*) Are you not aware that now private correspondence goes on between the Finance Member in India and the Secretary in the Financial Department here?—I always understood that that was the case, and I also understood that he corresponded with the Permanent Under Secretary. I never saw that correspondence and had no knowledge of its contents; but I knew that it existed, and I had no objection to it.

16,220. (*Chairman.*) But, as a general rule, would it not be desirable that any communications regarding dissent from policy should pass through the Viceroy? I understand that the greater part of this correspondence, to which Sir Donald Stewart alludes, is correspondence on questions of detail, which are eminently subjects upon which communications may pass between the subordinate officers?—As I say, I never saw the correspondence, and I do not know whether it only dealt with detail or what it touched upon.

16,221. (*Mr. Courtney.*) But you would not have the Finance Minister communicating even with the Secretary of State on any serious subject except through the Viceroy?—No, certainly not. I understand that to be the proposition.

16,222. (*Chairman.*) The proposition is that every communication of this nature that we speak of should pass through the Viceroy, who, in fact, practically should have the last word upon it?—Yes. Then I should like to add that every Member of Council, besides the Financial Member, might put in the same claim, and I should not be inclined to refuse him.

16,223. No doubt the other Members of Council stand exactly on the same footing as the Finance Member. Our questions are confined to finance, because the financial question is the only question before us?—Quite so. I quite understand, only I thought I was bound just to bring in that *caveat*.

16,224. I suppose the Commander-in-Chief probably has constant communications direct with the home authorities, does he not?—The Commander-in-Chief in India, I believe has a constant correspondence with the Commander-in-Chief at home. But there, again, I never saw anything of it—never wished to see anything of it. I think, however, that that is not quite the same case. The Commander-in-Chief's position as regards the head of the Army at home is somewhat different from that of the Finance Member as regards the Secretary of State, because the former has to do with the discipline of the British Army, with which the Government of India have nothing to do.

16,225. You are aware that there has been a considerable increase of expenditure in India during the last 12 years or so, due in part to the fall in the rupee, and in part to the increase of military expenditure?—Yes, I believe so.

16,226. And it has been necessary to increase taxation?—Yes, certainly.

16,227. Is not this an object-lesson in the dangers of which we have been talking? This is exactly a case of an increase of expenditure which may have been perfectly necessary, but which has led to the difficulty of finding taxes to meet the charge?—But I should have thought that that must always have been present to the minds of every member of the Governor-General's Council, it is so very obvious. If you increase your expenditure you must increase your revenue to meet it, and you know very well how difficult it is to increase your revenue in India.

16,228. Do you think, Lord Ripon, that it is always the case that, where expenditure is proposed, the Ministers who propose the expenditure look forward to the necessity of taxation; do they not leave it to the Finance Minister to find ways and means?—My answer to that is, in the first place that I was not speaking of the particular Member of Council who proposed the expenditure, but of the Council generally; and, in the second place, I still think that in India, where the difficulties of finance are so great, every Member of Council must have constantly before him the difficulties which arise out of that condition of finance.

16,229. I should not have said that that governs men generally; that, individually or as a body, they are very keen to look forward to this uncertain evil before them. I think they very often trust in the leaps and bounds, of which you were speaking, coming to save them from the effects of the increased expenditure. Increase of expenditure is popular at the time, and it very often is not necessary to increase the taxation at the moment. I should have thought that that was a very great danger, especially in India?—That is no doubt true, but I must say that the evil of an increase is greater and more immediate in India, I think, than it is here, where, after all, the worst evil you have is a certain amount of grumbling from the House of Commons or from the taxpayers of the country if you put on additional taxation; it is not so bad as having the consequences that might follow in India.

16,230. Well, to a certain extent has not that result actually followed in India?—There has been a considerable increase of expenditure concurrent with this very heavy demand on the Indian Revenue caused by the fall of the rupee; and we have seen, I think, a very awkward question of taxation follow.

16,231. Do you think that, on the face of it, it looks as if the financial consideration had been always present

to the Government of India?—Well, there is truth in that, I admit; but, again I say, all that increase that you are talking of is the result of policy.

16,232. But a result which constitutes a powerful reason for making the Financial Department as strong as possible, you would admit?—I quite agree.

16,233. Still, considering the essentially personal character of the Government in India, you see no method by which the Finance Department could be made stronger than it is at present, and I gather also that you do not think there is any great necessity for it?—I do not see, I confess, any very effectual means, by which the Finance Department could be strengthened. Some of the suggestions which have been made might go a certain way in that direction, but I cannot honestly say that I myself think that they would have very much effect.

16,234. I have no doubt you will have noticed the expression of despair as to the remedies in Sir David Barbour's and Sir Auckland Colvin's evidence?—No doubt.

16,235. (*Mr. Courtney.*) Would it not be that, in respect to the recent embarrassment arising from what may be called the fall of the rupee or the rise of the sovereign, they did not present the spectacle of a Finance Minister struggling against any other colleague or all his colleagues, but a whole body fighting with circumstances beyond their control?—That is perfectly true, of course. On the other hand, the fact that you are liable to such an increase of expenditure as results from that fall in the exchange, is a strong reason for paying special regard to economical considerations—and a very powerful reason.

16,236. But that fact does not raise the question of the Finance Minister's position among his colleagues?—No.

16,237. (*Chairman.*) Since 1885 the number of frontier expeditions has increased. Lord Lansdowne has explained to us that there has been of late years a change of policy in dealing with frontier tribes—a system of employment, I understood him to say, has replaced the system of punitive fines, and he hoped that from that policy would result a smaller number of frontier expeditions in the future. Are you aware of this change of policy, and would you think it likely to have this result?—I was not aware of it in detail, and I do not feel that I have sufficiently studied the question to be able to give an answer to it. Under the system which prevailed in my time, as I have already told you, we had hardly any frontier expeditions at all. And that again, I venture to think, is a question of policy. I do not think that the Government with which I was connected in India liked frontier expeditions; and I am bound to say that the military authorities of that Government disliked them as much as the civilians.

16,238. It seemed to me, from Lord Lansdowne's description, that the policy was one of greater interference than heretofore, both in forcing the tribes to keep the peace and in endeavouring to make it their interest to keep the peace; do you think that by this, or by any other means, it would be possible to avoid such a disturbing influence on sound finance as these numerous expeditions?—I do not like a policy of constant interference. My impression would be that it would rather lead to expeditions than the reverse; but I am speaking very much in the dark, because I really do not know what the new arrangements may be.

16,239. Of course, we are looking at it simply from the financial side, the disturbing effect on the Budget of these sums of 200,000*l.* or 300,000*l.* that come constantly on the Budget?—Quite so.

16,240. And the point that struck us particularly in the return of Indian expenditure was, that in the period extending over several years from the date of about 1887 or 1888 forward to 1895 or 1896, the items of frontier expenditure were not only present every year, but were present in comparative numbers 3, 2, 3, and 4 in each year, whereas the previous years had been singularly free from them. That, of course, struck us as showing that, at all events, some change had taken place to cause this. Sir Henry Brackenbury and, I think, Lord Lansdowne looked upon the present policy of interference, if I may so call it, as more likely to keep the peace than the former one. On the other hand, there is this to be said, that the actual figures did not present any such result?—I should be inclined to judge by the actual figures, and I should not think, from what you tell me, that that policy had proved itself successful; but I speak subject to correction upon that point.

16,241. They expressed themselves as being hopeful for the future?—I hope it may be, I am sure. You know there are always persons who are urging frontier expeditions, and it is sometimes by no means easy for the Government to resist that pressure; but if the Government were determined to resist frontier expeditions, unless they were absolutely necessary, I think you would find that the number of them would very greatly decrease.

16,242. I think, perhaps, the word I used went a little too far. I spoke of the policy of interference. I do not suppose that either Sir Henry Brackenbury or Lord Lansdowne would actually take that word; I may, perhaps, say a policy of control?—I cannot answer you because I do not know what the policy is.

16,243. (*Sir Ralph Knox.*) Might it not be said that these frontier expeditions in a large number of cases were due to the action of the tribes rather than to any particular policy?—The question, of course, is how are you going to deal with the action of the tribes?

16,244. Now, for instance, in the case which your Lordship referred to, which took place during your own Government, and where you say there was hardly a shot fired, was not that due to the action of the tribes?—That was due to the action of the tribes some time before, and no steps could be taken about it earlier because of the Afghan war—I think I am right in saying that it was after the Afghan war was over that that question was taken up again—it was the result of a raid upon our own territory. Certain demands were made upon the tribes, the tribes refused to comply with the demands, and a force was sent in.

16,245. But you think that raids upon the Indian territory should be resisted, I suppose?—Certainly.

16,246. (*Chairman.*) If you carry your eye along the earlier years shown in the return, you will see that there were very few expeditions, and then they come very thick and very frequent towards the close?—I do not wish to pronounce a judgment upon the matter, because I do not know the details and circumstances. Frontier expeditions are sometimes necessary, and frontier expeditions are often asked for which are not necessary—that is the only view I can give you of it.

16,247. It has been said that the presence of two Military Members gives a preponderating weight to the military element in the Council?—I never found that. Then I was very fortunate. I had for the chief part of my time a Commander-in-Chief who was essentially economical, and who paid as much attention to economical questions as any other Member of the Council, not excluding the Finance Minister. But, with regard to that question, you see the Commander-in-Chief has to be away a very great deal, and I am rather inclined to think, though I speak subject to correction, that probably under the present organisation of the Indian Army he may have to be away more; and I think that you must have a military man in the Council continually to deal with the military questions which arise. I also think that with his other work the Commander-in-Chief would probably not be able, without great labour, to deal with all those details of military expenditure which come before the Military Member, and I think, therefore, that the continuance of the two on the Council is almost a necessity. I had occasion to go into that question when I was in India, because the late Lord Lytton had expressed an opinion that the second Military Member was of no use; and I forget which it was that he proposed to put out.

16,248. (*Sir Donald Stewart.*) The Commander-in-Chief?—He proposed to put out the Commander-in-Chief, and, therefore, when the Government of which I was the head, was looking into the question of military organisation, I had to look particularly into that question. I came to the conclusion that the present arrangement had better remain.

16,249. (*Mr. Courtney.*) And you say that, not only must there be two, but that the Military Member must be a military man?—Yes, certainly, because, if he were not, it would not meet the case in the absence of the Commander-in-Chief.

16,250-1. A civilian could not be sufficiently representative of the Commander-in-Chief in his absence?—I do not think so.

16,252. (*Chairman.*) Then you would agree with Sir Henry Brackenbury, Lord Roberts, and Lord Lansdowne

The Most Hon. the Marquis of Ripon, K.G., &c.

18 Mar. 1897.

that the presence of a second military man on the Council is desirable, because the Commander-in-Chief is so much away; but, further than that, they thought that the Military Member is rather a check upon Military expenditure than a spur to it, and that in the Indian military system he rather holds the place held by our old Secretary at War?—You see, as I had to do with an economical Commander-in-Chief, the Military Member did not require to exercise a check; but the Military Member, of course, must look at things largely from the financial point of view; he has to consider his estimates, and he ought undoubtedly to take largely into consideration financial considerations.

16,253. And in that respect he would resemble very much the old Secretary at War, who, if you remember, was the Financial Officer of the War Office?—Yes, I think there would be a certain analogy between the two.

16,254. (*Sir Ralph Knox.*) The late Secretary at War was not necessarily a military officer?—No, generally not.

16,255. (*Chairman.*) But I take your view about the civilian to be what you expressed just now, namely, that so many questions of military organisation and other military questions arise during the absence of the Commander-in-Chief, that the Viceroy, if he had only a civilian to rely upon, might be in want of an efficient adviser on those points?—Quite so; and you must remember that important points may arise at any time in connection with questions on the general military system in India, and upon such points particularly a military opinion is very advisable.

16,256. It does not seem that the expenditure upon civil administration has increased, perhaps, as much as might have been expected. Lord Lansdowne, however, did not consider that the civil administration had been starved in order to provide for military services. Would you expect to find a steady advance in the cost of civil administration with the increase of population and the greater demand for active supervision which marks the present day?—I should certainly expect to find a tendency in that direction, and I myself think that there are many portions of civil expenditure which might very properly be increased, if the financial circumstances of India enabled them to be so. But when I am asked whether the civil expenditure in India has been in any degree starved, I think that the civil expenditure in India, as I have said, might with advantage be greater in some directions; and I think that the other expenditure in India, of course, has kept down the civil expenditure; but whether that is due to the loss by exchange or to the increased military expenditure, of course it is difficult to say. If there was no loss by exchange the financial condition of India would be very satisfactory, and you might either reduce the taxation or lay out larger sums for civil purposes; but you have the two increases of charge—you have an increase in military expenditure, you have a great increase resulting from the loss by exchange; those two things are a very heavy weight upon the finances of India, and naturally keep within narrow limits the civil expenditure.

16,257. (*Mr. Courtney.*) Is the comparatively small increase in that civil expenditure real, or is it to a large extent apparent, and due to the fact of a transfer of expenditure from the central to the provincial charges?—I do not think I could answer that question; I do not quite understand it.

16,258. Has there not been during the last 30 years a transfer of revenue and of expenditure from the central Government of India to Provincial Governments?—Yes, certainly.

16,259. Well, has the effect of that transfer been to make an apparent decrease, without a real decrease, in the civil expenditure?—That may be true; but I was not speaking of a decrease, I was speaking of an absence of increase.

16,260. It is just the same thing, is it not?—Not quite.

16,261. Has the apparent absence of increase been due to that transfer, do you know?—No, I should say not.

16,262. (*Chairman.*) One would be prepared for rather a steady increase in the leading branches of civil administration, would one not?—Yes.

16,263. In education, in police, in judicial arrangements?—Yes, no doubt.

16,264. And there is a danger, is there not, that the military expenditure will come first, and that, in that case, that which concerns the people most closely, namely, efficient domestic administration, may suffer?—That is quite possible.

16,265. (*Mr. Courtney.*) But, so far as any civil expenditure is withdrawn from the central and transferred to a provincial establishment, any increase of that expenditure would, of course, be withdrawn also, and there would be an apparent want of increase not due to actual cessation of increase throughout the country, but due to the transfer?—I do not think that what I had in my mind could be answered in that way; I was thinking then of the whole civil expenditure of the country; and I do think that there are many ways in which a larger civil expenditure would be productive of good if you had the money.

16,266–7. (*Sir Ralph Knox.*) Are you alluding to the reproductive expenditure, such as railways, roads, and irrigation?—No, I was not speaking of that.

16,268. (*Chairman.*) You approve of the delegation of these large financial powers to the Provincial Governments, do you not?—Certainly.

16,269. Do you think it promotes economy or the reverse?—I should say it promoted economy.

16,270. That is to say, it interests the local authorities in laying out the money to the best advantage?—Yes.

16,271. Would you extend the present system further?—I am not prepared to answer that; there might be matters to which it might be extended, but I do not think that I could mention them at the present moment; I am not, therefore, prepared to give a positive opinion upon them. The principle is right, and, as far as the principle can be extended, I would extend it.

16,272. (*Sir Ralph Knox.*) The principle would be really one of decentralization?—Quite so.

16,273. But it also tends to increase the civil expenditure, which you support so much as against the general military and police expenditure which is governed by the central authority?—It would do that.

16,274. (*Chairman.*) This Commission is directed to report on the apportionment of charges between the United Kingdom and India, for purposes in which both are interested. Would you say that in making such apportionment the two powers should be treated as partners, each of whom should pay his proper share of the common expenses, or would you suggest a method of calculation more favourable to India?—I do not think that the analogy of partners is quite suitable to the case, and I do think there are grounds, forcible grounds, for favourable consideration towards India in regard to the charges which are to be divided between the two Governments.

16,275. That is to say, you lean to the last of the two alternatives that I put before you?—Yes, I lean to the last of the two.

16,276. A method of calculation more favourable to India?—Yes.

16,277. Would you explain the grounds on which you rather demur to their being considered partners?—Well, two partners have, as I understand it, the same kind of interest in the undertaking. In all probability they are conducting one undertaking in which they have both a common interest. Now there are points, in regard to military expenditure, for instance, or in regard to the amount that is to be charged to India for any particular expeditions outside India, in which the interest of the two partners, as you propose to call them, would be not the same but different; and therefore I do not think the analogy is complete.

16,278–9. That is the point at which you object to their being partners, namely, that England has asked for aid from India on various occasions outside India about which there is considerable question?—Not only that; I do not think that in regard to military expenditure and the payment to be made by India on account of the British Army in India, the interests of the two partners are the same.

16,280. But if the scheme of the army in India is based upon reasonable economical grounds, surely that army must be that which is necessary to keep order in India and to keep India from invasion. Surely India is completely interested in securing that end?—I quite agree to that; but the questions that I was thinking of were questions relating to the cost of the army, and not to the question whether India ought to pay for the

whole of the British Army that is necessary in India for Indian purposes. To that proposition I entirely agree; but the doubt I had in my mind relates to other points which perhaps will come out in the subsequent part of the examination, or which I can explain now, as you please.

16,281. (*Mr. Buchanan.*) With regard to the partnership theory, Lord Ripon, is there not also this objection that the one partner has all the power?—There is no doubt that is true.

16,282. (*Mr. Naoroji.*) And the other has no voice at all?—I will not quite say that.

16,283. (*Chairman.*) The present and traditional arrangement is based upon the principle that India should pay fairly for her share of services common to the two countries. Would you attach weight to that principle, bearing in mind that of old time, before the Mutiny, India bore the whole charge of her own local army and maintained a local navy?—I think that, speaking generally, the principle is a right one; but on the other hand I think there are circumstances, particularly in the present condition of India, which give her claim to much consideration. In the first place I would allude to that loss by exchange of which we have talked so much. That loss by exchange is due to the large sums which India has to transmit to this country which are mainly—not entirely, but mainly—on account of military expenditure. She had in my time had to remit something between 16,000,000*l.* and 17,000,000*l.* a year. I do not know at present whether that has increased or not; I daresay it may have, but I think that the fact of her having a large dead loss, for which neither she nor anybody else gets any sort of advantage, is a strong argument in favour of her being treated with special consideration in her financial relations with the British Government. Then, again, there is another point and that relates to the expense of the British Army in India.

16,284. I was coming to that?—Very well, I will leave that then, but I put very far forward indeed in the forefront of my argument the loss by exchange. Of course, it may be only temporary, nobody can tell whether it will or will not. I hope it may. I am not sure that I think so, but such as it is at the present time, it is a grievous burden upon Indian Finance.

16,284*a*. That, of course, represents very forcibly the Indian view of the question. On the other hand, in arguing out a question of this kind, when the proposal is an easy transfer of a charge from one person's shoulders to another, is there not a tendency to overrate the power of the unfortunate British taxpayer to pay everything that other people in other parts of the world do not like to pay? Take, for instance, the Navy. Has not the annual expenditure over here—I have no doubt for perfectly sufficient reasons—advanced by leaps and bounds, and to an extent I think which makes some of us anxious as to what the possible capacity of the taxpayer here is? If, in addition to that our partner in India is absolved from a large part of a fair apportionment of expenses, may not an injustice be done to the British taxpayer in endeavouring to do justice to the Indian taxpayer?—I think you are looking to a very much larger reduction of the charge to India than I am looking to. I put it on the ground of a claim for consideration and of a claim to have those matters of account which relate specially to India determined as far as possible, where they are doubtful, in favour of India. That is all I mean; I do not go beyond that. I admit the principle that India has to pay for the army in India.

16,285. (*Mr. Courtney.*) Lord Welby says that you have put the case from the Indian point of view as strongly as possible; but might not the Indian urge even a stronger argument with respect to this matter of the loss by exchange—perhaps quite foolishly? Might he not urge, like the person in the Western States of America, that, owing to British reluctance to reconsider her monetary system, a heavier charge was thrown upon them than should be?—I am afraid that I cannot admit that.

16,286. I am asking you as to what an Indian might say?—The question to which I alluded just now, and in which I differed from my Council and they beat me, was the question of bimetallism. I am a strong monometallist.

16,287. Oh yes. I am not disputing the accuracy of your judgment on that point, I am only asking whether an Indian, like a man in Iowa, might say that he ought to be considered, because it was British unalterableness that was injuring his position?—Yes, but I should not admit the argument.

16,288. (*Chairman.*) On the other hand, might not the reply be: you gentlemen are asking to be allowed to pay off a debt of 1*l.* with 10*s.*, and we have an objection to that easy method of getting rid of indebtedness, and therefore we have not assented to it?—I should not admit the argument. It may be so, of course; as I tell you, it was very strongly used; but it was rather more, I think, on behalf of Europeans living in India than on behalf of the general population that it was used in my Council in my time.

16,289. (*Mr. Courtney.*) It is strongly used in the United States, you are aware?—Very likely.

16,290–1. (*Chairman.*) Now coming on to that point that you were just going to mention, Lord Ripon, the home charges of the regiments serving in India, that is to say, the charge for levying and training recruits for India and a variety of other services. India pays for these services, under the recommendations of a Committee over which Lord Northbrook presided, about 550,000*l.* a year. Lord Lansdowne thinks that this award of Lord Northbrook's should hold good; but that in enforcing it the Home Government might bear in mind that India is exposed to danger from being involved in the foreign relations of England. I understood him to mean that on that account the Home Government might forego part of that claim. How does that recommendation strike your Lordship?—I do not quite agree with Lord Lansdowne upon that point. I doubt whether, if India were not connected with England, she would not have charges of exactly the same kind upon her that she has now. I think all the history of India points to the fact that, if she had not become part of the British Empire, she would have become part of a French Empire, or of some other empire, and, as the Commission are well aware, in the middle of the 18th century it was a question whether India was to be governed by the French or by the English, and there was a moment when it seemed doubtful which would have prevailed. I think the sea power of England led to her prevailing; but in the other case India would still have been governed by a foreign country and would have been subject to the same sort of liabilities, though they might have taken a different direction. But that, perhaps it may be said, is ancient history. I will come down to the present time. In my judgment I think that, if India were not connected with England, she probably would be a dependency of another great European power. I know there are persons who say that India is exposed to invasion from Russia, because she is connected with England. I do not agree in that opinion. I believe India would have been probably annexed to the Russian Empire long ago—some considerable number of years ago at all events—if she had not been connected with the British Empire. I am not one of those who look with alarm to a Russian invasion of India. I do not think that, when she comes to deal with the British power in India, she will invade India. The idea is a source of scares and a source of expenditure; but I do not myself think, looking to all the circumstances of the case, that it is a very likely event; but I do think that, if the British power had not been there, in these days of earth-hunger among all the nations of Europe, India would very likely either have been actually an appendix to Russia or exposed to that danger; and therefore I do not think that our presence there and our foreign relations are a cause of expenditure, which she would get rid of if we were not there.

16,292. (*Mr. Courtney.*) But Lord Lansdowne suggested the daring conception of India being a dependency of the United States, and he thought that in that case the external policy of India would be very much modified as compared with what it is now?—But I do not think India was ever under the slightest danger of being annexed by the United States.

16,293. Oh no! I admit that?—That is the answer, because that is a supposition which is really not practical. Now the danger of being taken over by France in the 18th century was a real danger; and the danger of being annexed to Russia, if we were not there, is in my judgment in the 19th century a real danger.

(*Mr. Courtney.*) And you do not allow that that suggestion, inconceivable as it may be, supports the argument for the more moderate charges against India in respect of what we may call the military organisation?

The Most Hon. the Marquis of Ripon, K.G., &c.

18 Mar. 1897.

—It is not an argument that I should, myself, put forward, but that is all I mean. I think there are other arguments, I have named one of them.

16,294. (*Chairman.*) We might even assume Lord Lansdowne's supposition. Your Lordship is speaking now of the general earth-hunger; is it not quite possible that Russia, if India belonged to the United States, might attack India just as readily as she would in existing circumstances?—Certainly.

16,295. Then that assumption does not dispose of the question at all?—No, it does not dispose of the question.

16,296. (*Sir William Wedderburn.*) But, if India belonged to Russia, of course there would be no longer that fear, from the land side, of invasion?—That I cannot say; that depends entirely upon Russia's foreign relations.

16,297. (*Chairman*). Might there not in that case be some risk of annexation by England?—Yes; but it depends entirely upon Russia's foreign relations. An attack from the sea upon India would always, in my opinion, be more dangerous.

16,298. And, anyhow, whether India was a dependency of another foreign power or whether she was independent, she would require a very large defensive force to keep her from invasion?—If she were an absolutely independent power, she would, of course, require a larger military force than she finds necessary merely for the purpose of police; all great empires require that.

16,299. (*Sir Ralph Knox.*) Especially continental empires?—Yes.

16,300. (*Chairman.*) With a larger power on their frontier?—If she were not a continental empire, she might require a large navy.

16,301. (*Mr. Naoroji.*) If, as an independent power, she required any large force, certainly that force would consist of themselves, that is of the natives?—Yes.

16,302. It would not consist of foreigners?—No.

16,303. The advantage, therefore, of any such force would remain economically entirely to the country itself, which is not the case at present; is it not so?—But I do not know how far a force of that kind would be found able to meet an European army.

16,304. (*Sir James Peile.*) Could you conceive of India as one independent power defended by an army of her own people?—I think it very unlikely. I have also said that I do not think that, looking at it historically, it is at all possible.

16,305-6. (*Chairman.*) I was calling your Lordship's attention to the fact that, under the present arrangements of the payment of the effective services of the Queen's force, England was now receiving about 550,000*l.* a year, and that Lord Lansdowne thought that that award, which was Lord Northbrook's award, might hold good, but he thought that in enforcing it the Home Government might be liberal. On the other hand the War Office have presented to us a statement which calculates the home cost of the Queen's regiments serving in India at 1,100,000*l.*, in respect of which, as I have just mentioned, India only pays about 550,000*l.* It is probable that many of the items would be admitted, and that the cost of the service to the Home Government would appreciably exceed 550,000*l.* If, and to whatever extent this excess is admitted, would you allow that that excess should be taken into consideration in considering Lord Lansdowne's suggestion that we should be liberal in the charge which we make upon India?—I have never gone into those questions in detail as Lord Northbrook has. Lord Northbrook knows the whole subject extremely well, and has given it attention for many years. He was the head of a Commission which dealt with it, and can speak, of course, with great authority upon it. I have not, myself, at any time gone into those questions minutely. After all, the question you ask me is one of fact—is the claim of the War Office for 1,100,000*l.* right or is it wrong? You say that deductions might be made from it. I cannot say, therefore, whether a set-off of the difference between that and the present charge of 550,000*l.* would be sufficient consideration, or whether it would not. What I mean is, that India has a good claim for favourable consideration upon the grounds that I have already mentioned, and upon others that I could mention.

16,307. Your Lordship will observe I said that to whatever extent that excess beyond the 550,000*l.* is admitted by impartial people looking at the account, would you agree that to that extent fair allowance is made in the interests of that liberal treatment which, I think, both yourself and Lord Lansdowne have advocated?—Of course, if it is a fact that the whole charge would be 1,100,000*l.*, and the payment is 550,000*l.*, that is a considerable allowance to India; but then I am not in a condition to admit, nor am I in a condition to deny, the fact; it seems to me that, Lord Northbrook's Commission having gone very carefully into the matter, and having fixed a certain sum—7*l.* 10*s.* a head, I think it was—the Government of this country ought to stand upon that.

16,308. But the India Office do not demur to the 7*l.* 10*s.*?—No.

16,309. So far that is fair, but now in making deductions from that amount to whatever extent an impartial authority would say that the British Government have to pay more than that 550,000*l.*—let us take a very handsome discount off, and say 800,000*l.* would be admitted—would you admit that that excess of 250,000*l.* is a handsome contribution from this country to India, though perhaps it might not be a sufficient one?—It would undoubtedly be a contribution to whatever extent it might be proved; but I do not think the question ought to be raised now, if you have agreed upon the 7*l.* 10*s.* I think you should take that as the rate agreed upon and settled at present.

16,310. Yes, so long as you keep the bargain on both sides; but if it is left open to the Indian Government to say "We accept this, but now we have to call upon "you to strike off certain sums, we want you to make "allowances and deductions"?—Yes, I see what you mean.

16,311. (*Mr. Buchanan.*) But is it not the case, Lord Ripon, that, with regard to this claim put in by Sir Ralph Knox for abatement, Lord Northbrook has himself told us in Q. 14,300, that every single one of those items is an item which the Commission of which he was the President had to go through and consider in estimating their 7*l.* 10*s.* rate? He did not know that there was one which was omitted, and then he said that, if that 7*l.* 10*s.* rate is accepted as a fair arrangement between the two bodies, the whole of that part of Sir Ralph Knox's calculations on which he bases the calculation of 1,100,000*l.* ought to be dismissed from the consideration of the Commission altogether, the whole of it?—I think you must not ask me about that, because I do not know anything about it of my own knowledge. I have not been through those calculations myself, and I should not like to express an opinion one way or the other.

16,312. Well, I will put it in this way—in fixing the 7*l.* 10*s.* rate, have not all these various claims been already considered?—I understand so; but I know nothing about it from my own knowledge. I understand that is the case, but only from what you put to me from that evidence of Lord Northbrook.

16,313. (*Mr. Mowbray.*) Does it not come to this, that so far as we have got any impartial judgment upon the matter, that impartial judgment has arrived at the figure of 7*l.* 10*s.*?—I think so.

16,314. (*Chairman.*) There is an important member of that Commission present, Sir Ralph Knox?—I do not think you will get any good by examining me upon this point, because I really have not gone into it, and, therefore, I do not wish to express an opinion upon its details. I am not in a position to express an opinion upon it.

16,315. (*Mr. Courtney.*) We can only examine you with good effect upon the principles upon which the apportionment should be made?—Quite so.

16,316. (*Mr. Buchanan.*) The only question I will ask is this: the abatement, which you are urging in favour of India, is only to come into consideration on the assumption that the 7*l.* 10*s.* capitation rate is accepted?—Yes; in regard to the matter to which it relates.

16,317. As to what is included in that 7*l.* 10*s.*, we will take Lord Northbrook's evidence?—Quite so.

16,318. (*Chairman.*) Without pressing you upon a point upon which we can hardly ask you to express an opinion, I think we must come to this, that whether the charge is 1,100,000*l.*, or 1,000,000*l.*, or 900,000*l.*, if India does not pay it, the British taxpayer does?—Of course.

16,319. And, therefore, to whatever extent Sir Ralph Knox's calculation is admitted, there is a payment by the British taxpayer towards the charges of the army employed in India?—But does not that rather involve an assumption that that charge is incorrect. If I understand Lord Northbrook's Committee, that 7*l.* 10*s.* in their opinion covered the charges.

16,320. It was a compromise?—Then, if it is a compromise, it has been accepted by both parties.

16,321. Then both parties ought to stand by it?—Like everybody else who accepts a compromise, both parties say that they were done by the compromise.

16,322. (*Chairman.*) But a compromise by which only one party is bound, is rather one-sided, is it not?—How do you mean by which one party is bound?

16,323. Because the India Office and also Lord Lansdowne, admitting that the 7*l.* 10*s.* should hold good, proceed to say that deductions should be made from it, in order to show goodwill to India?—I see; if the deductions are to be made from the 7*l.* 10*s.*, then your argument would come in.

16,324. (*Mr. Buchanan.*) But that is not their contention, or your contention?—That is another point.

16,325. (*Chairman.*) Sir Henry Brackenbury suggested that there should be no such payment made by India in respect of the effective services, at all events, of the Army, for which she now pays, as we have said, 550,000*l.*, but that she should make a liberal contribution to the Navy. The cash difference would probably not be so great as might be anticipated. Lord Lansdowne did not approve this idea of simplifying the relations between India and England—what would you say to the principle of that arrangement?—I am inclined to take Lord Lansdowne's view. I should not like to see a new charge put upon India, and it would be better to leave things in that respect as they are.

16,326–7. Before leaving the subject of the Army, I should like to ask you whether you think that the Army in India was larger in your time than was required by Indian wants and interests?—No, and I give the best possible proof of that. While I was in India, we went most carefully into the question of the size of the Indian Army; and it never entered into our heads, so far as I know, in considering that question to take into account at all anything except the requirements of India. By the requirements of India I do not mean merely police requirements. I mean the military requirements of a great State, such as India would be if she were independent; and I certainly should never have agreed, nor do I think any Government ought to agree, to maintain in India a larger force than is necessary for Indian purposes. I am very well able to give an answer to that question, because of the inquiry which we specially made. The principle of our calculation will not be found in the report of the Army Commission, but such an idea never entered into our minds. We looked at what we considered to be the military requirements of India, and we based our calculations upon them, and, I will undertake to say, upon them alone.

16,328–9. (*Mr. Courtney.*) Had you in view not only the numbers of the Army, but efficiency and its condition?—Certainly; and all our proposals, I think I might say, in our judgment would have increased efficiency at the same time that they produced economy. They have all now after a long period of years been carried into effect, or very nearly so.

16,330–1. (*Sir Ralph Knox.*) But, so far as numbers are concerned, the total force is now not greater than it was before the Indian Mutiny, is it?—I could not say; I do not know what the figures are.

16,332. The constitution of it is different?—Yes.

16,333. A larger number of Europeans, and a smaller number of natives?—Certainly.

16,334. But the total force is even less than that which was maintained before the Indian Mutiny?—I rather think that is so, but I do not speak from my own knowledge. I am bound to say, in connexion with that question, that in determining the amount of European troops in India, you have to take into consideration two points; one is the number wanted for the actual military purposes of India, and the other is the proportion which it is necessary to maintain between the British and the Native Army. That proportion has been fixed now for some time at one to two; and that is a proportion which I look upon as absolutely fundamental.

16,335. (*Chairman.*) Would you look upon the Army in India as a reserve for England?—Certainly not. I am very glad that you have asked me that question, because there is no doubt an opinion prevalent at the present time in the minds of many persons, that the Native Army in India is an army upon which we can draw in this country when we want a few thousand men for any particular military operation or undertaking. It has been drawn upon in regard to Egypt, and it was drawn upon, under the Government of Lord Beaconsfield, for purely European purposes, when those troops were brought to Malta. I think it is a great mistake, and indeed, I think it is a dangerous mistake, to suppose that you can regard the Army in India as an army upon which you can indent for general Imperial purposes. The principle that my Government went upon was, as I say, to maintain the Army which was wanted for India and that only, and if there is now more force there than is required for Indian purposes, in my opinion it ought to be reduced; and although I do not mean to say that taking away a few battalions in a time of perfect tranquility would lead to any dangerous result, yet there are objections besides that, which, not being financial, I can not touch upon, to the employment of Indian troops in that way; but looking at it from the financial point of view it involves an admission that there are in India more troops than are required for Indian purposes; and, if that admission is true, then the Army in India ought in my judgment to be reduced; and I am afraid that, if people get into the habit of relying upon India as a country from which you can draw troops when you please, they will find that they are relying upon a broken reed. I do not mean by that to reflect in the slightest degree upon the Army in India, but I mean that they will find, when the occasion arises, that they cannot get that which they want. That, I confess, I feel very strongly.

16,336. As I understand, you have some doubts about the desirability of looking upon India as a power that can lend temporarily in time of complete peace a few of her troops for special services, such as in Egypt; but you deprecate chiefly the idea of looking upon India as a source from which England might draw in time of difficulty?—That is what I mean. I, of course, do not say that you should not remove a few battalions, or that danger would result in ordinary quiet times if you did; but you ought not to look upon the Army in India as a reserve for England, and you ought not to keep any troops in India with that view and for that purpose. Of course, I am not speaking of a great and overwhelming national necessity which puts aside all rules, in which you must do anything and everything that you can. I am speaking of a state of things short of that.

16,337. (*Mr. Buchanan.*) You said a minute or two ago that your calculation of the amount of military force in India was based upon the idea of what India would want as an independent power?—Yes; I did say that, I admit. But, what I meant was that it was not based merely upon what was required in India for police purposes. No great State keeps its army only for police purposes. You do not want any army in England at all, for instance, for police purposes, or hardly any; but what I meant was that you had to look to the possible requirements of India in all ways, as you would look upon those of a separate State.

16,338. The reason I asked that was to lead up to this other question, in view of your last answer to Lord Welby. Then you would not be disposed to keep up any force in India for Imperial purposes which might be necessary outside the limits of India?—No.

16,339. (*Chairman*). The Imperial Government argue that India made a considerable saving by the abolition of her navy, and the transfer of a great part of the duties it performed to the Imperial Navy. It is said that the local navy cost India 300,000*l.*, and more, at the time of its abolition, and that the same kind of force would cost a great deal more now owing to the greater costliness of ships and armaments. Do you consider that the abolition of the Indian Navy was financially an advantage to India?—I cannot answer that question. It took place before my time, and I never had any occasion to look into it.

16,340. You are aware that, under a decision given by Lord Rosebery, India now pays 100,000*l.* for the use of a certain number of Imperial ships stationed in Indian waters. Have you formed any opinion upon that arrangement?—No.

16,341. It has been suggested that India should be treated, in paying for defence, like the self-governing

The Most Hon. the Marquis of Ripon, K.G., &c.

18 Mar. 1897.

colonies. Is it not the case that those colonies, the Cape perhaps excepted, cost the Imperial Government very little for army services; and that the Imperial Government holds that the colonies ought to pay the full charge of military defence? Is it not further the case that the Imperial Government does consider that those colonies should contribute to the Navy, and that Australia has set a precedent and makes a contribution to the Navy?—Yes, it is true that the Australian colonies do make a certain contribution; but that is really very much the question which I answered before, that I do not think that any change in that respect is desirable. It must be borne in mind that any extension of that principle of the Australian arrangement is one that requires to be very carefully considered. It is, I think, a fixed rule now-a-days of naval policy that you must have your Navy perfectly free: that the Navy ought not to be tied down to be at any particular place at any particular time; that the defence of the British Empire in all its parts may often be more effectually carried out by the Navy upon the great trade routes than it would be in the immediate neighbourhood of our commercial ports; and this is the difficulty even in the Australian arrangement. I think there is a difficulty in tying up in any way the ships of the British Navy to be at any particular place at any particular time in the event of hostilities. That is another reason for being very careful before you make that sort of arrangement.

16,342. But still there is the principle that, as far as military defence is concerned, the Imperial Government holds that the colonies should pay the charge?—Certainly, that is the principle.

16,343. And with regard to the Navy—we have seen it in the Australian case—the principle is maintained that a contribution should be made—we are not now talking of the limitations under which it should be made?—That depends on an arrangement which has been made with the self-governing colonies; you have no such arrangement with the Cape; you have no such arrangement with Canada.

16,344. No, but we have with the Australian colonies?—We have with the Australian colonies.

16,345. I am only speaking of the principle?—I think the arrangement with the Australian colonies a very good one. It will expire, I forget now exactly when, but soon it will have to be reconsidered. I hope it will be renewed in some form or another.

16,346. (*Mr. Courtney.*) But does that arrangement clearly recognise the principle for which you contend?—Not altogether.

16,347. Not the principle of contributing a share of the cost of the Navy?—Yes, so far as that is concerned.

16,348. It is a demand for a localised Navy?—To a certain extent. As far as I remember, it does not recognise my principle fully.

16,349. (*Chairman.*) You know the very difficult questions that have arisen of late years between the Indian and the Imperial Governments on the subject of the charges for troops that have been lent?—Yes.

16,350. Would you wish to see some arrangement made, which would prevent that difference of opinion which almost invariably occurs when a question of such an expedition arises in which the Indian troops are asked to take part?—I should very much wish to see something of the kind if it can be done.

16,351. Have you seen the strong opinion expressed by Lord Northbrook in favour of such an arrangement, an opinion in which, I may add, Lord Lansdowne concurs?—Yes, I have seen the opinion.

16,352-3. The Indian Government has on several occasions been asked to contribute the ordinary pay and allowances of her troops borrowed for foreign expeditions. Lord Northbrook suggests that such a contribution should not be enforced without the consent of the Indian Government; that the contribution should only be made if Indian interests are concerned, and that a general definition of Indian interests should be formulated by agreement between the two Governments and embodied in a Treasury Minute. Lord Lansdowne, as I understand him, is not quite satisfied to leave the decision entirely in the power of the Indian Government, and would prefer an arbitration. Would you favour us with your view as to a possible solution of this difficulty?—In the first place I would say, as regards the question of pay or of the ordinary pay of troops employed out of India, using the word "India" in that sense not as strictly confined to the limits of British India, but including that which is in the sphere of the influence of India to use a modern expression, that I am inclined to desire that the same principle should be applied to any troops so lent by the Indian Government as is applied to the troops lent by the British Government to India, and that upon both sides the charges should be regulated in the same way; that as India pays, speaking broadly, all the expense of the troops that are lent to her for employment in India, so, if we borrow troops from India, we should begin by undertaking to pay all the expense of those troops. But then would arise afterwards the question whether Indian interests were concerned in the expedition for which the troops were employed, and whether she should make any contribution to the general expenditure of that expedition. That is the principle really upon which the English Government has recently made payments to India. You know she made payments to India after the last Afghan war. She ultimately, after a good deal of discussion and difficulty, made payments in regard to Lord Wolseley's first Egyptian campaign, of Tel-el-Kebir, and that is the principle on which I should like to see the payment made. I should like, when Indian troops are lent to England, to see India treated exactly on the same footing as England is, when English troops are lent to India. But then there would undoubtedly, in certain cases, arise a subsequent question whether Indian revenues should bear any portion of the expense of the warlike operations on account of the interest of India in those operations. It is on that principle that I think the arrangement should be made.

16,354. You refer to Lord Northbrook's suggestion?—As to Lord Northbrook's arrangement, I do not conceal from myself that it would be a very difficult thing to draw up the proposed Treasury Minute; but I think it would be a very good thing if it could be drawn up so as definitely to determine what course was to be taken. I doubt whether such a Minute would give much occasion for arbitration, but if there was an opening for any arbitration, I should be in favour of it, in order to avoid, what I think has been called in some questions and answers before this Commission, the scandal of the disputes which sometimes take place, and are prolonged for length of time, between the two Governments.

16,355. Lord Northbrook draws a distinction between questions in which policy is involved and questions of administration?—I understand your question now to apply, not to questions of administration, but only to the other questions?

16,356. Quite so?—But when you use the word "policy" it raises a serious question. I do not think you can go to arbitration upon any question of policy.

16,357. No, that was Lord Northbrook's view?—You must lay down in your Treasury Minute—if you can do it, but I think it is a very difficult thing—definite rules such as could be interpreted, say, as I think it has been suggested, by some person of legal eminence who should be employed as arbitrator; but you cannot put questions of policy to any such arbitrator.

16,358. (*Sir Ralph Knox.*) Do you not think that in the Eastern seas India's interests may be regarded as sufficiently involved to cover such an arrangement as the use of India's troops in any expedition that may be determined upon, provided no extra charge is thrown upon the Indian revenues?—With regard to that point, I prefer what I have stated, that India should be treated exactly on the same footing as England is. If you borrow Indian troops you should begin by paying the whole of the expense of them, and afterwards you might consider whether India should make any contribution towards the general expenses of the expedition.

16,359. (*Mr. Courtney.*) You said, I think, borrowed for use outside the sphere of Indian influence?—I did. Sir Ralph Knox, of course, extends that interpretation considerably.

16,360. (*Chairman.*) Well, one is tempted to ask what your Lordship would consider to be the sphere of Indian influence?—I do not mean to say that there are no Indian interests outside the sphere of the influence of India.

16,361. What kind of limitation would you imply by the sphere of Indian influence?—That is the great

difficulty in the way of laying down any general rule. I do not feel myself at present in a condition to do so. I wish it could be done, and I daresay the wisdom of this Commission will be able to do it.

16,362. (*Mr. Courtney.*) Would the Malay States, for example, be within the sphere of Indian influence?—That is a very difficult question to answer.

16,363–4. (*Mr. Mowbray.*) Well, would the Malay States come within your definition of Indian interests, when you told us that the strength of the Indian army was calculated for Indian interests?—No, what I was thinking of in that definition was Afghanistan. That I do consider now to come within the sphere of Indian influence.

16,365. In fact, all your remarks about these possible expeditions must be taken subject to the limitations which you have already laid down, that you object to the use of Indian troops outside what may be generally called the limits of India?—Yes, they may be taken so.

16,366. On the ground that such use implies that you have more troops in India than you really require for Indian purposes, and therefore you object to it?—Quite so.

16,367. (*Chairman.*) Lord Northbrook laid down as, I think, beyond doubt in his mind, that questions affecting the Suez Canal were Indian interests. Would you admit that?—Yes, I think they are. It is certainly a large Indian commercial interest; and it is an Indian interest in regard to the transport of troops.

16,368. Then again coming to a minor instance, take Zanzibar. We have understood that India has commercial interests there. Would you say that Zanzibar is an Indian interest?—I do not think the Foreign Office thinks so, because they took it away from India and undertook the management of it themselves. There used to be an Indian officer at Zanzibar. If you are looking to every place where India has commercial interests, you look to a large part of the world—you look to Australia. There is a good deal of trade between India and Australia now-a-days and an increasing trade.

16,369. At present you will observe that, if England asks to borrow Indian troops, somebody has to define on each occasion what is the Indian interest, and generally with a great deal of friction?—Yes.

16,370. It is not as if by not attempting to define it you escaped a good deal of difficulty?—I should be myself extremely glad if it could be defined. I only say that it seems to me to be a very difficult thing to define: if you could draw up a Treasury Minute of such a nature that you could lay it before a judicial person, and he could tell you in any particular disputed case what he believes to be the true interpretation of the document, provided the questions referred to him are not questions of policy, then I think you might be able to work it; but I am afraid the difficulty of drawing up the document would be very great.

16,371. (*Mr. Courtney.*) Must not the question referred to this legal personage be always a question of policy?—Not necessarily if the Treasury Minute could lay down general principles upon which the cases are to be determined—such a principle as a geographical limit. But, of course that is a question as to which I cannot understand any dispute arising.

16,372. If you could once settle the geographical limits, you need have no reference?—No.

16,373. (*Chairman.*) But taking Mr. Courtney's question; these administrative differences of opinion do not always involve policy, do they?—No.

16,374. Let me take Lord Rosebery's award about the Navy—the question was simply this. It had always been laid down that a certain squadron should be kept on the coast of India, in the Persian Gulf and for Indian purposes, which last was a disputed point; but also it had been arranged that for this purpose so many Imperial vessels should be kept?—Yes.

16,375. I think the arbitration was to settle the fair amount to be contributed for these ships. As far as I recollect, the Admiralty put forward something like 120,000*l.* as the actual cost of these ships. India had been contributing 70,000*l.* Well, that was really not a question of policy, but a question of what the fair cost of the ships was?—Yes, that is quite a question upon which you might have an arbitration; you had an arbitration, only you had Lord Rosebery instead of a judge.

16,376. You see he arbitrated as Prime Minister?—Yes.

16,377. And, I think, the India Office thought the Prime Minister had a bias?—Possibly.

16,378. (*Mr. Courtney.*) But, as I understand, the settlement, even if it could be drawn up, would not amount to more than this:—*primâ facie* Indian troops borrowed by the United Kingdom should be paid for by the United Kingdom as British troops borrowed by India are paid for by India. That being the rule, any special case might raise the question whether India had an interest sufficient to require a contribution from India?—Yes.

16,379. But, if that special case remains over for consideration, it must always be a question of the interests of India?—Yes.

16,380. That is not a question which could be referred to legal arbitration. It is a question of policy?—I agree to that; but then I understand that what was contemplated was that a Treasury minute should be passed laying down certain general principles upon which that question was to be determined: and I gather that they were rather of a geographical description than of any other description. And, if any dispute could arise under such a system, then I think that it might be referred to an impartial arbitrator.

16,381. Yes, but if you have defined geographically the limits of Indian interests, any dispute that could arise then would be of a very trumpery character?—If you used vague words of any kind disputes would arise, but I was not contemplating that. I so entirely agree with the view that has been taken that these disputes are very unfortunate and very much to be deprecated, that I should like to see any workable and proper system adopted which would get rid of them by a final decision; and that is the reason why I have gone as far as I can in regard to that matter, but I am not very hopeful in regard to these points which have been discussed. The other question which Lord Welby was coming to is quite a different point.

16,382. (*Chairman.*) You see, in the case of questions of policy Lord Northbrook thought that they could not be sent to an arbitrater, that the Government must decide them?—Yes.

16,383. And Lord Northbrook thought, not without some hesitation, that, if sufficient limitations were laid down, the Government of India should decide what was an Indian interest, and that India should not be required to pay, if the Indian Government did not assent—that is to say the Indian Government, under such circumstances, would be given an absolute veto upon the contributions?—Yes.

16,384. Lord Lansdowne, as I understood him, did not quite like that proposal, and he would have liked to have sent such questions to an arbitrator?—Yes.

16,385. You are aware of the extreme difficulty that the two Governments have always found in choosing an arbitrator?—Yes.

16,386. Of those plans, one of which would leave to the Government of India a veto under certain limitations, and the other refer the question to an arbitrator, which would you prefer?—I do not think that you could, and I do not think that you would ever get the British Government to agree to give the Indian Government an absolute veto.

16,337. Not even under such limitations as are proposed?—I do not think you would.

16,388. Then that leaves us very much as we were?—No; that rather points to the arbitrator, does it not?

16,389. Yes, but the arbitrator has always been a failure; arbitration has been a failure in different ways. First of all there has been immense difficulty in finding a man that both parties would agree upon, because both parties are imbued with the idea that any man that can be chosen has a bias. Then, after the arbitrator has been chosen and, probably after great delay, a decision arrived at, it almost invariably follows that both parties dispute the decision?—That is not peculiar to this kind of arbitration. That is a general difficulty which arises in all, or almost all, cases of arbitration, I am afraid.

16,390. Now passing, Lord Ripon, to the question of differences of opinion on matters of administration, Lord

The Most Hon. the Marquis of Ripon, K.G., &c.

18 Mar. 1897.

Northbrook suggested in that case a reference to a person of judicial standing, whose decision should be accepted by both parties. May I ask your opinion upon that suggestion?—Would you be good enough to define a little more what is the subject to be referred to arbitration.

16,391. The kind of question that would be referred to this person of judicial eminence and judicial standing would be such a case as the capitation rate, if ever that came up again?—Yes.

16,392. Such a question as to what was to be the contribution for a certain force of Imperial ships, stationed in the Indian waters?—Yes.

16,393. He would not decide on the policy whether ships should be stationed in the Indian waters; he would not decide the policy whether the capitation rate ought to be paid or whether more liberal consideration should be shown to the Indian Government; a definite question—for instance, that so many ships are to be provided—and the arguments on both sides as to what has to be the contribution for these ships would be put before him, and he would decide what that contribution should be; or such and such being the Home charges of the Queen's troops serving in India, what is the proper sum to be paid to recoup the Home Government those charges. That would be the form of question put to him—a practical question in each case?—I see no objection to that, provided you make your reference to him definite, and that it is outside of questions of policy. But we will take one particular point, which I observe Lord Northbrook pressed upon very much in his evidence. I am not expressing any opinion of my own, because I have not gone into it. Lord Northbrook expressed an opinion that the charges for depôts in England were greatly in excess of what they ought to be. Would your arbitrator have to go into that question, not into the question of what the charge was, but into the question of whether it was greater than it ought to be?

16,394. Well, I take it that this arbitrator would receive the two cases—the Indian Government would put forward their case, the War Office would put forward their case. It would be quite open to the Indian Government to state the grounds upon which they thought that such and such a charge was excessive; and, on the other hand, the War Office would state the grounds on which they thought it was not excessive. Take the case of depôts: It has been stated that these depôts are scattered about all over the country, and that it would be much cheaper if there were three or four central recruiting depôts. On the other hand I understand that the War Office say that for the purpose of effective recruiting you must have this great number of places where the recruits can be brought together. Of course, I am only giving you an instance, subject to correction by Sir Ralph Knox or Sir Donald Stewart. Each of those views, I take it, would be put before the arbitrator, and he would have to judge between them?—But that is really referring to him an important question of military organisation.

(*Chairman.*) Is it quite so, because he would only have to pronounce upon the cost of it; he would say "This is an excessive cost to India. If England "chooses to keep that system up; I do not think the "charge to India ought to be more than so and so."

16,395. (*Sir Ralph Knox.*) India complains not only of the scattered depôts but of the concentrated depôts?—But if you put before your arbitrator a definite question, and do not put before him questions with which he is perhaps not competent to deal, such as questions of policy, either general or military, I should be quite ready to agree that such a system would be far better than the present system of disputing these questions for years, and finally settling them to the satisfaction of nobody; but then both parties must agree to accept the arbitration.

16,396. (*Chairman.*) On the whole the difficulty of finding a man of high political position that both parties will accept has been so great that it has been almost impossible to find such a man; and when Lord Northbrook spoke of a person of judicial standing, I think he meant a man trained by his profession to weigh evidence and to decide upon it with the impartiality of a judge?—Yes, quite so.

16,397. You would agree at all events?—I should like to see it tried, and I should hope it might succeed.

16,398. Would you agree that it is desirable to find means to terminate quickly the differences of opinion which are sure to arise between independent governments engaged in joint operation, and thus prevent these terribly protracted discussions?—Yes, I quite agree with that.

16,399. It has been argued that the Imperial Government should contribute to the maintenance of Aden. On the other hand it is said that, if the Imperial Government take the whole charge of Malta and Gibraltar, garrisons of great importance to our intercourse with India, India should maintain Aden. Would you give us your opinion upon that point?—I should leave things as they are.

16,400. It is said that the Imperial Government does not sufficiently consult the Indian Government on questions affecting the two Governments, does your experience lead you to think that there is force in this criticism?—I certainly am of opinion that the Indian Government has on several occasions not been sufficiently consulted in regard to military expenditure. If you refer to the despatch of the Government of India—it is a very long despatch indeed—of the 29th October 1881, you will find that my Government drew attention to the large number of charges connected with the British Army, which had fallen upon the Indian Government, and which had added to the expense of the Army in India, upon most of which the Indian Government had not been consulted. That list does not include questions of great changes of military policy like the question of short service; it relates more to a series of comparatively small matters which during the period from 1864–65 to the date of that despatch, which is some 18 years, threw upon the Government of India, mostly without their being consulted at all, no less a sum than 800,000*l.* a year. That sum now probably is a million, or more than a million, pounds. Now I am not, of course, arguing that the Indian Government should determine the organisation of the British Army. That would be quite out of the question; but I do think that in all changes which are calculated to throw additional expenditure upon the Indian Government, they should be consulted. If you look at paragraphs 44, 45, 46, and 47 of that despatch to which I have referred, you will see the whole case there stated.

16,401. Have you summarised the matter already in saying that cases involving 800,000*l.* during that period of years, to which you allude, were put upon India, without India being consulted first?—Yes, I want to point out how necessary it is that the Government of India should be consulted, because there are cases in which a comparatively small expense in England is sometimes a considerable expense in India. At the end of paragraph 44 you will find this statement:—"The conversion, for example, of the first captains "of the Royal Artillery into majors gives the "officer so promoted an increase of only 5*s.* a day in "England; in this country the difference between "the pay of a major and a captain of artillery is 342 "rupees a month." Therefore, the cost of that change to India was very much greater than the cost to England. I do not mean to say that, if it was considered necessary for the organisation of the British Army that these first captains should be turned into majors, it ought not to be done; but I do distinctly say that the Government of India ought to have had a say upon it, and I also put it—I am very much inclined to put it almost personally to the Chairman—what is the condition of a Finance Minister who may have 45,000*l.* or 50,000*l.* a year put upon him, without his having had any say about it, by a power entirely outside his control? You will, I am sure, see what a difficulty that must make in the management of Indian Finance, and I think that is another reason why India has a claim for special consideration, because she cannot have—and I do not claim it for her—a determining voice in the organisation of the British Army; but, as the organisation of the British Army may throw heavy charges upon India, in addition to the previous expense of the troops, and without any increase whatever in the number of troops, I do think that there is a claim for important consideration in regard to her military expenditure. I do not say that all these changes may not be perfectly right—I daresay they are; but some of them, though very small matters, are reforms which it is much easier for a rich Government to adopt, than it is for a poor Government.

16,402. But, if it makes the Army more effective, that interests a poor Government just as much as a rich

one, does it not?—No doubt. That word "effective," you know, is a little wide; it is capable of being stretched a good deal.

16,403. Still, the great reforms which have been made within our recollection in the Army, have been reforms which, there is a pretty general agreement, have tended to make the Army more efficient?—Yes.

16,404-5. The abolition of purchase?—The abolition of purchase is not included in that list. They are all small matters; if you look at them, you will find that they are much smaller matters than those large questions of organisation, which I have not touched because they must be kept distinct.

16,406. (*Sir Ralph Knox.*) Does that 800,000*l.* include the increase of 2*d.* a day to the Army?—Yes.

16,407. That is a somewhat large matter, and that increase was made as the result of an inquiry by a Royal Commission into the recruiting of the Army. Do you not think that some such recommendation as that, coming from such a Royal Commission, must be admitted as a sufficient reason and generally applicable to the Army both at home and in India?—I am not at all arguing, Sir Ralph Knox, that those increases were wrong; I am only saying that they were put upon India without her being consulted, and when I think she might have been consulted and ought to have been consulted; and when you see such a difference in the result as in the case which I gave you about the majors of artillery, I think it is very likely that, if that had been put to the Indian Government, some mode of meeting it might have been devised. Do not suppose for a moment that I am claiming for the Government of India the right to interfere with the organisation of the British Army; I am making no such claim.

16,408. Nor to give her the power of veto on any of those changes?—No.

16,409. But to give her an opportunity of fitting the proposal to her convenience, as far as she possibly can?—Certainly. I am quite sure you will agree with me that no Chancellor of Exchequer would permit any outside power to put upon him charges of that kind without notice. This is an example of what I mean when I say that, particularly upon these military charges, the Government of India has not been as much consulted as I think it was entitled to have been.

16,410. (*Chairman.*) You are aware that it has been clear in several of these cases that the India Office was consulted, and that the Indian Government was not consulted. I think probably your Lordship will agree that in those cases where the War Office consults the Secretary of State that is a consultation of India by the Imperial Government. If the Secretary of State makes a mistake and does not consult the Viceroy, that has to be settled between the Viceroy and the Secretary of State?—But that does not touch my point; I am speaking for the Government of India, not for the Secretary of State. It may be as you say, but I think the Secretary of State in those cases always ought to consult the Government of India.

16,411. But, at all events, directly the Secretary of State has been consulted, the question passes away from any omission on the part of the Imperial Government?—No, it passes away from the War Office, but it does not pass away from the Imperial Government, if one of the Secretaries of State fails in doing what, I think, is his duty.

16,412. Yes, but in drawing a distinction between the Imperial Government and the Indian Government, when once the Indian Secretary of State has been made aware of this proposal, India has been consulted?—Theoretically, yes; practically, no.

16,413. Is there any other point to which you would wish to call our attention?—No, I think I have now touched upon all the points that I wish to bring before you.

16,414. (*Sir Ralph Knox.*) But do you think that, in the case of any changes such as those that are under contemplation, if a Royal Commission or an important Committee has considered some particular point and made recommendations, no action should be taken upon these recommendations by the Home Government until the question has been referred to the Government of India in detail, and considered in detail by that Government?—Speaking generally, I think the Government of India ought to be consulted. If they take an unreasonable time in answering, that is another question; but, looking at the condition of Indian Finance, particularly looking at what a serious thing it is to have your expenditure growing year by year in matters over which you have no control and of which you have no notice, I think there is a fair claim on the part of the Indian Government at least to have a power of making a remonstrance.

16,415. Would a communication by telegraph be sufficient, do you think?—It entirely depends upon whether you can make the communication clear; I think it would often be much easier to answer by telegraph than to make the original communication.

16,416. (*Mr. Buchanan.*) It has been suggested in some of the correspondence dealing with that subject that in a case like this, where a charge is being put upon India from here, the Royal Warrant should not be issued in India until the Government of India has given its consent—would you be in favour of this course?—That would be, as I understand it, giving them a veto. I am not prepared to go as far as that.

16,417. A suspensory veto?—I think they ought to be consulted before the matter has got to the stage of a warrant. The question must be considered before it is determined to draw up a warrant. That is the moment at which they should be consulted. I do not think that you could give them a veto upon a warrant. They might, of course, say "We are particularly "hard up just now; pray do not put this warrant "into execution in India immediately," and I should think they would have a very good ground for consideration in such a case; but I do not claim for them an absolute veto; I do not think that that could be done.

16,418. When you spoke of the consideration to be given to India in abatement of these charges between the two countries, what kind of abatements had you in view?—I had no particular kind of abatement in view.

16,419. In the early part of your evidence you rather indicated that India might get some abatement on the Home charges, the burden of which has so much increased upon her owing to loss by exchange?—I mean by that, that she might have favourable consideration upon those points. I will give a short example: I believe that the War Office think that a portion of the expense of the Head Quarters' Staff in England and of the War Office ought to be charged to India. Well, I think it is possible to maintain that view to a certain extent theoretically, though I do not myself agree with it; but I hold that that is a point where the favourable consideration, at all events, should come in.

16,420. But you do not mean to urge that the Home Government should bear a part of the loss caused to India by the fall in exchange?—No, I do not mean to suggest that.

16,421. On the other hand, would you urge any abatement of the charges between the two countries in any cases in which the charges put upon India might be looked upon as Imperial charges?—What case?

16,422. I was thinking of the case of Aden; I did not quite catch your answer?—My answer to that was, that I thought I would leave that as it stands. It has been suggested that Malta and Gibraltar, being on this side of the Suez Canal, are somewhat analogous to the case of Aden on the other side, but I do not myself see any necessity for reopening the question. It is quite a question for discussion. I have not considered it, consequently I cannot give a very decided opinion upon it.

16,423. Then take the cases of the Indian contribution towards the Chinese Legation, and the legations in China and Persia, do you think they are fair charges to put upon India?—None of these subjects have I considered, and I do not like to give an opinion upon them without having considered them. I think the two cases are not exactly on all fours.

16,424. Then are the abatements that you think might be equitably given to India, almost exclusively confined to military charges?—Mainly in regard to military charges I should say; but I admit the principle that she should pay for her army.

16,425. They are all to come after the 7*l.* 10*s.* capitation rate?—Yes.

16,426. India has to pay 7*l.* 10*s.*, or whatever sum may be fixed, for the capitation charge; but over and above that?—The capitation charge India pays now. It seems to me that, that having been fixed, it would be much better for both parties to adhere to it for the time for which it has been fixed.

The Most Hon. the Marquis of Ripon, K.G., &c.

18 Mar. 1897.

16,427. Assuming that India pays that, you still think that, in settling the accounts between the two countries, there might be equitable consideration given to India?—You have used exactly the words I should desire to use, equitable consideration.

16,428. (*Chairman.*) Equitable on both sides; equitable to the British taxpayer?—Quite so. I do not think that the Imperial Government is at all in the same position in regard to its finance, at least I hope not.

16,429. (*Mr. Buchanan.*) Do you think there is any risk of an equitable consideration not being given to the British taxpayer?—I was speaking exclusively of India. If you can prove to me that there are any equitable considerations that can be taken into account in regard to the Imperial Government, I shall be most happy to consider them.

16,430. Then one other question about the cost of the expeditions outside the limits of India. I gather that your opinion is that, whenever Indian troops are employed by the Imperial Government outside the sea limits of India, they should be paid for by the Imperial Government, and that afterwards it should be taken into consideration whether India ought to make a contribution to the cost of the expedition?—That is my opinion.

16,431. Where the Indian troops are employed outside the land limits of India, then, is India to bear the first charge? Supposing there is a war with Persia?—I did not include Persia when I spoke of the Indian sphere of influence. Persia would come under the other head; the question would have to be considered whether there were Indian interests in that Persian expedition, and to what extent they went.

16,432. Do you treat a Persian expedition in the same way as an expedition outside the sea limits of India?—Yes.

16,433. Then an Afghan expedition?—That I consider to be within the limits of the sphere of influence of India. I think you might really put the thing in this way. Expeditions which are commanded in chief by Indian officers and are under the sole direction of the Indian Government, might be taken to be expeditions of the first kind; expeditions which are commanded in chief and provided mainly from England, may be taken to belong to the second.

16,434. That might be subject, of course, to the obvious limitation that everywhere outside the sea limits of India the charges are to be borne by the Imperial Government?—Yes; in the first instance.

16,435. Then, after that, you would desire that the question of what contribution should be made by India, should be determined by some arbitrator, acting upon the terms of a Treasury Minute, which it might be possible to draw up?—I do not think that was put to me.

16,436. Then, what would be the procedure that you would have in contemplation?—What I understood to have been put to me was this; there is to be a Treasury Minute, which is to regulate these questions as far as it can; and the point to be put to the arbitrator under that Treasury Minute should be how a particular expedition was to be classed—the foundation of the arbitration was to be a definite minute.

16,437. (*Chairman.*) I think we must remember that Lord Northbrook's proposal was, not that the decision should lie with an arbitrator in such a case of policy as you are dealing with now, but that it should be absolutely in the power of the Indian Government?—Yes.

16,438. Lord Lansdowne did not like the idea of an absolute veto, even under those limitations, being given to the Indian Government, and he preferred the arbitrator?—Yes.

16,439. But the most fought-out proposal before us was Lord Northbrook's, which left the veto to the Indian Government?—Yes.

16,440. (*Mr. Buchanan.*) But what is the idea in your mind? Supposing you have the case of Indian troops being employed in some expedition over the sea borders of India, the Imperial Government is to bear the charges, and then it has to be considered whether India should contribute to the expedition; who is to determine what contribution India is to make, if she makes any?—If you could lay down definitely by a Minute of any kind the principles upon which the decision is to be based, and if it does not involve questions of policy, then I think you might go to an arbitrator in regard to it; but, if you do not lay down a definite principle, I do not see how he is to arbitrate; he cannot arbitrate out of his own head. Take the case of an expedition to Suakim; is India interested in it, and is she to pay for it? You would leave that to the arbitrator.

16,441-2. But you would be in favour of the Departments here at home endeavouring to draw up a general Treasury Minute, which should settle the character of the contribution that India, or the Home Government, should make?—A general minute. My belief is that, if a general minute could be drawn up, you would have very little use for your arbitrator.

16,443. Then you would be in favour of a Minute being drawn up, if possible, which should settle those questions?—Yes.

16,444. (*Chairman.*) There would then be no necessity to go to any arbitrator?—Probably not.

16,445. This minute would define, as far as possible, the Indian interests, and the Indian Government would then be bound to judge, in accordance with the terms of the minute, whether Indian interests were concerned?—Quite so, but I do not go that length; I think it is a one-sided arrangement; I should prefer the arbitrator to that.

16,446. (*Mr. Buchanan.*) Well, when we have got past that stage, section 55 of the Government of India Act comes into operation, and you have still got to have a resolution of both Houses of Parliament?—Yes.

16,447. And you would contemplate maintaining that?—I think it is important. I should contemplate retaining it, because it deals with the question of policy, which is not to come before your arbitrator.

16,448. Well, would not that decide the question of policy then?—Under my proposal that the whole of their expense is to be paid by the English Government in the first instance, I suppose that resolution would not be required.

16,449. Unless you altered the Act, that resolution would still be required, because it is imperative?—I thought the resolution was required only when any charge fell upon India.

16,450. (*Sir James Peile.*) Yes?—That is the law. The consent of Parliament is not required when any troops are employed outside India, but only when any charge falls on the revenues of India in consequence.

16,451. (*Mr. Buchanan.*) It would only be required when the charge fell?—Yes.

16,452. Yes, I see?—If out of the total expense of such and such an expedition, say, 500,000*l.* is to be paid by India, then you would have to have your resolution. I am in favour of the resolution because it deals with the question of policy.

16,453. But you do not think that the operation of that section of the statute has turned out favourably to the financial interests of India in the past?—I doubt if it has had any effect at all.

16,454. Well, it has always confirmed the judgment of the Home Government?—That is what I mean; I do not mean to say by that that I do not attach importance to the resolution; I do attach importance to the resolution, but in the past I do not think it has had any practical effect.

(*Mr. Buchanan.*) Except that it has always given a decision contrary to the opinion of the Government of India.

16,455. (*Sir William Wedderburn.*) I think I understand that this suggested arrangement would, in your opinion, tend to a fair settlement, because, of course, the Treasury Minute adopted beforehand would be upon equitable principles, without foreseeing the exact case to which it would be applied?—Quite so.

16,456. And that the interpretation of that Minute will rest with an independent tribunal of some sort?—That is what I mean, with the limitations that I have given.

16,457. Yes, and therefore, even if it is a few pounds one way or the other, that would not so much matter as the general belief in India that the case was being fairly and honestly dealt with?—I think that of very great importance, and that is the reason why I am favourable to a system which in itself I do not think I should have proposed—it is mainly with the view of satisfying India generally that her case has been impartially considered.

16,458. I think I am right in saying that the impartiality and independence of the Judicial Committee of the Privy Council is held in very high esteem in India?—I believe that to be the case.

16,459. Would you see any very strong objection, supposing the Judicial Committee were willing to undertake that duty of interpretation, to referring it to them?—I should hardly have thought that the Judicial Committee was the body required for the purpose. It is a large body, and I should rather have thought that an independent arbitrator, or, if you like it, three arbitrators, might have been devised, independently of the Committee; but I have no very strong opinion one way or the other about it. I think I should prefer an independent arbitrator—an arbitrator separate from the Judicial Committee, though he might be a member of the Judicial Committee.

(*Chairman.*) Would you explain the object of your question; are you applying your proposal to questions of policy?

(*Sir William Wedderburn.*) No, to the interpretation of the Treasury Minute.

(*Chairman.*) The Treasury Minute would apply to a question of policy—I only want to make it quite clear what you are arguing for. Are you arguing that the Judicial Committee of the Privy Council shall decide whether, in a particular instance——suppose, say, Indian troops have been asked for for Zanzibar—that is an Indian interest or not?

(*Sir William Wedderburn.*) I should only wish the Judicial Committee to interpret the Treasury Minute, apart from the question of policy.

16,460. (*Chairman.*) You would send the question of the despatch of these troops to the Judicial Committee of the Privy Council?—If the Indian Government differed from the Home Government as to the interpretation of the Treasury Minute; the matter would go before the arbitrator. All my answers must be taken subject to the limitations I have previously expressed. Sir William Wedderburn should understand that.

16,461. (*Sir William Wedderburn.*) Supposing the Treasury Minute were indeterminate on the question of policy, it would always be open to the arbitrators to say that it was indeterminate, and that they could not decide, in which case the Treasury Minute could always be amended to meet such cases?—Amended for the future?

16,462-4. Amended for the future, yes. Then I wish to ask a question on this matter of the loss by exchange, regarded as a ground of claim for consideration on behalf of India. The loss by exchange arises mainly from the necessity of paying Europeans at European rates?—Are you speaking of the Army?

16,465. I was rather referring to the civil administration, but also to the Army. That heavy charge for loss by exchange could in some measure be met by a gradual substitution of native agency, paid on the rupee basis, for European agency, paid upon sterling basis?—Certainly, if you employ more natives of India, you would not have so much money to remit to England.

16,466. That would be the way to meet, to a certain extent, that difficulty?—That entirely depends upon whether you can employ more natives of India.

16,467. I mean as far as possible?—Yes, I mean that another question altogether comes in, to what extent you could employ natives of India. My view, of course, has always been that you should employ natives of India as largely as you can; I look upon that as a very important matter. Not merely from the financial point of view, but for other reasons; but on the other hand I have always held, and do distinctly hold, that, as long as the British Government is in India, there must be a considerable employment of persons of British race in the Civil Service, and that there is an irreducible minimum in regard to the employment of Europeans below which you ought never to fall.

16,468-9. I think that necessity is quite admitted by all Indian public opinion; but I was only asking whether, when practicable and proper, the employment of Indian agency does not tend to meet this financial difficulty of loss by exchange, because a heavy additional burden has come recently in the way of compensation of European officials?—Yes, it would.

16,470. Of course that special charge would have been met, had the appointment in each of those cases been held, where possible, by an Indian official?—But you cannot deal with that question on purely financial grounds; it involves a great many other considerations.

16,471. I do not propose to do so. Then, with regard to the possible checks upon expenditure. I suppose the only ultimate check in all countries, which, directly or indirectly, tends to economy, is the unwillingness of the taxpayer to pay?—There is an unwillingness in all taxpayers to pay any taxes. There is what I think Mr. Canning, or somebody else, called an ignorant impatience of taxation, existing in all countries; but, although many taxpayers pay very unwillingly, still they pay. If the unwillingness becomes such that they will not pay, that is, of course, a serious practical difficulty.

16,472. The principal opportunity of making the taxpayers' voice heard is, I think, in the Legislative Councils through the independent members of the Legislative Councils?—I should scarcely have said that, in these days of the Press. I hope I shall not offend members of Parliament who are present, but I think the Press is much more powerful than Parliament, or any legislative assembly, in making the voice of the people heard.

16,473. But I think you attach value and importance to the opinions expressed by the independent members of the Legislative Councils in India?—Certainly.

16,474. Since the time that your Lordship was Viceroy an extension of the representation of the independent element has been accorded; have you considered whether that might still further be increased?—I have not considered that question very recently. I thought that the change which was made, I forget exactly when but not many years ago, should require a full trial before it was proposed to alter it. At that time I, myself, should in some respects have been inclined to make that representation more direct than it is under the Act; but I should not wish to imply by that that I think the Act should now at this particular time be revised.

16,475. The particular point which has been asked for by all Indian public opinion and by members of the Legislative Council is, that unofficial members should be allowed to move amendments upon the Budget and divide the Council upon it, in order to make more definite the objections that they have or the suggestions they wish to make?—That appears to me to be much more a political question than a financial question. To make such a change would involve something in the nature of establishing a Parliament in India. That is a very grave matter for consideration. I do not think you could adopt that course solely upon financial considerations.

16,476. I was bringing it under the question before us, as a part of the financial control?—Yes, but I can only answer it upon its financial aspect before this Commission.

16,477. But as a financial check it would be valuable if it were unobjectionable politically?—It might or it might not. I am not convinced that all legislative assemblies are economical—I am not even quite convinced that legislative assemblies that meet not far from here are in the present day very economical. I am not clear that it would produce a reduction in the total expenditure. That is what we are looking at; we are not looking at the details of any part of the expenditure, we are looking at a reduction in the total expenditure; whether it would reduce that or not I could hardly say.

16,478. Then another method of checking and controlling expenditure was referred to, namely, in the House of Commons?—Yes.

16,479. You have experience of both Houses?—Yes.

16,480. It has been suggested that, when the East India accounts are received (which they will be in a few days), they should be referred to a Select Committee to consider them in a mature way, and to report to the House?—I would say, in the first instance, in answer to that question, that I fully recognise the unsatisfactory nature of the discussions that take place on the Indian Budget in these days under the present system. I think that that is very unsatisfactory, and I should like to see it amended. I have no particular objection to the appointment of a Select Committee, though whether it would have the desired effect or not I do not know. I do not think that either the Secretary of State in Council, or the House of Commons, or any other body in England, can really deal with the details of Indian expenditure. What I said at the beginning

The Most Hon. the Marquis of Ripon, K.G., &c.

18 Mar. 1897.

of my examination I reiterate. The question is a question of policy. Policy it is which the Secretary of State and the Cabinet and Parliament have to deal with. No great questions of policy can be decided by the Indian Government without the sanction of the Secretary of State; and, if you want to make a material reduction of the Indian expenditure, you must consider it in the light of policy. That is what I think is the particular function of the Secretary of State, and, after him, of Parliament, but to deal with the details of an Indian Budget ought, in my opinion, to be left to the Government of India. As an ex-Viceroy, perhaps I am a little jealous of the Viceregal power, but I think that function ought to be left in the main to the Governor-General in Council; but keep your eye, if you want to be economical, upon questions of policy.

16,481. But would not Parliament be in a better position to judge of the question of policy, as conjoined with expenditure, if there were, at any rate, an attempt made to sift and consider carefully these points, before they are offered for debate on the occasion that is generally called the Indian Budget?—I do not think that discussion would affect the policy much, because the policy would have been decided upon, and the money would have been spent. I am not putting this as an argument against the proceeding you are suggesting, but only against its having any very large effect. I should like to make one remark: under the old system of the East India Company it came about that, as their charters were granted for limited periods, when that limited period was nearly run out, Parliament was in the habit of appointing a very important committee, upon which it generally put, if I am not mistaken, some of the foremost men in the House of Commons, to look into the whole question of the Indian Government during the period of the expiring Charter, and to make a full report upon the whole subject. Now, it has often struck me, that by the abolition of the East India Company, and the fact that there are no limited charters now running out, that solemn—if I may say so—inquiry by the principal men in Parliament does not take place; and I have thought that it might now be a very good thing to have such an inquiry regularly fixed, not yearly, because that is a great deal too short an interval, but at considerable intervals, so that at the expiration of a certain period of years a committee of the kind I have mentioned should be appointed to look into the state of the Indian Government. I think you would deal with policy more thoroughly in that way than you would with your annual Committee examining the Budget.

16,482. Then, would you be in favour of enacting that there should be such an inquiry, say every 20 years, as there was at the renewal of the East India Company's Charter?—I have not in my mind an Act of Parliament, and I cannot say whether an Act of Parliament would be necessary for the purpose. I think the system would be a good one.

16,483. Because ever since the 20 years elapsed after the inquiry in 1856, we have been trying to get such an inquiry every 20 years, and we have not been able to get it; but if it were enacted, then it would come automatically. There is just one other point on which I wish to ask a question. I think, during your time of office in India, one of the most important reforms introduced was that in the direction of local self-government?—Yes.

16,484. I think that had to a great extent a financial bearing; is it not the case that the Government felt themselves almost driven to some measure of that sort, owing to the extreme financial difficulty of meeting all the claims for increased administration?—My recollection does not lead me to think that that was a determining consideration in the policy; you may be quite right, but I do not remember it.

16,485–6. I do not wish to deal with the other reasons, because we are considering specially the financial side. But I think also, from my recollection of the minutes and memorials, that there was a strong idea of economy by obtaining the voluntary service of the respectable villagers and others, instead of the low-paid agency which in India is of so unsatisfactory a kind, in the improved administration?—My memory does not enable me to say that that was a determining consideration. It may have been the case, but I do not remember it at this moment.

16,487. I rather wished to bring out this point. One of the difficulties, it appears to me, in the Indian administration is that, however good and undoubtedly good the agency may be at the top of the hierarchy, we have to deal with the people ultimately by a lower-paid agency, which is of a peculiarly unsatisfactory kind in India. I thought, therefore, that, besides the other general benefits, there was very great saving from employing the unpaid agency of respectable citizens in place of this agency of *peons* and *chuprassis* which we are driven to use in our ordinary official administration. That was the point I wished to bring out?—And, as I say, I do not remember having considered that point particularly. I am very glad if I may gather from your question that it has had that effect.

16,488. (*Mr. Naoroji.*) I take it for granted that a certain irreducible minimum of Europeans is necessary in India?—Yes.

16,489. As you suggested, that necessity arises from the necessity of maintaining British rule in India; is it not so?—Yes.

16,490. If that is the case, it is a large and vital British interest which necessitates the employment of the Europeans as absolutely necessary, as you have said. And I will grant also that the employment of Europeans up to that irreducible minimum is beneficial to the Indians also—I take both for granted, that it is beneficial to both; it is important to British rule and Britain itself as well as to the Indians, I take that for granted?—Yes.

16,491. Well, then, in that case, as it is of vital importance to Britain as well as to India, is it not fair that Britain should take some share in the expenditure occasioned by the employment of Europeans?—No, I do not think so; I think that the Government of India, speaking broadly, must be paid for by India herself.

16,492. Yes, the Government of India must be paid for by India herself as far as the Indian agency is concerned; everything that may be necessary for India; but when you impose a special agency, a foreign agency, which introduces a very uneconomical or a very destructive economic condition in India; and it is entirely owing to the necessity, the vital necessity, of Britain itself; is it not fair that Britain should contribute something towards the maintenance of that vital interest?—But does not that raise the whole question of whether the British Government is to the advantage of India or not?

16,493. The advantage of Britain or not?—The advantage which England derives from the possession of India is a very large question, upon which a great deal might be said both ways.

16,494. That is all that I meant, that if it is to the advantage of India, it is also to the advantage of England; and this particular employment of Europeans is necessitated entirely for the advantage of England. I allow the advantage to both, and therefore I say Britain is, in fairness, bound to contribute something towards the advantage which is especially attained by this expenditure, I mean the expenditure on Europeans which is an absolute necessity for English rule?—I understand your argument, and it is not an unnatural one.

The Witness withdrew.

(Adjourned till Thursday next at 11 a.m.)

At the India Office, S.W.

FORTIETH DAY.

Thursday, 25th March 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. R. G. C. MOWBRAY.
Mr. COLIN G. CAMPBELL, *Secretary*.

Mr. DADABHAI NAOROJI, a member of the Commission, examined.

Mr. Dadabha Naoroji.

25 Mar. 1897.

16,495. (*Chairman.*) Will you state what public position you have held, and what opportunities you have had of becoming practically acquainted with public affairs relating to India, and to what class of questions you have given special attention?—From my early days I have been associated with those who have been working for the social, political, and material improvement of India, and was a member of various reform associations in Bombay, sometimes as president and secretary; in 1851 I founded the "Rast Goftar," a cheap weekly journal in Bombay, of which I was proprietor and editor. After some years' service in the Educational Department, I was in 1854 appointed Professor of Mathematics and Natural Philosophy in the Elphinstone College, being the first Indian appointed to a professor's chair. In 1853 I was one of the founders of the Bombay Association, and at the inauguration I declared my political creed of faith in the conscience and justice of the British people. In 1855 I and two other Parsi gentlemen opened the first Indian business firm in England, in London and Liverpool, and I remained in business as a merchant and commission agent till 1881. In 1867 I, with others, founded the East India Association in London, and induced some leading Indian princes to subscribe an endowment for it. In 1869 we founded the Bombay branch of the East India Association, and some years subsequently, the Bombay Presidency Association. In 1873 I gave evidence before Mr. Fawcett's Select Committee on Indian Finance. In 1874 I was Dewan, or Prime Minister, of Baroda. In 1875–6 and afterwards in 1881 to 1885 I was a member of the Town Council of Bombay, and in 1885–6 I was appointed a member of the Legislative Council of Bombay. In 1885 I was one of the founders of the Indian National Congress and presided over the meeting at Calcutta in 1886. In 1892 I was returned M.P. for Central Finsbury, and was a member of the House of Commons till 1895. In 1893 I visited India to be president over the ninth Indian National Congress at Lahore, and on the occasion was accorded a reception of a marked kind in various parts of India. For the last 40 years I have paid special attention to the material condition of the masses in India, and have published books, pamphlets, and speeches setting forth my views on the subject.

16,496. In what form would you prefer to give your evidence?—I have handed in to the Commission six printed statements. These statements contain the facts, figures, and authorities upon which I rely, and I am prepared to be cross-examined upon them.

16,497. The statements which you have put in deal with a variety of subjects which perhaps hardly fall within the scope of the reference to us. Of course you are aware our Commission only permits us to inquire into the administration, management, and apportionment of expenditure, and I should like to ask you to let it be understood between yourself as a witness and the Commission that you are prepared to limit yourself within reasonable bounds to the instructions of the Commission?—Oh, I am quite within the instructions of the Commission in what I have said and in what I propose to say.

16,498. Perhaps you could place before us in some concise form the leading facts and figures upon which you rely in those statements?—The headings under which my evidence falls are: the Administration of Expenditure, the Apportionment of Charge, and Practical Remedies. Upon each of those headings I am prepared to state categorically my most important contentions on behalf of India.

16,499. Will you state your propositions with reference to the first heading you mentioned, the Administration of Expenditure?—Yes. I consider that the Act of 1833, confirmed by the pledges contained in the Queen's Proclamation of 1858, conferred upon Indians a right to their full claim and share of public employment and emoluments and voice in their own expenditure, in order to secure their happiness and prosperity and good government, and attachment to British rule, and the prosperity of the British people themselves. I maintain that the administration of Indian expenditure is not conducted according to the principles thus laid down, and that the non-fulfilment of these pledges has produced poverty and degradation; the inherent and essential defect of British administration being the financial, political, and intellectual drain, which is inseparable from a remote foreign dominion exercised in disregard of the sound principles above stated. In my six statements I set forth the facts of India's poverty, as shown by the comparative production and consumption of each province, by calculating the average production of Indian per head, by analysing the trade returns, and by reference to the small amount of revenue obtained after exhausting all sources of taxation. I maintain that the impoverishment and degradation of British India has been caused by the compulsory employment of costly foreign official agencies and foreign capital (represented by the public debt, political and commercial) beyond the means of the taxpayer, resulting in a drain from British India, financial, political, and intellectual—aggravated by heavy frontier Imperial war expenditure—and that, indirectly, the foreign dominion has caused a further drain by creating a practical monopoly in favour of foreign private capital, which reaps the advantage of British India's material resources.

16,500. That is a general statement from your point of view upon the administration of India; but it does not give us your opinion on the questions more immediately before us, namely, upon the different branches of expenditure, to explain the details of which we have had before us the official witnesses. Have you anything to state upon those branches of expenditure, and upon the official evidence that has been placed before us?—Yes. Shall I wait until later, or shall I give my views now.

16,501. I will take the question, if you wish it, later; I am only anxious at the present moment to know how far you intend, by the answer you have given, to express your opinion upon the administration of expenditure?—Yes, that is the general answer I have given; shall I go now to the question of the machinery?

16,502–4. I think, if you are prepared to go on with that subject, perhaps you had better take it at this point?—

Mr. Dadabhai Naoroji.

25 Mar. 1897.

Very well, I will give such criticisms as I can offer upon the administrative machinery of the expenditure of India. When in August 1894 we asked for an inquiry, Sir Henry Fowler said that a very strong indictment of the British Government of India had been brought before the House and the country (15th August 1894). And then Sir Henry Fowler, when promising a Select Committee, himself challenged: "The question I "wish to consider is whether that Government, with all "its machinery, as now existing in India, has, or has not, "promoted the general prosperity of the people in its "charge; and whether India is better or worse off by "being a province of the British Crown." And this is the question to which an answer has to be given by this Commission, whether the present machinery of administration and management of the military and civil expenditure incurred in both countries "has or has not," as one of its results, "promoted the general prosperity of the people" of British India. I say that it has not promoted the general prosperity of the people. In the statements I have given in I have considered every aspect of this fact, which was the most important point of the inquiry. The most important criticism, therefore, to which this machinery is subject is that it is based on the basis of foreign domination. This is its worst evil. It is a machinery for what Lord Salisbury very correctly calls bleeding. However perfect the mere rules of the work to be done by the officials may be, the system or machinery is a crushing machinery. It produces in the words of Lord Salisbury a "terrible amount of misery." The machinery not only "bleeds" directly, but by the economic exhaustion of the people, leaves the resources of the country entirely at the mercy and disposal for exploitation by foreign capitalists. I have in my six statements shown this fully. India cannot afford to be governed by this crushing machinery. The Duke of Devonshire and Sir William Hunter have quite truly pointed out that India must be governed by its own native labour and at native rates. In the rates, although with equal efficiency, there will be at least one-third saving according to Government's own scale, but I feel that more saving can be made. In reality, the employment of a native is a whole saving to the country, inasmuch as it provides a native, and the money remains in the country to fructify in the people's own pocket, instead of its being consumed and carried away by somebody else. This machinery inflicts the triple calamity of depriving the Indians of wealth, employment, and experience.

16,505. How do you propose to improve the machinery in the way you desire?—One of two ways, or partly both ways, must be adopted to improve this machinery and remove its chief fundamental evil. Both these ways I have already indicated. 1. That native labour must replace foreign labour; and, 2. If any amount of foreign labour is considered as absolutely necessary as it is insisted on, as being necessary for the maintenance of British rule in India, and British supremacy in the east, the British Government ought, in justice, pay a share for its common interest with that of India. The machinery may be divinely perfect in its rules, but in its constitution or personnel it has a deep evil, and this evil ought to be remedied if Britain is to be a blessing and a benefit both to India and itself. At present this machinery renders Britain an evil to India instead of a benefit and blessing. I have not much intervened in examining details of departmental expenditure which have been examined with much trouble by the chairman, and so also the question of financial control. Such examination at proper intervals, as used to be the case in the time of the company, serves the important purpose of keeping the Government up to mark in case of expenditure. But unless the whole administration of expenditure is put on a natural basis, all examinations of details of departmental expenditures, &c., will be only so much "palliating with symptoms," and will bring no permanent good and strength either to the Indian people or to the British supremacy. However much you may change the rules or system of work, as long as this evil lasts as at present there cannot be good or beneficial government of India. My statements fully prove this. As this return (192 of 1892) on the salaries shows, there are about Rx. 15,000,000 paid annually for salaries, &c., above Rs. 1,000 per annum. Add to this all that is paid to the European soldiers, and in a rough way it can be said that about 18 or 20 millions of Rx. are paid to Europeans every year. I asked for the correct amount but have not obtained it. Economically it is a loss to Indians, and more especially the portion that goes clean out of the country as savings and pensions and salaries paid in this country. I take an instance: Suppose a European servant draws a salary of Rs. 1,000 a month. He uses a portion of this for all his wants of living, comfort, &c., &c. All this consumption by him is at the deprivation of an Indian who would and could, under right and natural circumstances, occupy that position, and enjoy that provision. This is the first partial loss to India, as, at least, the services enjoyed by the European are rendered by Indians as they would have rendered to any Indian occupying the position. But whatever the European sends to England for his various wants, and whatever savings and pension he ultimately, on his retirement, carries away with him, is a complete drain out of the country, crippling her whole material condition and her capacity to meet all her wants, a dead loss of wealth together with the loss of work and wisdom, *i.e.*, the accumulated experience of his service. Besides, all State expenditure in this country is a dead loss to India. This evil of bleeding must be removed from the present machinery of administration of expenditure as I have said, by treating India fairly for common purposes and by substituting native labour for foreign or European labour. The Rx. 20,000,000 are not by themselves the only evil. They return in the shape of capital and drain away a great deal more.

16,506–7. I beg your pardon. Would you explain that statement more fully?—There is regularly a transfer of a large portion of this Rx. 20,000,000 to this country adding to its capital; a portion of that again comes back to India as capital. Well, we are left entirely helpless, because we cannot make any capital, and, therefore, the foreign capitalist exploits, or uses to his benefit, all the resources of the country and carries away so much more in profits, in interests, and in every way. If we were free to accumulate our own capital fully we should be able then to compete on equal and fair terms with the foreign capital coming in, and there would be perhaps more benefit than evil by the foreign capital. At present we suffer it as an evil because we are helpless and on the ground, and foreign capital comes in and develops the resources for their benefit, and carries away the whole profit that is obtained out of those resources. We are simply used as common labourers, mere hewers of wood and drawers of water. That is the only position to which we are reduced.

16,508. That goes a little bit beyond my question. I understand the ground upon which you base your opinion, but I do not quite connect it with this Rx. 20,000,000. Do you think that a soldier who receives his part of the Rx. 20,000,000, immediately lends it out in India again, and do you make that a grievance?—No, it comes indirectly in the usual economic way.

16,509. I want to connect it with this particular Rx. 20,000,000. I want to connect it with the soldiers' or civilians' pay, and I cannot follow you when you say that the soldier with his 1*s.* a day or 1*s.* 6*d.* a day, and the civilian with his so many rupees a month lays it out so that it returns in the shape of capital and drains away a great deal more. I confess that I am unable to connect the two things?—It does not do it directly, but the economical result of that is that a large portion of the capital of the wealth of India is drained to this country and goes back to the other country in the shape of capital not exactly earmarked that it is the 1*s.* of the soldier or that it is the 100*l.* of the civilian that exactly formed that capital, it all comes into the great reserve of the capital of this country and from it again the capitalist takes it away back.

16,510. And therefore, you do think it an evil if the soldier, out of his large surplus income, invests it in any Indian securities, that is a mischief to India, is it?—The evil is in this way, that India therefore is unable to make any capital to make any benefit out of its own resources. The foreign capitalist comes in, both European as well as native — there are capitalists from Native States — and works up those resources and carries away the profit out of the country again. It is so much additional loss to the country on account of its helplessness. The original cause being these Rx. 20,000,000 drawn from them.

16,511. And the deduction which I must draw from that is that the investment by the soldier of his surplus pay in Indian securities is an evil to India?—Yes, in a way, I say that it comes indirectly.

16,512. I only want to follow that—that you regard the investment by the soldier of his surplus pay in Indian securities as an evil to India?—It comes in indirectly, it is economically an evil.

16,513–4. (*Sir William Wedderburn.*) To illustrate your meaning, if there is a gold mine in Mysore which yields 10 per cent., the Indians there, having no accumulated capital, are not able to undertake that enterprise, and this 10 per cent. profit goes to English capitalists instead of to Indian capitalists, so that India gets no benefit from her gold

mines. That, I understand, is the sort of idea?—Yes, and so with regard to all resources.

(*Chairman.*) I was under the impression that that was the meaning in Mr. Naoroji's mind. Only you observe that he connects it with the particular payments made to the soldier and civilian; and it seemed to me that to connect the question of investment of capital with the surplus pay of the soldier and the civilian, and with what they do with that surplus pay, is really building too big an over-structure on a narrow foundation. If Mr. Naoroji puts it to us in the form in which you have put it to him, we should understand it. I only want to make quite clear what he means with regard to this particular Rx. 20,000,000.

16,515. (*Sir James Peile.*) It is a pure assumption that India is helpless and has no capital?—That is what I have proved in my six statements.

16,516. No, you have asserted it—not proved it I think?—But it is there.

16,517–8. Would you consider the fact that almost every year in India four or five crores of rupees are raised as a public loan?—How much of that comes from the Native States, we should like to know.

16,519. But you do not know how much?—Well, that is what I want to know from the India Office and from the Government of India. I shall have a remark to make about our not knowing certain things further on.

16,520. Yes?—But, with regard to that, when you consider that out of the 300 millions of people in the general poverty of course there is a small portion that has some little capital and that very little capital comes out in some way of investment. That certainly does not enable India to go in freely with all its own resources to develop its own resources for its own benefit as Sir William Wedderburn has just pointed out. It is in this way that we are not able to develop our own resources, which we would otherwise do if we were not deprived of this money every year.

16,521. (*Mr. Mowbray.*) What evidence have you as to the accumulation of capital in India before the time of British rule?—India has been well known to be a rich country before the time of British rule, that it is its own riches that has brought all these invasions upon it, otherwise I do not think that the English would have come there had they thought that they would get no benefit out of going to India and merely to go on a quixotic expedition in order to save India from destruction or anything of that kind. And, besides that, the very fact that such an amount of wealth has been drawn from India shows that it has a capacity for producing if it is only allowed to enjoy what it produces.

16,522. (*Chairman.*) One question more about this Rx. 20,000,000?—Yes.

16,523. I want to be perfectly fair on the subject. You speak of this Rx. 20,000,000 as if it went to England and was then returned in the shape of capital to India; but is it not the case that a very large amount of it is spent on the spot in India by the civil servant and by the soldier?—Yes.

16,524. And, therefore, are you right in putting it forward that Rx. 20,000,000 comes to England and goes back again in the shape of investment?—No, I do not put the whole Rx. 20,000,000 as going to England. I first explained how a portion of it is spent in India; that portion is still to a certain extent to the detriment of an Indian, who would have taken his place; but that portion is spent there so far, with the loss that it is not enjoyed by an Indian but by a European.

16,525. I do not want to press this unduly, but would you not, therefore, modify your statement, "that "Rx. 20,000,000 are not of themselves the only evil; they "return (that is the Rx. 20,000,000) in the shape of capital "to drain away a great deal more"?—Yes, I take the Rx. 20,000,000 as representing the whole evil, not simply for what passes out of the country, but what is also consumed in the country by somebody else other than the Indian, but it is the actual amount of capital; of course I mean that the actual amount of capital that goes clean out of the country is what is left after allowing for what is spent there, so far as among the Indians themselves—I do not mean to say that the whole of the Rx. 20,000,000 goes bodily out of the country entirely; I do not mean that.

16,526. Well, but that is your statement?—Oh, yes.

16,527. You would probably wish to modify that?—I think I have modified it; in fact, I have shown that this is the partial loss, and the other, which goes out of the country, is the entire loss. Oh, yes, that may be clearly understood; it is clear on the face of it. Shall I go on.

16,528. Yes?—The present machinery of foreign domination of government is most destructive in every way. If England were subjected to such machinery, notwithstanding all its present great wealth, it would be, like India, impoverished before long. The one other necessity to improve the machinery is that the people themselves must have a voice in its conduct. Till the people themselves have a voice, it is simply an Oriental despotism, and India does not derive that blessing which it has a right to demand from Britain, of a constitutional government in place of a despotic government of the worst kind; "the heaviest of "all yokes is the yoke of the stranger" as Macaulay has truly said. Then the present machinery requires to be improved by the employment of native labour, by a fair share in the expenditure, of all that is insisted as necessary of foreign element in the services to maintain British rule, and to give to the Indians the true and the only important blessing of the British rule, the right of British citizenship, of having a voice in its own expenditure, thereby fulfilling all the solemn pledges and Acts of Parliament which the British people by every honour are bound to fulfil, and which have been so far dishonourably ignored and not fulfilled by the executive Governments in both countries. I feel bound to repeat, that if the machinery of a number of Native States, as suggested by Lords Salisbury and Iddesleigh, be carried out, all the requirements of Britain's best interests and India's best interests will be fully realised and fulfilled. I do sincerely hope that this Commission will see their way to an improvement of the present machinery, in a way beneficial both to England and India. I may add here my agreement to what I have already quoted from Sir Wm. Hunter: "But the "good work thus commenced has assumed such dimensions "under the Queen's Government of India that it can no "longer be carried on or even supervised by imported "labour from England, except at a cost which India "cannot sustain," . . . "40 years hereafter we "should have had an Indian Ireland multiplied fifty-fold "on our hands. The condition of things in India compels "the Government to enter on these problems. Their "solution and the constant demand for improvement in "the general executive, will require an increasing amount "of administrative labour. India cannot afford to pay "for that labour at the English rates, which are the "highest in the world for official service. But she can "afford to pay for it at her own native rates, which are "perhaps the lowest in the world for such employment." "You cannot work with imported labour as cheaply as "you can with native labour, and I regard the more "extended employment of the natives not only as an act "of justice, but as a financial necessity." "The "appointment of a few natives annually to the Covenanted "Civil Service will not solve the problem. . . . If we "are to govern the Indian people efficiently and cheaply "we must govern them by means of themselves, and pay "for the administration at the market rates of native "labour." This, I say, is a fair statement of the principal imperfections and evils of the present machinery, which must be improved as suggested. This peculiar inherent evil, or fundamental error, in the present British Indian administration and management of expenditure, and its consequences have been foretold more than 100 years ago by Sir John Shore (1787): "Whatever allowance "we make for the increased industry of the subjects of the "State, owing to the enhanced demand for the produce "of it (supposing the demand to be enhanced), there is "reason to conclude that the benefits are more than "counterbalanced by evils inseparable from the system "of a remote foreign dominion." And it is significantly remarkable that the same inherent evil in the present system of administration and management of expenditure has been, after nearly 100 years, confirmed by a Secretary of State for India. Lord Randolph Churchill has said in a letter to the Treasury, (1886): "The "position of India, in relation to taxation and the sources "of the public revenues, is very peculiar, not merely from the "habits of the people and their strong aversion to change, "which is more especially exhibited to new forms of "taxation, but likewise from the character of the "Government, which is in the hands of foreigners who "hold all the principal administrative offices, and form "so large a part of the Army."

16,529. (*Sir James Peile.*) Might I interrupt you, is that true that you have just read, "who hold all"?—Hold all the principal administrative offices.

16,530. All?—Yes, that at least is the assertion of the Secretary of State, but there are a few Natives now, I think,

Mr. Dadabhai Naoroji.

25 Mar. 1897.

in those appointments—very few—such as a few Chief Justices.

16,531. A few Chief Justices?—I mean the judges, and there has been some little advance in the application of what was incorrectly called the Statutory service; but they have put an end to that.

16,532. Well "all" is not correct, then?—All the highest offices is certainly correct.

16,533. That has been much qualified, has it not?—Well, it is qualified to a very small extent in regard to some of the inferior offices; still, I have quoted what the Secretary of State says.

16,534. (*Sir William Wedderburn.*) But the judges are not administrative departments?—No, not administrative nor executive.

16,535. All the principal administrative offices?—Yes, all the principal administrative offices. "The impatience "of new taxation which would have to be borne wholly "as a consequence of the foreign rule imposed on the "country, and virtually to meet additions to charges arising "outside of the country, would constitute a political "danger, the real magnitude of which it is to be feared is "not all appreciated by persons who have no knowledge "of or concern in the Government of India, but which "those responsible for that Government have long "regarded as of the most serious order." Lord Salisbury, as Secretary of State for India, put the same inherent evil in this manner: "The injury is exaggerated in the case of "India, where so much of the revenue is exported without "a direct equivalent." And he indicates the character of the present system of the administration and management of expenditure as being that "India must be bled." I need not say more upon this aspect of the inherent evil of the present system and machinery of expenditure. I give these opinions in these words as I agree with them, and as very significant as coming from high authority. Almost in words of prophecy Sir David Barbour and Lord Lansdowne uttered these words only four years ago on the present machinery of Government. Sir David Barbour said "The financial position of the Government of India "at the present moment is such as to give cause for "apprehension." "The prospects of the future are "disheartening." Lord Lansdowne, as Viceroy, said: "We should be driven to lay before the Council so "discouraging an account of our finances, and to add the "admission, that, for the present, it is beyond our power "to describe the means by which we can hope to extricate "ourselves from the difficulties and embarrassments which "surround us." "My honourable friend is, I am afraid, "but too well justified in regarding our position with "grave apprehension." "We have to consider not so "much the years which are past and gone as those which "are immediately ahead of us, and if we look forward to "these there can be no doubt that we have cause for "serious alarm." And now within four years, India is visited by the greatest and direst calamity as was feared. When will there be an end of these calamities? Sir George Wingate says, with which I agree, with regard to the present system of expenditure: "Taxes spent in the "country from which they are raised are totally different "in their effect from taxes raised in one country and spent "in another. In the former case the taxes collected from "the population . . . are again returned to the "industrious classes. . . . But the case is wholly "different when the taxes are not spent in the country "from which they are raised. . . . They constitute ". . . an absolute loss and extinction of the whole "amount withdrawn from the taxed country . . . "might as well be thrown into the sea. . . . Such is "the nature of the tribute we have so long exacted from "India. . . . From this explanation some faint "conception may be formed of the cruel crushing effect of "the tribute upon India." "The Indian tribute, whether "weighed in the scales of justice, or viewed in the light "of our own interest will be found to be at variance with "humanity, with common sense, and with the received "maxims of economic science." This is my criticism on the most vital aspects of the present machinery of the administration of expenditure. It is destructive to India, and will be disastrous to England, and cannot promote the general prosperity of the people. My statements have been in the hands of the Commission from 9 to 15 months (the sixth being about 6 or 7 weeks), and I cannot but trust that the Commission will have fully examined them, and know my views on the most important references to them; viz., the administrative machinery of expenditure and the apportionment of charges for common purposes. Now, coming direct to some of the incidence of the machinery, I say there is one thing very unfortunate in the Government of India, in both countries there is great disinclination to give information, especially if it is likely to tell against them. Even such information as Parliament prescribes and the Government of India itself tabulates. In the Act of 1858 (section LIII.), Parliament provided that, among other information for its guidance, the Indian authorities should lay before it every year "a statement pre-"pared from detailed reports from each Presidency and "district in India, in such form as shall best exhibit the "moral and material progress and condition of India in "each such presidency." Thereupon such reports were ordered by the Government of India to be prepared by the Government of each presidency. As a beginning the reports were naturally imperfect in details. In 1862 the Government of India observed: "There is a mass of "statistics in the Administration Reports of the various "local governments . . . . but they are not com-"piled on any uniform plan . . . . so as to show "the statistics of the Empire (Fin. Con., June 1862)." The Statistical Committee, which the Government of India had organised for the purpose, prepared certain forms of tables. And after receiving reports on those forms from the different governments made a report to the Government of India, with revised forms of tables (Office Memorandum, Financial Department, No. 1,043, dated 28th February 1866). The members of this committee were Mr. A. Grote, president, and Messrs. G. Campbell, D. Cowie, and G. Smith. Now, if all these tables of the different departments were fully and carefully given, in the annual administration reports, the non-official public and, for the matter of that, the officials themselves would be able to judge correctly the character of the efficiency or inefficiency of the departments. But the non-official public and Parliament have no means afforded them by the Government to understand and judge fairly the working of the whole machinery. The machinery of every department is a monstrosity, a huge heavy weight of lead of high salaries to a few Europeans at the top, and the under-machinery from which all work originates is very weak, underpaid, and offering every temptation to corruption and oppression, and consequently both insufficient and inefficient, or worse than inefficient, as in the case of the police. If India were allowed the benefit of its own production, instead of being bled unceasingly, it is capable of giving as full resources to Government as this country is. But this is not allowed. Compare the expenditure incurred in this country to enjoy efficiency of administration and protection, with the wretched provision in India, because India is not allowed to enjoy its own. And consequently the whole machinery of Government is unworthy of an English administration. All this great imperfection and discredit would become clear to the public if the administration reports gave all the information which Parliament has asked, subject to such improvements as may be suggested from time to time. This is the chief reason why the non-official public in India are unable to criticise this machinery. Criticism pre-supposes knowledge and information of the subject, and this cannot be got. If we criticise without precise information, from general belief, we are at once come down upon us as reckless, attacking Government without knowledge, ill-informed agitators, and what not, when really the head and front of the offence is the Government itself. I shall read the comparison I have made between the expenditure of this country and of India, to show that with India's poor expenditure on India's benefit (after the bleeding), makes inefficiency and insufficiency of Government as a matter of course. The Duke of Devonshire, Lord Salisbury, Sir William Hunter, and others are perfectly justified in their views about the inefficiency and insufficiency of Government of India. And then I have got this table of comparison between the expenditure incurred here for the sake of efficiency and the expenditure we can only provide it from very poor resources in India, which, of course, must naturally be insufficient and inefficient in Government. Am I to read all the figures or only just give the ultimate result?

16,536. (*Chairman.*) Perhaps you will take the course that you think best for the Commission?—Very well. The United Kingdom, 1896—I have taken this from the Statistical Abstract return, No. C. 8209 of 1896 — United Kingdom expenditure—I exclude interest, because it does not form a part of the administration or protection—civil list, and civil administration list, 21,251,357*l.*; army, 18,459,800*l.* Navy I exclude, because we have no navy, except a small marine expenditure, and therefore I do not think it just to put that in. Charges for the collection of revenue,

13,119,000*l.*; total expenditure for administration and protection, excluding the Navy and interest—52,830,157*l.*; or 53,000,000*l.* for a population of 39,465,730, say, 40,000,000. This gives 1*l.* 6*s.* 6*d.* per head, excluding the Navy and interest. On the side of British India: the statistical abstract of British India, return C. 8238 of 1896; the figures are for 1894–5—I exclude interest also. Post office, telegraph, and mint, Rx. 2,466,175; salaries and expenses of civil departments, Rx. 14,835,209; miscellaneous civil charges, Rx. 6,065,705; famine relief and insurance, Rx. 610,235; buildings and roads, Rx. 5,352,801; army services, Rx. 24,096,091; special defence works, Rx. 217,867; provincial expenditure defrayed from provincial balances, Rx. 560,860; direct demands on revenue, Rx. 9,722,041; deduct refunds, Rx. 280,555; the total amounts to Rx. 63,646,429, or, say, 640 million rupees, for nearly six times the population; for a population of 230 millions; and taking the population of 1891 as 221,172,952, and adding 4 per cent. for the subsequent four years, gives a total of 230,091,870— say, 230 millions population. The expenditure, therefore, per head comes to 2 rupees 12 annas per head as compared with 1*l.* 6*s.* 6*d.* in the United Kingdom.

16,537. And what deduction do you draw from that? What is the impression it leaves on your mind; and what is the impression you wish to convey to the Commission?—The impression left on my mind, and what I wish to impress on the Commission, is, that the resources of British India are so very poor that Government cannot get more with all the taxation than 2 rupees and 12 annas per head for administration and protective charges. Consequently, necessarily this Government should be very inefficient, while here the fact that for efficient and good Government the public are willing and are able to give 1*l.* 6*s.* 6*d.* per head shows that the Government of British India naturally throws a great deal of discredit upon the Government of India for the poor resources that they have at their command for giving efficient and sufficient government.

16,538. I ask that question with reference to this point; you are comparing the rich country and the poor country?—Yes.

16,539. You have dwelt very much upon the wealth of England, and very much upon the poverty of India; and yet, from your putting those two totals together, it looked as if you thought it an evil that the administration in India did not cost more?—What I want to conclude is that the administration of India is very imperfect and very inefficient on account of its resources being so poor, caused by the foreign domination system, and the unnatural system which is introduced, or which is worked in India.

16,540. But I want to follow you out. Would you advocate a larger expenditure on administration in India?—Yes; I advocate that India should be left to be benefited by its own resources; and India would be able to give a great deal more for governing purposes, and be more efficiently governed than what it is at present. The cause of its being in such an unfortunate plight is that the system of machinery adopted there is a very unnatural and a very unfortunate one.

16,541. Then what is your conclusion; that if India was independent, would the independent Government double, treble, quadruple, quintuple the taxation in order to bring the expenditure to something more like the expenditure in England?—If India is allowed to keep its own resources to itself I am quite confident that India would be quite able to supply all the necessary funds as they are supplied here.

16,542. That is to say, that, if India were independent she would have to raise something like Rx. 300,000,000?—Very well.

16,543. And you really think that if India was independent, she could do that without damaging her own resources?—If India is allowed to retain all its resources whilst being dependent upon British rule, because it is a great blessing—the British supremacy—for various reasons; but if India is allowed to retain its resources instead of being bled by this foreign domination, India would be quite able to pay, if necessary, Rx. 200,000,000.

16,544. That is to say, that you are using that expression "if India was independent" because that is the easiest way of putting it?—You may put it in that way to illustrate the case.

16,545. That the Indian Governments in that day without doing harm to India, could quintuple the present taxation?—I cannot go so far as to say that it would quadruple or sextuple it; but still, I have no doubt that it would supply all the necessary funds for efficient government.

16,546. I want to get at your standard. You are holding up to us a comparison between the expenditure in England of 1*l.* 6*s.* 6*d.*, and the expenditure in India of 2 rupees and 12 annas?—Yes.

16,547. And your evidence would lead us, I think, to think that India, under a happier state of things, would emulate, in order to get a thoroughly good administration, the expenditure per head which obtains in this country?—Yes.

16,548. I want to give you the opportunity of qualifying the statement if you think it necessary. It leads to this, that in some shape or other you are to get out of India, which you say is a poor country, say, five times the present revenue. It is a question of the difference between the 1*l.* 6*s.* 6*d.* and those 2 rupees 12 annas a head, which, I think, take it up very closely to Rx. 300,000,000. That is multiplying its present revenue by six or seven. Do you think that a poor country, if it were only under an independent government, could raise that amount of money without impairing its resources?—With this British supremacy, what is poor now would become rich if it is allowed to keep its own benefits. The only qualification I have to make, whether she will need even so much money as England requires for efficiency, is this: that labour there and efficient labour and native labour would be so much cheaper, a good deal cheaper, than what it is here, and the result would be that perhaps if we did not require Rx. 200,000,000 or Rx. 300,000,000, or as many times as the difference now exists; but certainly India would be quite capable of supplying as much as may be necessary for its own efficient and sufficient government; that I have not the least doubt whether it would be 150,000,000 or 200,000,000, or 150,000,000, I have not the least fear that India's resources would be found quite equal to the necessities of its wants.

16,549. You see the practical remedy which you have indicated to us as a means of arriving at this result is that, whereas Rx. 20,000,000 is now spent upon European soldiers and European civilians, that amount should be spent upon Indians, that is to say that Indians should receive this Rx. 20,000,000; but, supposing that was done, that would not supply anything like the difference which would be necessary to raise the two rupees up to a level of 1*l.* 6*s.* 6*d.* per head, and therefore you would have to find the difference by some other method?—If what is taken out of the country is saved to the country its economical effect would be to enrich the country.

16,550. But you cannot enrich it more than the sum?—No. This sum remaining in the country will economically provide far better effects than it does at present. It is not the saving of the Rx. 20,000,000 only, it would be the saving of all the reproduction, fructification of the money in the country itself.

16,551. But that Rx. 20,000,000*l.* laid out there could only produce a certain interest?—It is not all interest, it is developing the resources of the country which might quintuple and make the riches of the country far greater than what they are. It will make, in fact, the country rich if all that is drawn away from India is saved in it and becomes its own resources. It is the capital, the blood of the country.

16,552. May I interpret it in this way, that if that Rx. 20,000,000 was left in Indian pockets it would produce every year Rx. 300,000,000, and that gain, realised by laying out those Rx. 20,000,000 in India, would enable the Indian Government to raise the rate of taxation from 2 rupees 12 annas a head to something like 1*l.* 6*s.* 6*d.* It is a very large deduction. I am delighted to hear that India is so rich that laying out Rx. 20,000,000 would produce in a year between Rx. 200,000,000 and Rx. 300,000,000?—Of course it will not produce it in a year, but it will first have to fill up the gap of all that has been drawn away, and it will raise it gradually to that rich condition which it is capable of. Of course to say that these Rx. 20,000,000 saved this year will enable the Government of India to have Rx. 200,000,000 for the purposes of Government cannot be thought of. Of course I never meant that, but if those Rx. 20,000,000 or Rx. 30,000,000, or whatever it is that is drawn from India, is saved to it, it will gradually work its economical effect in enriching India every year by increased foreign trade, by increased production, and in that manner will make it strong enough and rich enough to give the Government of India such resources as may be necessary to their heart's content.

16,553. I am only anxious to bring out clearly, Mr. Naoroji, what you mean by it in order to give you an opportunity of making any modification of the statements which you have just given us in evidence?—Yes.

16,554. Because at present it certainly, I think as it stands, would sound rather drawing wide deductions from

Mr. Dadabhai Naoroji.

25 Mar. 1897.

small premises. You point out to us that India is a very poor country, you go on to say that, if she was independent, you would quintuple her expenditure in order to bring her up to somewhere near the standard that you suggest it should be or to the English standard, and you produce that result by proposing that a comparatively small sum in salaries and pay, which now goes to Europeans, should go to Indians?—Yes. It is not the amount that is so much the difficulty. If the people get back what they give, as here, India can give in time all that may be necessary, Rx. 200,000,000 or Rx. 300,000,000.

16,555. And you think that that comparatively small sum kept in India would result, perhaps in a few years, in this enormous sum in order to raise the expenditure of India to something like the level of the English expenditure?—I thank you very much for pointing out the likely misunderstanding which would arise, and therefore I have given the modifying answers, so that it may not be misunderstood. Then I have given an illustration here. I have taken just one instance of public education in which I have also worked out those figures which come to for primary education alone; here 4*s.* 6*d.* per head of the population, while in British India it comes to about one anna and half a pie per head. I just point out my object in bringing this illustration was not to point out that the figures must be equal, but that there is a great disparity on account of certain causes which I lay stress upon.

16,556. (*Sir William Wedderburn.*) And I think that you do not lay stress upon the word "independent" which the chairman used?—No, I do not at all.

16,557. You mean that if a suitable system is adopted it will tend greatly to prosperity; it will allow of much heavier taxation and sufficient taxation?—Quite right; that is what I mean.

16,558. And that the present system is as though the people were to consume the seed corn which is needed for next harvest, it will produce destitution even though sowing that seed corn may not immediately produce prosperity. I think that is the drift of your evidence?—Yes.

16,559. (*Chairman.*) In using the phrase "independent Government," I was only wanting to get out your view, Mr. Naoroji, that if the English Government were removed, and, therefore, if the great evil which is pressing on India in your view were removed, India under a better system of administration would be able to work in the direction of the model which you have put before us; namely, the amount of expenditure in this country?—Of course. What I mean is that I for one, certainly do not wish to sever the connection with Britain. On the contrary it is my extreme desire that the connection with Britain may last a very long time for the benefit of both countries; it is for that reason alone that I am struggling; if it were otherwise, I think I had better remain quiet.

16,560. Then may we take that as giving your views upon the machinery of administration?—Upon the machinery of administration.

16,561. There is nothing you would like to add to that?—No. I do not think I have got anything to add here.

16,562. I mean that is a general statement of your views?—A general statement.

16,563. But I would bring it before you that it hardly touches the subjects that have been before us and upon which Indian officials have placed very full information before us; namely, the analysis of the different branches of public expenditure in India. Beyond your comment upon the small amount spent in education, do I understand that you do not wish to offer any criticisms upon the description they have given of Indian administration in all its branches?—No, I do not offer any criticism upon those details for the simple reason that I confine myself especially to the important point for which I asked the Commission and for which Sir Henry Fowler said that he wanted to prove that there was prosperity or not from the machinery of the Government as it existed. I therefore applied myself fully to prove that point that it did not promote prosperity. I therefore did not apply myself to the little details for two reasons, first that you cannot get information from the public records of any kind so as to go very minutely into precise figures, and for the present purpose for which this Commission, as far as I was concerned, was asked was the important purpose of the principles upon which the whole Government expenditure was conducted, and these principles being unnatural any discussion upon the details of the different departments will benefit nothing excepting perhaps proposing a reduction here and a reduction there which is soon forgotten and which is the fate of all the previous Commissions that have generally taken place, and as I know of the Financial Committee of 1871–4. I purposely, therefore, wanted to bring out as prominently as possible this fundamental evil difficulty, by the removal of which both England and India may benefit.

16,564. Then may we take it that you confine your recommendation for reform of Administration in India to the doing away with the European element—I do not want to put this in an antagonistic manner, but merely to get out your view?—No.

16,565. From your evidence I gather that your remedy is to do away with the European element in India and replace that element by an Indian Army and by an Indian Administration—no Europeans being employed in the Army, no Europeans being employed in the Administration—that I should gather to be your view?—No. I can explain what I mean; I do not mean that there should be no Europeans at all in the Army, nor in the Civil Administration. What I want to say is—even Lord Ripon put it as the irreducible minimum—that as far as possible every native added in the service will be a gain to the Administration of the country, and that if any portion of Europeans is considered as absolutely necessary it is on the ground of the maintenance of the British rule; otherwise there will be no necessity as far as the British Government or the British people are concerned. In that case, I say in fairness, if they went for the common purpose, and I admit that is a benefit to India also, that in fairness the expenditure incurred upon the European portion—the irreducible minimum—should be fairly divided between the two countries instead of putting the whole burden upon India. As to the employment of every Indian, of course, India ought to pay and should be very prepared to pay.

16,566. You put your suggestion before us as a means of raising the expenditure of India to something like a level of the expenditure of England. As far as possible the Europeans in the Army and the Europeans in the Administration should be replaced by Indians. The mere fact of paying an Indian, you look upon it, instead of a European would have such a fructifying effect that in the course of a certain number of years it would enable the Indian Government to raise taxation up to almost the level of the English taxation. But you go further, and you say wherever Europeans are employed that England should repay. Therefore the position would be this, that supposing, we will say, that only one-fourth of the present force were retained of Europeans that would cost something like Rx. 5,000,000. I am now taking the figures of Rx. 20,000,000, as the total that will be paid by England to India by your view, and that would be the sole immediate cash benefit?—Immediate benefit, yes.

16,567. Beyond that the Rx. 15,000,000 would be paid to Indians, and that left in the Indian pocket would produce this enormous interest or fructifying power, which would enable the Indian Government within a few years to raise the expenditure per head from 2 rupees 12 annas to something like 1*l.* 6*s.* 6*d.* per head?—Sticking to that comparison between the two as I have brought in this table as an illustration, I do not think it is fair to me. What I mean there is that India, if left to such resources as I am mentioning, will be able to supply all its wants, and at the cheaper rate of labour every demand required of themselves; but I say if it requires Rx. 200,000,000, or if it requires Rx. 150,000,000 to be more efficient and sufficient to give that, Indian resources are quite enough to meet all its wants, provided those resources remain in its hands.

16,568. That is the object with which I asked these questions?—Yes.

16,569. You placed this before us as a model?—Yes, as an illustration.

16,570. And your evidence after that, I think, pointed very much to this—you were giving the cost of the English Administration at home as a type, and you considered that something of the kind should be the object of administration in India. The increase of taxation which that involves in so poor a country, is, of course, very startling. I wanted to be quite sure that there was no modification in the case that you are putting before us that you would wish to make?—Yes.

16,571. Now, I understand that you modify it so far as this, that you do not put the 1*l.* 6*s.* 6*d.* as an absolute type?—No.

16,572. But, of course, you do leave it that a very large increase of expenditure is necessary in India for Indian purposes?—Yes.

16,573. And therefore that considerable means ought to be found for that purpose; but the one practical remedy which you suggest is, that a certain number of Europeans

who are now employed in India should be replaced by Indians?—Yes. The principle which I approve is that which was declared by the Duke of Devonshire, who said: "If the country is to be better governed, that can only be "done by the employment of the best and most intelligent "of the natives in the service," and, as pointed out by "Sir W. W. Hunter, if we are to govern the people of "India efficiently and cheaply, we must govern them by "means of themselves, and pay for the administration at "the market rates of native labour." An administration conducted on these principles will stop the material, political, and intellectual drain from India.

16,574. (*Sir William Wedderburn.*) And I think you are able to illustrate the general problem to which the Chairman has referred, the wonderful improvement in the case of Mysore, which was handed over to native rule in a condition of great financial difficulty, and which is now able to raise a large revenue, and to do a great deal for the public good, and yet is in a prosperous financial condition. It is not to the mere interest profit out of sums invested, but to a more economical and suitable method of administration that you look for the prosperity which will bear the additional expenditure. Is that not so?—Yes. In the case of the Mysore State this method was adopted by Lords Salisbury and Iddesleigh "as a guarantee for "the good government of the people, and for the "security of British rights and interests." This experiment, though disapproved by the Anglo-Indian authorities, was loyally and effectively carried out by them, and proved a brilliant success, resulting in a contented people, a full treasury, moral and material progress, and attachment to British supremacy. It is a brilliant episode in British Indian history. Similarly British India will be prosperous and contented if the same principles are followed, local administration being entrusted to competent native officials under European control, co-operating with representative assemblies.

16,575. (*Chairman.*) I understand that it is your desire that British rule in India should be continued and strengthened?—I gladly recognise the benefits of British rule, especially as regards law and order, education, and freedom of the press and public meeting; but I believe that British power and influence are much weakened by the refusal to administer expenditure in a way so as to give the people justice and a voice in their own affairs, by the consequent "extreme poverty" of the masses, and by the non-fulfilment of the solemn pledges given by Parliament and the Crown, of equal opportunity in the public service to all subjects of Her Majesty; and I sincerely desire to see British rule strengthened on the lines most beneficial to the people both of India and of Britain.

16,576. Then, before we pass on to apportionment, I would call your attention to one point, Mr. Naoroji. We have a proverb here, "take care of the pence and the pounds will take care of themselves." That argument does not apply in India, does it? Your evidence does not deal with the reform of the administration in its details?—Taking care of the pence and an examination like this which you have so very carefully and with much trouble carried out has its use. What I want to point out was that that alone by itself will not remove that general condition of the poverty of India, and all the bad effects of the present system of administration, unless we go into the question of the principle upon which the whole administration of expenditure is based.

16,577. Quite so?—And I wanted to impress upon the Commission particularly that they must fully treat India on righteous principles, and if that is once settled a great deal of the difficulty would be removed; the whole Indian problem will be solved; and there would be time enough then to go into the details which will be a matter of necessity, as here, every year, there is an examination of the details of Government in the discussion on the Budget.

16,578. Quite so. You have put before us your general view of the manner in which the reform of the administration should be effected and its results. The Commission, I think, might regard the remedies you propose as outside their powers—but within our powers we have had a very exhaustive examination of the details of administration, and I was anxious to know whether in the course of that examination you had any views to express upon the different branches of the public service as they have been brought before us. It is only by going into those details that economy can be effected; I rather gather from you that you are not prepared to offer us any suggestions or criticisms upon this evidence which has been placed before us?—No; I do not enter into the criticism of the details, as I have already explained that, with the best results that may be obtained, there is very much of this criticism that would not touch the chief evil and the real evil of the whole matter; and so far as the Government of India is concerned, taking the things as they are, they are doing what they can to a very great extent, and I do not find much fault with them as far as the machinery is adopted by them subject to all human imperfections as they have. An examination like this of details at regular intervals something like what it was every 20 years in the case of the East India Company might be very important to check any unnecessary expense, or any extravagance in expenditure, and that also has been discussed during the last financial committee. On the present occasion my chief contention, and I wanted particularly to keep aloof from the details for the very reason that I may direct the Commission as pointedly as possible to going to the root of the whole evil, so that there may be some permanent benefit, and therefore I am not prepared to go into the criticism of the details. I did that deliberately and I may say generally, as I said just now that the Government of India avoiding the question of the evil of this principle of administration they are doing as well as they can, with all human imperfections and requiring criticism from time to time. They are doing their work with a sufficient desire to administer in the best way possible. I am quite willing to give them that credit, that the officials are doing what they can, even under very disadvantageous and evil circumstances.

16,579–81. And does not that somewhat justify my quoting the proverb about the pence? Is it not worth taking care of the pennies?—Only that these points will all again come back when the Government of India falls into its own regime, and there will be no good done. And that was my own personal course that I have taken. I do not know; my other friends may be able to go into some criticism of details here.

16,582. You have been critical upon the Indian administration, and you have stated that the information, I think, was not forthcoming which would enable you more effectually to criticise Indian administration?—Yes, that is true; that is the great want.

16,583. But has not this Commission given you a very fair opportunity for obtaining that information. We have had the responsible Indian officials before us?—Yes.

16,584. And was not that a far better opportunity to cross-examine them and elicit from them this information which is wanting, rather than after the time to say that examination is difficult because the information is not forthcoming?—Yes; but the information that has come before the Commission is of that kind, especially from the official point of view, is a one-sided information to a large extent necessarily to justify their own way of procedure. We have not that information which would enable us to know behind the scenes what is wanting in it. Only we should have in order to criticise, and that is a great disadvantage for every non-official witness that he cannot criticise, because he has not a full knowledge and a complete knowledge, and he does not know what to ask. It is for the Government of India to give this information as is asked by the committee of the Government of India and by Parliament, and we would then be able to criticise more effectually and more precisely what decrease, or what extravagance, or what waste has taken place in any particular department, or in any particular way.

16,585. I think, Mr. Naoroji, a man who has given so much attention to these subjects as you have evidently done from the papers which you have laid before us, is in a position, when he is put face to face with the official witnesses, to elicit from them those weak points upon which they have not given us, in his opinion, full information?—We have not got such information as would enable us to know what the weak points are. The official witnesses really do not point out what their weak points are, and we are not able to point out those weak points for the simple reason that we have no information, or very imperfect information which would not help.

16,586. If you have no information, is it quite fair to make a general attack on Indian administration?—The general attack is perfectly justified from the results. The results show that the very nature of the administration with the poor resources at the command of the Government, that the Government must be inefficient and insufficient, and the general attack I made is not so much upon the Government as officials, but upon the system upon which they are working, that system being an evil system. They cannot help but do what of course would produce unsatisfactory results. I have not the least wish to attack the Government of India, or the officials, because I do not believe they themselves

Mr. Dadabhai Naoroji.

25 Mar. 1897.

would do any evil. It is the cause of the evil system upon which they are working, and which requires to be considered and modified so that they themselves may be able to do their work with greater satisfaction to themselves as well as with greater satisfaction to the people. That is the principle which I wanted specially and principally to bring forward.

16,587. Of course, the point to which I am directing your attention is this. We have had a large amount of evidence before us of an official character; and we have done our best on the Commission, not only to get the best official evidence, but also the evidence of high officers who have held posts in India, and who are above the ordinary official witnesses. In addition we have been anxious to learn native opinion upon the subject; and here a very large field of examination has been opened, upon which, I think, every opportunity has been given in bringing over witnesses from India to undergo examination; every fair demand for information has been fairly met, and at the end of it I am anxious to learn from you whether, from a native point of view and as representing native opinion, you have any criticism to offer upon the subject more immediately interesting to us, namely, administrative management of expenditure in its details?—If this question of the greatest importance upon which I insist is put aside, and if simply the machinery as it is taken, supposing it to be, as it were, machinery in which that evil did not exist, I have not much criticism to offer myself. I do not think it so much necessary that I need go into very great detail in order to point out any defects in any particular department.

16,588. (*Sir William Wedderburn.*) With regard to what you say of not being able to get the information of certain definite facts, can you give the Commission a note of the points on which you had asked for information, and you have not got it, and points on which you desire information from the India Office or the Indian Government, can you give a statement to that effect?—I can give it at once just now; to say that if all the tables which are proposed by the Government of India were fully filled up for any particular year, we shall be able to offer a good deal of criticism.

16,589. Yes; but will you just give a form that you wish filled up, and then I have no doubt the Chairman will consider whether they can be obtained?—Yes, I can do that, if the India Office would be good enough to give us the report of that committee which settled the tables, and from those tables—those tables are the very tables that they have not placed before the Commission.

16,590. What tables are those?—The tables that were fixed by this Committee of Sir George Campbell and others, and what the different administrative officials give in their administrative reports, and if those tables were supplied with the information I think, it would be good for the Government itself as well as for the public to understand each other, and a good deal of misunderstanding and misapprehension will then be removed, and then the statement I can lay partly as I pointed out in one instance already in my report with regard to the agricultural tables a factor of depreciation. I have got those tables at page 4 of my statement of the 9th January 1896, and as they were prescribed by this Committee, and if this information is fully given, we should be able very well to ascertain what the capacity, and what the condition of the people is. This is only one set of tables, and there are tables with regard to the Judicial Department, and with regard to the Police Department, with all the departments, and if those tables were correctly and fully given of course, we have all the information. It is not that the information does not exist; this Commission would have been very much helped and we would have been very much helped, to help the Commission in the most effective manner possible.

(*Chairman.*) Do you wish to ask Mr. Naoroji to put in such a paper?

16,591. (*Sir William Wedderburn.*) I should like a note of that to be put in, and to state distinctly what is the information that you consider necessary?—Very good. I shall require, Sir James Peile, if I can be given a copy of the Report of this Committee, with all the tables connected with it. I was obliged to go—even those few tables that I have made—I was kindly allowed to go to the India Office by Sir Charles Bernard, and to copy out some of those which I immediately required.

16,592. (*Sir James Peile.*) Has a copy been refused to you?—Yes, a copy has been refused, for this reason, that they have got it all bound up in one volume, and no spare copy.

16,593. But you can come and consult it here?—So I went and copied what was required for this purpose. If a copy could be made by a clerk, or by the India Office, it would save me a great deal of trouble; if not, I will come and copy it all myself, in order to place it here.

16,594. (*Sir Ralph Knox.*) You drew attention to the difference between the salaries payable to Europeans and to natives, and seem to think that India would gain very much if the salaries were reduced to the native scale. Can you give any instance of the high salaries which you think would be saved if a system of native employees was introduced?—All the high positions are of such salaries that the Government of India does say that if any Indian is employed in any of those places two-thirds the salary would be quite enough for him, as a very liberal salary. The Government of India, and the Secretary of State, has himself laid down this condition, that wherever an Indian is employed in place of a European, that two-thirds of the salary ought to be enough for him. That in itself at once saves one-third. But then I go further than that, even those two-thirds in its economical effect will be still of far greater benefit, as well as the one-third saved.

16,595. And is it the rule at present when a native is appointed to any one of those high positions that he receives two-thirds of the salary?—Yes, I think that is the rule now.

16,596. (*Sir James Peile.*) May I correct you?—Is it not?

16,596*a*. No; that rule is now abolished. Under the Provincial Service there are special rates of salary lower than the European rates fixed for the natives, except in the highest appointments, such as the High Court, where a native judge gets the same salary as a European judge?—Yes. What I say is that even in the highest positions a lower salary will be accepted by quite equally efficient men, even on the scale which the Government of India itself has laid down; but at present, of course, it produces to a certain extent dissatisfaction, for one official is paid at a very high salary for services of the same character done by a native. If the European officials were also brought down to the same salary as the Indian, there would be some fairness; that the salary is paid not according to the individual, but according to the services done; and if it is paid according to the services done, there will be a great deal of saving, not only two-thirds, but, I think less—at least this is my opinion—that these high salaries can be reduced with satisfaction both to the Government, as a relief to them, and to the Indians, that they have employment in their own country.

16,597. (*Sir Ralph Knox.*) Does that apply to any very large number of appointments?—There are very few appointments yet given in that way.

16,598. But is there a very large number of these high appointments?—Yes.

16,599. To which high salaries are attached?—Yes.

16,600. Which could be reduced, do you think, if a native Indian was employed?—Here we have got a Return which gives us the figures. I got them out. From what salary do you think I should begin in. Here is a return from Rs. 1,000 per annum up to—well, take the salary of the Viceroy, 25,000*l*. Then, as you go through, we go to the highest, the number, of course, is smaller, but the amount is very large. If you look at this, this will give you the exact figures, and we can work them out if you like.

16,601. But you think that below the very highest appointments there are salaries which are too high for the scale of work, either for the European or for the native?—Yes, there are to a very great extent—all those salaries. The very fact that the Government has determined, in regard to the covenanted Civil Service especially, that any appointment now, except those that pass here with the other competitors, that they are kept, I think, on the same level, but when the Statutory Service was passed, that is to say, the service under the Act of 1870, the Government passed a rule that any appointments given to them should have two-thirds of the salaries paid to Europeans, and that regulates appointments under the statutory service; though the Act exists, its action is repealed by the Secretary of State himself, though Parliament required that a certain number of Indians should be every year appointed in India itself, and that Act of 1870 is now a dead letter.

16,602. (*Sir James Peile.*) Did you say a dead letter?—It is a dead letter is the Act of 1870. The Provincial Service is now introduced, which really does not supply what this Act of 1870 meant.

16,603. Why?—Why, because it does not come to the same level. In the Act of 1870, it was intended that the Indians appointed in India itself, without being required to come to this country, were to be put exactly on the same footing as those who went from this country, in fact, they were to form an integral part of the Civil Service. Well, this went on for 10 years, and then the Secretary of State decided that no further appointments should be made in that way. In 1878, the Government of India urged very strongly not to act upon that Act, and to introduce what I may call the Provincial Service. The Secretary of State refused to do that; the Secretary of State wished that the Act should be carried out in its integrity, and then only after the Secretary of State's resistance the rules were made. For six years no notice whatever was taken of this Act, either here or in India.

16,604. For what six years?—From 1870 to 1876. The Secretary of State, from here, several times reminded the Government of India to make rules, but they did not do it until they were pressed afterwards, and in 1878 they wrote a long despatch, trying to persuade the Secretary of State for India not to compel them to make these rules, and not to carry out the Act of 1870

16,605. The Statute was passed in 1870, was it not?—The Statute was passed in 1870.

16,606. Are you aware that rules were prepared and sent here for approval in 1873?—Yes, that I became aware of when the Blue Book was published, but the rules that were sent were not received, as far as I can understand, were not adopted by the Secretary of State, and it was in 1876 or 1877.

16,607. Do you know why they were not adopted?—That I cannot say, because the information is not given in the Blue Book.

16,608. Well, I will give you the information. You could have had it at any time in the Report of the Public Service Commission?—Yes.

16,609. The difficulty was that the law officers of the Crown raised an objection to the rules proposed by the Government of India. Do you know when the next set of rules were proposed; you said nothing was done for six or eight years?—The next set of rules was proposed by Lord Cranbrook, who pressed those rules again.

16,610. What year?—That was again in 1877 or 1876.

16,611. No, in 1875, on the contrary?—I know; I have not even the despatch, I think.

16,612. Revised rules were drawn up by Lord Northbrook's Government in 1875?—Very well. I am very glad to have all that information.

16,613. Rules were proposed in 1873 and 1875; and then what next?—They were only settled in what year?

16,614. The rules were sanctioned in that year?—When was the Act brought into regular operation?

16,615. It was brought into regular operation in 1875?—Were there any elections or nominations made in 1875?

16,616. One or two, I believe?—No.

16,617. Yes?—I do not think—at least that is my knowledge—that no nominations were made.

16,618. Well, we differ?—I know I had none from the India Office. Every Member of the Council, when I complained to him that no notice was taken of the Act of 1870—that the rules were made and finally settled—I do not know whether it was in 1877 or 1878, and the very first nominations were made much later; that is my information; that is just our difficulty.

16,619. The rules were not finally settled, but a new set of rules was prepared in 1878, to give more thorough effect to the statute?—Very well, if the rules were made in 1878 to give thorough effect to the statute——

16,620. More thorough?—Very well, more thorough; I am very glad. Then it is very strange that those rules were abolished, and the nomination entirely put an end to altogether; why were they not carried out while the statute was still standing.

16,621. When were they abolished?—The nomination continued, as far as I can remember, about 10 years.

16,622. And why were they abolished?—That I do not know. The Government of India was determined, even in their despatch, that long despatch, I do not know whether it was in 1877 or 1878; they recommended very strongly that those rules should not be made, and that a provincial service should be adopted.

16,623. That does not really concern the question?—Yes; it concerns this question.

16,624. I asked you why were they abolished?—Why they were abolished is the thing.

16,625. Was it not that after the experience of a good many years it was found that the system introduced in 1879 did not work satisfactorily?—Yes; very well there is nothing strange in that; it was actually foretold by people that it would not work, because the rules were not satisfactory.

16,626. Then in 1886 a Commission was appointed to consider the whole subject?—Yes.

16,627. On which native members sat?—Yes.

16,628. And they reported. And the consequence of their report was that a new system was adopted, which is now in force?—Yes. I know that the Commission was appointed, and that the Commission came to that conclusion. The fact of the matter is, and, of course, I do not want to attribute any motives, but the effort of the Government of India was to have the rules that they themselves had suggested to the Secretary of State in that long despatch, to be somehow or other got into operation, and this Act of 1870 should not be carried out in its full extent. The result of that was that first the rules were made very unsatisfactorily. Instead of making rules by which the nominations in India should be of the same standing, the same competence, and under the same tests of examinations; instead of that the rules made were to leave the Governments—the different Governments—to make their choice; and, in my opinion, without any satisfactory test of competence. Well, the result was that the rules were made which were very unsatisfactory, which were not as they ought to have been, and the result was naturally that discredit should be brought upon them. The rules themselves showed in their very face; whether there was the intention or not; but that that should be the result, where the nominations were made merely according to the ideas of the Government of the day, instead of having any public good test, just as it was, adopted here for the competitive examination.

16,629. The Government of India themselves tried in various ways to give effect to the statute?—Yes.

16,630. And they have now introduced a new system which is on its trial, and which appears to have a satisfactory working?—Yes. Well, this new system they were determined to have.

16,631. That is all I wished to ask you?—That is quite right. I wish to say this, that this new system which is now introduced was the Government of India's desire many years before, publicly expressed in their public despatch, and they did try at least to carry that system of their own into effect and nullify the Act, as it was originally, no doubt. That is what I have to say.

16,632. (*Sir William Wedderburn.*) Was not the object of the Act of 1870, to give promotion to higher offices to men of experience and qualifications already in the service who had shown their competency. Was not that the object of the Act?—That was a part of the object.

16,633. That was one of the objects of the Act?—Yes; that was one of them.

16,634. And the objection to the rules was that they allowed the Government of India to appoint young men of good family or otherwise without any qualifications at all?—Without any qualifications at all.

16,635. And that was the objection to the rules, and it was owing to that that public opinion in India considered that the statutory service was not successful?—No.

16,636. But it would have been successful if it had been carried out thoroughly in the spirit of the Act of 1870?—That is what I say.

16,637. (*Sir Ralph Knox.*) But, however, you are willing to accept the proposal or the idea that if the natives were employed in any of those places the salaries could be very largely reduced?—Yes; certainly salaries could be reduced by one-third as it is already settled; and I think that if a fair trial is given many thoroughly efficient persons would be able to accept these higher offices at less than two-thirds, because the original standard is very high.

16,638. (*Sir James Peile.*) Mr. Dadabhai Naoroji, I suppose you stand by all that you have said in the pamphlets which you have printed for the instruction of the Commission?—Yes.

16,639. I understand that your views may be summarised in this way, first, that India is so crushed with taxation and impoverished by the withdrawal of her wealth abroad, that the Indian people are ground to the dust and reduced to starvation?—These are the words of authorities.

Mr. Dadabhai Naoroji.

25 Mar. 1897.

16,640. Secondly, that the European services, and the present forced inordinate and arbitrary employment of Europeans are India's greatest evil, and the cause of all its economic miseries and destruction?—Yes.

16,641. And, thirdly, that the Government of India is an unrighteous system of selfishness and despotism?—Yes; I have said that.

16,642. Carried on by the Anglo-Indian authorities in defiance of the desires and biddings of the British people and Parliament?—Yes. Well, the desire of the British people in Parliament is distinctly pointed out by the Act of 1833, by the Proclamation of the Queen which is again repeated at the last Jubilee. There you have the whole policy of the British people in Parliament set forth, and if that had been carried out, and even if it were now carried out, the whole difficulty would disappear, and the British Government would indeed be a great blessing to India, and India will not be a less blessing to England. That is what I say.

16,643. With regard to the taxation; you are at considerable pains to prove that the taxation of India is exceptionally low, as compared with that of European nations, and of the Indian Native States?—I want to show there is a little misunderstanding; it is exceptionally low in amount, and far heavier in incidence and pressure than even British taxation, because of the incidence of taxation, as I have explained over and over again.

16,644. That would depend, of course, on the comparative poverty of the people?—Upon the comparative capacity and poverty of the people.

16,645. Yes?—That when you take the whole production over India and you take the whole production of this country, and compare the taxation in this country with the whole wealth, and compare the taxation of India with their capacity you will find that the percentage of the incidence of that taxation in India is higher than the percentage of taxation as compared with the wealth of this country, with such information as we have got.

16,646. Well, it amounts to this, that the people being poor, the Government has kept the taxation of India extraordinarily low; but when you come to the incidence of taxation on wealth, and you allege increasing poverty, and crushing taxation, I want to know what proof you have of the capacity and wealth of the Indian people?—I first worked out the poverty of India, the total production of India mostly on official authority; this calculation has been before the public and I should have been very glad if any mistake had been pointed out. When Lord Cromer—Sir Evelyn Baring—gave his opinion as that the production of the country was 27 rupees per head per annum—while I have made it 20 rupees per head per annum which, however, will not make a very great difference,—however, I asked Sir Evelyn Baring, the present Lord Cromer, to give me that calculation so that I might see whether I had made a mistake, or who has made the mistake. Unfortunately that calculation was not given to me, and therefore I adhere to my resolution that the total production of India—British India—is on the average only 20 rupees per head per annum.

16,647. That is the total income of the people?—No; there is a little confusion, only the total production, actually the quantity of material wealth produced in the year by cultivation by manufacturers from the mines and so on, all these accumulated as the total wealth of the country produced during the year and calculated at the prices which are always published regularly. We will make out—and the whole process of calculation is given in my books—we make out that the average cost of about 20 rupees per head per annum.

16,648. Then, with a family of seven or eight, the production, not the income, would be Rs. 140, 160, and so on?—Yes, and it is not enough to keep them.

16,649. That is at best an assumption?—And it is by comparing the consumption I have given, not only the production; the production may be very small in amount, and yet if the requirements of consumption may also be comparatively small in amount there would be nothing to complain of; but they are not able to produce as much as would even satisfy their ordinary want of common labour. These figures also I have given there, and I have not up to this time had pointed out to me that they are wrong. I have had correspondence direct with the India Office—I laid down all this—and I have not had any reply to refute those figures from the India Office.

16,650. Do you think that calculations of that kind in a country like India are of any value whatever?—Even Lord Cromer himself has said that, for all practical purposes they are sufficiently approximate, we cannot expect them to the farthing; but at the same time in India we have this advantage, that Government has almost all the information it can require to calculate such a result as that. What the result really is of the annual wealth produced in the country which is not very easy here in this country, but there they being the principal proprietors, as you may say, why they have all the details of land cultivation in every way. Then the administration reports also give, what manufactures are done, what mines exist, and so on we have very substantial material to go upon in order to calculate from year to year what the real production is, or the amount of wealth that is produced every year, and from which the State expenditure and taxation has to be paid, and were that taxation to return to the people as it returns here, notwithstanding such a large debt the interest comes back to the taxpayers, the whole tax that is raised comes back to the taxpayers, there is nothing to complain of, that is the difference.

16,651. Now as regards crushing taxation, I see here you take the taxation of 1886 of India and from that you deduce that the taxation comes to about 5*s.* 8*d.* a head. Well, in looking into the details of that year—— ?—Will you kindly tell me what page it is, and which report it is of mine?

16,652. It is page 27?—What date: is it No. III.?

16,653. I am not going into the pamphlet; the 9th of January is the date, but I am merely referring to it?—9th of January. Yes, and what is the page?

16,654. The 27th page?—27, thank you. Yes, this pamphlet was written, it is a copy of the pamphlet that was written, in reply to Sir Grant Duff in those years.

16,655. On looking to the items that make up the taxation which you give there as about Rx. 57,000,000, the first item I remark on is Land Revenue, about Rx. 23,500,000?—What are my figures to which you refer?

16,656. I am not referring to any of your figures; I am referring to the details, the items, which make up your Rx. 57,000,000?—Rx. 57,116,000; I have got it only from public records, I have not created it myself.

16,657. No, I am not disputing it?—No.

16,658. The first item which makes up your total is the Land Revenue?—Yes.

16,659. Rx. 23,500,000?—Yes.

16,660. You consider that to be taxation?—It is taken from the wealth of the country whether you call it taxation or rent, or anything; it does not matter at all as far as the economic condition is concerned. I think Lord Salisbury himself has discussed that point in one of his minutes, if I remember right, in which he says that you may call it taxation or you may call it rent, but he is more inclined to call it taxation, as so much taken off from the country for revenue purposes.

16,661. I do not wish to enter into any controversy as to the nature of the Land Revenue?—No; very well.

16,662. But I will just ask you one question, when a man is taxed is he taxed on his own property or income, or on the property of some other person?—On his own property.

16,663. On his own property?—Yes.

16,664. Now is it not the fact that throughout all history a portion of the produce of the land in India has belonged to the ruler or Crown?—Yes.

16,665. In that case it does not belong to the producer?—You take the principles of the despotic Government. I grant that as a fact. Go on; yes, I will answer that question if you like.

16,666. I am quite satisfied with your answer. Does not the British Land Revenue as it is now constituted represent the share which the former native Governments used to own of the produce of the land?—Yes; in its economic effect you may call it the property of the Government or the property of the people, it is not of the slightest consequence, because in those days though Government took this half it used it on the government of the country, and every farthing of that half remained in the country. It is there that the difficulty lies; I do not care at all whether it is.

16,667. We are not on that point, at all events at present?—That is the real purpose which we have to discuss.

16,668. The next item is opium?—Well.

16,669. In that year it came to about Rx. 9,000,000. Now that is paid by China?—That is paid by China; very well.

16,670. It is not a tax on India?—No; it is so much, that is to say, that it is actually, properly speaking, the property of the Indian people, which Government——

16,671. Certainly?—Because it is their produce which brings this profit. Whether it is morally good or not is not the question; but it is the produce of the country which otherwise would have gone to the people. It is the profit of the people of India; the Government find it very convenient to have this for their government purposes.

16,672. It is a tax on that produce which is paid by China?—Yes, that is true; that is the case with all trade, every trade. When you send goods to another country you get a certain profit out of it, and that becomes the profit of the country.

16,673. Well, let us proceed. I think the home charges that year were about 14,000,000*l.*; that at 1*s.* 6*d.* to the rupee is about Rx. 18,000,000, so that you see China paid half of those home charges?—Yes, that is so; India's profit; that is so much gain in that direction.

16,674. And the public share, the national share of the land produce would more than cover the whole of the home charges?—Yes; but then why should India be deprived of that benefit? That is no justification that somebody else should take it away if it is the produce of India—India must enjoy it.

16,675. We are not on that point now. If you would kindly just answer the question?—Yes; I am answering the question.

16,676. Now, from that Indian taxation fund which you have admitted to be exceptionally low, far lower than that of any other country?—In amount, not in incidence.

16,677. Whether it is 6*s.* a head, as you say, or 2*s.* 6*d.* a head as Sir Henry Fowler makes it?—Sir Henry Fowler makes it so; that is the authority.

16,678. If you take away land revenue and opium, the remaining taxation comes to a very small amount?—I do not think land revenue ought to be taken into account.

16,679. Is it not the fact that from that very low taxation fund the Government pays all the charges which devolve upon government, namely, all the charges for the Army, both in India and in England, the contribution to the Navy, the whole cost of civil administration both in India and in England; the interest on railway capital?—Yes.

16,680. And the deficiency on the revenue account of railways, the interest of debt, all charges for pensions and leave allowances; and also the cost of all stores, and all railway materials?—Yes.

16,681. In fact every charge?—Yes.

16,682. Is paid out of the very low rate of taxation which is levied by the Government?—Yes.

16,683. And your grievance appears to be that out of that low rate of taxation about one-fourth in this year 1886 was applied to the payment of home charges?—Yes; well.

16,684. These home charges are what you call tribute?—Yes.

16,685. Now, is it the case that one single rupee from the Indian revenues goes into the British treasury as tribute; that is to say, is applied otherwise than as a payment for something which is given in return?—What is given in return. First of all my grievance has been again misunderstood. The grievance lies in this, that what is taken from the people as so much taxation in any shape whatsoever does not return to the people, but a portion of it goes away out of the country and impoverishes the country—that is the grievance. It is not of the slightest consequence, that the very fact that from a very small taxation the Government of India is obliged to carry on all these departments shows that these departments therefore naturally become very insufficient and inefficient; and the Secretaries of State, two Secretaries of State were perfectly justified in saying that this was an awful condition of things. That is the grievance.

16,686. What you have said is that this tribute, as you call it, is a portion of the produce exported out of British India, for which nothing whatever has returned to her in any shape?—Yes.

16,687. Now, I ask you whether there is any part of it that is not spent upon services or materials supplied to India?—Very good; it is only for necessary services. The services itself are our grievance, we are not only deprived of our money, but we are deprived also of our employment. We do not want those services.

16,688. Excuse me, that is not our point?—That is the main point. *Mr. Dadabhai Naoroji.*

16,689. The point is whether, rightly or wrongly, the money has not been paid for services or materials supplied to India?—The services are a portion of the tribute which we are compelled to pay. The services, and the money which is given for the services, both are our great grievances, that we are doubly injured both in the point of money and in the employment which belongs to us by right in our country should be taken away from us; and with it, therefore, the wisdom which is derived from that service, so that it is a grievance. 25 Mar. 1897.

16,690. So that the irreducible minimum of Europeans is not to be paid for, is it?—First of all, there ought not to be so great a minimum as now exists. I explained that very clearly that the irreducible minimum, if considered by the British as absolutely necessary, it is for the sake of maintaining their rule in India and their position in the East, as well as their position in Europe. Well, therefore, all I say is, that we grant, though if I were to take it in its logical sequence I do not grant that it is absolutely necessary to have this irreducible minimum, with the exception of the few highest offices, in order to keep the control over India; but I grant for the sake of present purposes, and for practical purposes, that a certain number of Europeans may be considered absolutely necessary. Then I say——

16,691. We will come to that presently?—If you will kindly allow me to finish. Then I say, if it is true that Europeans for certain purposes are required simply on account of the British rule, then the British people ought to pay a fair share for that interest which they themselves have.

16,692. Now, next you contrast the British system of government with the system in the native states?—Yes.

16,693. Very much to the disadvantage of the British system?—Yes, the system of course. There is nothing to be said but against the bad system.

16,694. You say the native states which adopt good management go on increasing in prosperity, in strong contrast with the system of the British management of expenditure?—Yes.

16,695. And you give instances of the taxation in certain states which come to about 12 rupees, 18 rupees, and so on, per head, so that the taxation of the native states is at least two or three times what it is in British India, or even more?—It is more.

16,696. Twice or three times that of the native of British India?—And yet he is better off.

16,697. That is what you say?—And yet he is better off.

16,698. That has to be proved, I think, has it not?—The proof lies on the very surface. First of all——

16,699. We shall come to that?—I have given testimony; one testimony, I think, in regard to this in Bhownuggar.

16,700. I have seen what you refer to, and I do not think it proves it in the slightest degree?—I have your own words that Bhownuggar had a full treasury, and so on.

16,701. I said it had a full treasury. Still, if you take three times the taxation from the people you can easily have a full treasury?—Yes, but the whole people are much better off.

16,702. I did not say that, you assume it?—What was the use of praising that state if this was not the meaning of it. You praised it because it was a good government.

16,703. Under a long British management it had a full treasury?—True, but British management was Indian management.

16,704. Shall we go on?—Yes; I have to explain a little.

16,705. I have not asked you any question?—No; but it is in answer to that question we had just now.

16,706. What?—In regard to the comparison with native states exacting greater taxation, and yet you say: How is it that they are prosperous?

16,707. I did not ask you that?—Oh, very well then.

16,708. You say the capacity for taxation in the Native States is not the result of any oppressive taxation, but the natural developments under improved government of the increasing prosperity of the people. Well, the first point is that the taxation is at least two or three times as high as that of British India?—Yes, and taxation here is, I suppose, 20 times higher than in British India.

Mr. Dadabhai Naoroji.

25 Mar. 1897.

16,709. Now how is this taxation in Native States spent; have you ever heard of its being wasted upon unworthy favourites and in debauchery?—That may be, if the political agents do not do their duty; but that is no argument against the development of the prosperity of the people under this taxation.

16,710. Have you ever heard of the native state revenues being hoarded?—Hoarded, yes; and they can afford to hoard.

16,711. You give the case of Scindia, for instance, who lent 3½ millions sterling to the British government?—Yes, that is the British Government.

16,712. Where was that money produced from; was it not hoarded in vaults?—It was hoarded in vaults.

16,713. For many years?—Yes; and it was the fault of the native state that it did so; but we are discussing the ordinary good management.

16,714. When the money was hoarded in vaults in that way, was it doing any good to the subjects of Scindia?—No, it was not doing any good; that was the fault of the native state, and notwithstanding that the people were in better condition.

16,715. Now let me ask another question. Does any of the Native State revenue go outside the Native State, is it spent outside the State; for instance, there is a considerable item of tribute that goes out?—Yes, that is the only thing, and it is a very small item, it does not affect them very much; the whole thing is so very small.

16,716. The Mysore State pay 25 lacs a year?—25 lacs, and yet they flourish.

16,717. You keep on assuming that as a fact?—Yes, we have that point.

16,718. Mysore pays 25 lacs?—Yes.

16,719. That is as a subsidy for military aid?—Yes.

16,720. For military protection. Therefore you see that the Mysore subject contributes a considerable sum towards the cost of the English Army?—Yes, that might very well be considered, what might be a reasonable contribution to a portion of the Army.

16,721. That is not the point. He is, therefore, very much in the same position as the British Indian subject as regards contributing to the Army?—Yes, but not exactly the same position.

16,722. Now do you not find in native states European servants?—Yes; that is of their own choice.

16,723. We will take the Bhownuggar State?—Yes.

16,724. I daresay you are aware that for the last 20 years the head of the Public Works there has been a European with a family at home?—Yes.

16,725. And that some of his sons are also employed?—Yes.

16,726. Again, take the Native State Railways?—Yes.

16,727. The managers of the Native State Railways are Europeans living in native states?—Yes.

16,728. And the railway materials and the rolling stock have all been bought in England?—I never made a complaint of that.

16,729. The native chiefs are in the habit of coming to Europe?—Yes.

16,730. And spending large sums of money in England?—Yes.

16,731. In all those ways a portion of the taxation of the native states goes out and is spent abroad?—Yes.

16,732. So that their position in that respect also is like that of British India?—That is so very small compared with the system in British India, there is no comparison between the two.

16,733. There is no comparison between a native state like Bhownuggar and the British Empire?—Yes.

16,734. In size; therefore neither should there be in the amount of revenue spent abroad?—Then I am again misunderstood. What I say is this, that in the native states you have the whole of the service from top to bottom, the natives themselves.

16,735. I have just shown you that you do not?—The whole of them are natives with the exception of such Europeans as a sort of investment they employ for benefit; and so for instance for the mills in Bombay. Actually I myself have sent from here managers.

16,736. We are discussing the Native States I think, if you do not mind?—It is the similarity of the incident that induced me to mention it; I will keep to the Native States. Therefore every farthing that is raised by the state is returned to the people, it remains in the country, it fructifies among the people naturally. I have been, of course, in Baroda, and I know a native state.

16,737. But if Europeans are employed there that does not take place?—The Europeans are employed for special purposes of their own choice; here they are compelled to put upon us where it is unnecessary, where you can have Indians of the same efficiency to do that work.

16,738. But Europeans in Native States send their savings home just the same as Europeans in British India?—Yes, that is true, but the Native States do that of their own choice for their benefit; in the other case it is compulsory to an extent that the people cannot afford.

16,739. Now we come to a point in which you see a great advantage in the Native States, that is to say that they build and extend their own railways from revenue?—They have their revenue.

16,740. British India is not able to do that because they have no revenue?—They cannot, yes.

16,741. Do you think you are correct in that statement?—In which part of the statement? Baroda has built its own railway.

16,742. That, while the Native States build their railways from revenue——?—Baroda has built it from revenue.

16,743. British India is not able to do so?—No, it cannot.

16,744. You think that is correct?—Yes, I think so.

16,745. Do you happen to remember a question in our evidence some time back in which it was shown that the British Government has spent Rx. 22,000,000 on railway and irrigation works out of revenue?—What is that compared with the whole debt.

16,746. I did not ask what it was compared—is that the vidence or not?—If you want to modify it in this way, hat Briti h India has from revenue spent some money on railways, of course I do not deny altogether.

16,747. Do you think that the Native States have spent anything like Rx. 22,000,000 on railways?—But Native States are not so big as British India.

16,748. Then, in proportion?—In proportion they have spent a good deal, and they are spending more every day.

16,749. How much, do you know?—One Native State has lent to another Native State for railway extension.

16,750. Can you tell us what amount the native states have spent on railways?—I would work it out if you want it.

16,751. You do not know?—I could not tell you off-hand.

16,752. But that is not all, besides the expenditure on railways and irrigation, the British Government has spent—I have taken it out for 10 years, 1885–6 to 1894–5—has spent immense amounts on roads and rest-houses, and all sorts of communications?—Yes.

16,753. And on other public improvements, water supply, and so on. Will you allow me to ask my question?—Yes I am not interfering.

16,754. The total of expenditure from revenue on these for the 10 years, 1885–6 to 1894–5, amounts to Rx. 43,000,000?—Yes. All that from that wretched taxation; all that from a small amount. You ought to have been able to do 10 times as much.

16,755. Will you allow me, that is spent by the British Government from revenue?—Yes.

16,756. So you are wrong in saying that the British Government is unable to find revenue for public works?—Yes; that is, to the extent they ought to do.

16,757. That was not your remark?—I have said that in my evidence to-day; I have referred to that point. All this is from a poor revenue, therefore they ought to be able to if they were in the same condition as the Native States, then their expenditure would have been in such a large proportion.

16,758. I think it is plain, then, that the native state subject is really in precisely the same position as the British Indian subject as regards the appropriation of his taxation to the interest on loans which they have in Mysore and the Nizam's dominions, too; to the payment of Europeans employed by the States, and to payments made towards the cost of the British Army, as in the case of Mysore?—Yes.

16,759. I think all you have shown me is that a large revenue is raised, and not why the people are more prosperous?—Yes.

16,760. Do you recollect also that the Native States contribute largely to the British salt revenue?—Yes. Well, that shows, you see, that there is something drawn from other people which the people themselves are not able to supply.

16,761. The point I am making is that the Native State subject pays money to the salt revenue?—So much the worse.

16,762. Which money goes abroad?—So much the worse for the British Administration.

16,763. Again, they pay a portion of the duty on piece goods?—Yes.

16,764. In all these ways they pay taxation?—Yes.

16,765. Which goes out of the Native State?—No. Still, as much as goes out of the state, they are still able to do that and be prosperous.

16,766. Well, I will take the point of prosperity. Will you allow me to ask you a question as to the testimony of your own eyes. You are a native of Western India?—Yes.

16,767. You know the districts of Kaira and Neriad?—Yes.

16,768. You know the magnificent cultivation of Neriad?—Yes.

16,769. Do you know also the Plains of Kathiawar?—Yes.

16,770. Contrasting those two, do you think the conditions of prosperity in Neriad are smaller than those in the Native States of Kathiawar?—Well, is it fair to compare a very fertile portion of the country with a portion of the country which is not so fertile? Leaving that alone; I have been in Baroda; I know something of the condition of Baroda, of the condition of the people of Baroda, its revenue, having administered that for a year; and I know that the Baroda people are much better off than the people of the neighbouring territory.

16,771. Baroda, again, is a particularly rich territory?—Very well, then, if you compare it.

16,772. That is exactly my point. Do you not think the comparative prosperity of the people depends as much on the fertility of the lands they have to cultivate as on the form of government?—If it is a fertile region and the political condition is good it will be still happier, still better.

16,773. The advantage of the political condition is that they pay three times as much taxation?—Yes, it all comes back to them, while in our case one-third does not.

16,774. I have shown that it does not all come back to them?—The very fact that so much is raised from them, and all that comes back to them.

16,775. You forget you have admitted Europeans?—Very few Europeans, they are not worth considering.

16,776. Loans are raised; tribute is paid?—The tribute is very small compared with the resources.

16,777. Now, as to the capacity for taxation not being the result of any oppressive taxation?—It is oppressive taxation, because they are unable to pay it.

16,778. Will you kindly wait until you are asked a question?—Yes.

16,779. I wish to contrast the British system as regards the land revenue with the native state system. Are you aware that the Famine Commission, after very carefully examining the question, and with every advantage in access to statistics, brought out that the incidence of the British land revenue was about 7 per cent. of the gross produce; are you aware of that?—I am not aware of it, but I would take it from you. I believe you; yes.

16,780. Are you also aware that the ordinary system in the native states is that the state—the Native ruler takes one-half of the gross produce. You see, then, there is a considerable advantage there on the side of the British subject?—Yes, and yet all that advantage is lost on account of the system of the Government.

16,781. That is your assumption?—I simply mention the fact that the half—I take that for granted—though I know that in the British assessment it is a great deal more than 7 per cent.; but I do not question that point. I take the fact as you have placed it, but the chief point is, that though they may take half of the produce, or more or less, the produce remains in the country. It is enjoyed by the country, every part of it.

16,782. I have ventured to show you that it does not?—Very well, you may say so, and the difficulty is that the exception of just this little portion of tribute that they pay; it is not large at all or weighing upon them, and they are increasing in prosperity, so that this tribute is almost not worth thinking of; but the prosperity consists in this, the difference in the two rules consists in this, that in one case every farthing, as in this country, although it pays nearly 100,000,000*l.*, but all that 100,000,000*l.* come to the people; in the other case one-fourth or so goes to other people and not to the Indians. There is the point. Of other comparisons I have no complaint to make.

16,783. Do you consider the British land revenue to be oppressive to the people?—Their taxation, I consider, is oppressive, simply from this point of view, that it becomes oppressive. The people's capacity for payment becomes less and less every year.

16,784. And that it reduces the people to a state of starvation?—Just so; it does.

16,785. Would you allow me to read a part of a speech made in India by Sir Syed Ahmed, Khan of Aligarh?—He has his own views, and I have my own views.

16,786. In the course of the last month?—Yes.

16,787. He says, "Two very large classes of the population consist of zemindars and peasants. The amount of "attention that is now given to the welfare of the peasantry "is unparalleled in any former Indian kingdom. In those "provinces in which the East India Company made a "permanent settlement of the land the enormous increase "of the wealth of the zemindars has been such that it is "unnecessary for me to enlarge on it, but I wish to say "something about the land revenue system in the provinces "in which there is no permanent settlement. If you will "study old histories you will find that the mode of "assessment adopted by this great empire is far lighter "and milder than that adopted by former rulers. The "most famous of former land settlements was instituted "by Shere Shah, and perfected by Akbar, and I wish, in a "few words, to explain the difference between that system "and the present one, so that everyone may understand "it. It is this, that in the former system Government "took a share of the whole produce of a village, and under "the present Government a share of the whole produce is "not taken, but a share only of the surplus after the "peasants have received their dues. Hence, everyone can "see how light and easy is the land settlement even in "these provinces in which there is no permanent "settlement. No one can deny that under this good "administration every species of property, and especially "landed properties, has immensely increased in value. "These landed properties, which were formerly a burden "on their owners, are now a source of profit and wealth, "of honour and social distinction. The income from "property has increased tenfold, so that he who formerly "got Rs. 10 now gets Rs. 100, and the owner of an estate "worth Rs. 10,000 has property now worth a lakh"?—Yes; so I answer, first of all, the proportion of people to whom he refers is but infinitesimally small. The large mass of the people suffer. This is what we complain of, both from starvation and famine; but with regard to the system of assessment, I would take for granted that it is a good system, that the system adopted by the British is a better system than the old rulers had; but the whole mischief comes in this, that whether it was a bad system or a good system in their old Government, and under their own kings, every farthing produced was taken by the State and returned to them, it remained in the country. The evil of this foreign domination is that it drains the country of a portion every year unceasingly, and there the whole difficulty lies. If some proper suitable remedy were applied to reduce that to its minimum extent—a fair tribute—we do not then object to pay the tribute, as it were, just as the Native States pay; but that could be brought within such dimensions as would enable India to make capital, so as to be able to stand on the same footing as any other country; it would be all right. As I said in answer to former questions, I do not want to object to the system of rules that are adopted for the sake of good government. I accept them. The difficulty lies in the economical condition of the foreign domination, and that must be reduced to its lowest possible mischief, which cannot but be incidental to a foreign domination.

16,788. I have pointed out to you that what you call the drain amounts to about one-fourth of a very low rate of taxation?—Very well.

16,789. And that about one-half of that in the year we took was paid by China. Now I want to ask you with regard to another point; there seems to be some

Mr. Dadabhai Naoroji.

25 Mar. 1897.

misunderstanding as to the return of the price and profits of exports?- Yes.

16,790. You seem to be under the impression that the British Indian subject does not get back his full price and profits of his export; that some part is retained somewhere? — That is this what is taken away from the country.

16,791. Will you let me now just put a case. Suppose that a British Indian subject in Ahmedabad, and a Native State subject in Kathiawar adjoining, each sent home cotton worth ten sovereigns?—Yes.

16,792. Each of those men gets the full value of his ten sovereigns in rupees paid to him, does he not?—Yes.

16,793. Then the British Indian subject is not deprived of any part of his ten sovereigns?—Yes; I will explain that. The British Indian subject, in sending his ten sovereigns worth of produce; that produce is here intercepted by the India Office in sending him a bill.

16,794. Not the produce, I think?—That produce is sold, and the agent for the sale of that produce pays the British Indian subject by an India Office bill, and sends it out there to be paid, not from the price that is got here from that produce, but from the revenues of India that are drawn upon to meet that bill which is kept here. That is to say it is paid from the revenue. It requires to be understood clearly.

16,795. We are all perfectly aware of that, Mr. Naoroji. It is a convenient fiscal expedient?—No.

16,796. Yes?—I would not interrupt you.

16,797. It is a convenient fiscal expedient?—Yes.

16,798. That is to say, the Secretary of State, wanting the gold here for the Home charges, takes from the merchant the gold price of the Indian produce and he gives the merchant an order on the Indian Treasury for an equivalent amount of rupees?—Yes.

16,799. Does that in any way affect the profit of the native producer and exporter in India?—Of course its effect is this, that as much as is intercepted here by the India Office in sending their bills off that price of the produce, does not itself return to India, but in its place that price of the produce is paid out of British revenue which, in the case of the native states, is quite different, he gets back actually the return.

16,800. It really amounts to this, does it not, that that small portion of the low taxation fund is paid at home for material and service supplied to India from England?—Very well, we come back to that again.

16,801. I do not wish to go into that. That is the fact, whether you think the services are worth it or not is another question. I say it is paid for in material or service supplied to India?—That is the whole of my complaint.

16,802. That is the whole transaction?—That is the whole of my complaint.

16,803. The money might be sent home to India, but the money, the gold, is kept here and the silver is obtained for it in India?—Which must be paid in some shape or other.

16,804. Does that affect the native exporter of the produce itself?—No, the native exporter is not affected.

16,805. That is all I wish to know?—But then, at the same time, it is misleading if you stop there.

16,806. I beg your pardon, I do not think it is at all misleading?—I must give my full answer, that the native exporter receives his money from the Indian Exchequer and not the money which is actually got by the sale of the goods. The sale of the goods, which means, therefore, that so much of the produce of the country entirely went out of the country without that material return in the shape of produce or bullion or in any shape.

16,807. But in the shape of service or materials?—Then that service comes in. The service does not give us a grain of rice more, but then the service in itself again is a further complaint, a further grievance of ours.

16,808. The question I was asking you was as to the profits of the native exporter, you will admit that he gets back the whole of these profits?—He must get his value; but at the same time, he does not get it from his own proceeds, he gets it from Indian revenues.

16,809. Never mind?—That makes all the difference.

16,810. Not the slightest?—That is what I complain of; else, I have no complaint whatever. The native gets this, but then what he has sent here is never returned except in the shape of services.

16,811. It is simply a convenient arrangement?—It is not a convenient arrangement, it is an economic drain.

16,812. You have admitted that the Native State subject and the Indian subject each get their full equivalent of the 10*l.*?—The native must get his 10*l.*, but in the one case——

16,813 And out of the 10*l.* the Native State subject pays 12 or 18 rupees of taxes, and the British Indian subject pays half a crown?—Yes, because the Native Indian subject does get back his full price of the produce that he has sent, all the 10*l.*; and the British Indian subject, that is to say British India as a body economically, does not get his own 10*l.* That makes all the difference.

16,814. I want to ask you a few questions as to the agency employed in exporting; that is to say, the foreign merchant. You are particularly hard on him are you not?—In what way?

16,815. You grudge him what he eats?—I do not grudge him anything.

16,816. You said of him "he eats what the Indian would eat if he did not eat it"?—That is the Indian not employed.

16,817. Oh no, the merchant?—The merchant or the non-official?

16,818. What is the merchant in India? What is his business. Does he not export raw produce?—Yes.

16,819. And import English goods in return?—Quite right.

16,820. His gains are what—the interest on the capital he employs in that business?—Yes.

16,821. Do you not think that that is a benefit to India?—Under a self-governing country, if we were a self-governing country, or at least governed in the way I am describing, we would welcome the merchant, because we would have our own resources daily employed, and the merchant would have so much more, and he is quite welcome to come in there and use his capital, and get any profit himself in the perfect free trade, but our position is that we are helpless, our capital is taken away from us, we cannot make any capital, and the foreign merchant or the foreign capitalist comes in. He has a full monopoly, as it were, of the resources of the country, he benefits by it, and we are simply the hewers of wood and the drawers of water to them. That makes an entirely different position in the economical condition of India.

16,822. Does the foreign merchant pay taxes in the country?—He may pay taxes. It is nothing, the small amount he pays. It is all very good.

16,823. Does he spend largely on living and employ labour, and so on?—Yes, to his profit.

16,824. Has he any privileged position at all?—No, the economic condition is the thing in all these things.

16,825. I find, however, in one of your remarks you suppose that he has a certain privilege?—Oh, yes, he has. I can understand what you mean.

16,826. I should like to ask you about that?—Yes.

16,827. You say here: "The position of the exploitation "by the foreign capitalists is still worse than I have already "represented. Not only do they exploit and make profits "with their own capital but they draw even their capital "from the taxation of the poor people themselves. So "that the European merchants, bankers, &c., may have "Indian taxes at their disposal, the profits of which, they "may take away to their own country"?—Yes.

16,828. What does that mean?—I have explained it thereto.

16,829. Oh, I see?—If you read further on in explanation I have quoted Sir James Westland himself.

16,830. Allow me to read Sir James Westland?—Yes, if you please.

16,831. You say: "The following words of Sir James "Westland in the telegram of 'The Times' of the "18th December last, will explain what I mean. Sir "James Westland then explained how closely con-"nected the money market of India is with the "Government balances, almost the whole of the "available capital employed in commerce practically "being in those balances. . . . A crore and a half, "which under normal conditions would have been at "head quarters in Calcutta and Bombay, had been placed "at the disposal of the mercantile community for trading

"purposes," and so on. Is it possible that you have confused these two different things, that is, the loan of money out of taxes to foreign merchants for trading purposes, and the supply of the currency by the Government for the trade generally?—No, this is quite a different thing. This simply means this: that a portion of the taxation or the money raised by taxation is or would have been available, as he says, at the disposal of commerce, and that means, therefore, that a portion of the taxation goes into the banks; from these banks European merchants mainly draw their credit, and use that money for their own business, which in reality is supplied to them as a capital from the taxation of the people.

16,832. Do you mean to say that the Government lends the taxes to the foreign merchants?—No, the Government does not lend. The Government gives it to the banks, there is a certain amount of balance kept into the banks. The merchants get the benefit of it because the banks do not put it in a stocking, and put it away saying, "there is Government money, it must remain there." They use it, they lend it; they make a profit out of it, and that means that it goes mostly to those who are in the commercial world.

16,833. Do you really suppose that that amounts to lending the taxes to the merchants?—It is so really.

16,834. Lending the taxes?—Because it is from the taxes that that money is deposited in the banks; where does that money come from?

16,835. Well, we will leave it there. Now I should like to say a few words about the civil administration. You are even harder upon the civil administration than you are upon the foreign merchant?—How; in what way, let me see?

16,836. Well, I will quote a few of your phrases. "The European civil and military services are a burthen and a destruction to India"?—Yes.

16,837. "The European services are India's greatest evil." "The present forced, inordinate, and arbitrary "employment of Europeans." "A charge forced upon "India by sheer tyranny"?—Yes.

16,838. "It is the British Indian authorities who have "made India what she is, bleeding at every pore, "and a helotry for England." "The sovereign, the "British people and Parliament have done their duty by "laying down the true and righteous principles of dealing "with India, but their desires and biddings are made "futile by their servants, the Indian authorities"?—Yes.

16,839. Now do you mean to say that you really believe that the English authorities in India are at liberty to disobey and set at defiance the orders of the English Government?—Why, your own Viceroy has acknowledged it in so many terms. Lord Lytton in his private minute says distinctly that of the two ways of saying straightforward to the Indian people that we shall not do this, or that. Instead of that we have deceived the people; we have adopted (I think the words are) transparent, deliberate subterfuge in all these matters.

16,840. Have you got that paper?—It is in the statements. I will read the part itself.

16,841. Have you got the paper you are quoting—Lord Lytton's?—I will read it.

16,842. Have you got the whole of his confidential minute?—No such confidential minute.

16,843. Has it ever been published?—I do not know. I will tell you. The extract was brought forward publicly, by a speaker in the first—I think it was the first—meeting of the congress. It is in the very first congress. It has been in the public prints all this time—12 years—and it has never been contradicted.

16,844. It was a confidential paper pilfered from the Viceroy?—That I do not know. I have nothing to do with that.

16,845. Will you answer this question? Was the purport of that paper in favour of a larger employment of Indians in offices in India?—It would have been very good if it had been published. I do not know.

16,846. Was it so or not?—I do not know. This is the only extract out of the despatch which has become public some way or other.

16,847. Now let us return to the question before us?—Yes.

16,848. Will you give an instance of a great public measure, in which the Viceroy and the Government officials in India have thwarted and defied the wishes and the orders of the English Government?—Yes.

16,849. Give it, then?—This very Act of 1833 has been left a dead letter up to the present moment.

16,850. That is not at all to the point?—Yes, but I want to show that.

16,851. I want you to show me some great measure?—This is the great measure.

16,852. In which the Anglo-Indian authorities, the English authorities in India have defied, and resisted, and obstructed a great measure which the English Government wished to give effect to in India?—That is just what I am answering, that the greatest of all measures, our very emancipation as you may say, our great charter, the Act of 1833 has been kept a dead letter up to the present time.

16,853. But is it not the case that whatever has been done in that matter has been done under the orders of the Secretary of State and the English Government?—Very well. It is no consolation to me whether it is the Secretary of State or the Government of India. When I am talking of the authorities I talk of both.

16,854. No; I beg your pardon, I quoted this to show that you were speaking of the English in India of whom you complained?—I speak of the English altogether.

16,855. I beg your pardon, it is not so?—Whatever the

16,856. They are the public servants, the Indian authorities?—Yes, the Indian authorities; but I mean, of course, the Indian authorities in both countries.

16,857. You say, "British Indian authorities and Anglo-"Indians generally obstructing at every point any step "desired by the British people for the welfare of the "Indians"?—Yes. There it is. This illustration. This is confirmed by Lord Lytton himself. Then there is the admission by the Duke of Argyll, showing that we have not fulfilled our promises, and I could make out a statement if you like.

16,858. And you condemn both the Anglo-Indians and also the Government at home?—Oh yes, both.

16,859. But the Government at home is responsible to Parliament?—Very well.

16,860. And Parliament represents the English people?—Yes; and Parliament has passed the Acts.

16,861. And do you mean to say that the Indian Government can refuse to obey or ever have refused to obey any order sent out to them from the Cabinet and the Secretary of State at home?—But there are the facts.

16,862. Where?—This Act of 1833 has been disobeyed entirely. The Act of 1870 was disobeyed for six years and every effort was made not to carry it out.

16,863. I have shown already that it was not disobeyed for six years and you admitted it?—Very well. Then, again, I give the authority also.

16,864. Will you kindly answer the question about that statute of 1870?—Yes.

16,865. Is it not the fact that nothing could be done under that Act without the sanction of the Secretary of State?—My complaint is about the Secretary of State as much as about the Government of India.

16,866. You say it is the English authorities in India?—No, Indian authorities. I mean, if I have not expressed it properly, my complaint is more against the India Office than against the Government of India. To take for instance this resolution that was passed for simultaneous examination, why the Secretary of State and the Government of India resisted to the tooth, and they would not have it, though the resolution was passed by the House of Commons.

16,867. But they may be quite right in the opinion of the British Government?—That is another affair. As to the disobedience of the Government of India or the Secretary of State to a resolution passed, this is the instance; really the reasons are there before you. Whether they are good reasons or bad reasons is not the question now.

16,868. You have shifted your ground. Your statements were made about the British Indian authorities, and I wish to know whether it is true that they can act in defiance of the home authorities?—No, I never meant such a thing. I mean both British and Indian authorities. I mean both authorities over India; I have repeatedly stated that, as well as in this country.

16,869. Let that rest there?—Very well then.

Mr. Dadabhai Naoroji.

25 Mar. 1897.

16,870. You have condemned these European services in these strong terms, I want to call your attention to the sort of work that they have done in India?—Yes.

16,871. India is a great exporter of raw produce, is it not?—Yes.

16,872. And what a country of that nature requires is to be opened up by railways?—Yes.

16,873. Up to last December the Government had opened 20,000 miles of railway?—Quite.

16,874. Did the natives of India take any great part in promoting those railways?—Simply because they have not got the means, their means are taken away.

16,875. That is what you say?—Yes, that is what I say. If the people were able to invest their money in those railways they would be only too glad to do it.

16,876. We have had that a great many times. Now, with regard to commerce, I will just read, and it is as good as anything for the purpose, the remarks of Mr. Playfair in the Chamber of Commerce in Calcutta this month. He says, speaking of Her Majesty's reign and the increase of Indian trade during Her Majesty's reign: "The combined "value of exports and imports, including treasure, in "1837 amounted to about 19 crores; it now exceeds 200 "crores. The capital invested in cotton mills exceeds 13 "crores, and in jute mills 4 crores. The cornfields yield "3,000,000 tons annually, while the tea crop is valued at "24 crores. The progress which the country has made "in the 60 years, during which its resources have been "developed, communication improved, law and order "maintained, and the protection of life and property "assured, was described as lending lustre to the Queen's "reign." Then I will quote a few figures relating to the last seven or eight years. In four provinces, being the Punjab, Madras, the Central Provinces and Lower Burma, for which exact figures happen to be available—the average cultivation—cultivated acres, in 1886-9 was 72,215,000, in 1893-5 the average acreage was 80,915,000. The value of some of the principal exports, cotton, rice, wheat, oil, jute, tea and indigo, in 1881-5 the average was Rx. 54,000,000; in 1891-5 it was Rx. 73,000,000?—Yes.

16,877. You see the increase which has taken place in the figures which I have quoted?—Yes. But all this I have fully explained in my statements.

16,878. Now you will naturally say that the taxation also has greatly increased?—Well, we are going into a subject which requires very careful examination, both with regard to the trade and with regard to the taxation, and we are not going into taxation; I am not allowed to go into that by our reference, or I would have gone into it.

16,879. I am merely wishing to give you a few figures as to the great increase of taxation, which is probably a question in which you take an interest?—Yes.

16,880. I was taking the Queen's reign as before. I find that between 1839 and 1840 the average yearly taxation, was 18 crores; in 1896-97 it is 65 crores?—That does not show that there is a natural increase of prosperity, it has been new taxation.

16,881. No, on the contrary, I suppose it would *primâ facie* show that there had been a heavy increase of taxation?—Yes, heavy and crushing.

16,882. I wish you to look at one or two items. The land revenue has increased from Rx. 12,000,000 to Rx. 26,000,000, that is an increase right off of Rx. 14,000,000?—Well, it is not a great matter, after so many years of increasing assessment.

16,883. Of course there are new provinces which have been added?—Yes.

16,884. And, as I have just shown, an enormous additional acreage has come under assessment?—Yes.

16,885. For instance, it amounts, as I have shown you, to 8,000,000 acres in 7 years in four provinces only?—Yes. There is an increase of population also.

16,886. Then, in opium there is an increase of from Rx. 784,000 to Rx. 7,123,000?—Yes.

16,887. That 6,000,000 is got from China, as we have already agreed. In customs there is an increase of Rx. 4,000,000 and in excise an increase of Rx. 6,000,000?—Yes.

16,888. That is upon strong liquor generally?—Yes.

16,889. In stamps there is an increase of 4,000,000?—Yes.

16,890. I suppose in none of those things would you find a specimen of "crushing taxation grinding India to the dust"?—How has that taxation increased? The nature of the taxation, the principles upon which it has enhanced, that has to be considered and examined before you give any judgment upon these.

16,891. I have just been accounting for the increase of land revenue?—Yes.

16,892. The increase of Chinese tribute?—Yes.

16,893. And so on?—Well, what I say is that the increase in the land revenue is an increased oppression; well, without going into the character and the examination of the increase of this land revenue, unless we go into a thorough examination of the way in which it has increased and the other increases, we cannot form a judgment generally that it is all favourable, because a more high figure is not necessarily good. We are precluded by our reference from going into taxation.

16,894. I have shown you that in 10 years there was an increase of over 8,000,000 acres in four provinces?—Yes, and there is an increase of population also.

16,895. Which came under assessment?—Yes.

16,896. So that it is the growth of cultivation which largely accounts for the increase of the land revenue and also the increase of territory?—All this requires examination, which the Commission cannot go into.

16,897. But I think you know that as a fact?—If it is a fact we must go into it, and we cannot go into it here.

16,898. There is one item which I have not noticed, and which you have not noticed also—salt. The increase during the Queen's reign has been from Rx. 2,696,745 to Rx. 8,861,845?—Yes, by what increase of rate.

16,899. An increase of 6 millions of Rx.?—Yes, and there is an increase in the rate of taxation.

16,900. That, I suppose, you would consider as an instance of heavy additional taxation?—Yes, it is additional taxation, and it is more crushing to the poor people that it should ever be taxed at all.

16,901. It is a poor man's tax?—It is the poor man's tax; he is not able to pay any tax. He is starving, he is dying off at the slightest touch, living on insufficient food.

16,902. The incidence of the salt tax has been lightened and not made more heavy during the last 30 or 40 years. Do you know that fact?—There is no need of doubting anything; if the fact is a fact you can put it here before the commission. There is no need of doubting it. All I know is that there are 6,000,000 or 7,000,000 raised from salt, which is one of the most objectionable taxes that can be put upon these poor, wretched people.

16,903. The question is whether there is a crushing and increasing burden of taxation, crushing the life out of the people?—That is what I consider.

16,904. I wish to show that this salt tax, which is the most open to objection, is actually lighter than it was 30 or 40 years ago?—If it is actually lighter than it was 30 or 40 years ago, that is no consolation. It was very heavy.

16,905. Do you know what the price of a pound of salt is in India?—I know in my own time what the price of salt was. I, myself, as a little boy, used to go to the salt store and used to buy it far cheaper than it is now.

16,906. Do you know what the price of salt is—a pound of salt?—Yes.

16,907. Well, what is it?—It is a tax added to its cost of production.

16,908. What is the price of a pound of salt in India?—I do not know the exact figure; I can find it out very easily.

16,909. I only wanted to know whether you knew?—I do not know just now; I cannot tax my memory immediately.

16,910. The price of a pound of salt in India is something over ½*d.*; it is ·68 of a penny. The price of salt in London is ·75 of a penny; so that it is dearer in London than it is in India?—Yes, it is much worse for the Indians than in London, because the people have not the means of paying. Lord Cromer said, when talking of this: You say that one anna—it only costs one anna, or the addition is one anna; do you mean to say that one anna is not a matter of concern to people who are so extremely poor?

16,911. I quite agree with you that that is perfectly evident?—It is perfectly evident.

16,912. This is really the only tax the poor man pays?—They are not capable of paying it. They are starving, as you know.

16,913. I wish to point out the nature of the salt tax in India. It is generally looked upon as a rather arbitrary tax. The real fact in India is, is it not, that the Government sells the salt to the people?—Yes.

16,914. And charges a certain duty—at present 2 rupees 8 annas a maund, in addition to the cost price of production?—Yes.

16,915. With the result that, while the salt supplied is of very excellent quality—far better than it used to be—the price at which the salt is sold is less than it was 40 years ago; that is all I wish to bring out?—Yes, but all I wish to say is that, notwithstanding that, these people are so wretched that they cannot get enough of salt for themselves and for their cattle.

16,916. That is what you say?—Well, those are the facts.

16,917. Now, with regard to what you call the minimum which you want to sweep away—the minimum civil administration—you call it inordinate; "forced inordinate and arbitrary employment of Europeans"?—It is arbitrary because we have no voice in it.

16,918. Of course not?—Yes.

16,919. Are you aware that the higher administrative body, the Indian Civil Service, consists of less than 1,000 persons, of whom about 60 are natives?—Yes.

16,920. You grant that?—I know that.

16,921. Do you think that a large proportion for managing 300,000,000 of people?—It is the amount of money which is paid to them, and the economic effect of the large amount of money which is paid to them. It is not simply the men.

16,922. You think that too many?—Yes, certainly. It is the very cause of the whole grievance.

16,923. You would sweep them all away?—No, I would not sweep them all away. You may have your viceroys and governors, and a few heads of departments to have your whole control. There is no necessity for having this 1,000 Europeans.

16,924. Let us go on to the next official rank; the middle rank—sub-judges and magistrates, and that class. I take the figure of the Public Service Commission Report, that is sufficiently near; the number of persons is 2558?—Yes.

16,925. Of these 35 were Europeans?—Very well.

16,926. Thirty-five were domiciled Europeans, 104 were Europeans permanently resident in India and Eurasians?—Yes.

16,927. When you get to the next rank below that the whole are natives?—Of course all the lower places are given to Indians, because they cannot help it. It is at these low salaries Europeans could not be employed.

16,928. It is not necessary to attribute motives. I suppose it is a fact, is it not?—It is a fact. I do not say it is not, but it is the higher salaries that it takes away.

16,929. Are there native judges on the benches of the High Court?—There are some few.

16,930. Are there native judges on the benches in each High Court?—Yes.

16,931-2. Are there native gentlemen in the Legislative Councils?—Yes, that has nothing to do with the economical condition, and they do not get anything.

16,933. Are there native judges on the district benches?—Yes, on the district benches. Do you mean what are called district judges, and who can be only employed from the civil service?

16,934. Yes?—Well, there are a few that, being entered into the civil service, are necessarily district judges.

16,935. The provincial service comprises a considerable number of the district judgeships, which have been handed over to them in order that natives may be employed?—It is yet to be seen whether this provincial service which has destroyed the statutory service will fill up its place. We have been deprived of something like 200 situations given to us in the Civil Service by the introduction of this, what is called the provincial service; we lost instead of gained by it.

16,936. Would you take it from me, that in the North-West Provinces now, or very recently, two district judgeships having been placed in the provincial list, there are four native gentlemen filling the appointment of district judge?—I am very glad, so far; we have made very little progress but the progress would have been far greater had the Act of 1870 been kept intact, and the number of additions which was a partial instalment, what was given to us on my petition through the East India Association by Sir Stafford Northcote. If that had been loyally and faithfully carried out by this time we should have had a much larger number.

16,937. Will you answer me this question? Has the general tendency of the British Government been to increase or decrease the employment of natives in public offices?—Well, there are two opinions upon it, and, of course, we are obliged to remain on general belief. There is an opinion prevalent in India among the Indians that wherever they can introduce an European they try to do it, notwithstanding the despatch of Sir Stafford Northcote referred to, with regard to 200 rupees of salary, namely, that any appointment of 200 rupees of salary, or above that salary, should not be given as far as possible to an European, but to an Indian, except with the consent of the Secretary of State. But the actual practice, so far as I have heard, has been that situations are given to Europeans. The Secretary of State's consent is taken, and that really and properly speaking the despatch is a dead letter, in which Sir Stafford Northcote had put very strong grounds. I have not got that despatch, or I should have been glad to read it.

16,938. Do you know that in 1880 the recruitment for the Civil Service was decreased by one-sixth, in order to make room for natives?—For the Act of 1870.

16,939. Quite so?—But unfortunately then for 10 years there was such a deal of opposition to it, some way or other, that it was cut away.

16,940. What was cut away?—This one-sixth, had you gone on adding this one-sixth we should have been very glad.

16,941. I beg your pardon, the decrease of the civil servants has not been abolished?—The statutory service does not exist.

16,942. But the provincial service has taken its place?—The substitution of the provincial service was actually a loss to us from what was the statutory service.

16,943. I do not admit that at all. You have got the whole of the statutories so far?—That is so. Those that had been passed; but none after that—after that year.

16,944. Of course not?—The year 1888 or 1889.

16,945. The provincial service has been substituted?—The provincial service has been substituted on a different scale altogether.

16,946. The provincial service has been substituted?—There was no reason why it should be substituted. The statutory service was a great gain to us, as an instalment, and as a part of the civil service. Had you gone on adding that one-sixth to the service every year in 30 years, 210 situations in the service would have been held by Indians in what is the Indian Civil Service.

16,947. A statutory civilian does not hold a position in the service, he is simply put into some appointment. He is not a member of the Indian Civil Service?—That was the interpretation put upon it. The Act was passed in reference to our petition, and it was simply and solely an integral part of the Civil Service. The only difference was that——

16,948. Where is that, is it in the Act?—Oh yes, the 6th clause says that distinctly.

16,949. What does it say?—That instead of Indians being required to come and pass their examination here, to get into the Civil Service——

16,950. That is not in the Statute of 1870?—Yes, the service, the statutory service is a wrong name given to it. Why the Civil Service itself is the statutory service, the whole of it.

16,951. There is not a word of that in the Statute; the Statute simply says that in order to increase the promotion of natives of approved merit and ability, a native may be appointed to any post without restriction?—Yes, and then a certain portion is fixed, is it not.

16,952. No?—A certain portion—one-sixth—or something of that sort is fixed.

16,953. No?—And then the speeches will illustrate very largely what the Act says.

16,954. No; you are quite mistaken?—One sixth was prescribed in order that so many appointments should be made every year for the Civil Service.

Mr. Dadabhai Naoroji.

25 Mar. 1897.

16,955. Was that in the Act?—Whether it is in the Act, or whether it is in the despatch, I am not able to say just now.

16,956. It is not in the Act; I have sent for the Act?—We shall see the Act. If it is not, some way or other the rule was adopted, in fact, by the Government from 1880, I think as you said.

16,957. It was in 1880?—And they fixed a proportion of six and seven, say six and seven every year. Well, there, they at least made it as the proportion in which they should be nominated every year. What it ought to have been would have been that by a good strong test of competition they should have been selected. Instead of that they were nominated by the Government, and the whole of the statutory service was discredited in that manner. It does not exist now, and the provincial service was substituted for it which the Government of India was determined to have as early as 1877 or 1878. They did not then get it, and they at last got it by their own way.

16,958. You are aware that the statutory civilians are young gentlemen of good birth and station?—Yes, but they were not competent.

16,959. And that was found on the whole not to answer?—Yes.

16,960. And therefore the statutory service was abolished?—Yes.

16,961. And what promised to be a better system was substituted for it?—No, but there is an injustice done to the statutory service.

16,962. We need not go into that; that is another question?—Then what is the good of putting your question to me; I must answer that question.

16,963. The injustice done to the statutory service has nothing to do with the question?—Yes, because you referred to the statutory service just now, and said it was found unsatisfactory; but the reason was, that the statutory service was introduced in a way which was sure to fail; instead of simply going to have boys belonging to good families, one essential and most important necessity was that they should have been first found and tested as competent to hold such places. Well, that was not done.

16,964. Quite so. It was right to do away with such a system, was it not?—Yes; but then that system should not have been introduced. Well, at least, this was the suspicion in the mind of the Indians, that these rules were adopted without the test of competence, and that it was the object of the Government to throw discredit upon it and to try to get rid of it.

16,965. Do you attribute such a motive as that?—I do not attribute it myself; but that is the general feeling, and also this is a fact, that this is a general feeling among the Indians, that the rules were made, whether intentionally or unintentionally—the rules were not such as they ought to have been made.

16,966. I will read part of the Statute of 1870, section 6. "Whereas it is expedient that additional facilities should "be given for the employment of natives of India, of "proved merit and ability, in the Civil Service of Her "Majesty in India: Be it enacted that nothing in the 'Act "'for the Government of India,' 21 & 22 Vict. c. 106, or "in the 'Act to confirm certain Appointments in India "'and to amend the Law concerning the Civil Service "'there,' 24 & 25 Vict. c. 54, or in any other Act of "Parliament or other law now in force in India, shall "restrain the authorities in India by whom the appoint-"ments are or may be made to offices, places, and "employments in the Civil Service of Her Majesty in India "from appointing any native of India to any such office, "place, or employment, although such native shall not "have been admitted to the said Civil Service of India in "manner in section 32 of the first-mentioned Act provided, "but subject to such rules as may be from time to time "prescribed by the Governor-General in Council, and "sanctioned by the Secretary of State in Council, with the "concurrence of a majority of members present; and that "for the purposes of this Act the words 'natives of India' "shall include any person born and domiciled within the "dominion of Her Majesty in India, of parents habitually "resident in India, and not established there for temporary "purposes only; and that it shall be lawful for the "Governor-General in Council to define and limit from "time to time the qualifications of natives thus expressed; "provided that every resolution made by him for such "purpose shall be subject to the sanction of the Secretary "of State in Council, and shall not have force until it has "been laid for 30 days before both Houses of Parliament?"—Those rules were made, which were unsatisfactory altogether. Unfortunately the Secretary of State, when the rules were made, did not pay attention to those rules, and they were unsatisfactory to us.

16,967. What you said about one-sixth and all that is not in the Statute?—I will find out.

16,968. You did not find it in the Statute?—I cannot lay my hand upon it at once, but the best proof of that is that the Government of India actually adopted a certain proportion, whether it was by a despatch from the Secretary of State for India or whether it was the Government of India's own decision I am not prepared to say, but there was the fact.

16,969. Are you aware of what were called the rules of 1879?—What are they, and what about them?

16,970. The rule of 1879 was that in this intermediate or middle body of officials, subordinate magistrates and judges and so on, no European should be appointed to a place of 200 rupees and upwards if a native could be found fit to hold it?—Yes.

16,971. Now was that provision in favour of the appointment of natives to that class?—Yes, it was, for the lower class.

16,972. At the same time that one-sixth was deducted from the recruitment of the civil service?—Yes, that was an independent provision.

16,973. Was not that in the direction of giving larger employment to natives?—Then I have to ask that question, if you would kindly supply it to us—how many appointments have been made since that time?

16,974. Since what time?—Since the time that that despatch was written, that no appointment at 200 rupees salary should be given, as far as possible, to Europeans, but to Indians, except with the consent of the Secretary of State; I never have been able to get the information.

16,975. I can personally testify that the rule has been most rigidly observed?—Very well, I am very glad to hear that, but I can tell you that the general impression among us is that it has not been strictly carried out.

16,976. That may be?—And the Secretary of State has sanctioned, of course, whatever the Government of India said, and all such situations have not been given; there was one complaint from Madras, if I remember rightly, of such an appointment which was irregular, and the Secretary of State actually put it back.

16,977. I have no doubt; that confirms what I say?—But I should be very glad indeed to be satisfied that that is done.

16,978. Might I put another point to you?—Yes.

16,979. The admission of natives to high offices has always been conditional, in a certain sense, from the first. For instance, in the Act of 1833 it is said that no native shall be excluded from office on account of his religion or his place of birth?—Yes.

16,980. It does not say that he is to be admitted to office on account of his religion?—He is not to be excluded; therefore he ought to have been given equal facilities.

16,981. Allow me to go on. In the Queen's Proclamation we find "that, so far as may be, Our subjects, of "whatever race or creed, be freely and impartially "admitted to offices in Our service, the duties of which "they may be qualified, by their education, ability, and "integrity, duly to discharge?"—Yes, quite right; that is all we ask.

16,982. Then when you get to the statute of 1870, it provides for the promotion of natives of approved merit and ability?—True.

16,983. So you see the Government always has the same difficult task of deciding, in any case, whether a native candidate is qualified by education, ability, and experience for any particular office?—Yes.

16,984. And that makes a considerable difficulty in carrying out the statute of 1870?—There can be no difficulty whatever if the Government is determined to do it, for they have only to lay down the standard.

16,985. But they are determined to do it, and they have done so?—They have not done so. That is my complaint.

16,986. They have tried various expedients, and are now trying one which they hope will succeed?—They have not tried the right expedient.

16,987. That is your opinion?—That is what I point out to you. The expedient is just as they have done here; they ought to have laid down rules according to which the Indian candidates are examined, and whether physical,

mental, or moral, there is the standard laid down there. Well, according to that standard, those Englishmen who come to that standard are elected in the same manner. Have the regular standard as high as you like, either mentally, morally, or physically; put it forward, and then let them come forward without any disabilities of being compelled to come to this distant country. Let them have equal facilities. We do not want anything more; we do not want any favouritism or any concession, but let us all be treated exactly on the same footing, and on the same standard, and then if we fail the fault will be ours. Let us have simultaneous examination upon the very same standard.

16,988. That is your view of the matter?—I can only give my view.

16,989. I want to ask you, generally, what it is that you want; do you wish to sweep away the whole English civil service?

(*Sir William Wedderburn.*) I think when Mr. Naoroji says again and again that he does not wish to do it that he should not be asked this question.

(*Sir James Peile.*) I want to know what he says.

(*Sir William Wedderburn.*) Mr. Chairman, I do not think, when Mr. Naoroji has only made a statement of that sort, it is a fair question.

16,990. (*Sir James Peile.*) I asked him whether he wishes to sweep away the whole civil service in India, which he describes as the destruction of India and its greatest evil?—Yes, as it is.

16,991. I want to know whether he wishes to get rid of it bodily?—There you misunderstand me. What I lay down in my fifth pamphlet, what I considered as the best means of governing India, is suggested by Lord Salisbury and Lord Iddesleigh themselves.

16,992. What proportion would you keep?—There is no proportion there; there you have first of all native states, and that supreme power should be maintained there a certain contribution from all the states, just to keep a certain reasonable amount of the European Army; and in each native state, as we will call it, you will have a political agent who will have a complete control over the work—call him a Governor, call him a subordinate, call him anything you like; this will supply the double purpose both of maintaining the supremacy in a very remarkable and in a very efficient manner, and at the same time the people will feel that they are governed by themselves.

16,993. I merely wish to ask whether you propose to retain any part of the Civil Service?—The European service? Only the highest portion, such as the Viceroy, the Governors, the Commander-in-Chief, leaving the military alone if we are talking of the Civil Service, and the Lieutenant-Governors, or you may go one grade below as a beginning. Now I do not mean to say that all the Europeans are to be turned out; let there be, as in Mysore, gradually every European place being supplied by the Indian, till at last you come to these highest places which are really not the places of the Civil Service; let us have the whole Civil Service, leaving alone all the high level to Europeans as the controlling power. That I have always said.

16,994. Then you would have the Viceroys, the Governors, and the Lieutenant-Governors?—Lieutenant-Governors; these certainly.

16,995. No Englishmen beneath them?—I do not see any necessity for others; but even if you go one grade lower for the sake of regularity in a practical way, you may begin with, say, one-half the Civil Service should be given to the Indians, and let the number be reduced from 1,000, as you said, to 500 or 400; that by itself would be a great relief.

16,996. And by degrees you would evict them all?—Then we may go on gradually higher up.

16,997. Then tell me about the Army; what would you do about that—the British troops?—I am quite willing to say that Lord Roberts put it very properly: He says we have an Army, and he praised that Army. I have not the least objection to that praise, but he said that after all the real strength of the British rule depends upon the contentment of the people. If the people were contented, and if they are at your back, no matter when Russia or five Russias come to invade India; if the people are at your back you can raise an army sufficient even to drive away Russia to St. Petersburg. But I am just going further—I am quite willing to allow that a certain portion of the British Army is absolutely necessary for the purpose of benefiting both England and India. Let there be a fair proportion of expenses divided between the two countries, because the European soldier or the European Army is wanted, especially for the sake of the British rule. We grant that the continuance of the British rule is also a benefit to us, and therefore we do not want to object to the European Army to a reasonable extent, and I will show that afterwards. Let the British people pay a share of it. Now, with regard to the whole Army, I do not see it is necessary. The number that was at the time of the transference to the Queen, say about 30,000 or say 40,000, may very well be kept, say, up to 40,000, and the half the share must be paid by the British on account of the mutual benefit for common purposes, and if the other plan is adopted of native states being formed out of them, they contribute what share would be considered as reasonable as for common purposes, and then the whole thing will be as natural and as worthy of the English name and the English fame as can possibly be.

16,998. Yes. You heard Lord Ripon say that his Government had considered the question most carefully?—Yes. Very well.

16,999. And had arrived at the conclusion that the proportion necessary to maintain is one English soldier to two natives?—Yes, because it is on account of the fear that is entertained that the soldiers cannot be depended upon; it is the fear of the people.

17,000. Of the soldiers?—I mean of the Indian soldier; it is the fear of the Indian soldier. We propose then—it is a question merely whether you are to act upon fear or upon confidence. If you act upon fear then there is no help; then, at least, you must pay a proper proportion for keeping such an European army as you think necessary on account of that fear.

17,001. If you had a very small European army do you think that you would have the means of preventing two sections of the Indian army fighting one another, Mohammedans and Hindoos for instance?—Again we are going back to the first proposition.

17,002. I said with a very small European army?—Have that confidence in the people and the people will side with you and will regard it as your and their own interest.

17,003. I am not speaking of the people siding with you, but of the people fighting among themselves?—The people fighting among themselves is quite a different thing altogether from the Imperial purpose of keeping up the supremacy of the British rule which, first of all, necessitates this employment of Europeans to an inordinate extent. If you say that a certain amount of European troops are necessary it is always from fear that the Indian army will not behave properly. I am willing to grant the fear, and whatever they consider as the necessity either of the protection or the fear of the Indian soldier going wrong at any time, very well, all this arises from the necessity of maintaining British rule in India and British Empire in the East. Well, therefore, I say that granting that an irreducible minimum, as Lord Ripon called it, granting that that is absolutely necessary, without controverting that point, I say that it is for the benefit of both, and therefore a share must be paid by the British Treasury. That is granting all the necessity that the British rulers may consider necessary to have Europeans there.

17,004. What I wanted to bring before you was this; suppose the English civil administration is reduced to half a dozen men, and the English army is reduced to——?—Say 40,000.

17,005. Would England be able to keep the warlike races of India from invading the peaceful ones?—The warlike races of India have been there for thousands of years, the peaceful ones have been there for thousands of years, and the people themselves and they have not disappeared. They are now even perishing by millions. Take for instance, Europe, civilised and highly advanced countries, they are armed to the teeth, one spark will throw them we do not know where.

17,006. But the history of India is that the people have been continually slaughtering each other?—What have you done here; what is the history of Europe? We do not want to go back, because we have learnt as you have learnt.

17,007. Is your receipt for reviving the prosperity of India to let loose the Pindaris?—Not necessarily; those days are gone; you have now introduced, and perhaps that is one reason that I say that your supremacy must remain there in a way in which the interest of every native state will be to take care of itself and will therefore depend more upon you, and you will be more secure, you see. I have proposed my plan, and I do not want to go beyond my plan.

Mr. Dadabhai Naoroji.

25 Mar. 1897.

17,008. Do you remember what Sir Madava Rao, Prime Minister of Baroda, said to Lord Roberts on the subject of India for the Indians?—What did he say? I do not know.

17,009. He said it would be like loosing the bars of the cages of the Zoological Gardens and letting out the animals, that very soon they would all be dead except the tiger—the tiger was, I believe, the warlike people of Northern India?—Is this the result of 150 years of British rule that we are not so civilised enough to observe law and order?

17,010. It would be the result of the suspension of British rule?—The result of British rule that we are yet unfit for law-abiding people?

17,011. Now, Mr. Dadabhai Naoroji, we have kept the Commission a long time. You and I are agreed on certain propositions—that it is a disadvantage—however inevitable it may be—that, people, or a continent of people, should be under the supreme control of foreigners who cannot, from the nature of the Indian climate, be permanently amalgamated with the Indian people, and that in those circumstances it is the duty of the supreme power to be careful that the cost of Government should not be unduly heavy on a poor population, and that natives of India should be admitted freely to all public offices for which they are fit?—Yes.

17,012. But we differ in that I have some regard to facts and possibilities, while you, as I think, indulge in visions and certainly in a great deal of strong condemnatory language. Do you not think that, considering the facts to which I have called your attention, and the evidence before the Commission, when you describe the Government of India as a selfish and despotic tyranny, crushing India to the dust by cruel and reckless taxation administered by the civil and military services, which are the destruction of India and its greatest evil, when you describe Lord Elgin, Lord Lansdowne, Lord Dufferin, Lord Ripon, Lord Lytton, Lord Mayo, and Lord Canning as the agents of this selfish and despotic tyranny, defying and thwarting the desires and biddings of the British people and Parliament, so that India is bleeding at every pore and a helotry for England, do you not think you are, shall we say, somewhat overstating your case?—First of all, the words "poor people" is assumed there, or at least you understand it as if it is an actual natural necessary incident of the people; they are poor because of this system. When you make me say that Lord Mayo and Lord So-and-So and all the Viceroys and the Secretary of State are the agents of this tyranny—there, I say, I am misunderstood. They are merely working in a system which is evil and bad; they are working in a system; how far it is their fault, or their agent, it is quite a different thing. It is the system that is bad, and that makes very good men work on wrong lines, and therefore the result is that, on account of this foreign system, without giving the people of India such a position in its own Government as would make them prosperous, and, at the same time, benefit Britain, in that my complaint lies. The way in which you have put it just now is certainly unjust and unfair to me.

(*Sir James Peile.*) Well, I quoted your own words, and I will leave it there.

17,013. (*Chairman.*) We will now pass on to the question of the apportionment of the charge?—Yes.

17,014. Will you tell us what your suggestions or propositions will be upon that head?—Yes, my propositions are—(1) That it is the desire of the British people that British rule should be one of justice and righteousness, for the benefit of both India and Britain, and not for the benefit of Britain only to the detriment of India, and that the financial relations in apportionment of charge should be as those between two partners, and not as those between master and slave; (2) That upon this equitable basis the apportionment of expenditure in which Britain and India are jointly interested should be according to extent of the interest, and according to capacity to pay; (3) That the creation and maintenance of British Imperial supremacy in India is a British interest of the first magnitude; yet, with a few exceptions, India has been unjustly charged with the whole cost of creating and maintaining the British Imperial supremacy, without Britain paying any portion, and without India being allowed to share in the advantages connected with that supremacy; (4) That law and order are beneficial to India, but they are also British interest, as a condition essential to the very existence and prosperity of British rule; (5) That, assuming, as it is said, that India should bear all those charges for internal and external protection, which she would have to bear if British rule did not exist, she should not bear the special cost of European agency so far as used solely to maintain British supremacy. And, moreover, that if British rule did not exist, everyone employed will be an Indian and not an European; (6.) That, as a practical arrangement, Britain should pay for all British employed in Britain, that India should pay for all Indians employed in India, and that as regards British employed in India and Indians employed in Britain, there should be an equitable apportionment, according to respective benefit, and capacity to pay. To put it still more moderately, the payments to Europeans in both countries may be divided half-and-half between Britain and India; (7) That in the Army, Navy, and Civil Service, public employment, with its advantages and emoluments, should be proportioned to the charge; and in considering this point it should be borne in mind that in India Government employment monopolises in great part the sphere of private enterprise and the open professions as practised in Britain; (8) That the wars carried on beyond the Indian frontier of 1858 are, as stated by Lord Salisbury, "An indivisible part of a great Imperial question," and that therefore the cost should primarily be borne by the Imperial Exchequer, India contributing a fair share on account of, and in proportion to, indirect and incidental benefits accruing to her, and direct share in the services; (9) That from April 1882 to March 1891, nearly Rx. 129,000,000 were spent from Indian revenues beyond the western and north-western frontiers of India, for avowedly Imperial purposes, and that a fair share of this amount should be refunded from the Imperial Exchequer, and similarly for the cost of Burmese war.

17,015. Where do you get that 129 millions?—There is a return made.

17,016. (*Mr. Caine.*) What is the reference?—Return East India Military Expenditure beyond the frontier, No. 91 of 1895.

(*Chairman.*) Perhaps you would just hand it to me. (*Return handed in.*)

17,017-9. Quite so. Would you go on?—Colonel H. B. Hanna in his book No. 3 "Backwards or forwards," gives at page 40 a table, and makes the total about Rs. 714,500,000, out of which the British Exchequer paid 5,000,000*l*, towards the expenses of the Afghan war. Besides this amount he points out several omissions. I may put in this table with his remarks thereon in Chap. III.

17,020. Are there any further papers you would like to put in?—I desire to put in my correspondence with the War Office, the Admiralty, and the Civil Service Commissioners. In this I claim that neither the War Office nor the Admiralty had any authority or power to exclude Indians from the commissioned ranks.

17,021. What was the origin of this correspondence of yours with these three departments?—Questions were put in the Commission whether Indians were admissible in the Civil Service in this country, and then I put a question or two, I think to Admiral Kennedy, with regard to the admission of Indians in the naval service. The answers were not quite positive and I thought proper to communicate with these three departments and find out exactly what the real condition is, and that made me carry on this correspondence which I am now putting before you.

17,022. (*Sir James Peile.*) It is quite irrelevant to our subject, your correspondence?—The employment of the service?

17,023. (*Chairman.*) I am anxious to know what the object was, because the Commission must hereafter consider whether the correspondence is a correspondence which they would care to publish; therefore I will ask you what was the outcome of the correspondence—let me take first of all the Civil Service Commissioners?—The Commissioners have replied positively that the Civil Service is open to all the Indians in this country, excepting, of course, that they must come over here to be examined.

17,024. Yes?—Upon which I have put a short note saying that while for the civil service here every facility is given to the candidate, by examinations in Edinburgh and Dublin, that Indians should be compelled to come here for their examinations for service in their own country was not fair or just. That is a note that I have attached to it.

17,025. Your point there is that in order to qualify or to obtain admittance to the civil service in India, Indian gentlemen have to come over here to be examined?—Yes.

17,026. Did I not gather from some questions and answers that passed between Sir James Peile and yourself that there has been a statute passed to enable Indian gentlemen to be admitted on certain conditions to the Civil Service in India without coming over here?—Yes, a portion of them.

17,206*a*. I thought I also understood from Sir James Peile that the principle involved in that arrangement has been consistently carried out.

17,027. (*Sir James Peile.*) With regard to the appointment of natives in India, yes?—What I meant to say is, that there is a statute prescribing these appointments of a portion of the civil service, and rules were made and appointments were made; but after some nine or 10 years that is abolished, so that the statute is a dead letter now.

17,028. (*Chairman.*) Then, in fact, the point at issue between you and the Civil Service Commissioners was that you object to the Indian candidates for appointments to the Indian Civil Service being brought over here?—Yes; that was not the correspondence; it is my note upon the reply that for the English Civil Service they are eligible.

17,029. They are eligible?—They are eligible; that is distinctly pointed out, which was doubtful.

17,030. May I also ask the upshot of the correspondence with the Admiralty?—The Admiralty—I was obliged to put the last interpretation myself, that in the commissioned offices Indians will not be admitted, and so is the reply also of the War Office. I discussed that the authority by which they had any power to make appointments did not authorise them to exclude the Indians positively and distinctly from these services.

17,031. But you say that the regulations of the War Office and the Admiralty do exclude Indians?—They do exclude Indians—the War Office—which I demur to.

(*Sir James Peile.*) They do not specifically do it, but they say that it rests with the authorities here to say who is to be admitted.

17,032. (*Mr. Caine.*) They are not barred by statute, but by regulation?—No; the War Office regulations distinctly exclude them.

17,033. (*Sir James Peile.*) They do not mention natives?—Oh yes, distinctly.

17,034. You think so?—Oh yes; the correspondence states it.

17,035. My recollection was that they reserved the power to say who was eligible?—That is what I wanted to know from them; the Admiralty fenced with me in that respect and would not give me a decided answer, but the War Office regulations are clear; they are given to me there distinctly they must be Europeans or Europeans naturalised; any others are entirely excluded, and then the Admiralty replied that their rules were something like or approximately.

17,036. (*Chairman.*) Would you read the passage in the War Office letter on which you build that conclusion?—Oh yes, I will read it: "I am to acquaint you, in reply, "that candidates for admission in the British Army must "be of pure European descent, and are also required to "be British-born or naturalized British subjects; that is "the regulation."

17,037. (*Sir James Peile.*) I thought that had been altered?—This is the latest I have got.

17,038. (*Mr. Caine.*) That is about a year ago, is it not? What is the date of that letter?—The date of this is the 10th June 1896; they have not given us any further information. The correspondence is carried on up to the present day; there is a reply still standing which they have not yet given. Since that a good deal of correspondence has taken place, but they have never modified that.

17,039. (*Chairman.*) You have referred to Mysore State. Are you able to develop and illustrate the views which you put forward as to government by the native states?—Yes. With regard to the native states I agree with Lord Salisbury when he says: "the general con- "currence of opinion of those who know India best is "that a number of well-governed small native states are "in the highest degree advantageous to the development "of the political and moral condition of the people of "India." And Lord Iddesleigh similarly said: "Our "Indian policy should be founded on a broad basis. "There might be difficulties; but what we had to aim at "was to establish a system of native states which might "maintain themselves in a satisfactory relation." Again, "We should endeavour, as far as possible, to develop the "system of native government to bring out native talent "and statesmanship, and to enlist in the cause of govern- "ment all that was great and good in them." Entertaining these ideas, Lord Iddesleigh practically carried them out in restoring Mysore, on the distinct basis that "at "once offered a guarantee for the good government of "the people and for the security of British rights and "interests," as I have already stated.

17,040–1. What advantages do you think would accrue from this arrangement?—The advantages from this arrangement will be these: The obvious conclusion is that the only natural and satisfactory relations between an alien supremacy and the people of India can be established on this basis alone. There are these obvious advantages in these relations. The British supremacy becomes perfectly secure and founded upon the gratitude and affection of the people, who, though under such supremacy would feel as being under their own rulers, and as being guided and protected by a mighty supreme power. Every state thus formed, from the very nature of its desire for self-preservation, will cling to the supreme power as its best security against disturbance by any other state. The division in a number of states becomes a natural and potent power for good in favour of the stability of the British supremacy. There will be no temptation to any one state to discard that supremacy, while, on the other hand, the supreme Government, having complete control and power over the whole government of each state, will leave no chance for any to go astray. Every instinct of self-interest and self-preservation, of gratitude, of high aspirations, and of all the best parts of human nature, will naturally be on the side and in favour of British supremacy which gave birth to these states. There will be an emulation among them to vie with each other in governing in the best way possible, under the eye and control of the supreme Government on their actions, leaving no chance for mis-government. Each will desire to produce the best administration report every year. In short, this natural system has all the elements of consolidation of British power, of loyalty, and stability, and of prosperity of both countries. The result of this arrangement, in the case of Mysore, has been most satisfactory from all sides. For the result in Mysore, I give a short statement from the Mysore report of 1st October 1895. Of the work of the late Maharaja from 1881 till his death at the end of 1894, it would be enough for me to give a very brief statement from the late address of the Dewan, to the representative assembly held at Mysore on 1st October 1895, on the results of the late Maharaja's administration during nearly 14 years of his reign, as nearly as possible in the Dewan's words. The Maharaja was invested with power on 25th March 1881. Just previous to it, the state had encountered a most disastrous famine, by which a fifth of the population had been swept away, and the state had run into a debt of 80 lakhs of rupees to the British Government. The cash balance had become reduced to a figure insufficient for the ordinary requirements of the administration. Every source of revenue was at its lowest, and the severe retrenchments which followed had left every department of state in an enfeebled condition. Such was the beginning. It began with liabilities exceeding the assets by Rx. 307,500, and with an annual income less than the annual expenditure by Rx. 12,500. Comparing 1880–1 with 1894–5, the annual revenue rose from Rx. 1,030,000 to Rx. 1,805,000. or 75·24 per cent., and after spending on a large and liberal scale on all works and purposes of public utility, the nett assets amounted to over Rx. 1,760,000 in 1894–5, in lieu of the nett liability of Rx. 307,500 with which his Highness's reign began in 1881.

	Rx.
In 1881 the balance of state funds was	240,743
Capital outlay on State railways	251,919
Against a liability to the British Government of	800,000
Leaving a balance of liability of Rx. 307,500.	
On 30th June 1895:—	
Assets:	
(1.) Balance of State funds	1,272,361
(2.) Investment on account of railway loan repayment fund	278,150
(3.) Capital outlay on Mysore-Harihar railways	1,480,330
(4.) Capital outlay on other railway	413,339
(5.) Unexpended portion of capital borrowed for Mysore-Harihar Railway (with British Government)	157,949
	3,602,129
Liabilities: Rx.	
(1.) Local railway loan 200,000	
(2.) English railway loan 1,638,280	
	1,838,280
Net assets	1,763,849
Add other assets:	
Capital outlay on original irrigation works	Rx. 990,893

Mr. Dadabhai Naoroji.

25 Mar. 1897.

Besides the above expenditure from current revenue, there is the subsidy to the British Government of about Rx. 250,000 a year, or a total of about Rx. 3,700,000 in the 15 years from 1880–1 to 1894–5, and the Maharaja's civil list of about Rx. 180,000 during the 15 years also, paid from the current revenue. And all this together with increase of expenditure in every department. Under the circumstances above described, the administration at the start of His Highness's reign was necessarily very highly centralised. The Dewan, or the Executive Administrative Head, had the direct control, without the intervention of departmental heads of all the principal departments, such as the Land Revenue, Forests, Excise, Mining, Police, Education, Mujroyi, Legislative. As the finances improved, and as department after department was put into good working order and showed signs of expansion, separate heads of departments were appointed for Forests and Police in 1885, for Excise in 1889, for Mujroyi in 1891, and for Mining in 1894. His Highness was able to resolve upon the appointment of a separate Land Revenue Commissioner only in the latter part of 1894. Improvements were made in other departments, local and municipal funds, legislation, education, &c. There are no wails which, unfortunately, the Finance Ministers of British India are obliged to raise, year after year, of fall in Exchange, over-burdening taxation, &c. And all the above good results are side by side with an increase of population of 18·34 per cent. in the 10 years from 1881 to 1891, and there is reason to believe that during the last four years the ratio of increase was even higher. During the 14 years the rate of mortality is estimated to have declined 6·7 per mille. But there is still the most important and satisfactory feature to come, viz., that all this financial prosperity was secured not by resort to new taxation in any form or shape. In the very nature of things the present system of administration and management of Indian expenditure in British India cannot ever produce such results, even though a Gladstone undertook the work. Such is the result of good administration in a native state at the very beginning. What splendid prospect is in store for the future if, as heretofore, it is allowed to develop itself to the level of the British system with its own native services, and not bled as poor British India is.

17,042. You had some personal knowledge of Mysore, had you not?—No, of Baroda I have personal knowledge.

17,043. Have you any later information about Mysore?—I have the latest report of Mysore, which is summarised in the "Times" of the 8th December 1896. The "Times," in its article on Indian affairs, confirms by actual facts and events the wisdom and statesmanship of Lords Salisbury and Iddesleigh in their one great work of righteous and wise policy. Fortunately, it is the very Mysore State to which this righteous and wise act was done; therefore, I desire to quote a few words. The "Times" says: "The "account which Sir Sheshadri Iyer rendered to it of his "last year's stewardship is one of increasing revenue, "reduced taxation, expenditure firmly kept in hand, repro- "ductive public works, and a large expansion of cultivation "of mining, and of industrial undertakings. The result is "a surplus which goes to swell the previous accumulations "from the same source." The "Times" article concludes with the words: "A narrative such as Sir Sheshadri Iyer "was able to give to the Representative Assembly of Mysore "makes us realise the growth of capital in the native "states, and opens up new prospects of industrial under- "takings and railway construction in India on a silver "basis." Then he has said about some other native states, but I have not introduced that here. I have got this latest report, if the Commission would allow me to put in a statement out of it, like the one I have already given. I have cited other illustrations of native states in my statements.

17,044. I think it probably would be best if you were to modify by those latest figures the figures which you have already given in your evidence?—I could give the latest figures in continuation of those.

17,045. You are giving us the examples of Mysore?—Yes.

17,046. It is no good giving us two sets of tables in regard to it. Can you not, with this latest report, correct the table you have already given us in evidence?—I could do, but there is this difference, that in the report which I have quoted here he went into the comments on the administration of the 15 years and gave the result up to 1894–5; in this last report, of course, he only goes, in the usual way, into the figures of receipts and expenditure of the year; he does not go again into a report of the administration of the 15 years.

17,047. Do the later figures very much vary from the former?—They are not on those lines; the other figures are simply the results and expenditure in the usual way, a sort of budget.

17,048. We must bear in mind the danger of drowning the Commission in figures. You were giving us an instance of the working of a native state; it is no use giving us two sets of tables in illustration of that. If you are satisfied with the figures you have given us for 1894–5—they appear to me to give the illustration which you desire to give—then I do not think it would be necessary to supplement them with other figures?—All right.

17,049. Would you take Mysore as a type of native states generally?—Yes.

17,050. If I had, for instance, a list of the Native States before me here, and I were to put them to you one by one, would you quote each of them as a model state of the kind like Mysore?—Not every one of them—those that have introduced improvements in the way in which they have been introduced in Mysore—Baroda will be a very good illustration, as far as that goes.

17,051. One used to hear that Oudh was not a model kingdom?—Oudh was not a model kingdom.

17,052. I have heard so. What security is there that such a state of things as occurred in Oudh, or something like it, may not occur in these Native States?—No, for the times are entirely changed, and the control which the British Government has even on the existing native states is now of a different character altogether, and the management or the system of Government is more or less assimilated and brought to the system which exists in British India.

17,053. Then your contention is that repetition of such evils as those which led to the annexation of Oudh must be prevented by the precautions to be taken by the supreme Government; that is, by the Indian Government?—In fact, the later improvements and the way in which the administration is introduced in all Native States.

17,054. Would you quote Hyderabad as a case of model government?—Well, I am not acquainted with the details of the Hyderabad Government, and therefore it would not be right for me to give any opinion upon it. My general impresssion is—and I may be wrong—that the state is not conducted in the way which would produce such results as Mysore has produced. It is more the defect of the administration than the possibility of results as good as the Mysore; but still I qualify it that I may be wrong, because I am speaking only from general impressions about that State.

17,055. In that case, if Hyderabad does not come up to the level of Mysore the supremacy of the British Government is not sufficient to secure in a native state such good results?—If I am right in the impression, I think then it is evident that in that case the supremacy has not been exercised to the best advantage.

17,056. Now, leaving this point, you have put before us the practical remedy which you would recommend; that is to say, you have called our attention to the cost to India of Europeans. Have you any facts or practical figures on that subject which you would like to put before the Commission?—Yes, I leave the important suggestions I have made; I leave that consideration alone, and I come now to matters exactly as they are. First of all, Europeans. Here is Return 192 of 1892 of East India salaries. In the Civil Department the amount of annual salaries, Rs. 1,000 and upwards, is:—

	Rx. 3,874,929
Public Works Department (Civil) - -	909,814
Absentee allowances Civil Department -	175,677
Public Works Department, Civil - -	44,734
Pensions paid in India, Civil:—	
Europeans (Eurasians) - - -	97,323
Public Works Department, Civil:—	
Europeans (Eurasians) - -	23,871
Total in India - - -	Rx. 5,126,348

in England. The amount for civil and military are not separate, which I may request to be supplied.

17,057. Are you suggesting that those figures should be supplied to enable you to give a complete statement of the sum which represents the cost of Europeans in India?—Yes; the two are mixed up, civil and military, only that the amounts might be separated, but I have just the total further on; it does not matter much even if the information is not given, because my illustration stands just the same. Now what I urge is that the European Civil Service is distinctly alleged to be employed mainly for the

maintenance of the British rule. For a practical purpose at present I grant that the service is for the benefit of India also—as for the maintenance of the British rule—and further, I do not press for the very weak capacity of India. I say the least that Britain can do in justice to India is to pay half of the salaries of the Europeans in the Civil Departments. The next figure I want to put is the expenditure on the European army in India, and pensions and other disbursements in England.

Army Europeans.

	Rx.
For the Military Department, Annual Salaries	3,781,844
Public Works (Military) - - -	171,075
Absentee Allowances, Military - - -	234,900
Public Works, Military - - -	7,089
Pensions paid in India:	
Pensions under Civil Regulations:	
Europeans (Eurasians) - - -	8,839
Pensions under Army and Marine Regulations:	
Europeans (Eurasians) - -	101,697
Total—India - -	Rx. 4,305,444

Paid in England—

The amounts, Civil and Army together, are 3,710,678*l.* (including contributed) say at Rs. 15 per £ Rx. 5,566,017.

grand total about 15 millions of Rx., to which is to be added the payments to European soldiers. What I urge is that the British Army is mainly for the maintenance of British rule against internal or external troubles. But for present practical purposes I accept that the Army is for the benefit of India also, as for that of Britain; and I urge, therefore, that, leaving alone even the poverty in India, Britain in fairness to India should share the expenditure, say half and half, for what is a common purpose of equally vital importance to both. The Government of India correctly puts the position: "Millions of money have been spent "on increasing the army in India, on armaments and "fortifications to provide for the security of India, not "against domestic enemies, or to prevent the incursions "of the warlike peoples of the adjoining countries, but to "maintain the supremacy of British power in the East."

17,058. You have heard a good deal of evidence taken on the subject of existing army charges. Would you not think it desirable to criticise what you have heard put before us with regard to the different branches of Army expenditure or have you any remarks or suggestions to make upon the question of apportionment as it has been before us?—Apart from the important considerations to which I have already referred, and taking the question as it exists now, I consider, as far as I can judge at present, that the Government of India has made out a fair case. I have heard the other side of the War Office and the Admiralty, and this I shall fairly consider and give my opinion on in the preparation of the Report.

17,059. Therefore, so far, in offering your evidence you do not wish to make any remarks upon those important questions?—No; I do not see the necessity of it, because the question has been very fairly and largely discussed, and the Government of India has put the case very fairly, as far as I could see it.

17,060. On that point you associate yourself with the Government of India?—Yes; I am quite satisfied with the fairness with which they have urged the question.

17,061. And you do not wish to go beyond them?—No, I do not wish to go beyond them.

17,062. Then do you wish to offer any remarks in connexion with the Navy?—Yes, with regard to the Navy, it is of absolute necessity to England whether there was rule in India or not. With regard to the absolute necessity to the United Kingdom itself for its own safety, of the whole Navy as it exists and is intended to be increased, there is but general opinion, without any distinction of parties. It will be easy to quote expressions from many prominent politicians. It is, in fact, the great subject of the day for which there is almost unanimity. I would content myself, however, with a few words of the highest authority in the realm under the Sovereign, the Prime Minister, and also of the Chancellor of the Exchequer. Lord Salisbury said in his Brighton speech, I have not quoted the whole words, but just such words as apply here:

"But dealing with such money as you possess . . . that the first claim is the naval defence of England. I am glad that you welcome that sentiment. . . . . It is our business to be quite sure of the safety of this island home of ours whose inaccessibility is the source of our greatness, that no improvement of foreign fleets, and no combination of foreign alliances, should be able for a moment to threaten our safety at home. . . . . We must make ourselves safe at sea whatever happens. . . . . But after all, safety, safety from a foreign foe, comes first before every other earthly blessing, and we must take care in our responsibility to the many interests that depend upon us, in our responsibility to the generations that are to succeed us, we must take care that no neglect of ours shall suffer that safety to be compromised."

Sir M. Hicks-Beach, the Chancellor of the Exchequer, so late as 28th January last (the "Times," 29th January 1896), said emphatically, and in a fighting mood: "We "must be prepared. We must never lose the supremacy "of the sea. Other nations had not got it and could "afford to do without it, but supremacy of the sea was "vital to our very existence."

The Irish Financial Relations Report at page 23, says:

"Sir Edward Hamilton has stated in his evidence that he did not believe that if Ireland ceased to exist, Great Britain's expenditure on the Army and Navy could be reduced (Ans. 8741–2). The enormous outlay on the Navy has become necessary in consequence of Great Britain's position as the first commercial power in the world, on account of her enormous trade with every part of the globe, and on account of the dependence of her inhabitants for subsistence on supplies from abroad, and on having a safe ocean communication."

Notwithstanding that such is the absolute necessity of England to have even more than its present Navy as a world-wide power, I am willing to allow that a fair share should be paid by India, for the vessels that are kept in the Indian waters, and which have been under consideration by the Commission. Well, that I have said in the question of partnership, and therefore I will not add here, that whatever is asked from us to contribute, to that extent we should have a share in the benefits of that service. It comes, in fact, next immediately—about partnership.

17,063. Considering the partnership between England and India, should not India take some share in all such charges as are required for imperial common interests?—Yes. About the partnership between England and India, as it becomes an element in all questions of the relations between the two countries. The Indians are repeatedly told, and in this Commission several times, that Indians are partners in the British Empire and must share the burdens of the Empire. Then I propose a simple test. For instance, supposing that the expenditure of the total Navy of the Empire is, say, 20,000,000*l.*, and as partners in the Empire you ask British India to pay 10,000,000*l.*, more or less, British India, as partner, would be ready to pay, and, therefore, as partner, must have her share in the employment of British Indians, and in every other benefit of the service to the extent of her contribution. Take the Army. Suppose the expenditure of the total Army of the Empire, is, say, 40,000,000*l.* Now, you may ask 20,000,000*l.* or more or less to be contributed by British India. Then, as partners, India must claim, and must have, every employment and benefit of that service to the extent of her contribution. If, on the other hand, you force the helpless and voiceless British India to pay, but not to receive a return to the extent of the payment, then your treatment is the unrighteous treatment of the slave-master over British India as a slave. In short, if British India is to be treated as a partner in the Empire it must follow that to whatever extent (be it a farthing or a hundred millions) British India contributes to the expense of any department, to that extent the British Indians must have a share in the services and benefits of that department, whether civil, military, naval, or any other; then only will British India be the "integral part" of, or partner in, the Empire.

17,064. Have you any considerations to lay before the Commission on the subject of frontier expenditure?—Yes; according to the table of, and comment on, the expenditure on the frontier wars from Colonel Hanna's book. This expenditure, which is entirely Imperial—for the maintenance of British rule against Russian invasion—is, say, roundly, about Rx. 80,000,000 or more, out of which 5,000,000*l.* have been paid by England. I am not at all discussing the policy of these wars. All I simply say is that these frontier wars are avowedly for Imperial purposes, that both England and India must be considered as benefited by it, and the least that should be done in justice in India is to halve the expenditure, if not in the proportion of the capacity of India as compared with that of England.

Mr. Dadabhai Naoroji.

25 Mar. 1897.

I have here the highest declarations of the Imperial character of these wars. If the Commission would allow, I shall read them.

On 11th February 1880, Mr. Fawcett moved the following amendment to the Address in reply to the Queen's Speech (Hansard, Vol. 250, p. 453):

"But humbly desire to express our regret that in view of the declarations that have been made by your Majesty's ministers that the war in Afghanistan was undertaken for Imperial purposes, no assurance has been given that the cost incurred in consequence of the renewal of hostilities in that country will not be wholly defrayed out of the revenues of India."

Mr. Fawcett then said (Hansard, Vol. 250, p. 454):

"And, fourthly, the most important question, as far as he was able to judge, of who was to pay the expenses of the war . . . . It seemed to be quite clear that the expenses of the war should not be borne by India, and he wished to explain that so far as India was concerned this was not to be regarded as a matter of generosity, but of justice and legality. . . . . The matter must be decided on grounds of strict justice and legality. . . . . (p. 457): It was a remarkable thing that every speech made in that House, or out of it, by ministers or their supporters on the subject, showed that the war was a great Imperial enterprise, those who opposed the war having always been taunted as being "parochial" politicians who could not appreciate the magnitude and importance of great Imperial enterprise. . . . . (p. 458): He would refer to the speeches of the Viceroy of India, the Prime Minister, and the Secretary of State for Foreign Affairs upon the subject. . . . . In December 1878, the noble earl* warned the peers that they must extend their range of vision, and told them that they were not to suppose that this was a war which simply concerned some small cantonments at Dakka and Jellalabad, but one undertaken to maintain the influence and character not of India, but of England in Europe. Now were they going to make India pay the entire bill for maintaining the influence and character of England in Europe. . . . . His lordship† treated the war as indissolubly connected with the Eastern question. . . . . Therefore, it seemed to him (Mr. Fawcett), that it was absolutely impossible for the Government, unless they were prepared to cast to the winds their declarations, to come down to the House and regard the war as an Indian one. . . . . All he desired was a declaration of principle, and he would be perfectly satisfied if someone representing the Government would get up and say that they had always considered this war as an Imperial one, for the expenses of which England and India were jointly liable."

Afterwards Mr. Fawcett said (p. 477):

"He was entirely satisfied with the assurance which had been given on the part of the Government that the House should have an opportunity of discussing the question before the Budget was introduced; and would, therefore, beg leave to withdraw his amendment."

In the House of Lords, Lord Beaconsfield emphasised the objects to be for British Imperial purposes (25th February 1880, Hansard, Vol. 250, p. 1,094):

"That the real question at issue was whether England should possess the gates of her own great empire in India. . . . . We resolved that the time had come when this country should acquire the complete command and possession of the gates of the Indian Empire. Let me at least believe that the peers of England are still determined to uphold not only the Empire, but the honour of this country."

So it is clear that the object of all the frontier wars, large or small, was that "*England* should possess the gates "of *her own* great Empire," that "*this country* should "acquire the complete command and possession of the "gates of the Indian Empire," and uphold not only the Empire, but also "the honour of this country." Can anything be more clear than the Imperial character of the frontier wars?

Mr. Fawcett, again, on 12th March 1880, moved (Hansard, Vol. 251, p. 922):

"That in view of the declarations which have been officially made that the Afghan war was undertaken in the joint interests of England and India, this house is of opinion that it is unjust to defray out of the revenues of India the whole of the expenditure incurred in the renewal of hostilites with Afghanistan."

Speaking to this motion, Mr. Fawcett, after referring to the past declarations of the Prime Minister, the Secretary of State for Foreign Affairs, the Chancellor of the Exchequer, quoted from the speech of the Viceroy soon after his arrival (p. 923):

"I came to India, and just before leaving England for India I had frequent interviews with Lord Salisbury, the then Indian Secretary, and I came out specially instructed to treat the Indian frontier question as an indivisible part of a great Imperial question mainly depending for its solution upon the general policy of Her Majesty's Government. . . . ."

And further on Mr. Fawcett said (p. 926):

"What was our policy towards self-governed colonies, and towards India, not self-governed? In the self-governed colony of the Cape we had a war, for which we were not responsible. Who was to pay for it? It would cost the English people something like 5,000,000*l.* In India there was a war, for which the Indian people were not responsible—a war which grew out of our own policy and actions in Europe—and we are going to make the Indian people, who were not self-governed and were not represented, pay every sixpence of the cost."

And so, Lord Salisbury, as Secretary of State for India, and the Viceroy, had cleared up the whole position: "To "treat the Indian frontier question as an indivisible part "of a great Imperial question, mainly depending for its "solution upon the general policy of Her Majesty's "Government," and the Indian people having no voice or choice in it.

Mr. Gladstone, following Mr. Fawcett, said (p. 930):—

"It appears to me that, to make such a statement as that, the judgment of the Viceroy is a sufficient expression of that of the people of India, is an expression of paradox really surprising, and such as is rarely heard among us . . . . (p. 932): In my opinion, my hon. friend the member for Hackney has made good his case. . . . Still, I think it fair and right to say that, in my opinion, my hon. friend the member for Hackney has completely made good his case. His case, as I understand it, has not received one shred of answer. . . . . (p. 933): In the speech of the Prime Minister, the speech of Lord Salisbury, and the speech of the Viceroy of India, and, I think my hon. friend said, in a speech by the Chancellor of the Exchequer, this Afghan war has been distinctively recognised as partaking of the character of an Imperial war. . . . . But I think not merely a small sum like that, but what my right hon. friend the Chancellor of the Exchequer would call a solid and substantial sum, ought to be borne by this country, at the very least . . . . . (p. 935): As regards the substance of the motion, I cordially embrace the doctrine of my hon. friend the member for Hackney. There is not a constituency in the country before which I would not be prepared to stand, if it were the poorest and most distressed in the land, if it were composed of a body of men to all of whom every addition of a farthing for taxes was a sensible burden, and before them I would be glad to stand and plead that, when we have made in India a war which our own Government have described as in part an Imperial war, we ought not for a moment to shrink from the responsibility of assuming at least a portion of the cost of that war, in correspondence with that declaration, instead of making use of the law and argument of force, which is the only law and the only argument which we possess or apply to place the whole of this burden on the shoulders of the people of India."

The upshot of the whole was that England contributed 5,000,000*l.* out of 21,000,000*l.* spent on this war, when one would have naturally expected a "far more solid and substantial" sum from rich England, whose interest was double, both Imperial and European. But the extent of that contribution is not the present question with me. It is the principle that "the Indian frontier question is one "indivisible part of a great Imperial question, mainly "depending for its solution upon the general policy of "Her Majesty's Government," and that, therefore, a fair apportionment must be made of all the charge or cost of all frontier wars, according to the extent of the interest and of the means of each country.

Coming down to later times, the action of Mr. Gladstone on 27th April 1885, to come to the House of Commons to ask for 11,000,000*l.* and the House accepting his proposal, and on the occasion of the Penjdeh incident, is again a most significant proof of the Imperial character of these frontier wars. He said (Hansard, Vol. 297, p. 859):—

"I have heard with great satisfaction the assurance of hon. gentlemen opposite that they are disposed to forward in every way the grant of funds to us to be used as we best think for the maintenance of what I have upon former occasions described as a National and Imperial policy. Certainly, an adequate sense of our obligations to our Indian Empire has never yet been claimed by any party in this country as its exclusive inheritance. In my opinion

* The Prime Minister.
† The Marquess of Salisbury.

he will be guilty of a moral offence and gross political folly who should endeavour to claim on behalf of his own party any superiority in that respect over those to whom he is habitually opposed. It is an Imperial policy in which we are engaged."

17,065. You lay great stress on the high authorities you quote, do you not, throughout your evidence?—Yes.

17,066. May I ask you, would you lay equal stress if I placed before you the same high authorities speaking in the other direction?—I lay stress upon high authorities in all matters which I have so thoroughly studied, and in which I agree with them. Of course, each authority has different opinions upon different subjects.

17,067. But if the same high authorities on another occasion spoke in a different sense would you lay equal stress upon them?—On the same subject.

17,068. On the same subject?—Well, I should be glad to see them.

17,069. (*Mr. Caine.*) You quote these high authorities in support of your own position?—In support of my own views.

17,070. And strengthen your own views based on personal experience?—What I consider to be the right thing, of course.

17,071. (*Chairman.*) There is this to be said, where great reliance is placed on the expression of opinon of a high authority, in all probability an equally high authority can be produced on the other side?—As Mr. Caine said, I produce authorities which are in support of my opinion.

17,071*a*. I am only pointing out that high authorities may be found on both sides; we should bear that in mind before we place absolute reliance upon what is said in political discussion?—Yes.

17,072. You are aware that there has been much discussion about the employment of the Indian Army outside of India; have you any remarks to make upon what has occurred before the Commission upon that head?—Yes. This can be answered in two ways. If the test I have just proposed of dividing the whole Imperial expenditure, and each deriving the benefit of the services in proportion to the contribution, then the whole Army and Navy becomes altogether Imperial, and may be used in any part of the world at common additional expenditure. Secondly, apart from such Imperial partnership, whenever Indian forces are taken outside Indian limits, the expenses must be paid in full by the British Exchequer except when the interests are distinctly common, like that of the frontier wars as a protection for both against Russian invasion. In such case as I have already stated, expenses may be divided in some fair way, giving some consideration to the capacity of both. On the other hand, such wars as that of Abyssinia, and for the benefit of Egypt or the Cape Colony, no expenditure should be placed, ordinary or extraordinary, upon the Indian revenues. The only case which can come at all, outside of India, within the purview of common purposes like the North-Western Frontier wars, is when the Suez Canal is actually threatened and has to be defended. Then, like common purpose, both India and Britain can make a fair share with some consideration for the poorer party. Aden should be considered as for Imperial purposes, and be divided in a similar way. With all other diplomatic or other expenses of Britain, India has no connexion or interest, and should not be made to contribute. Now, sometimes this question of interest may not be so very obvious, and, in any such difference, some fair tribunal should be resorted to to decide the difference. This question of tribunal has been already discussed in evidence, and I trust the Commission may be able to see their way to recommend some.

Mr. Dadabhai Naoroji.

25 Mar. 1897.

(*Chairman.*) That, I think, completes your evidence, thank you, Mr. Naoroji.

17,073. (*Mr. Caine.*) Just one question on what you have said. You say that India and Britain should take a fair share when the Suez Canal is actually threatened and has to be defended. Do you not think that Australia and New Zealand, the Straits Colonies, and Hong Kong and Ceylon, ought also to take a fair share?—Surely they ought to.

17,074. You do not discriminate between India and the other dependencies interested in the Suez Canal?—They are as much interested in the Suez Canal as India is.

(Adjourned till Monday, 5th April.)

At the India Office, S.W.

FORTY-FIRST DAY.

Monday, 5th April 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Mr. DINSHAW EDULJI WACHA called in and examined.

Mr. Dinshaw Edulji Wacha.

5 April 1897.

17,075. (*Chairman.*) You appear before the Commission, do you not, as the representative of the Bombay Presidency Association?—Yes. I represent the Bombay Presidency Association, of which I am one of the honorary secretaries since the date of its establishment in 1885, say 12 years.

17,076. What is the object of the Association?—The Association is established for the advocacy and promotion of the public interests of India by all legitimate and constitutional methods, for the due fulfilment of which Rule 2 prescribes that it "shall, whenever necessary or expedient, hold "meetings, which may be made open to the public, for the "discussion of public affairs, prepare and submit memorials "or petitions to the Provincial or Imperial Governments "or the British Parliament in England or other authorities "for the removal and prevention of injurious measures, "and the introduction of others which may be calculated "to promote the general interests of this country, and "otherwise to take such action as may be considered "conducive to the accomplishment of the purposes in "view."

17,077. What are you besides being the honorary secretary of the Bombay Presidency Association?—I am, besides being the honorary secretary of the Bombay Presidency Association, honorary joint general secretary of the Indian

Mr. Dinshaw Edulji Wacha.

5 April 1897.

National Congress, and a member of the Bombay Municipal Corporation. I am also managing agent of a large and flourishing cotton mill, and a member of the managing committee of the Bombay Mill Owners' Association. For many years past I have employed my leisure hours in the study and discussion of public affairs, especially on finance and economic subjects, and have regularly contributed to the local press many articles on these subjects. I have also taken, and am still taking, an active part in the many public movements in the city. At the annual sittings of the Indian National Congress I have made speeches on military expenditure from time to time; as well as on such topics as cotton duties, income tax, exchange compensation, and so forth. Similarly, I have taken active part as secretary of the Bombay Provincial Conference which annually meets in some prominent town of the Presidency, and have addressed delegates as such on the expanded Legislative Councils, on the way in which provincial budgets are discussed thereat, and on other matters, including the administration of the drink traffic. On the latter question, to which I have devoted close attention, I wrote a series of articles in the "Bombay Gazette," which I afterwards reprinted in pamphlet form, copies of which were forwarded to the Bombay Government, the Government of India, and the Secretary of State. In my honorary capacity as secretary of the Bombay branch of the Anglo-Indian Temperance Association, I memorialised the Government, pointing out the evils of their farming system, and criticised, as secretary of the Presidency Association, the Mowra Bill, which the entire Presidency condemned. I also issued a pamphlet on the burning question of agricultural distress, and the impoverished condition of the Indian peasantry, chiefly basing my criticism on the official facts embodied in the report on the condition of the people, which was published on the eve of Lord Dufferin's departure. I have taken an active part at meetings of the Bombay millowners, and have spoken on questions affecting the cotton industry. Last year I contributed to the "Times of India" a series of letters on the growth of the revenue and expenditure of the Bombay Municipality, and I have been continually contributing articles to the press on Imperial and provincial finance. I was elected President of the Provincial Conference held at Belgaum in 1895, where I broadly surveyed, in my inaugural address, the financial condition of India. At the last sittings of the Indian National Congress, held in December 1896, the following resolution was passed. "That this Congress "desires to place on record its sense of satisfaction at the "delegation by the Bombay Presidency Association of "Mr. Dinshaw Edulji Wacha, joint general secretary of "the Congress, to give evidence before the Royal Com-"mission on Expenditure, and the Congress has full "confidence that Mr. Wacha will give accurate and "adequate expression to its views on the questions which "form the subject of inquiry."

17,078. The Commission is glad to have before it a representative of Indian and independent opinion?—I feel much obliged for the consideration on the part of the Commission.

17,079. You have had the opportunity of reading the evidence which has been tendered to the Commission?—Yes.

17,080. Perhaps you will give us your view generally on the subjects on which the Commission is instructed to report; and in the first place I would ask you how you would wish to divide your evidence?—Following the procedure adopted by the Commission, I have divided my evidence into three parts—the financial machinery, progress of expenditure, and apportionment of charge.

17,081. I will first of all invite your observations upon the financial machinery of India?—It is, no doubt, highly essential for the economic administration of the Empire that its finances should be closely looked into and steadily watched, especially in India, where the people have no direct voice in checking or controlling it; and, where, besides, they are governed by a foreign agency which more or less is not in touch with popular sentiments and popular wants and requirements. Again, bearing in mind that the people are poor on the whole, the progress of enhanced and new taxation needs serious consideration, as such taxation can only be compatible with their ability. As a matter of fact for years past, at any rate since 1875, expenditure is growing at a rapid pace and demands the strictest control and check. The Finance Minister may endeavour to do his best, but so long as the financial machinery is imperfect, and so long as he finds himself with insufficient support from the Viceroy and other colleagues in the Viceregal Council, he cannot do much. He may endeavour to discharge his duty very much like "a sort of watchdog on behalf of the taxpayers" (that is an expression of your lordship's), but so long as the voice of the taxpayers themselves is not heard for good in the Council, it is not possible to keep that rigid control which checks all extravagant or doubtful expenditure. At present a certain line of policy may be followed by a Viceroy or the Secretary of State which may entail on the taxpayers heavy permanent burdens. For instance, the so-called "forward" policy, steadily pursued since the days of the unrighteous second Afghan War (save during the beneficent administration of Lord Ripon), has been principally the cause of heavy military expenditure necessitating taxation. The expenditure since the date of the Penjdeh scare has been mounting higher and higher. Upper Burmah was annexed to the Indian Empire, notwithstanding the fact that the Indian community generally protested against such annexation to India and suggested its being made a Crown Colony like Ceylon. The first Indian National Congress, held in Bombay in December 1885, protested against the annexation. I agree generally with what Sir David Barbour and Sir Auckland Colvin have said regarding the weak spots in the financial machinery of the Government, and we Indians are thankful for their expression of opinion. (Questions, Sir D. Barbour, 1854 to 1890, Sir A. Colvin, 2879 to 2894). But what I beg to urge is this: that however economic in his tendencies a Finance Minister may be, or even a Viceroy, so long as those who pay the taxes have no effective voice in the councils of the Empire, the control of expenditure, within due limits and with a regard to the capacity of the taxpayers, no financial retrenchment can be hoped for. For example, Indian public opinion believes that the present Finance Member, Sir J. Westland, has not shown so much zeal in checking expenditure as his three immediate predecessors.

17,082. (*Sir William Wedderburn.*) In your experience Sir James Westland has not shown himself so active a watchdog as perhaps former Finance Members?—No.

17,083. I think he has rather shown an inclination to bark at the taxpayers and their representatives rather than at the taxspenders?—Yes.

17,084. Is that your experience?—Yes.

17,085. Are you aware of any check which can prevent a complaisant Finance Member being appointed to the Government of India, that is, which will ensure a useful watchdog being appointed?—No.

(*Sir William Wedderburn.*) I just wished to clear up that point.

17,086. (*Chairman.*) You say that the Indian taxpayer has no effective voice in the Legislative Council. May we understand you to confine your criticism of the financial machinery to that point?—Yes.

17,087. I think that, before making that statement, you also said that the financial machinery is imperfect—have you any points in the finance machinery, besides this question of the voice of the Indian taxpayer, to which you would point as imperfect?—All those points have already been put before the Commission by other witnesses, like Sir Auckland Colvin and Sir David Barbour.

17,088. You follow Sir David Barbour?—Yes, and Sir Auckland Colvin.

17,089. You take their criticisms and adopt them?—Yes.

17,090. And these are all the criticisms which you are desirous of offering upon the details of financial administration?—Yes.

17,091. Do you think that the privilege of discussion on the budget in the Imperial and Provincial Legislative Councils tends to keep a check upon public expenditure?—It is true that in the expanded Legislative Councils, both Provincial and Imperial, there are a few non-official members who are indirectly elected as the representatives of the people. Their presence in the Council is most valuable. They are mostly leading public men who have devoted much attention to financial matters, and are in a position to represent the taxpayers' point of view; but, after all, their criticism cannot be considered effective so long as they are debarred from bringing motions for the curtailment of expenditure in a budget and dividing the Council thereon. There is a consensus of opinion on the subject among Indians that this privilege should be conceded and is absolutely needed. The Congress has more than once passed resolutions on the matter; but, unfortunately, like, many other resolutions of the Congress, which are regularly forwarded for consideration to the Imperial Government, they are unheeded.

17,092. (*Sir William Wedderburn.*) I think you mentioned that the Government were not in touch with the people?—Yes.

17,093. Would it not be a great satisfaction to the people if the Government carefully noticed and replied to formal representations of Associations like the National Congress and the Bombay Presidency Association?—Yes.

17,094. Is it not the case that Lord Elgin has recently rather restricted than encouraged the formal statement of grievances by local bodies?—Yes.

17,095. He requires, I think, that addresses should be revised by him, before they are presented to him?—Yes.

17,096. Has that given dissatisfaction to the country?—Yes.

17,097. And it has shut off one of the most useful means for the Government getting in touch with the responsible representatives of the people?—It is so.

17,098. (*Mr. Courtney.*) How has he required that revision of addresses?—Local bodies, in different places that a Viceroy visits, are supposed to present him with an address of welcome, and in doing so, generally, the custom has been to point out the legitimate grievances. A draft is previously sent through the Collector, or whoever the supreme authority in the particular place may be, to the Viceroy; the Viceroy sees the draft, and, if he thinks that certain matters should not be put in the address, he asks the Association to delete them from it.

17,099. Is that a new procedure on the part of Lord Elgin?—Yes.

17,100. (*Sir Donald Stewart.*) I think you are mistaken there?—As far as my knowledge goes only two years ago, when Lord Elgin came to Poonah, the address of the Poonah Sarvajanik Sabha was treated in that way; and I read in the newspapers from Madras that the Madras address was dealt with partly in the same way—that is, returned to be revised.

17,101. (*Mr. Courtney.*) Let us proceed by steps. In the case of former Viceroys, have drafts been submitted to the Viceroy, before petitions or addresses have been presented?—So far as my knowledge goes, they are generally sent beforehand to the Viceroy.

17,102. And so that is an old practice?—That is an old practice.

17,103. And you say that Lord Elgin has for the first time referred back those addresses, saying that certain portions ought to be cut out?—Yes.

17,104. That is a novelty?—Yes.

17,105. Can you tell what were the portions he desired to be cut out?—I cannot say at once; I do not remember them; but it is a fact that certain portions were asked to be deleted.

17,106. You do not know the character of them, I suppose?—I can only refer to the papers, but I have not these with me just now.

17,107. (*Sir William Wedderburn.*) They were statements of grievances?—Yes, statements of grievances.

17,108. (*Mr. Courtney.*) I suppose the intention in submitting drafts to former Viceroys was to ascertain whether they were in a form in which they could be received?—The Associations generally present their addresses in exactly the same form as they did to Lord Elgin.

17,109. Yes, but the drafts were sent beforehand, in order to be sure that they were in a form to be received?—I cannot answer that.

17,110. What was the motive for sending them in beforehand?—That is the practice; that is all I know.

17,111. But every practice has some reason at the base of it?—It is not for me to say what motive there is.

17,112. You complain of an alteration of procedure, and you must have in your own mind some theory of the meaning of the procedure?—I can only consider it in this way, that the addresses are sent, so that the Viceroy may reply to them.

17,113. The drafts are sent beforehand?—Yes, the drafts are sent beforehand.

17,114. What was the purpose of sending them on?—As I say, it must be for the reason that the Viceroy may be prepared to give a reply when the address is presented.

17,115. (*Sir William Wedderburn.*) And also, I presume, to see that they are in a proper respectful form?—Yes, certainly.

17,116. But the objection of Indian opinion is, not to any revision of the form or to ensuring its being respectfully expressed, but to the novel practice of checking the statement of grievances?—Just so.

17,117. And the former practice was only to revise the form of expression; that I understand to be the case?—Yes.

17,118. (*Mr. Courtney.*) I asked you, and I repeat my question, can you tell exactly what was objected to?—At the present moment I cannot answer that question.

17,119. It may have been the form?—No.

17,120. You cannot tell what it was?—This much I can say that it was in reference to certain subject matter, and not to the form.

17,121. What was the nature of the subject matter?—Some grievances; the local grievances to which they referred.

17,122. (*Chairman.*) Lord Elgin objected to receive a statement of local grievances?—In the way in which it was put by the Sabha.

17,123. You stated it as if Lord Elgin had introduced an innovation?—Yes.

17,124. Do you mean by that that he made an innovation by any minute or document which introduced formally a new system presentation of addresses?—I have no knowledge of it.

17,125. Then may I ask on what ground you speak of this as a departure from old practice; do you base it simply on the case that an address was objected to on the ground of its representing certain local grievances?—Yes.

17,126. You are hardly able to point out, I gather from what you have said to Mr. Courtney, the exact difference in Lord Elgin's practice from previous practice; you do not know of any minute or order of Lord Elgin which varies from previous practice. I would ask you, are you assured that previous Viceroys have not exercised the same power in any case?—So far as it has come to the notice of the public, they have not.

17,127. (*Sir William Wedderburn.*) Mr. Gokhale may be able to speak to the Poonah case, because he is a Poonah gentleman?—Yes.

17,128. (*Mr. Buchanan.*) But did Lord Elgin refuse to receive this address?—Yes.

17,129. (*Chairman.*) And not on the ground of form?—No.

17,130. But on the ground of its alluding to grievances which he did not think fit to receive?—Yes.

17,131. (*Mr. Buchanan.*) On what ground did he decline to receive the address?—The same ground, that there were some local grievances, as his Lordship has just rightly interpreted, which, perhaps, he did not wish to have presented to him.

17,132. On the ground that he was not the person to appeal to—that they should be submitted to the local authority?—I cannot say that; I cannot say what was in his Lordship's mind. This much is a public fact, that the address was not received because it contained certain grievances which his Lordship did not wish to remain in the address when it was presented.

17,133. (*Chairman.*) And your complaint is that Lord Elgin by this act, unlike his predecessors, practically limited the right of statement of grievances?—Yes.

17,134. (*Mr. Courtney.*) Cannot you tell us what the grievance was?—I will once more repeat, that I do not remember it; and, as Sir William Wedderburn has just put me the question, the Poonah gentleman will be better able to explain it to you.

17,135. (*Mr. Mowbray.*) Was the address declined altogether, or was it modified and then afterwards received?—The address in the first instance was sent back to be modified.

17,136. And then, when modified, was it received by the Viceroy?—I do not remember.

17,137. (*Mr. Buchanan.*) Are you prepared to state that no address which it has been proposed to present to a Viceroy on a former occasion, has ever been sent back to be modified?—So far as my knowledge goes, it has not.

17,138. (*Chairman.*) Perhaps you will explain somewhat further your object in advocating for the Legislative Council the power of moving amendments to the budget?—Yes. What practical good such a privilege, if conceded, to the popular representatives of the various Legislative Councils may do, may be judged from the exceedingly able

Mr. Dinshaw Edulji Wacha.

5 April 1897.

way in which the Honourable Mr. P. M. Mehta, President, Bombay Presidency Association, acquitted himself in the Viceregal Legislative Council two years ago. All India to a man was gratified at the criticism he brought to bear upon the finances, and the way in which he denounced the iniquitous exchange compensation allowance. But, of course, such criticism is distasteful to the official members, and, when there is a Finance Minister like the present one, he resents it, as he resented Mr. P. M. Mehta's speech. It is felt that if leading corporations at Bombay, Calcutta, and Madras, and the various local and district boards are allowed to discuss and vote their respective budgets, there could be no reason for withholding the same privilege, which is still more needed for budgets in the Imperial and Provincial Legislative Councils. The Bombay Municipal Corporation has been more than once praised by the Government of India and the Secretary of State for its successful management of its civic finance. I, myself, as one of the representatives of the ratepayers, have brought forward motions from time to time for reduction of unnecessary expenditure, or expenditure of doubtful utility. And, on the whole, the effect of such division has been of a wholesome character, and calculated to keep a good check and control over the spending departments.

17,139. I gather from what you say as to the speech of Mr. Mehta that, at all events at present, there is room for useful financial criticism upon the proposals of the Government?—Yes.

17,140. But you think that that is not sufficient?—The discussion?

17,141. The discussion?—Yes.

17,142-3. (*Mr. Mowbray.*) Did I understand that in the Provincial Legislative Councils amendments can be moved to the provincial budgets?—No.

17,144. (*Chairman.*) But in the Municipal Corporations amendments can be moved, can they not?—Yes.

17,145. (*Sir William Wedderburn.*) And they deal with very large sums indeed?—Yes.

17,146. (*Chairman.*) Objections have been urged against giving the Legislative Council the power of which you speak?—Yes.

17,147. What have you to say upon that?—It has been alleged that such concessions might sometimes defeat Government, which is not desirable. This allegation carries its own refutation. For, as a matter of fact, under the standing rules the Government has always an official majority, and if such a thing happened as the defeat of Government, why, it would show that there was an overwhelming case made out by the non-official members to lead to such a division. My suggestion, therefore, under this head of financial machinery is that the rules should be so altered as to allow members to bring motions at budget time and divide the Council thereon. We strongly advocate the proposal of Sir W. Wedderburn for the appointment each year of a Select Committee on East Indian Accounts to report to the House of Commons regarding the financial position of India. Such a Select Committee would find in the amendments voted in the Leglislative Councils valuable materials for consideration. The non-official members of Legislative Councils would thus be stimulated to careful criticisms of Indian finance.

17,148. You say that the rules should be so altered as to allow members to bring forward motions on the budget and divide the Council thereon. Do you mean by that that they should be allowed to move amendments on the items of the budget?—Yes.

17,149. Or that they should make general motions, on which they might take a division at the time of the discussion on the budget?—No; that they might move amendments on each item of the budget, which they think might be fairly reduced.

17,150. Have you any further suggestions to make in connection with the budgets?—Yes; it is also very desirable, in connection with the budget in the Viceregal Council, that its members as well as a few outside public bodies, like Chambers of Commerce and recognised Associations, should be supplied with copies of the civil and military estimates which contain details of the revenue and expenditure of each Province, before the budget is brought forward At present they are not accessible to the members or to such bodies. The civil estimates are only made available a year after the budget to which they refer has passed, when all practical interest in them has died out. The military estimates, so far as my knowledge goes, are never made available. This is a great drawback. The public criticise the budget in darkness. A great deal of ill-informed or ignorant criticism would be avoided, while bodies like my Association would be in a better position to make suggestions, or offer criticisms, if such copies were previously supplied. I may say that the Bombay Legislative Council does furnish such a detailed statement to its members, which greatly helps them to debate the budget.

17,151. Let me understand that more fully, please. Am I right in following you that the estimates on civil and military expenditure are not available to the public for a long time after the commencement of the year to which they apply?—Yes.

17,152. They are circulated, I suppose, before the budget discussion comes on, to members of the Legislative Council, are they not?—So far as I learn from the non-official members, they are not.

17,153. But at the close of a year, or at the close of a certain period, those estimates are published?—They are advertised in the official gazette as being available, and the public buy them.

17,154. But that is only a long time after the commencement of the year to which they apply?—Yes.

17,155. And you would urge that their publication should take place previous to the introduction of the budget?—Yes.

17,156. (*Sir William Wedderburn.*) I think you have a general complaint that it is difficult to get information from the Government?—Yes.

17,157. Is that the case?—Yes; the details.

17,158. And it would lead to much better feeling and to more well-informed criticism, if the Government were willing to meet public bodies in a conciliatory way and furnish them readily with the information they ask for?—Yes.

17,159. You do not wish to make ignorant criticism but well-informed criticism?—Certainly.

17,160. (*Sir James Peile.*) But, when you speak of the estimates not being before the public, you are not referring to the statement which is issued by the Finance Member and published in the papers, which gives the accounts of three years?—No.

17,161. The closed accounts of the past year, the revised estimates of the current year, and the budget estimates of the coming year?—I refer to the civil estimates, on which the financial statement or the budget for the new year is prepared.

17,162. You mean the detailed figured statement?—Yes; the detailed statement of all the provinces, which is bound in one volume.

17,163. The general effect of the whole of what we call the estimates for three years is put before the public at the time the budget is brought forward in the Council?—Those are mere general statements. The details of each Province, with all the sub-heads which appear in the finance accounts, are not before the councillors at the time of the budget. As I say, in Bombay they are; the whole details of the estimates are before them, and they are in a better position when the budget is discussed to offer intelligent criticism.

17,164. (*Mr. Mowbray.*) How long before the discussion are they submitted in Bombay?—Fully a fortnight before the budget comes on for discussion.

17,165. (*Chairman.*) Sir William Wedderburn has asked you whether there is not a complaint that information is not very readily furnished. Passing for the moment by the question of the estimates, are not full accounts of past expenditure published, which are available to Associations like your own and to local authorities?—The Finance and Revenue accounts are published, but of course they come very late.

17,166. Of course they must come after the close of the year?—Yes; they must come after the close of the year.

17,167. But, when you speak of information not being readily furnished, do not those accounts give you in detail the expenditure of the Government of India, and so give you that information which is necessary for effective criticism?—They do in certain cases; but I may just give your lordship an instance under the head of "army services." There is a heading called "miscellaneous services," to which I have referred later on in my evidence. The item is put down; it generally comes to half a million of money—Rx. 500,000. There are no absolute details about that; here and there in the different revenue accounts, when one goes closely into them, he finds that perhaps here an item requires explanation which is not given, and here is another item.

17,168. Have you ever represented to the Government your complaint that on these points sufficient information is not given?—At any rate, my Association has not.

17,169. Then you are not able to say that the Government has refused you information?—From the general reticence to supply information officially we thought it was perfectly useless to ask Government.

17,170. (*Mr. Courtney.*) On what date is the financial statement made?—Generally in the second or third week in March.

17,171. Then the Finance Member refers to three years; the actuals of the past year?—The accounts, the revised estimate, and the budget.

17,172. The experience of the current year and the estimates of the future year?—Yes.

17,173. You have not at that time before you any details of the contemplated expenditure of the future year?—That is so.

17,174. That is the complaint?—Yes; and the accounts that are made then are also those general accounts; the details of them are, as his lordship properly said, given afterwards in the form of Finance and Revenue accounts, which take time to be compiled.

17,175. When do you get submitted to you, or made public, the detailed information as to the expenditure of the year which is the future year when the Finance Member makes his statement?—Do you mean to say the estimates on which the budget is based?

17,176. Yes?—Nearly a year afterwards.

17,177. The statement is made in March of one year and it comes out at the commencement of the next year?—Yes.

17,178. (*Chairman.*) And you are not aware of any reason for that delay?—No.

17,179. (*Sir William Wedderburn.*) But the estimates are in the possession of the Government?—Of course.

17,180. (*Chairman.*) You would hold that they must be in the possession of the Government to enable the financial statement to be made?—Otherwise it cannot be made.

17,181. (*Mr. Buchanan.*) You have all the details of the previous year, of course?—Which previous year?

17,182. (*Chairman.*) I think what Mr. Buchanan means is that at the time of the budget you have then the estimates of the previous year available?—Yes, the estimates, but no details of them.

17,183. I understood you to say that the actual detailed estimates are available for the public about a year after the commencement of the year to which they apply?—Just so.

17,184. And therefore, at the time when the next budget is brought forward you have the estimates of the previous year before you?—We have the revised estimates of the past year and the actual accounts of the year preceding.

17,185. I want to bring your two statements together, please. You have told us that the estimates of one year are available for the people a year later?—That is the estimates for the year for which the budget is expounded. I say that the detailed estimates are not before the public for the budget for the year.

17,186. I want to find what information you had at hand for the budget. As I understand, the budget for 1897–8 was brought forward in March 1897 at that time?—The budget for 1897–8 is brought forward now.

17,187. You said that the budget was brought forward in March?—Yes.

17,188. The budget, therefore, for 1897–8 was brought forward last month?—Yes.

17,189. At that time, I gather from your statement, you could have had for the purpose of criticism the estimates of the year 1896–7?—Not in that detailed form that I speak of, only the revised estimates; I have no information beyond that.

17,190. That does not quite tally with what I understood you to say before. I understood you to say before that the detailed estimates of one year are available a year later; that is to say, they are published?—The detailed estimates of the budget. For instance, the financial statement for 1896–7 was declared; at that time the detailed estimates referring to that were not before the public, and they would be made public just about this time, which is 12 months later.

17,191. But at the present time they are available; you can buy them?—Yes.

17,192. Therefore, when the budget of 1897–8 was brought forward, critics could have in their hands the detailed estimates of 1896–7?—Yes, the details of the *budget* estimates.

17,193. (*Mr. Buchanan.*) And, if there is any substantial alteration in the estimates for the ensuing year, it is possible for them to discover what the substantial alterations are?—They may or they may not.

17,194. They may see where there is any great increase in a grant?—Yes.

17,195–6. (*Sir William Wedderburn.*) For purposes of getting information, the non-official members of Councils are able to ask questions; they have a right of interpellation in the different Legislative Councils?—Yes.

17,197. Do they make full use of that right in the different Councils?—So far as the Bombay Legislative Council is concerned, they now and then do put questions on the subject.

17,198. Do they get satisfactory replies?—Not quite satisfactory; some information is given, but the members themselves feel that it is not full.

17,199. (*Chairman.*) When you complain that information is not readily afforded you, that (*exhibiting volume of "Civil Estimates"*) is a goodly volume; it looks to me as if it contained very minute information?—Yes.

17,200. I should have thought, looking at it, that there is information that would enable the most searching critic to get food for his criticism?—Yes, just so.

17,201. (*Sir William Wedderburn.*) But the information of the want of which you complain, is not so much the information that the Government of India prefer to put forward, as that referred to in the questions that you would like to have an answer to?—In the Legislative Council.

17,202. No; I am referring to the general complaint of want of information. It is true that the Government of India publishes large quantities of information?—Yes.

17,203. But what the public of India want are answers to the particular questions that they wish to put?—Yes.

17,204. Is that the case?—Yes.

17,205. (*Chairman.*) I think that is common to all countries; no Government can undertake to answer every question that any individual or authority may put to them. I would submit to you that the objection you are taking there is an objection that applies equally to this country. I have had some experience of administration in this country, and certainly in my time we could not have undertaken to answer every question that was put to us. I am putting before you that it is not a grievance confined to the Indian Government?—Of course, I am not conversant with the details of your constitution and how the thing is done; but what I say is a fact, that the details are not before us to enable us to criticise the budget more carefully and to prevent any ignorant criticisms.

17,206. That is common to all taxpayers. The Government of India and the Government of England would not, and could not, undertake to answer all questions that are put to them?—Of course, as a matter of fact, important questions are put, but no member of the Council goes and, as you say, asks so many questions as to which the Government of India cannot answer.

17,207. I am anxious to get a definition of your complaint. As you put it, you make it a complaint that individuals and authorities in India cannot get answers and explanations on questions of general finance, which they would like to get answered?—Yes.

17,208. Of course it is a different matter if you mean that members of the Legislative Council cannot get answers to questions which they put in their representative or quasi-representative capacity. Is that what you mean to convey to us?—Yes.

17,209. Therefore, your complaint is, not that general information on financial matters is not given to every person or body who chooses to correspond with the Government of India, but that it is not given to those people whom you may look upon as the representatives of India; that is to say, the members of the Legislative Council?—Yes, the members of the Legislative Council.

17,210. A member of the Legislative Council cannot move for a return, is that the case?—No.

17,211. He can ask for one, I suppose?—In the Legislative Council he may move for a return, and, if the

Mr. Dinshaw, Edulji Wacha.

5 April 1897.

Government thinks fit, it may be put forward, or it may not.

17,212. That also is the case here?—Yes.

17,213. A Member of Parliament only puts down a motion?—I am not speaking as far as a return is concerned; if a member wants to produce a paper, that is a different question from the complaint I am making.

17,214. (*Mr. Courtney.*) I think the complaint you are now making you adopt from Sir William Wedderburn; he puts the words into your mouth that you could not get answers to the questions that you wanted to have answered. Will you explain what is meant by that in your own words?—Members of the Legislative Council, when they put questions on finance, get answers from Government which sometimes are not satisfactory.

17,215. They do get answers?—Yes, in a way.

17,216. They have a right to put questions?—Yes.

17,217. (*Chairman.*) So far, their right is the same as that of Members of Parliament here. I have heard of Members of Parliament here not being satisfied with the answers given them. But, practically, I do not see a great distinction between the rule that obtains here and the rule that obtains in India. In both there is the right of asking questions, and, as I understand, the right of having an answer. It is very true that the answer may in neither case be entirely what the questioner wishes?—But the House of Commons is differently constituted from a Legislative Council. It sits here from day to day, and if one Member cannot get a satisfactory answer some other Member puts the question, and it has to get to the bottom of the thing. Virtually, the Legislative Council is held one day and, it may be, a fortnight afterwards; there is no further question put upon it, and, of course, there is an end of the matter. For instance, in Bombay there are only three or four sittings at the utmost in the year.

17,218. The complaint in that case is, not that there is not a right to put a question and to get an answer—— ?—I have not disputed the right.

17,219. But that the opportunities are not sufficient?—Yes.

17,220. Now, passing on, have you anything to say on minor matters in connection with the financial statement?—Yes. A word or two may also be said under this head on minor matters in connection with the annual financial statement. Firstly, the revised estimates invariably exceed the budget estimates, and the accounts are generally better than the revised estimates. From the table I have prepared of budget estimates, revised estimates and accounts for the last 10 years, and which I beg to put in as appendix to my evidence, this will be clearly seen. It would seem to show that, apart from budget estimates, even revised estimates are not yet so carefully prepared as they should be. Bearing in mind that these estimates are made a month or so before the accounts for a financial year are closed, I am of opinion that there should be no such striking variations between them and the actuals as are revealed in the table. Secondly, as to exchange. This item can only be considered as an ordinary one like any other item of expenditure. But much is made of its fluctuating character. It is regarded, as Sir A. Colvin observed in his contribution on "Indian State Expenditure" to the "Nineteenth Century" for October 1894, "in the light of the lodging-house cat. All surplus that "disappears, every estimate which is reduced to fragments, "is due to this mischievous beast. No limits are assigned "to its appetite; yet no provision is made for its voracity." My suggestion is that, under present circumstances—at any rate till the time again arrives for a stable exchange—it would be better to take exchange at a fixed rate from year to year, say at 14 or 14½ pence per rupee in the budget estimate. Should it be found, at the end of the year, that the actual amount incurred under this head is less than the estimate, the difference be credited to an account to be called "Exchange Equalisation or Reserve." In case at any other time the amount incurred is in excess of the estimate, the difference should be taken from this Reserve account. By adopting such a course a certain stability will be imparted to the finances, while it will prevent the Finance Minister from attributing this, that, and the other increase to this *deus ex machinâ* of exchange.

17,221. Would you explain a little more fully your plan of an exchange reserve. I should gather that it is a species of reserve fund which you would create?—Yes, a sort of exchange reserve.

17,222. You would create a reserve fund?—As far as exchange itself is concerned.

17,223. As far as exchange itself is concerned?—Yes, not a general reserve fund of the finances, but of exchange.

17,224. How would you provide that reserve fund with money?—The money would be credited to that account, and it will be supposed to be in the Treasury. Whenever, of course, as I have said, exchange is more or less, the funds would be operated upon and the accounts would be adjusted accordingly.

17,225. But how, in the first instance, would you put that reserve account in funds?—Say, that in the present financial year the Finance Minister takes exchange at 14*d.*; then say that during the whole of the year he finds that exchange has improved to the extent of a halfpenny, therefore, of course, there will be a credit to the exchange over the budget estimates; that credit should be put in the following year's accounts to the exchange reserve, and left there.

17,226. Now take the reverse case, please, that the rupee is not worth so much?—Then, of course, there will be what may be a diminution, and the exchange reserve, if there is a credit to its account, could be drawn upon to make up the difference; provided, of course, that the credit is equal to the amount you require. It may be so sometimes, or it may not be.

17,227. I want to know in case of the rupee falling, and your reserve fund having no money in it, how are you going to get on then?—Then there is nothing to be said; but if we take a sufficiently low estimate, there is every chance that we shall be on the right side.

17,228. But still, you must be prepared for taking money from somewhere; you would have to take money out of revenue, for instance, and put it into the reserve fund to meet this charge; that is to say, if the rupee falls?—I do not mean to say that more money should be taken from the revenue, but only that part of the surplus that remains to the credit of the exchange account on the basis of the rate taken in the budget estimate. This alone should be taken.

17,229. For many years past the exchange has been constantly falling. In that case the reserve fund, unless you took money out of revenue and put it into that reserve at the beginning, would have been always empty, and I do not see how in that case you could have adjusted, or found the means for making good, this loss?—What I mean to say is this—this is my own suggestion, if such a plan was followed, and if there was money it could be utilised. At present, what happens is this, that when there is a surplus in exchange, the Finance Minister disposes of it in his next year's budget.

17,230. (*Mr. Naoroji.*) If I understand you rightly, you mean that, when there is, by a rise in exchange, a larger surplus than was estimated for, you would rather have that surplus arising from the rise in exchange put separate; that is, not to be utilised in the subsequent year?—Yes.

17,231. (*Mr. Buchanan.*) Your plan is only available when the exchange is rising, not when it is falling?—As a safe plan, if the Government is cautious, and knows from past experience that exchange will not go beyond a certain limit, for instance, take 13*d.* even, taking it at that rate, there is very little chance of exchange falling below that.

17,232. But still your plan only works when exchange is rising, not when it is falling?—Of course.

17,233. (*Mr. Courtney.*) If the Finance Member takes a sufficiently depressed view of the coming year, he will always be ready?—That all depends upon the way in which the Government of India for the time being thinks of the rupee; sometimes they may take an optimistic view, and sometimes a pessimistic view.

17,234. Is your complaint this, that in the 20 years 1872–93 the Finance Members have been too sanguine in their estimates of the rate of exchange?—As far as the rate of exchange goes, they have taken it according to the fluctuations, and sometimes it may have been that their expectations have not been realised and exchange has gone lower, or sometimes it has gone higher. For instance, in 1891 exchange was taken low, and yet it rose on account of the United States legislation, the Sherman Act, and it went up with a bound.

17,235. That was one year. As a rule, from 1873 to 1893, was the Finance Minister too sanguine in his estimate of what the rate of exchange would be in the coming year?—From 1873, at any rate, no Finance Member thought much of exchange, and I think in India people did not pay much attention at that time to exchange.

17,236. I said from 1873 to 1893. It began about 1873, and went on to 1893?—Yes, but the general complaint about exchange has been made during the last few years, I think; that is to say, from 1885 the Finance Members have more pointedly called attention to it. In 1885 it was only 3 crores, and it was not thought of much.

17,237. But it does not matter much which year you take—take 1885. What is the gist of your complaint? Is it this, that from that period down to 1893 each Finance Member was too sanguine in his estimate of what the rate of exchange would be during the following year?—I have not said that the Finance Member was sanguine; I have said, generally, the whole of the estimates were more than the budget. I am not speaking of any particular item as being a sanguine estimate, or a lower estimate; I am speaking generally.

17,238. You are speaking with reference to the rate of exchange?—You are speaking there about my table, are you not?

17,239. I thought you were complaining that the finances had been put into confusion in consequence of the rate of exchange falling, and Finance Members making use of the falling rate of exchange as an excuse for successive deficiencies. Sir Auckland Colvin said it was the lodging-house cat; that was your complaint?—Yes.

17,240. The deficiency, then, must be in excess of what the Finance Member had anticipated in his statement?—The fact is this, Finance Members put one rate of exchange, and it may happen, according to circumstances, that it may go up, or it may go down.

17,241. But if it goes down, there is no use in calling it the cat?—Generally we have said it is the military expenditure, particularly during the last 10 years, that have gone more to disturb the finances——

17,242. You are talking about the rate of exchange?—I beg your pardon; in our own way we have thought that it is not exchange that has brought on these disturbances. Exchange might have been borne but for other expenditure which has increased; and what the Finance Members have generally done is that they have attributed it to exchange a great deal; they have made it the most predominant factor.

17,243. And you want to get rid of that cause of disturbance?—We cannot get rid of it.

17,244. You propose a way of accounting which would get rid of that cause of disturbance?—Yes, which would minimise it; that is my suggestion. If this sort of suggestion is adopted—it depends upon the Commission to consider it—in my opinion, I say that it will impart greater stability.

17,245. (*Mr. Naoroji.*) What I understand your suggestion to be is, that whenever there is a surplus on account of a rise in exchange that surplus should not be at once utilised, but should be kept back in order to meet, perhaps, a rainy day of another year?—Exactly.

17,246. And that, upon the whole, if such a reserve were kept, it would keep the fluctuation more stable than it is at present; that is your suggestion?—That is my suggestion.

17,247. (*Sir William Wedderburn.*) It would give the Finance Member an inducement to make a very careful estimate of the loss by exchange; and if he was wrong one year, it would be his object to correct it in the following year?—Yes.

17,248. So as to have no very large balance either to debit or credit of that exchange reserve fund?—Yes.

17,249. (*Chairman.*) I do not think that that is quite reconcileable with what you have told us. I understand Sir William Wedderburn to say that this reserve would induce the Finance Member to make a very careful estimate of his rate of exchange; but you have told us that it would be better to take the exchange at a fixed rate of 14*d.* or 14½*d.* It strikes me that, if a rule was laid down that a fixed rate was to be taken, there is no inducement to the Finance Member to make any minute calculation as to what the rate of exchange would be in the following year?—I am only speaking of a fixed rate; and in taking a fixed rate a wise Finance Member would say the exchange would not go below such a minimum; and, if he takes that minimum, there is, of course, always a chance of coming on the right side.

17,250. That was not Sir William Wedderburn's question to you. Sir William Wedderburn's question was whether your plan would not make the Finance Member much more careful in his estimate of the exchange; but you have already told us that he is not to make a varying estimate, but to take a fixed rate?—Even taking a fixed rate, there is a careful calculation that exchange would not go lower down except, perhaps, in very rare cases; and so far it will be a careful estimate.

(*Chairman.*) But if he has a fixed rate there is no room for the Finance Minister to make this careful calculation.

17,251. (*Mr. Courtney.*) What do you mean by the Finance Member taking a fixed rate; do you mean for five years to come?—Such a fixed rate, as the best experience would tell; a rate beyond which it may not go lower.

17,252. To how long a period in the future does that apply?—It may be revised from time to time, according to the tendency of exchange. The tendency may be always to go up or to go down. At present, you see, the tendency has been for the last few years slightly to improve; it all depends upon the experience of the past.

17,253. (*Chairman.*) I quite understand the utility of your considering a suggestion of this kind; but I want to see what practical value it would have. It does not seem to me that it would have any very great effect, because taking the case of the rupee falling, the money must be found somewhere; and, if it had to be taken out of revenue, the expenditure would be exactly the same as at present; when you got to the end of the year you would find out that such and such had been the loss by exchange, and that would be shown in the expenditure?—That may be your lordship's view. The present practice of at once disposing of the so-called "improvement" in exchange should be put a stop to. As Indian finances go, there is a desire to utilise rather prematurely so-called "surplus" owing to better exchange; though it may happen the very next year that exchange may be worse, leading either to economies here and there, or encroachments on provincial balances, or fresh taxation. This cannot be considered sound finance. At any rate, knowing as we do the chronic embarrassments of the Indian treasury, financial statesmanship would suggest not to be too hasty in disposing of such a sort of surplus. It is more in the nature of a fortuitous windfall, and should not be depended upon. Take the latest instance. In the financial statement for 1896-7 there was a surplus, chiefly owing to better exchange. Straightway half a crore was gifted away to Manchester by reducing the import duty on cotton goods from 5 to 3½ per cent. on the hollow plea of protection, though the Chamber of Commerce, recognised associations, including the Presidency Association, and the Bombay mill-owners, all protested against the plea put forward. It was felt as a sop to Manchester in loyal obedience to the "mandate" from the Secretary of State. Another half a crore was at once voted for purposes of mobilisation, though large sums in previous years had been expended on this object despite our being told that it was not a recurring expenditure. But no sooner was the crore thus disposed of than famine overtook the land, necessitating a large expenditure. Had the crore not been so hastily voted away for objects hardly approved of by the Indian public it would have been available to partially diminish the deficit which is now announced in the revised estimates for 1896-7.

17,254. That, I think, explains perhaps more fully the object you have in view; you would like, as I think Mr. Naoroji put it before you, that any improvement in the finance—any saving made by a better rate of exchange—should be put aside into a reserve fund and not utilised for those purposes which you have described?—Yes.

17,255. That describes your view, does it?—Yes.

17,256. Do you know at all the actual saving on exchange that accrued in this year in which the cotton duties were reduced and the half crore given to the Army? You say there was a surplus, chiefly owing to better exchange; do you happen to know what the surplus, so far as it was due to exchange, was?—I have not looked into that.

17,257. I am anxious to call your attention to it, because your argument is this, that there was a surplus of a crore resulting from exchange, of which one half was given for reducing the import duties and one half to mobilisation?—Yes.

17,258. Now a crore obtained from the exchange being better than what it was anticipated sounded to me rather large. Have you ascertained that the surplus in that year due to better exchange was as much as a crore?—There was a surplus, and it may be not wholly owing to exchange but partly to exchange; but my recollection is that it was generally owing to exchange.

(*Chairman.*) But your argument is based entirely upon this saving in exchange; and your statement would lead

Mr. Dinshaw Edulji Wacha.

5 April 1897.

the Commission to think that that saving had produced enough to enable half a crore to be remitted in taxation, and half a crore to be added to army expenditure. It is rather important that we should know whether the saving on exchange was really anything like a crore.

17,259. (*Sir James Peile.*) Was there no famine insurance surplus put aside in 1896-7?—I have not the financial statement before me just now.

17,260. (*Chairman.*) I may say that I have just been informed that the saving on exchange was more than a crore, and, therefore, your argument, so far as it applies, is correct. Do you think the present system of provincial allotments might be altered, so as to induce a greater check on Imperial expenditure?—Under this head the Provincial Conference held at Karachi last year, the Bengal Conference and Congress at Calcutta, all passed resolutions demanding a more equitable mode of fixing the quinquennial allotments. In substance, all these resolutions stated that the time had arrived when a further step should be taken in the matter of decentralisation by leaving the responsibility of the financial administration of the different provinces principally to the Provincial Governments, the Supreme Government receiving from each Provincial Government only a fixed contribution levied in accordance with some definite equitable principle which should not be liable to any disturbance during the currency of the period of contract except in "dire emergencies," as contemplated by Lord Ripon's resolution, so as to secure Provincial Governments that fiscal certainty and that advantage arising from the enhancement of the revenues which are so essential to all real progress in the development of the resources and in the satisfactory administration of the different provinces. It would be well that in each case the Government of India should record a declaration showing the dire necessity which has made it necessary to infringe the original contracts with the Provincial Governments. And the contributions taken from the different provinces should be taken on the basis of the original contracts. It is thought that at present not only the Imperial Government takes a larger portion of the provincial revenue at the renewal of each contract, but makes further demand on the Provincial Governments when it has to meet a very large expenditure. This policy hardly engenders an economic spirit in the Government of India. It checks provincial expenditure, but there is none to check its own. It is the old story of who will keep in custody the custodian. It is therefore suggested that the Provincial Governments should respectively contribute to the State Treasury a certain fixed percentage of their revenue, and reserve the rest for their own expenditure. Say, if 40 per cent. was so reserved, it would not only impart uniformity, but remove the present complaint of unequal contribution. The older and richer provinces are made to pay partially for the expenses of the newer and poorer. The advantages claimed under the system proposed by the Congress and the Conference are these:—(1) That each province will be in a position to work out its own financial salvation, exactly in the way in which a kingdom, self-contained and self-managed, does. (2) That it will enable each province to develop its material resources, with the revenue it may make available on objects of utility. (3) That it will be unfettered by any obstruction from the Imperial Government. (4) That the Imperial Government would only obtain as much as would suffice for its reasonable requirements, and not for expenditure on objects of doubtful utility, or on profitless border expenditure, and so forth, including so-called strategic railways and military works. (5) That thus the Imperial Government would be compelled to cut its coat according to its cloth, and exercise the strictest economy in Imperial expenditure. A sort of automatic check will be exercised. These checks would operate usefully as a financial control over the expenditure of the Government of India.

17,261. You do not, I understand, demur to the Supreme Government drawing on the Provincial Governments in cases of what you describe as "dire emergency"?—Those are the words of the resolution of Lord Ripon; I put them in inverted commas.

17,262. You do not demur to that?—No; in the case of "dire emergencies" the Imperial Government can.

17,263. Therefore, the distinction you draw is between "dire emergencies" and what you call "large expenditure." You do not object, that is to say, to drawing on the Provincial Government in cases of "dire emergency," but you do in case of "large expenditure"?—What I say is this, that at present the provincial allotments are based on a principle which is considered not quite equitable; therefore, if a certain percentage of revenue for all the provinces was uniformly fixed, then the Provincial Government will get a certain expenditure.

17,264. That is another question. I am confining myself now to this: you speak of "dire emergency," and I think it has been considered that in case of "dire emergency" the Central Government must get its money as best it can?—Certainly.

17,265. You say that "it is thought that at present, "not only the Imperial Government takes a larger "portion of the provincial revenue at the renewal "of each contract, but makes further demand on the "Provincial Governments when it has to meet a very "large expenditure." Therefore, I take it that you would say that the Central Government does not confine itself to "dire emergency," but draws upon the Provincial Government to meet large expenditure?—Yes, when making every five years its contract.

17,266. We will keep that till afterwards, if you please; we are now talking about "dire emergency." Your charge against the Central Government is that it does not confine itself to making these drafts on the Provincial Governments for cases of "dire emergency," but that in fact it makes these drafts to meet heavy expenditure of its own?—Yes.

17,267. Is not that to a certain extent a matter of opinion; do you not think that the Government itself would say that it has only been drawing upon the Provincial Governments in cases of "dire emergency"?—I beg your pardon?

17,268. Do you not suppose that the Central Government would say that it has confined itself to cases of dire emergency?—Of course, if there is any dire emergency, to draw upon the Provincial Governments—to that I have not demurred.

17,269. You say, further, that it has drawn upon the Provincial Governments in cases of large expenditure, which are not "dire emergency"?—I beg your pardon. What I have said here is this, that at the renewal, as it were, of each provincial contract, a larger part of the surplus of provincial revenues is drawn; that is one thing quite apart from that; if "dire emergencies" took place during the contract the Imperial Government takes a little more.

17,270. Further, you say it makes further demand upon the Provincial Governments when it has to meet very large expenditure?—That is only, as I say, in the case of "dire emergencies." That is what I mean.

17,271. Therefore, you do not object in the case of large expenditure; you interpret that as the same as "dire emergency"?—It is only in "dire emergency," caused by larger expenditure, that the Government of India draws upon the Provincial Governments beyond the amount of the provincial contract.

17,272. And you do not object to it doing so in the case of "dire emergency"?—Certainly not.

17,273. Do you think it has drawn upon the Provincial Government in cases which were not cases of "dire emergency" during the currency of the contract?—Yes.

17,274. Can you name any cases?—During the time of the Penjdeh scare, in the time of Lord Dufferin, the Provincial Governments were called upon to pay a large amount of money.

17,275. Was not that a "dire emergency"?—There, your Lordship will please see, there will be difference of opinion; the Indian opinion is that it was not a "dire emergency," for which the provincial balances should have been drawn.

17,276. But, at all events, the Central Government was apprehensive of very grave complications, was it not?—There, of course, we are coming into a question of policy.

17,276*a*. No; I am talking merely of the question of dire emergency; I have nothing to do with whether it was right or wrong; the Central Government thought that this was a grave foreign complication. Would you not call a grave foreign complication a dire necessity?—By dire necessity I mean such a thing as famine, or a war actually forced upon the Government by acts of foreign powers of a nature——

17,277. And, rightly or wrongly, in this case the Government thought in what you call the Penjdeh scare there was a grave foreign complication impending, and I ask you whether that is not a dire emergency?—I say that it was not.

17,278. You do not think that the idea of an invasion is a dire emergency?—If it was actual war, unprovoked or anything of that sort by a foreign power, it would be a "dire emergency" in which to defend; but in this case it was simply a scare, and much was made of it.

17,279. At all events that is a matter of opinion?—There, again, as I say, we come to a question of policy; and of

course the Government of India may differ from Indian public opinion. Indian public opinion thought that it was not a "dire emergency" and that the money should not have been drawn.

17,280. (*Mr. Naoroji.*) Do I understand that the threat of that Penjdeh scare was so far considered as a "dire emergency," that it led to some very important results, and upon that threat the Government took a certain larger proportion from the provincial budgets; but finding that that scare passed off, and that the necessity did not arise for this extra contribution from the Provincial Governments, you think that the Imperial Government ought to have taken that amount into consideration in the future allotment of the quota that the Provincial Government should have given?—Yes.

17,281. (*Sir James Peile.*) Did not the Government of India restore what it took from the Provincial Governments in that case?—Not for the year 1885–6; some balances taken later on were refunded; for instance, the balances drawn upon the year before last were restored, but in some cases they were not restored.

17,282. (*Chairman.*) Then, passing away from "dire emergency," your view would be that, when a new contract is made, there should be a fixed proportion of the increase of revenue which should be taken by the Imperial Government, and that there should not be, as it were, a negotiation between the Imperial Government and the Provincial Government as to which could get the best terms; the Imperial Government would simply take 40 per cent.?—I am simply speaking of 40 per cent. as an example; a certain fixed expenditure might be considered as fair to the Imperial Government, and a certain other fixed percentage as fair to the Provincial Governments.

17,283. That proportion should be a fixed one?—Yes.

17,284. Supposing at the end of the contract it were found that the revenue, where it had been a million, was a million and a half, the Imperial Government during the next five years would take only a certain known proportion of that increase?—Yes. If your Lordship will allow me, I will refer to what was discussed at these public meetings. It was this: Of course, all revenue is collected to be eventually expended, therefore the Government might take into consideration what was the average expenditure of all the different provinces. If it came on calculation that the average expenditure of all the different provinces was something like 40 per cent. or 45 per cent., the Government of India might say, "Very well, we will give all the provinces a fixed percentage of revenue." No province can then complain that more is taken from one province and less from another; everybody will stand on a par; everybody will spend the fixed percentage, be it 40 per cent. or 30 per cent., from the revenue for their own provincial expenditure, and the rest will come to the Government of India, and that will be a very equitable way of doing it.

17,285. (*Sir James Peile.*) Would not that assume that all the provinces were equally taxed?—That is what the people want. They observe that at present sometimes Bombay contributes more, and perhaps Madras, which pays a larger revenue to Government, gets less for its expenditure. If your Lordship will allow me to refer to a little table I had prepared at the time of my addressing the Provincial Conference at Karachi, I shall be able to explain what I mean. Taking the last provincial contract, I find that whilst the revenue of the Central Provinces was 1·46 crores, its expenditure was much greater—that is to say, the percentage of expenditure to revenue was 70 per cent.

17,286. (*Mr. Mowbray.*) That is the provincial expenditure?—That is the provincial expenditure. In the case of Bombay the revenue was 7·97 crores, and the expenditure was 5·26; therefore Bombay's percentage came to 66. Then take Madras. Madras had a revenue of 9·59 crores, and the expenditure was only 4·67, therefore Madras had only 48 per cent. of its revenue for expenditure. The North-West Provinces had a revenue of 9·57, expenditure 4·01, therefore their expenditure was 42 per cent. Therefore it will be seen that the percentage of revenue which the different provinces get for their expenditure, ranges from 70 per cent. to 42 per cent. All have not the same ratio of expenditure, and the complaint is that some provinces which have a larger revenue get less for expenditure, and part of their revenue goes perhaps to further the purposes of the wants of some other province. So that is the inequality of which the different bodies complain.

17,287. (*Chairman.*) Do you not think there may possibly be some reason for one province not having so much of its revenue given to it as another?—According to a statement of Sir James Westland, there are some backward provinces, which have not got the same revenue as the richer provinces, and they should all be placed on the same line as the older.

17,288. He advocates a single line—that the poor provinces and the rich provinces are to be treated in exactly the same form. Is that really Sir James Westland's opinion?—I think so. What we say is that each province must depend upon its own revenue, and, if it gets a fixed percentage of revenue for its expenditure, it cannot complain. Bombay gets 40 per cent. for itsexpenditure; the Central Provinces, if they have a less revenue, will still get 40 per cent. for their expenditure, and thus all provinces will have an equal chance of expending, and the Government of India will not have to take a little more from one and a little less from another.

17,289. (*Sir James Peile.*) They would not all have an equal chance of prospering?—What we say is this: that where a younger province has a small revenue, it will excite and stimulate that province to improve its own resources so as to get by-and-by a larger revenue. Virtually, every province must be considered, as it were, a small kingdom by itself. India is a very large country. Each kingdom of Europe by itself manages its own finances and tries to work out its own salvation. In the same manner each province should strive to stimulate its own revenue, and by all means, if it can stimulate its own revenue, so much the better; it will soon come in a line with the older provinces; that is the argument.

17,290. (*Sir William Wedderburn.*) Was not the original contribution of each province settled in a somewhat accidental way originally; there was no regular inquiry?—In the early stages there was no fixed principle.

17,291. It was roughly fixed?—Yes.

17,292. There was no regular inquiry?—No.

17,293. (*Chairman.*) You do not see any difficulty in, or any objection to, laying down a cast-iron rule for the whole of India, rich and poor, thriving province and backward province alike?—The complaint is this; that India is a progressive country, and each province requires a particular expenditure, especially of a public utility character, in order to progress, therefore each province is jealous of the other provinces, and the complaint is "They take more "from us and give it to somebody else, and why should we "have a less amount of revenue to expend."

17,294. That does not quite answer my question. You see no objection whatever to laying down one cast-iron rule for rich provinces and poor provinces, for thriving provinces and backward provinces?—No.

17,295. The difficulty of applying general rules to what is really a continent, and the necessity of treating the different portions of that continent according to their wants, have been put before us as some of the great reasons for decentralisation. But now, when it comes to this question of the provincial revenue, you are advocating precisely the contrary, namely, one iron rule to be applied throughout the whole country. You see no objection?—Because it would be more equitable.

(*Chairman.*) That, of course, is the question, whether it is equitable to treat the backward and the thriving provinces the same.

17,296. (*Mr. Naoroji.*) Do you not also mean that at different times the share, or whatever the proportion is that is fixed, might be considered according to change of circumstances and experience obtained?—I do not understand your question exactly.

17,297. You do not make it quite a rule to lay down for ever a certain proportion; but, having fixed a certain proportion, after a number of years, if we found a certain change necessary, it should be made?—Certainly, oh certainly.

17,298. (*Sir James Peile.*) What was Sir James Westland's opinion about the manner of treating the poorer provinces?—I think it is stated in the speech which Sir James Westland made last year.

17,299. Did he wish to help the poor provinces, or to leave them to their own resources?—No, he wanted to help them.

17,300. From the resources of the richer?—Yes, because certain of the non-official members of the Council complained at the time about this very affair—that the revenues were not equally distributed for the purposes of expenditure.

17,301. (*Mr. Courtney.*) From what provinces did they come?—One gentleman was Mr. Bhuskate, who came from

Mr Dinshaw Edulji Wacha.

5 April 1897.

the Central Provinces, and the other gentleman—I forget his name—came from Madras, I believe.

17,302. (*Mr. Mowbray.*) The Provincial Governments do get a share in some of the revenues, do they not; I mean, their share depends on the amount of revenue they themselves raise?—No doubt at the end of each provincial contract the Government of India revises the contract and sees what revenue a particular province has been able to earn; and, of course, if there is a growth of revenue, then the Government of India takes a part and allows a part to the Provincial Government.

17,303. But is it not the case, with regard to certain revenues, that the Provincial Government gets for itself a share of the revenue, a proportion of the revenue; and, if that revenue increases, its share naturally will increase during the currency of the contract?—If during the currency of the contract the revenue increases?

17,304. Yes; is it not the case, with regard to certain revenues, that the Provincial Governments now get, not a fixed amount, but a proportionate share of the revenue which they themselves raise?—The contracts are fixed, as you will find in the Financial Statement,—of land revenue so much; excise so much——

17,305. Yes?—That is the contract itself.

17,306. But is not that very much what you were arguing in favour of, that they should have a certain proportion of the revenues they raise?—Yes; but, as a matter of fact, certain proportions are fixed for different heads of revenue.

17,307. Yes; I admit the proportions under different heads may be different, but, so far as it is proportional, that is the system which you yourself are advocating, is it not?—No; I say that those proportions, even when they are taken, do not act fairly on the different provinces; and therefore, if, instead of taking the revenue, a certain proportion of expenditure was fixed, that would be a far better way of doing it. Our principle is rather directly contradictory to the principle adopted by the Imperial Government; we go for giving the Provincial Government a fixed percentage of expenditure.

17,308. That is the difference between your proposal and the existing system?—Just so.

17,309. That, whereas the Imperial Government gives to the Provincial Government a share of the revenue, you wish to assign a share of the expenditure?—Yes; to fix a percentage of expenditure.

17,310. (*Mr. Naoroji.*) Do I understand it rightly that what you mean is that during the five years of the contract the Provincial Government goes on increasing its expenditure in accordance with its increase of revenue; but, when the five years are over, the Imperial Government takes away so much; and that, if the addition made to the expenditure during the five years is not kept up, they are obliged to retrench their expenditure; if a certain proportion was fixed on out of the surplus, the Provincial Government would always get a certain proportion; that fixture would make the Provincial Government see in what proportion it could increase its expenditure?—It virtually comes to that.

17,311. (*Chairman.*) I will take a figure. A certain province produces Rx. 1,000,000, a crore of rupees. Your suggestion would be that Rx. 400,000 of that——you have named 40 per cent.?—Simply as an illustration; I did not mean to fix it.

17,312. That Rx. 400,000 should go to the Central Government, and Rx. 600,000 should be reserved for the Provincial Government?—I beg your pardon, it is the other way; Rx. 600,000 to the Imperial Government, and Rx. 400,000 to the Provincial Governments to be distributed among the different provinces.

17,313-4. A description of every branch of administration in India has been laid before us in papers given us by Sir Henry Waterfield. Have you, or your Association, any comments to offer upon the administration of those branches under their different heads?—I have made some remarks under my second heading, the progress of expenditure.

17,315. I want to invite any comment you might like to make upon the different heads, such as education, judicial establishments, and so forth—upon the machinery of their administration?—I have no remarks upon that.

17,316. And so far as you do not criticise them, we may assume that you have no objections to advance against the principles of administration under those several heads?—I am not in a position to criticise, because I am a non-official, and do not know what is the exact working of the machinery, and whether the expenditure is justified or not. I am not in a position to tell.

17,317. But, as representing the opinion of the governed as apart from the governing body—you have no criticism to offer upon it; there are no blots or defects which are evident to you outside and to which you would wish to call attention?—Under which heading?

17,318. Under the heads of these great departments?—I am not in a position to criticise them.

17,319. (*Mr. Buchanan.*) As far as you know, there is no general dissatisfaction with them?—There is a general dissatisfaction in a way; but I have not gathered all the details in different parts of the country—I mean the opinions expressed on the subject. These have not been formulated and focussed in such a way as to enable me to offer that criticism here.

17,320. No particular Department is found fault with?—As a matter of fact, there are complaints, say, about, the Police Department, about the law courts, and so on—there are complaints, no doubt, but if you ask me specifically on the subject, of course, I say I am not in a position to submit them.

17,321. (*Chairman.*) If it has not been represented to you in a form that you can represent to us, it will naturally be left upon our minds that Indian public opinion has no very grave criticism to make; otherwise it would be able to formulate it?—Other Associations may be able to formulate them; of course, for the present, I do not offer my own opinion one way or the other.

17,322. Therefore, we should come to the conclusion that Indian opinion has not formulated any formidable criticisms upon these branches of administration; otherwise, no doubt, you would be able to tell us what that criticism was?—I have already given my reply; but on the growth of expenditure, I have spoken about military expenditure, and some other matters too; education, and one thing and another, so far as my own personal knowledge has gone.

17,323. I think that finishes what you would wish to say to us upon the subject of the machinery of administration?—Yes.

17,324. The second heading on which you propose to give evidence is the progress of expenditure?—Yes.

17,325. What year do you wish to take for your comparison for the growth of expenditure?—For purposes of comparison, I have taken 1884-5 as the standard year for two reasons. Firstly, my Association in its memorial to the Indian Government, in March 1894, complained of the excessive growth of civil and military expediture during the years following 1884-5, and pointed out that the increased expenditure was principally to be attributed to that expenditure, and not to the increasing expenditure on exchange, which was only a subordinate factor. Secondly, because in 1884-5 revenue and expenditure nearly balanced each other after the many vicissitudes to which Indian finance was subjected by famine and the second Afghan War, and after the laudable remission of taxation to the extent of nearly 3 crores of rupees during the administration of Lord Ripon with Sir Evelyn Baring (now Lord Cromer) as the Finance Member.*

17,326. On what principle do you calculate the increase of expenditure?—I may observe that in comparing the growth of expenditure from 1885-86 to 1894-95, I have taken the average increase of the decade, as being more accurate and satisfactory. For instance, take one item of expenditure, say the net charge on the debt services. This amounted in 1884-85 to Rx. 3,907,848. In the year 1894-95 it was Rx. 4,308,955. Apparently the difference in the amount between the two years would show an increase of Rx. 401,107. If, however, the average of the annual growth of the 10 years was taken, it would be found that the charge was Rx. 3,728,949, or a decrease of Rx. 178,999 over 1884-85.

17,327-8. Does that represent quite a correct result? You start with the debt as it stood in 1884-85, do you not?—In 1884-85.

17,329. That is a single year?—That is a single year.

17,330. Very well; during the 10 years that followed various changes have taken place in the debt; is not the fairest comparison, then, that of the year 1884-85 against the latest year in your comparison—1894-5. Let me put this to you in explanation of what I mean. Some conversions have taken place during this time, have they not?—Yes.

17,331. Is it not a fair comparison between the debt at the end of the time with what it was at the beginning of

* *See* Appendix No. 74.

the time? Does not the year 1894–95 on comparison with 1884–85 more fairly express what the state of the debt was at the two periods?—As far as to what the mere state of the debt was, it may be an arithmetical calculation to do it; but I am comparing the growth of the interest charge during the decade. I did not take a single year, because in many matters there have been fluctuations in all the cases of expenditure. One year it has gone up and another year it has gone down. In the year in which it has gone down, if you compare that year with 1884 you may show the expenditure is less; that is one way of doing it. But if you take the 10 years' average growth, it shows distinctly on the whole for 10 years what has really been the growth. As a matter of fact the Government of India itself has followed that plan. I remember in 1883–84, when Lord Ripon's Government was criticised by Mr. Stanhope in a speech in Parliament showing that the expenditure had greatly increased, there was a Blue Book published by the Government of India. It was a Parliamentary return in which Sir Evelyn Baring really took the average growth; and very often the Government of India itself adopts such a method.

17,332. As far as the debt is concerned, surely the fairest way of comparing it is to take what the debt stands at now, and compare it with what it was 10 years ago. The average appears to me to have no meaning in that case at the present moment. The charge of the debt is so much; during the 10 years you may be borrowing and you may be reducing interest; but the charge on the debt at the present moment is Rx. 4,308,955, according to your figure. At the end of the previous 10 years, in the year 1884–85, it was Rx. 3,907,848; surely that difference of Rx. 401,107 shows you the state of the debt of the two periods?—Your lordship will see that I am more fair in taking the average growth of the debt services. All my figures are taken from the last Parliamentary return of 1896–7. For instance, take the interest of the ordinary debt in India. In 1884 it was Rx. 3,783,184; in 1885–86 it increased to Rx. 3,810,372; then again in 1886–87 it went down to Rx. 3,791,427; then again the next year it rose to Rx. 3,850,769; in 1888–89 it went up to Rx. 4,107,403; in 1889–90 it was Rx. 4,149,775; in 1890–91 it went up to Rx. 4,368,045; in 1891–92 it again came down to Rx. 4,168,622; and then it again increased, so that there have been regular fluctuations. Sometimes it has gone up and sometimes it has gone down. Therefore, if you want to compare what was the average interest charge paid during the 10 years, in my opinion, the more satisfactory basis of comparison is to take the average of 10 years than to take a single year and compare it with 1884. That would be the real growth.

17,333. I should have thought, myself, that the state of the debt, as it stands at the end of the period, compared with its state at the beginning of the period, was the proper way to compare it; but your view is different. What do you consider to be the financial position during the 10 years you have adopted; was it improving or deteriorating?—According to the Parliamentary Return of Income and Expenditure, dated 27th March 1896, the net expenditure for the 10 years ending with 1894–5 amounted to Rx. 545,854,292, while the net revenue was Rx. 546,319,618, showing a net surplus during the decade of Rx. 465,326. It meant that the expenditure just balanced the revenue, and left an insignificant surplus of half a million Rx. It should, however, be remembered that enhanced taxation on salt, and the imposition of the income tax, and that of the import duty on certain classes of merchandise in 1894–5, yielded Rx. 23,996,829. But for this amount there might have been a deficit of Rx. 23,531,503, or, say, 2·35 million Rx. per annum. But even this is not the full measure of the deterioration of the finances during the decade under review. The Famine Insurance Grant was now and again partially suspended, in all amounting to Rx. 4,520,114, while the provincial balances were encroached upon to the extent of Rx. 890,000. When these additional items were taken into consideration, it would be found that the deterioration or deficit amounted to Rx. 29,406,943 *minus* Rx. 465,326.

17,334. How do you reckon that increase of taxation, which you put at nearly Rx. 24,000,000?—I calculate it in this way; the receipts from new taxation in the period under review may be divided into three heads: assessed taxes, salt duty, and customs. As to assessed taxes, the income tax was levied in 1886–7; the increase from that year to the year 1895–6 amounted in all, taking all the nine years together, to Rx. 9,879,000. As to the salt duty, that was enhanced in 1888–9. The increase from that year over the yield of 1887–8 and the previous years amounted to Rx. 11,981,000. Customs duty; the import duty on merchandise, exclusive of cotton duties, was imposed in 1884–5; and the increase in that year over the preceding one was Rx. 2,135,000, making a total of 23,996,829.

17,335. I wish to gather how you reckon the actual increase; now, taking salt duty, how do you arrive at that increase? The salt duty was raised from 2 to 2½?—Yes, from 2 to 2½ per maund.

17,336. Two rupees?—Two rupees and a half.

17,337. That was to say, that the duty was increased 25 per cent.?—Yes.

17,338. Do you reckon the increase from that duty at 25 per cent.?—What I have done is to be more fair; I have done this: I have taken the four years preceding, when the salt duty was at two rupees, from 1884–5 to 1887–8. For instance, in 1884–5 the salt duty was six millions; in 1885–6 it was Rx. 5,877,000; and in 1886–7 it was Rx. 6,238,000; and in the last year before the duty was raised it was Rx. 6,233,000. I have taken the average of those four years.

17,339. Which you find to be how much? What is the average?—It comes to Rx. 6,200,000 odd.

17,340. Yes?—Then, commencing with 1888–9, of course the duty has gone up. It is Rx. 7,229,000. I take that Rx. 7,229,000, and deduct from it the average of the previous four years, and put down the increase in the duty in that year as Rx. 995,000. In the next year it was Rx. 1,507,000; and the difference came to Rx. 1,839,000, and so on.

17,341. (*Mr. Naoroji.*) You mean the difference?—Yes; and I total up the increase of the seven years to Rx. 11,981,565.

17,342. (*Chairman.*) That does not take into consideration any possible increase or decrease of consumption?—Supposing that the duty has not been increased. There might have been, in the natural course of things, a small improvement as it was going on.

17,343. In consumption?—In consumption.

17,344. I want to find out how you reckon it. You do not take into consideration in your calculation increase or decrease of consumption—it is not a factor in arriving at the amount?—No, but the thing is this, I have not taken it into my account, because I may say that the increase which had gone on from 1884–5 to 1888 was not very considerable, and according to my calculation—in my estimate which I have given—it would make very little difference.

17,345. Still, you have not taken into consideration increase or decrease of consumption?—No. If your Lordship will allow me to say, as a matter of fact, I see in my table that I have taken the average of the salt revenue in my comparison, not from 1884, but from 1882–3; that is to say, the very first year in which the duty was reduced by Lord Ripon's Government from 2½ to 2 rupees; and therefore the average for the six years only came to six millions, as I have already pointed out to your Lordship. Therefore the average is very fair.

17,346. You have pointed out that the deterioration or deficit amounted to over Rx. 29,000,000?—Yes.

17,347. To what do you attribute the deterioration?—I attribute this deterioration in the finances, which necessitated additional and enhanced taxation, to the enormous growth of military expenditure in the first instance, and, secondly, to a considerable increase in the civil expenditure. But the main disturbing factor was military expenditure, but for the growth of which the revenue could have fairly borne the increasing burden of exchange without any taxation being imposed. Thus:—

	Rx.	Rx.
Net expenditure in 10 years - -		545,854,292
Deduct increased net army charges over 1884–85, exclusive of exchange -		37,494,770
		508,359,522
Net revenue in 10 years was -	546,319,618	
Deduct new taxation, famine grant, suspended and provincial balances -	29,406,943	
		516,912,675
Net surplus - - -		8,553,153

17,348. The Government thought this increase of military expenditure which you have been mentioning necessary; but I presume that was not the view of

Mr. Dinshaw Edulji Wacha.

5 April 1897.

Indian public opinion?—The view of Indian public opinion is the same as I have expressed; but the increase of military expenditure was mainly owing to the addition of 10,000 European and 20,000 native troops in 1885. On this subject a resolution was passed at the First Indian National Congress (1885) as follows: "That in the opinion "of the Congress the proposed increased military expendi- "ture of the Empire is unnecessary, and, regard being had "to the revenues of the Empire and the existing circum- "stances of the country, excessive." I seconded this resolution, and gave my reasons in support of it.

17,349. And did your Association also protest?—Yes. On the same subject, namely, this increase of troops, the Bombay Presidency Association forwarded on 27th January 1886 a memorial, prepared by me, to Lord Randolph Churchill, the then Secretary of State, protesting against its necessity. It pointed out that, bearing in mind the report of the Simla Army Commission that for all purposes of internal defence and repelling external aggression on the frontiers the then existing strength of the troops was sufficient, the Association failed to understand the reasons for augmenting it, when 17 millions were being already spent per annum, as the Army was then constituted; that successive Viceroys and Finance Members had deplored, from time to time, the growth of the expenditure, and emphasised the necessity of curtailing it; that the Government of India itself, in its despatch of 21st November 1884, pointed out how the growth occurred; that of the net average growth of Rx. 670,000 per annum in the ordinary revenue during the decade ending 1883-84, the army charges alone absorbed Rx. 144,000; that during the same decade the growth of the net land revenue was Rx. 400,332, or say Rx. 40,000 per annum, so that increased military expenditure absorbed in one year the net increase in land revenue of 3½ years; that the Indian Exchequer had no reserve to fall back upon; that there was no true surplus to speak of while the periodical calamities of famine, let alone other unforeseen contingencies, had generally to be met with borrowed monies which only swelled the permanent interest charge on the revenues; that, reviewing in 1879 the finances of India for the seven preceding years, Sir John Strachey, a former Finance Member, observed that, "India "possessed no true surplus of revenue over expenditure "to cover the many contingencies to which a great country "is exposed;" that, such being the ordinary condition, the Association would leave to the Secretary of State to consider how the finances could bear the severe strain that was then about to be put upon them to the extent of 2 millions sterling per annum; that, in its despatch of 8th February 1878, the Imperial Government observed that "placed as it was under the serious responsibility of "so administering the affairs of the greatest dependency "of the British supremacy, that while British supremacy "is strictly guarded, the means of securing that end shall "not unduly weigh on the people of this country, it was "constrained to represent to Her Majesty's Government "that the burden thrown upon India on account of the "British troops is excessive, and beyond what an impartial "judge would assign in considering the relative material "wealth of the two countries, and the mutual obligations "that subsist between them—all that we can do is to "appeal to the British Government for an impartial view "of the relative financial capacity of the two countries to "bear the charges that arise from the maintenance of the "army of Great Britain, and for a generous consideration "of the share to be assigned by the wealthiest nation in the "world, to a dependency so comparatively poor, and so "little advanced as India—owing to the poverty of the "people, and their consequent inability to bear taxation, "it was unable to supply the funds required for the most "necessary and desirable objects;" that the Secretary of State, on a reconsideration of the whole question in all its bearings, political and financial, would be pleased to recall the instructions issued on the subject, and at the same time take such measures for the curtailment of the overgrown military expenditure as to bring about a sounder and healthier state of Indian finance generally; that, should Her Majesty's Government adhere to their resolution to carry out the proposed increase in the Army, the Association submitted that the expenditure thereon should be met from retrenchment, for which there was great scope, and not from increased taxation, and that the Imperial Government of England be asked to share the greater portion of the burden; and, lastly, that a stringent system of check and control should be established, so that encroachments on the revenues of India might be effectually prevented. I beg to put in this memorial.*

17,350. You mentioned the Simla Army Commission; when did that Commission sit?—In 1879.

17,351. Of whom was it composed?—I do not remember all the names. Sir Donald Stewart was one, Lord Roberts another.

17,352. (*Sir Donald Stewart.*) I was not one?—I beg your pardon. I made a mistake.

17,353. Sir Ashley Eden was the chairman?—There were about six or seven gentlemen present.

17,354. (*Chairman.*) Have you any further evidence to give of remonstrances made by representative native opinion?—Yes. Those were the views expressed 11 years ago on military expenditure by the Association, which the course of events has now greatly emphasised. For, beyond the expenditure on the increased troops, there has been a very large expenditure on strategic railways, on arms and ammunition, on mobilisation, on a variety of border expeditions beyond the statutory frontier of India, special defences, military roads, and the occupation of Upper Burma. The Association, therefore, is of opinion that it is the increased military expenditure which is primarily responsible for the embarrassed condition of Indian finance during the period under review.

17,355. I do not quite follow. Are you alluding now to a further memorial?—I am just going to read it.

17,356. At the end of the previous question you said that you wished to put in a copy of the memorial?—That I have put in.

17,357. Then you say: "the Association, therefore, is of "opinion that it is the increased military expenditure "which is primarily responsible for the embarrassed con- "dition of Indian finance." Is that in another memorial?—No, that is the general opinion of the Association which I put forward; a memorial afterwards followed—later on.

17,358-9. You mean to convey to us that that was the opinion of the Association; it was embodied subsequently in another memorial?—Yes.

17,360. Now will you proceed?—I may observe that, in response to the invitation issued to leading public bodies by the Finance Committee appointed by the Government of India, the Bombay Presidency Association forwarded on 27th August 1886 a memorandum on the retrenchment of expenditure prepared by me. That memorandum, which I beg to put in, reiterated in brief its protest against the burden of two million sterling on the additional troops, as well as the outlay on frontier railways and other military works, and observed that these were all elements of danger to the stability of Indian finance; that loss by exchange was liable to swell with further fall in the value of silver measured by gold; that, while it disturbed the Indian Exchequer, it was within the power of the Government to mitigate to some extent the evils arising from it, provided the causes which created the heavier burden were fairly faced, namely, the home charges; that these would grow in future with the increased military expenditure, and with the increase of sterling debt, and of salaries and pensions which had to be paid in gold; that a material reduction under exchange could only be looked for when there was a corresponding material reduction in those charges; that it was essential for the Indian Government to urge strongly on the Secretary of State the desirability of devising some scheme to commute in silver the liabilities that had to be met by gold payments; that, if possible, the guaranteed interest on railways should be reduced by opening negociations with those companies, as suggested in 1882 by Sir John Strachey and General Strachey at pages 80 and 83 of the "Finances and Public Works of India."

17,361. You mentioned that the despatch of the Indian Government of the 8th February 1878 remonstrated against the heavy charge of the British troops. I presume that the Indian Government was a party to, and concurred in, the increase of the Army in 1885-86?—I do not know.

17,362. You have no evidence upon that?—No.

17,363. I wanted to know whether that increase was imposed upon the Indian Government against the wishes of the military authorities in India and of the Indian Government, or whether it was a measure to which they assented?—I know nothing about it.

17,364. There is no evidence upon that?—This much appears in the book on the reduction of expenditure. There is a minute of Sir Auckland Colvin, the Finance Member, and Mr. Ilbert, jointly, in which they strongly protested against that expenditure.

17,365. If they protested, being two members of the Council, I think we must assume that the remainder of the Council were concurring in this increase?—The Finance Member of the day protested against it.

* *See* Appendix No. 75.

17,366. That hardly answers my question. My question was, whether the Governor-General and the majority of the Council were in favour of it?—I do not know what the opinion of the majority was.

17,367. You say that the Indian Government remonstrated against the expenditure, throwing the responsibility upon the Home Government; it is rather important, when an enormous increase of the Army takes place a few years afterwards, that you should be able to show to us whether the Indian Government, which must be the body most alive to the danger of inefficient defence, were parties to this large increase?—I have no knowledge of it.

17,368. I suppose you would judge from the fact that two Members of the Council protested, that the remainder of the Council concurred?—It may be that the other members of the Government of India did not want to make any minute in obedience to the orders of the Secretary of State; and that they, therefore, remained quiet.

17,369. But I suppose there is some correspondence which shows how that increase of the Army was brought about, is there not?—I have not seen the correspondence.

17,370. (*Sir Donald Stewart.*) Are you aware that the Governor-General and the majority of the Council in the first instance, went against that proposal for the increase of the Army to which Sir Auckland Colvin and Mr. Ilbert objected?—I have no knowledge.

17,371. You do not know; but are you aware that the Government of India subsequently accepted that increase under different circumstances?—I have no knowledge of it.

(*Chairman.*) Therefore we have it now that the Government of India, possibly reluctantly, but looking at all the circumstances of the case, were parties to that increase.

17,372. (*Sir Donald Stewart.*) Very reluctantly?—I hear so from Sir Donald Stewart.

17,373. (*Chairman.*) When you took out of what I presume were the published documents of the Government of India, the protest of the Finance Member and Mr. Ilbert, was there not appended any resolution or despatch of the Government of India expressing concurrence, or otherwise, in the proposal?—No, so far as my recollection goes, there was a blue book published and there were a number of telegrams and despatches; but there was no despatch, so far as my recollection goes, in which the Government of India categorically opposed—no despatch of that character was there.

17,374. Did your Association make any further representation?—I have not finished the whole of the other answer.

17,375. Perhaps you will proceed, then? — The Association proceeded to say that at the same time it was expedient to contract payment in silver only, so far as it may be possible, of all liabilities and obligations which the Government may have to incur hereafter as well as salaries, pensions, and gratuities of every kind and nature; that, beyond the charges which entail loss by exchange which in all fairness should be borne by the British Treasury, charges such as those of the Aden Residency, the Persian and Chinese embassies, and other minor political establishments, should also be paid by England as well as rents, taxes and charges on buildings in London constructed at India's expense, besides other miscellaneous charges too numerous to mention; that the burden of the cost of the European agency was very heavy, as detailed in the table appended to the Memorandum; that a very large saving might be effected by the more extensive employment of natives in posts which are now filled by highly paid Europeans; that the annual migration of the Supreme Government to Simla was injurious financially and by reason of the length of the period over which it extended, the cost being, according to a Parliamentary return (26 August 1886), 7 lakhs, but it being generally believed it is actually considerably more; that the cost of collection of land revenue was growing larger, so, too, the customs and salt establishments also; that the cost of superior establishments in the P. W. Departments; and the cost of General Administration, too, had grown since 1870–1; that expenditure in the Bombay Presidency under various heads was large and susceptible of reduction; that it was imperative expenditure should be adjusted to income rather than income to expenditure; that the interests of India in expenditure were not sufficiently protected under the constitution of the Council of India in England, and there was much better protection in the time of the East India Company; that there was no sufficient barrier against official pressure in the direction of lavish expenditure; that it was the faulty system of administration which was at the root of the financial embarrassment, and that, therefore, fundamental changes should be made in that system, especially the gradual substitution on a large scale of native for European agency, without which it would be vain to indulge in the hope that any permanent relief could be afforded to the Indian Treasury. I beg to put in a copy of this memorial.

17,376. Your Association stated, then, that it was the faulty system of administration which was at the root of the financial embarrassments; and therefore fundamental changes should be made in that system, especially in the substitution on a large scale of native for European agency. That rather points to the assumption that at that time your Association was able to point out, and had its own views upon, the defects in administration, which, from your previous answers to me you do not feel in a position to formulate. They speak of the faulty system of administration being at the root of the financial embarrassments. Therefore, fundamental changes should be made in that system?—That is the principal thing.

17,377. But you observe the charge made by the Association is a very general one—"the faulty system of administration"; and that would point to something more than the fact that economy would be effected by substituting natives for Europeans?—The Association then considered that the system of administration was really faulty in this respect that an agency was employed which was very costly, and, therefore, all the burdens arose from that in the Military and Civil Departments.

17,378. Yes; but is that quite "the faulty system of administration"? Their way of putting it would rather lead one to think that the administration itself was faulty, whereas you observe that the remedy is one of substituting a cheaper form of labour. A cheaper form of labour hardly seems to cover such a general charge as "the faulty system of administration"?—That was the view which the Association took, that the system of administering the Empire was faulty in this respect. That there was this fundamental defect in it, that it was carried on by an European agency.

17,379. And, therefore, when the Association speaks of "the faulty system of administration" it is not at variance, you think, with your having no criticism or charges to bring against the system of administration by itself, apart from the fact that, if natives are employed instead of Europeans, much economy would be effected in your view?—I have pointed out what are the defects, which should be checked and controlled, in the system of administration, so far as the financial machinery goes.

17,380. I do not think you pointed them out in detail, did you?—In my evidence on the financial machinery certain defects in the system of administration were pointed out — that is particularly in the financial machinery.

17,381. However, perhaps you would not mind mentioning them again; I do not remember your bringing before us the specific points?—There is a financial defect in machinery of check and control; and that, of course, is "the faulty system of administration."

17,382. I do not remember your pointing out what the actual defect was; a criticism of that kind is a little too general? where is the check and control faulty; that is what I want to come to?—As I said in my evidence on the financial machinery, if the Finance Member is not well supported and if he is alone, he is not able to control one thing and another; expenditure increases and that sort of thing.

17,383. With reference to lack of control, you quote Sir David Barbour and Sir Auckland Colvin; and of course it is most important that the Finance Member should be well supported; but is it quite clear that Sir David Barbour and Sir Auckland Colvin did not lay too much stress upon this point? Lord Cromer is, of course, entitled to equal weight with those two gentlemen, and I do not think he agrees with them; and Viceroys of very different types, such as Lord Northbrook, Lord Ripon, and Lord Lansdowne, appear to agree with Lord Cromer rather than with Sir David Barbour and Sir Auckland Colvin. Do you think that it is quite just to omit all reference to their evidence, where it differs from Sir David Barbour and Sir Auckland Colvin?—*If* you will allow me to speak, it is this way. Different Finance Members have been under different Viceroys. Lord Northbrook himself was a very economical Viceroy; and Sir Evelyn Baring, now Lord Cromer, was then Finance Member. Their experience is not the same experience which Sir David Barbour and Sir Auckland Colvin experienced. The

Mr. Dinshaw Edulji Wacha.

5 April 1897.

actual forward policy in the growth of military and civil expenditure began with Lord Dufferin; and during Lord Dufferin's time and Lord Lansdowne's time Sir David Barbour and Sir Auckland Colvin were Finance Members, Sir Auckland Colvin first and Sir David Barbour afterwards; and their evidence would tend to show that their experience was an entirely different one, of which Lord Cromer could know nothing, nor Lord Northbrook.

17,384. Lord Lansdowne agrees with Lord Northbrook and Lord Ripon?—Lord Lansdowne may agree, because Lord Lansdowne has himself, if Indian opinion is to be given, been a party to its growth.

17,385. (*Sir James Peile.*) And Sir James Westland agrees with Lord Cromer, so you have two Finance Members against two?—I have not Sir James Westland's evidence.

17,386. You will find it in Sir Henry Brackenbury's evidence before this Commission?—Sir Henry Brackenbury was a member of the same council as Lord Lansdowne.

(*Sir James Peile.*) He merely quotes what Sir James Westland said in a speech.

17,387. (*Chairman.*) You have quoted some of the evidence, but you have not quoted witnesses on the other side, and I want to bring before you that it does not do to rely too implicitly upon the evidence of Finance Members who take one view and ignore entirely the evidence of Finance Members that tends in the other direction, does it?—If your Lordship will refer to my evidence, I say that I agree generally with what Sir David Barbour and Sir Auckland Colvin said, not in every particular. The general result of their evidence is, of course, actually in consonance with Indian sentiments expressed on the subject.

17,388. But I still must recall the fact to you, that the opinion of certainly one of the ablest Finance Members India ever had—Lord Cromer—and of the present Finance Member does not agree with that of Sir David Barbour and Sir Auckland Colvin?—That is for the Commission to consider.

17,389. (*Sir William Wedderburn.*) I gather that Lord Cromer—that is, Sir Evelyn Baring—did not find it necessary to draw attention to any difficulty, because he was supported by an economical Viceroy and did not find the difficulty?—No.

17,390. And, in your opinion, Sir James Westland is not so anxious for economy that he will naturally come into collision with the Viceroy, who is rather inclined to large expenditure?—Just so.

17,391. So that in those two instances their experience is not the same; they have not felt it so much?—Yes.

17,392. (*Chairman.*) Supposing that the want of the power of control and check on the part of the Finance Member, which you support from Sir David Barbour's and Sir Auckland Colvin's evidence, exists, have you formed any view as to how the position of the Finance Member could be strengthened?—I have stated in evidence that with an economical Viceroy his position is very much strengthened.

17,393. That all the witnesses agree in?—It all depends on the selection of the Member himself; after all, as Lord Cromer himself has said, it depends on good selection. Of course, even apart from that, as I have said, however economical a Finance Member may be, or however well supported, still, for the purposes of better control, if the non-official element was allowed to vote on the budget and divide, that would be a very efficient way of having that control your Lordship is speaking of.

17,394. Of course the selection of men is a very difficult matter, and good Finance Members do not grow on every tree. When you say, as I understand you, that more care should be taken in the selection of Finance Members, do you mean to imply by that in any way that sufficient care has not been taken?—There are Finance Members and Finance Members.

17,395. Yes. At any time do you think that sufficient care has not been taken?—I am not in a position to reply to your question.

17,396. And it is a question that cannot be replied to, is it not? The difficulty of choosing a man is because men are not available generally; it is clearly, and it must be, the interest of the Viceroy and the Indian Government to choose the best men they can. Therefore, if the only remedy that can be suggested is more care in choosing the Finance Member, it is proposing an impracticable remedy. You have no reason for suggesting that due care has not been taken?—Very much will depend on the selection of the Finance Member. What I say is that more still depends on the concession which may be made to non-official members to discuss the budget.

17,397. Therefore, what you rely upon is to allow the non-official members of the Legislative Council more power?—Yes.

17,398. (*Sir William Wedderburn.*) Would it not tend to more independence in the Financial Member of the Council, if he were nominated from home? Would not an independent public man, rather than a man who is already in the permanent civil service of India, occupy a more independent position?—Yes, he would.

17,399. Like Mr. Wilson or Mr. Laing; they were appointed direct from England?—And Mr. Massey also later on.

17,400. And they occupied in some respects a more independent position—less dependent on the favour of the Viceroy—than a man who is a candidate for promotion in the Permanent Civil Service?—Yes.

17,401. (*Mr. Courtney.*) There is no rule now, is there, against a Finance Member of Council being appointed from home?—I do not know that.

17,402. The Legal Member is often appointed from home?—Legal members have also been appointed from the Indian Civil Service.

17,403. Sometimes, but often from home?—Yes.

17,404. It may be that the conditions of tenure are not sufficiently satisfactory to induce persons from home to accept the appointment?—In that case I should submit that the Indian public would prefer having a really trained independent man sent from England holding that position, because, after all, if there is to be a check on Indian financial control, if such a person could be had, India would prefer him.

17,405. And be prepared to accept the cost of the improved conditions?—The cost would be nothing compared with what such a Finance Member may save such a Finance Member may save millions of money by his economical way of administering the finances.

17,406. (*Chairman.*) That is rather a bold assumption, that an ignorant, however able, statesman going out from home, may be able to effect economies of millions. Do you happen to recollect—probably your memory does not carry you back to the time when Mr. Wilson went out to Calcutta?—I was a young man then.

17,407. Would you be surprised to hear that Mr. Wilson was criticised on his ignorance of India, and on measures which he took in order to bring about equilibrium of the finances?—I do not know anything about it.

17,408. If I remember rightly that was the case, and Mr. Wilson was a very exceptional case; it is very rarely that you find so competent a financier as he was available in England?—In a matter of this kind opinions will vary. Perhaps the official body in India would not like a statesman coming from England, and might try perhaps to minimise his services and say he was ignorant and all that sort of thing. We Indians might take a different view and say he was independent, because he introduced financial changes which the official body did not like, but which we approved.

17,409. (*Mr. Buchanan.*) Do you think there is a general desire on the part of the native Associations for whom you speak, that the Financial Members should be appointed from England?—So far as my own Association is concerned, and the views I have heard from other bodies, they would prefer if there was a trained man in public finance sent from England, who would view things from a fresh point of view altogether.

17,410. Is that one of the subjects which you are deputed to bring before this Commission?—Yes.

17,411. And to lay great stress upon?—Yes.

17,412. In the expectation of getting great economies from it?—Certainly.

17,413. (*Mr. Courtney.*) Are you charged with a resolution upon that subject, do you mean?—No.

17,414. Has that view ever been formulated at the Congress, or at meetings of any body?—They have spoken on the subject, but not formulated any special resolution on it.

17,415. (*Chairman.*) You mentioned the Finance Committee; what savings did the Finance Committee make?—It would be noticed from the memorial which I have

quoted that the Association had 11 years ago fully gone into the question of the large growth of expenditure, reviewed all the causes which led to it, and suggested economies and reduction. Though the Finance Committee eventually recommended savings in expenditure amounting to a little over half a crore, and although a portion of that saving was effected at the time, the subsequent increase in such expenditure has more than swallowed up the savings, and civil expenditure since has grown considerably along with the military. Therefore, the condition of Indian finance now is much worse than it was in 1886.

17,416. Have you any views to express upon the debt services?—Yes. Coming now to the heads of expenditure, I may remark as regards the public debt, that the rupee borrowings have increased Rx. 11,000,000, while the sterling debt has risen from 69,271,088*l.* in 1884–85 to 114,005,826*l.* in 1894–95, nearly 70 per cent. It should be borne in mind that every increase in sterling debt adds correspondingly to the annual interest charge. Sterling loans for public works of an unproductive character, such as military railways, are most objectionable. The Committee on the Home Charges has well put it (Parliamentary Return, 13th July 1893). "That the greatest caution "should be exercised in borrowing in England for public "works in India, especially as long as the rate of exchange "is so variable as practically to make of little value all "calculations as to the charge for interest. The conclu- "sion is supported by another important consideration. "The political inexpediency of adding to the charges to "be met from the revenues of India by payments made "in the country is very obvious, and in view of the feeling "in India on this subject, no increase of such charges "should, in our opinion, be increased, unless it be "practically unavoidable."

17,417. You are, of course, aware that this subject of borrowing in England or in India has been a subject probably more discussed here than almost any other subject connected with India?—Yes.

17,418. And that the form the borrowing has taken represents the mature conclusions of very high authorities of Indian experience on Indian finance?—Yes.

17,419. Do you say that they have been entirely wrong? Do you mean to imply that a mistake has been made in borrowing in England?—I do not mean to imply it at all; but Indian opinion generally is that, as far as practicable, money should be borrowed in India, so that we should only pay interest charges in rupees, as the burden of every sterling loan is greater.

17,420. I believe that Sir James Peile is more competent to put this question to you, but I have always understood that the conclusion to which the best authorities have come is, that, had they borrowed in India, in all probability the charge would have been higher. I put that point to you, bearing in mind at the same time, of course, that the fall in exchange no doubt contributed to make the charge heavier than it probably appeared to be when the loan was contracted. But I want to know whether you, or your Association, have come to any distinct opinion, that the course actually followed has been more expensive to India than it would have been to try to borrow in India?—How is that conclusion arrived at? I have no knowledge of how borrowing in rupees will cost more than borrowing in sterling.

17,421. It is a question that high authorities have given great consideration to; if you have not gone into it, it is a difficult matter for you to express a very decided opinion upon?—With all due deference to those high authorities, I may say that, if the particulars and details are brought to public notice, then, of course, we are in a position to criticise; we do not know, except your Lordship's word, that those high authorities have come to that conclusion; on what details or basis they have done so, we have no knowledge; therefore, we are not in a position to say one thing or another.

17,422. If your Association had gone into it, they would have been able to form an opinion, would they not, as to whether, first of all, there was capital in India available for lending to the Government at the rates at which the Government borrows; and, next, whether the rates at which the Government could have borrowed in India would have been lower, or not so low, as those at which we borrowed in England; those are points upon which Indian opinion would be able to judge?—If such a statement were put before our Association, we might then form a judgment one way or another.

17,423. If the Association are going to criticise, ought not the members to have examined the question and formed an opinion themselves, which they are perfectly competent to do, as to whether the borrowing of these large sums could have been done cheaper in India?—The question whether there is more capital in India—whether we can get it or not—is a question which has to be verified by independent investigation.

17,424. But who are more capable to have made that investigation than the members of an Association which exists almost entirely for the purpose of criticising the acts of the Indian Government?—Exactly; but all Associations do not go minutely every day into some of these particular questions.

17,425. But, until they have done so, they are hardly in a position to criticise very forcibly the acts of the Government, are they?—So far as we have known from the past results of sterling expenditure the cost is greater owing to exchange. We can form a common-sense opinion that it is better to deal in rupees than in sterling.

17,426. (*Mr. Courtney.*) Are you keeping the two considerations quite apart in your own mind? First, the differences—if there be differences—in the rate of the interest on loans contracted in India and those contracted here, and next, the large item of the variation of the rate of exchange?—Yes; exchange, if anything, has added rather to the interest charges than anything else.

17,427. Quite so; but if you dismiss that for one moment, and put out of consideration altogether the effect which the variation in the rate of exchange has had upon the annual charge on India, would you then, simply considering the matter of difference in the rate of interest in borrowing in India and in England, say that it was manifestly an improvement to borrow in India?—You cannot dismiss altogether the item of exchange, at the present moment. As far as expenditure is concerned, it is inseparable from it.

17,428. I admit that, but——?—If you dismiss that point, the question is this, whether India should borrow in the cheapest market—England or America.

17,429. Which would be the cheapest market?—That depends upon the state of the money market in the world for the time.

17,430. Have you any view which is the cheapest market?—If you want my view, it may be England.

17,431. (*Sir William Wedderburn.*) Your main wish is that the repayment and the interest should be in the currency which belongs to the country itself; that is your main object?—That is the Association's view, as already put down in the memorial.

17,432. Subject to that, you would like to borrow in the cheapest market possible?—Exactly; wherever it may be.

17,433. (*Mr. Courtney.*) That is not a final consideration. It would be much cheaper if we had contracted our national debt in rupees, although that is not the currency of this country?—That depends on what your Treasury Officer or Financial Minister thinks.

17,434. (*Chairman.*) But the first object is to make the cheapest bargain?—Certainly.

17,435. You would not have pleasure in paying in rupees, if it were shown that gold was cheaper?—That is plain enough.

17,436. What are your figures for the increase of the Army charges?—It may be as well to examine the growth under the several principal heads up to 1893–94, as I have not before me the new volume of Finance and Revenue accounts up to 1894–95 just issued. I am aware of the explanations given as to the increases. The Military Department must justify them. But having regard to the expression of opinion given by Sir H. Brackenbury (Q. 14,361–4) that expenditure, exclusive of exchange, has not much increased in India since 1885–86, I beg to submit the following table which shows the average annual growth of the expenditure from 1886–87 to 1893–94 under the head of effective services in India and England, exclusive of exchange, compared with 1885–86.

17,437. Pardon me, the basis from which you start is subsequent to the increase in the Army?—Subsequent to 1885–86.

17,438. In 1886–87 the Army had been increased?—Sir Henry Brackenbury spoke of the military expenditure up to 1885–86.

17,439. What I mean, is this, you show an increase in India of 1½ millions?—I beg your pardon, the correct table shows a minus of Rx. 118,870 in India, and in England an increase of Rx. 362,201.

Mr. Dinshaw Edulji Wacha.

5 April 1897.

17,440-2. But it is clear that the beginning of the year 1886-87, was after the increase of the Army?—Yes. The table is as follows :—

No.	——	In India.	In England.
		Rx.	£
1	Army and garrison staff -	18,869	—
2	Administrative staff -	9,102	—
3	Regimental pay, &c. - -	784,320	347,158
4	Commissariat, &c. - -	1,268,592	120,630
5	Remount - - -	22,908	3,013
6	Clothing, &c. - -	110,383	-71,585
7	Barracks - - -	37,032	—
8	Administration of martial law.	11,530	—
9	Medical - - -	80,300	- 7,202
10	Ordnance - - - -	62,892	38,693
11	Ecclesiastical - -	846	—
12	Education - - -	3,883	—
13	Transport - - -	15,972	-72,286
14	Miscellaneous - - -	- 2,582,956	3,780
15	Volunteer corps - -	37,455	—
		- 118,870	362,201

17,443. That is a net increase of about Rx. 250,000 is it not?—Yes (or properly Rx. 1,247,726, if commissariat and miscellaneous are compared with 1886-87, as 1885-86 was exceptional owing to the Penjdeh expedition, &c.); army and garrison staff, taken year by year since 1885-86, has shown a steady increase. Regimental pay has risen from Rx. 6,841,956 to Rx. 7,877,608 in 1893-94. In England, too, the amount (exclusive of exchange) has gone up from 959,428*l.* to 1,070,454*l.* Commissariat shows a fluctuation. In 1886-87, after the additional troops were provided, which led to the charges of Rx. 3,054,189*l.* in India, and 35,970*l.* in England, there was a decline in India up to 1889-90, when the charges fell to Rx. 2,578,501, since that year they were as under; 1890-91 Rx. 2,633,637; 1891-92 Rx. 3,307,657; 1892-93 Rx. 3,251,886; 1893-94 Rx. 2,959,904. Clothing exhibited the same general tendency of regular increase from year to year. In 1886-87 the cost came to Rx. 69,546 in India till in 1889-90 it rose to Rx. 119,992. In the following year it jumped to Rx. 168,113 till in 1892-3 it stood at Rx. 171,187 with a slight fall in 1893-4. *Per contra*, there has been a diminution in England; while the decrease there in eight years, compared with 1885-86, is 71,525*l.*, the increase in India during the same period was 110,383*l.* So that on the whole there was an increase.

17,444. How did the cost of clothing in England and India compare; would you give me your figures?—The growth in the ten years in India was Rx. 110,383 and in England minus 71,885*l.*

17,445. Was the 71,885*l.* a minus quantity?—Yes.

17,446. It was a decrease?—Yes, it was a decrease. Administration of Martial Law shows a steady increase. Medical has risen from Rx. 607,504 in India to Rx. 680,599 in 1893-94, but has fluctuated in England from 21,639*l.* to 33,147*l.* Ordnance exhibits a large growth both in India and England, despite the fact that, according to Colonel Wace, the factories for arms and ammunitions in Bombay and Bengal are turning out larger stores than before. It seems that the savings obtained in local manufactures are more than absorbed by additional cost for increased ordnance of all kinds. Miscellaneous Services. This is a most extraordinary charge, for the reason that the Annual Revenue and Finance Account gives no particulars, while under all other heads particulars of small items of tens and hundreds are given. Here a lump sum is put down from year to year, averaging about half a million Rx. That such a large sum should be spent for which no detailed figures could be obtained, is much to be regretted from the public point of view. Only particulars of submarine mining charges, which are very small, are given. For instance, in 1886-87, the gross charges amounted to Rx. 620,706, while the accounts for that year give submarine mining charges at 5,593, and the remainder, 615,113, are put down as "Miscellaneous Services."

17,447. With reference to "Miscellaneous Services," is it not the fact that the miscellaneous services are largely made up of the charges of expeditions?—I think something of that sort was said in evidence by one of the witnesses, but there are no particulars given in the Finance and Revenue Accounts at all; there is not a single trace to show that these are for the Army expeditions from 1886-87 to 1893-94; all the books of the Finance and Revenue Accounts do not show any particulars whatever.

17,448. The "Gazette of India," I suppose, is a public document?—Yes.

17,449. I find in the supplement to the "Gazette" this statement:—The figures under "Miscellaneous Services" may be sub-divided as follows: Expeditions and special charges, accounts of 1894-95, Rx. 379,000; revised budget of 1895-96, Rx. 1,966,000; and (I suppose) the budget of 1896-97, Rx. 377,000, while other items, as far as the accounts go, are Rx. 95,000 and Rx. 74,000, showing that the other items are small; I turn over the page in this public document and I find the charges for the expeditions set out in detail, and that is followed by two paragraphs explaining the difference of charge under other heads of this "Miscellaneous Services" head of expenditure. I do not know that those explanations would quite satisfy you, but, as far as they go, they hardly justify your statement that no public document shows how the charge is made up?—I have been speaking in my evidence about this most extraordinary item that the Finance and Revenue Accounts give no particulars; the Finance and Revenue Accounts are the books to which everyone refers. It is very few people who take the "Gazette of India"; virtually all the people look to the "Statistical Abstract" and the "Finance and Revenue Accounts" as the *vade mecum* from which to draw their inspiration and their figures. If they do not find them there, where are they to find them?

17,450. This is the Appropriation Report. Anybody who is studying the finances of India, I think, you might fairly expect to refer to such an important document?—That is true; but I maintain that the Finance and Revenue Accounts Book is an authoritative book, and it is a compilation of all that appears in the "Gazette of India;" and, if the "Gazette of India" gives it, what is there to prevent its being put in the Finance and Revenue Accounts?

17,451. That opens another question. What I wanted to bring before you was that in a known document, very easily obtained, such as the "Gazette," very considerable details are given of this item?—That may be so. Volunteers: The charges under this head show a steady increase. They have risen from Rx. 84,642 to Rx. 177,446. As Indians are not accepted as volunteers, it appears that European volunteers are maintained mainly for the purpose of British supremacy. The charge in great part, therefore, should be borne by the British Treasury. Military Works and Special Defences: The point to be noted under these heads, apart from their doubtful utility, is this. That the cost of these works, which are supposed to last for more than a generation, is all charged to revenue. Thus the present generation of taxpayers bear the burden, when both sound finance and equity demand that it should spread over at least 25 or 30 years. I agree with Sir H. Brackenbury in the observations made in reply to Question 14,742, that India is the only country which has carried out such works without a loan, while every Continental nation has got an extraordinary budget for military works; and that at present, even in England, there are Bills before Parliament for borrowing money to carry such works.

17,452. Therefore, you would increase the borrowing for those purposes? I must remind you that you have been speaking of the difficulties of the present borrowing?—I have been speaking here, not of charging to revenue account, but that the charge should be spread over a number of years.

17,453. That is by borrowing?—It may be from revenue, you spend so much, and you debit to the revenue account so much for every year; but to charge to one year the whole of the cost of the military works of that year is, I say, a little hard on the present generation of taxpayers.

17,454. But I think Sir Henry Brackenbury was speaking in favour of borrowing?—Yes, he was referring to borrowed funds. I say that, so far as this particular work goes, it would be far better to spread it over a number of years.

17,455. You separate yourself from Sir Henry Brackenbury on that point; what you mean is, not to do as he said, to borrow, but to postpone the works, executing in 30 years, say, what the existing Government has done in one year?—I qualify in this way: if it is certain that revenue cannot afford to defray in one year the cost of the large military works which the Government thinks necessary, and if it is unavoidable to borrow, there is nothing to prevent them from doing it; but, so far as the revenue can bear the burden without any taxation, of course, if the amount is spread over several years, it would be better. It may be less than 30 years, then it would be all right.

17,456. What conclusion do you draw from this statement?—It will be seen from all that has been said in the foregoing evidence that military expenditure is most burdensome. It was said (A. 5210) that "the Army must be made an efficient weapon." But the efficient weapon may cost over much and far beyond the financial ability of those who provide the funds for it. The Simla Army Commission was more alive to the increased army charges from the taxpayers' point of view, when in its Report (see p. 11), it observed that there was some truth in the statement that hitherto "army reform in India has "been dealt with on the principle that India was made "for the Army and not the Army for India." There is no doubt that the effectiveness of the Army for purposes of external defence depends greatly upon the friendly attitude of the masses of the people towards the Government. Every measure, therefore, tending to conciliate the people and make them contented may be regarded as expenditure tending to increase the efficiency of the Army.

17,457. Have you any further remarks to make upon that?—Lastly, I beg to submit the following table of the cost of a soldier per annum in the armies of the great Powers of Europe and Japan, from which it will be noticed that the cost of a British soldier in India, which is given at 891 rupees (*vide* Parliamentary Return, 14th January 1894), but which, I think, comes to considerably over that figure, compares unfavourably with the cost of the soldier of the Continental armies:—

——	Strength of Army.	Cost.	Cost per Head in Rupees.
(1.) Austria -	334,717	140,179,699 florins	528
(2.) France -	559,524	591,457,151 francs	668
(3.) Germany -	585,574	541,507,000 marks	720
(4.) Russia -	868,672	284,379,994 roubles	800
(5.) Japan -	98,961	24,116,812 yens	648

The figures are taken from the "Statesman's Year Book" of facts for 1897.

A florin - - - = 1*s.* 8*d.*
A franc - - - = 9½*d.*
A mark - - - = 11½*d.*
6·40 roubles - - - = 1*l.*
A yen - - - = 3*s.* 4*d.*

The pound sterling is taken at an equivalent of 16 rupees.

17,458. When you say that those figures are taken from the "Statesman's Year Book," I suppose you do not mean that the conversion of them into rupees is taken from the "Statesman's Year Book"?—No; the cost is given in florins, roubles, &c., and I have converted those florins, &c., at their equivalent in sterling. For instance, 1*s.* 8*d.* make a florin. I have converted the florins into pence, and the pence into sterling value at 16 rupees to the 1*l.*

17,459. (*Mr. Naoroji.*) That is your own calculation?—That is my own calculation.

17,460. (*Chairman.*) In those cases where the currency is still silver it would probably be more correct to compare silver coin with silver coin?—For instance, Russia. I am only taking the present value of the rouble.

17,461. In order to show the comparative cost of the British soldier in India with the cost of the Russian soldier, you first of all turn the rouble into sterling, and then back from sterling into rupees. Would it not be better to compare like with like; the rupee is silver, and the rouble is silver?—6·40 roubles are equivalent to 1*l.* at present.

17,462. Yours is a lengthy calculation to make. I should have thought it would be easier to compare a silver coin with a silver coin?—It entirely depends on the way in which it is calculated.

17,463. You will observe also that in those countries which you name—I do not know about Japan—there is conscription?—Yes.

17,464. Have you sometimes heard conscription talked of as a blood tax?—That is according to what view each country takes of it; England, being a free country, almost hates conscription, I believe.

17,465. Would you like conscription in India?—I do not know that; I have not formed any opinion upon the subject.

17,466. But, at all events, conscription means a somewhat lower charge for the soldier, I believe, upon the remainder of the population?—I have only taken the figures; there they stand.

17,467. Have you any other representations, to name which you made to the Central Government?—Yes, I may at this stage mention that on 12th March, 1894, my Association made another representation to the Government of India on the occasion of the imposition of the import duty on merchandise, in which was reviewed the entire growth of military and civil expenditure to 1893, as well as of exchange. It was shown that though exchange was a disturbing element in Indian finance, it was not the principal one. The fountain sources of the embarrassment would be found in military expenditure in all its ramifications, as well as in the large growth of civil salaries and establishments, Upper Burmah, and the unjust, because indiscriminate, compensation allowed to the services. The Association had uniformly raised its voice against the growing expenditure on all these accounts. First the income tax was imposed, then the duty on salt was enhanced, and eventually the import duty was levied. Under the circumstances the Association begged leave to support its statement regarding the increases by means of a series of tables of official figures of the Army charges, civil charges and sterling remittances, and to prove that exchange was not the sole nor the principal factor, a statement which the British Committee of the Congress afterwards amplified on the basis of those figures. Further, the Association observed that another cause which had contributed in no small measure to the embarrassment was the exchange compensation granted indiscriminately to the service; that it was a matter of profound regret that while all other classes of the community were patiently resigning themselves to the currency legislation, in spite of acutely suffering more or less from its evil consequence, the servants of Government should have been allowed in such a financial crisis this allowance; that it was purely an act of false generosity at the expense of the helpless taxpayers of the empire, and as such was misplaced and altogether uncalled for; that the allowance was made in the midst of the financial difficulties of the Government, when it had no funds to provide for it save by means of extra taxation; that the plea of the services that they had to pay a less number of sovereigns as remittance home, and that they were unable to make both ends meet for the support of their families, was not borne out, as the purchasing power of gold had increased, and articles of domestic consumption and apparel were on the whole a great deal cheaper than what they were 10 years ago; that the Government had made no serious attempt at retrenchment, and that the sterling charges were allowed to grow; that, if the reserve power of the country to bear taxation was discounted in times of profound peace, it was to be feared the Government would find greater difficulty in meeting dire contingencies when they occurred; that under the circumstances the necessity of continually husbanding their resources should be the first care of Government, and next strict control over expenditure. I beg to put in this memorial.

17,468. And what reply did Government make to it?—The representation of our Association was slightingly referred to by Sir J. Westland, the present Financial Member, as almost all representations, however cogent, emanating from representative bodies, including the Congress, are generally treated by the Government. In the present case, however, it is satisfactory to notice that an eminent authority like Sir A. Colvin, an ex-Finance Member, in his contribution on "Indian State Expenditure," to the pages of the "Nineteenth Century," previously alluded to, confirmed the facts of the Association, as amplified by the British Committee of the Congress. He observed that "it was difficult to differ with a great "deal of what it has to say in the matter of expenditure." And the facts again were further confirmed last year, by so independent a financial journal of the highest reputation as the "Economist" in its issue of 25th July 1896, a copy of which I beg to put in. X

17,469. Are you speaking of the English "Economist"?—Yes.

17,470-1. I think you might give us, if you would, a summary of what the article says, instead of putting it in, if you have got it at hand?—Yes. In its article headed "Indian Finance" that journal observed that, "A year "ago, when expounding the Indian Budget, Lord "George Hamilton instituted a comparison between "the net expenditure in 1884–5 and 1894–5, and, commenting upon the increase shown to have taken place during "the interval, maintained that it was wholly due to the "fall in exchange. Instead of increasing, the administrative expenditure of the Government had, he maintained, "diminished. 'The Indian Government,' he said, "'although they have had to administer a much larger "'territory during that period, although 20,000 additional "'native soldiers have had to be added to the native, and

Mr. Dinshaw Edulji Wacha.

5 April 1897.

" ' 10,000 Europeans to the Indian, Army, have been able " ' adequately to carry on all these additional duties at a " ' less cost than two years ago. I say that is a very " ' remarkable performance.' And certainly, if all this " had been accomplished, a truly remarkable perfor- " mance it would have been. But at the time we " ventured to challenge Lord George Hamilton's figures, " and endeavoured to show that, instead of having " diminished, the administrative expenditure had very " considerably increased." In support of its statement, the " Economist " gave the following table of net expenditure after meeting loss on exchange :—

NET EXPENDITURE after meeting Loss on EXCHANGE.

—	1894–95.	1884–85.	Increase or Decrease 1894–95.
Services of debt (excluding that charged to railways and irrigation.	Rx. 2,138,100	Rx. 3,281,400	Rx. −1,143,300
Military services -	20,654,800	16,107,400	+4,547,400
Collection of revenues	6,279,100	5,103,600	+1,175,500
Post office and telegraphs,	—	441,200	−441,200
Railways - -	2,348,500	1,051,800	+1,296,700
Irrigation - -	612,800	573,000	+39,800
Civil Departments -	12,764,000	10,262,100	+2,501,900
Miscellaneous civil charges.	3,686,500	3,247,400	+439,100
Famine relief and insurance.	610,100	1,548,400	−938,800
Construction of railways (charged against revenue).	19,600	263,500	−243,900
Buildings and roads -	3,664,700	3,473,200	+191,500
	52,778,200	45,353,000	+7,425,000

Commenting on the above figures, the " Economist " proceeded to remark as follows : " The fact is, that nearly " every branch of expenditure shows a more or less con- " siderable expansion. Apart altogether from loss on " exchange, the cost of the military services was fully " Rx. 4,500,000 greater in 1894–95 than in 1884–85. " Similarly, the Civil Services show an increase of nearly " Rx. 3,000,000, and so on throughout the list. Now, we " have no intention of arguing that these additions to " the expenditure have been either unreasonable or " unnecessary. Everywhere the cost of government " tends to increase, and it would have been wonderful " indeed if India had proved an exception to the rule. " That, in fact, was what made Lord George Hamilton's " assertion that, apart from exchange, India is now being " administered at a less cost than it was ten years ago, so " surprising as to incite to investigation. Inquiry goes " to show that it is contrary to the fact, and, as it is of " the utmost importance that on such a question Parlia- " ment should not be misled, an endeavour should be " made during the approaching discussion of the Indian " Budget to ascertain definitely how the matter stands. " Lord George Hamilton should then be called upon " either to prove or to correct his statement." And after the Budget was discussed in the House of Commons, the " Economist," in its issue of August 15, 1896, observed that, " it is noteworthy, however," that Lord George Hamilton " studiously refrained from any attempt to " justify the statement he made last year, to the effect that, " during the ten years ending 1894–95, the administrative " expenditure of the Indian Government, apart from loss " on exchange, instead of increasing, had diminished."

17,472. Have you any observation to make on railway expenditure ?—Coming now to railways, it may be observed that their accounts are, not only very complicated, but reach colossal figures. I give below the combined results of State and Guaranteed Railways :—

SUMMARY—In 10 years.

	Rx.
State Railways :	
Net receipts - -	- 69,209,897
Net charges - -	- 75,272,523
Loss - -	- 6,062,626
Guaranteed Railways :	
Net receipts - -	- 34,501,231
Net charges - -	- 42,312,231
Loss - -	- 7,811,000
Total loss in 10 years -	- 13,873,626
Average loss per annum -	- 1,387,362

17,473. Is that including exchange?—It will include exchange.

17,474. That is the total?—That is the total. The subsidised State Railways, and the miscellaneous railway expenditure worked out to a net loss of Rx. 989,333 during the decade, or a loss of Rx. 98,933 per annum. But the loss is smaller by Rx. 82,793 than what it was in 1884–85. The total net loss on railways for the ten years is, therefore, Rx. 14,862,959, or an average of Rx. 1,486,296 per annum. The above results, however, refer to the mere working of the railways. When all the financial factors, including interest on capital outlay, are taken into consideration, the results are different. To exhibit this, take the actual financial results as stated in paragraph 19 (p. 22) of the Parliamentary Blue Book, " Administration " Report on the railways in India for 1895–96."

1894–1895.

Losses.	Rx.
Guaranteed Railways - - -	1,504,138
State Railways, Military, open -	559,011
State Railways, Military, unopen -	88,853
State Railways, Commercial, open -	114,716
State Railways, Commercial, unopen -	251,678
Total losses - -	2,518,396
Gain.	
State lines leased by Companies -	− 856,557
State lines worked by Companies -	1,175,059
Apparent net loss - - -	2,199,894
Add other charges - - -	148,595
Total apparent charge -	2,348,489

Deducting certain charges in connexion with the East Indian, Eastern Bengal, and North-Western Railways, " the charge to the State," continues the Report, " during " 1894–95 in connexion with the entire Indian railway " system will stand at about 190½ lakhs of rupees." If interest on lines under construction were excluded, the charge for railways open to traffic would come to 145½ lakhs in 1894–95. It is, no doubt, true that the charges on account of the guaranteed railways, in terms of their contract, are very heavy indeed, specially owing to exchange, as interest on their capital has to be paid on sterling, also for surplus profits. It is observed in the report that " the " State has to continue to pay interest at the guaranteed " rates until the contracts terminate, and it is consequently " unable to obtain any advantage from cheaper money and " the improved credit of the country ; that is to say, where " the State could now raise money at a little over 2½ per " cent. to pay off loans raised at higher rates of interest it " has to continue paying interest at a high average rate of " about 4¾ per cent. on the capital raised by the Guaranteed " Companies ; and owing to the fall in exchange the " sterling interest charges, if converted into rupees at the " average rate for 1894–95, gives a percentage of over 7¾ " on the total capital raised, converted at the contract rate " of exchange. Had it been possible to remit the earnings " at the contract rate of exchange, the result to the State " of the working of the guaranteed railways would have " been a profit of Rs. 926,670 in the year 1894–95, " instead of a charge of Rs. 15,041,380 as shown above." Thus, owing to the burdensome conditions of the contract with the guaranteed railways, the State at present has to suffer until the period of their purchase or renewal on other terms arrives. Guaranteed lines besides, it must be observed that the State lines leased to companies, that is to say, Imperial lines constructed with capital raised by or supplied to companies under contract with the Secretary of State do not yet show any very encouraging results. Statement No. 2 of the Railway Administration Report already referred to shows that the working for 1894–95 was a loss of Rx. 856,557. These railways had a capital outlay of Rx. 34,603,797, on which, after paying interest charges, taking into consideration their net earnings, less the share paid to companies, there was the loss of Rx. 856,557 as indicated above. Again, according to Statement No. 3 of the same Report, the commercial railways belonging to the State, which were open for traffic or working, lost in all Rx. 114,716 during 1894–95, their total capital being Rx. 62,019,586.

17,475. At the beginning of your answer you gave a summary of the results for 10 years ?—Yes.

17,476. And shortly afterwards you gave a sample for one year, 1894–5 ?—Yes.

17,477. On the average of 10 years you showed an average loss per annum of Rx. 1,486,296, and you come

to the conclusion, in your subsequent table for the year 1894–5, that the total apparent loss, which I shall suppose was the equivalent of the average loss on the former table, is Rx. 2,348,000?—Yes.

17,478. Can you explain why there should be such a difference between those two tables?—Yes. The thing is, that the summary which I have taken is the summary from the Parliamentary Return, whereas the Administration Report, I presume, not only gives the net receipts and charges of working, but also goes into other factors, interest charge and land and other charges; and that, of course, makes all the difference; and my object simply in giving out the last report was to show that the Government of India itself thinks that these losses arise owing to the improvident conditions of the old contracts which entail heavy charges, but which, of course, when the contracts come to an end, might go to diminish the charges.

17,479. Still I do not quite understand, in that I see the charges on these railways, on the average of 10 years, appear to be of the kind that cover everything that is to be fairly set against the railways, how this loss and gain in 1894–5, showing such a very different result, is constituted?—It is the Administration Report which takes all these railways into cognisance, and I believe the reports which the Administration Report makes are on a somewhat different principle from the mere account which are put in the budget.

17,480. First of all, do you think that in the year 1894–5 there was a heavier loss on the railroads than there would be on the average? Of course, the figures out of which you get your 10 years' average would show that?—Yes. I may just refer to the figures. Since 1885–6 they have been going up, until in the two years, when exchange was a little more favourable, they went down. In 1891 they fell to Rx. 145,989; and in 1892 (Guaranteed Railways) to Rx. 332,228. After that, in 1893, 1894, 1895, they again went up. In 1893 the exchange alone was 1,290,000, in 1894 exchange was 1,400,000.

17,481. What was the total of the year 1894–5, which entered into the 10 years' average given in your first summary?—The total was this: net receipts were Rx. 3,000,000 odd.

17,482. 3,000,000?—Yes; those were the net receipts for Guaranteed Railways.

17,483–4. I have got net receipts for the 10 years: 69,000,000, giving an average of nearly 7,000,000?—That is taking all the State railways together. I have made the statement in this form: there are the Guaranteed Railway and the State Railways, and combining the result I have shown it in the form in which you have got it. State railways' net receipts were Rx. 69,000,000 in the 10 years.

Mr. Dinshaw Edulji Wacha
5 April 1897.

17,485. What were the corresponding charges to that in 1894–95?—For the State railways?

(At this stage it was decided to take the point regarding the railways at the next meeting).

17,486. I think the next question which we shall come to is that of the strategic or military railways. Perhaps I may put this as the concluding question for to-day: What have you to say with regard to strategic or military railways?—It is the State Military Railways which show a very heavy loss. The North-Western, with a capital outlay of Rx. 12,213,069, incurred a loss in 1894–95 of Rx. 559,011, while four unopened lines, with a capital of Rx. 2,568,508, lost Rx. 88,853. Thus there was a total loss of Rx. 647,864 on a capital outlay of Rx. 14,781,577. The enormous amount of the capital sunk in these military lines, and the loss they incur from year to year, needs the closest attention of the Commission. In reality the annual loss entailed by these military lines should be distinctly shown in the accounts as military expenditure. They are of a most unproductive character and must be condemned. Their strategic utility is openly doubted by even military experts, such as Colonel Hanna. In connexion with these railways it may be pointed out here, that in the capital outlay is included the sum of Rx. 436,900 for "frontier railway reserve material," besides a further item of Rx. 36,776 for "Peshawar railway reserve material." The first would refer, I believe, to the railway material lying at the farther end of the Khojak Pass for laying a line to Kandahar, about 100 miles, whenever the emegrency arises. The material has been there since the conclusion of the second Afghan War; I leave it to the Commission to consider the inutility of such expenditure, involving a heavy annual charge for interest, not to say aught of the deterioration of such material. Further, there is now in progress the new Bolan railway called the Mushkaf-Bolan. The old line is abandoned, and a new alignment made for a certain distance. No doubt it is owing to heavy floods that the course has been changed. All the same, it means so much more capital and also a little want of foresight in the first construction. Lastly there is a certain line under survey, namely, the Wazaribad-Mooltan railway.

The witness withdrew.

(Adjourned till Thursday next at 11 a.m.)

At the India Office, S.W.

FORTY-SECOND DAY.

Thursday, 8th April 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.

Mr. COLIN G. CAMPBELL *Secretary.*

Mr. DINSHAW EDULJI WACHA recalled and further examined.

Mr. Dinshaw Edulji Wacha.
8 April 1897.

17,487. (*Chairman.*) Mr. Wacha, I think that in a paper which you gave me you stated the total loss to the State, according to your view, on the railroads from 1846 to 1894 was Rx. 60,689,000, did you not?—Yes.

17,488. Do you happen to know what was the state of the account on the railroads, the profit and loss account, on the last year?—The profit and loss on 1893–94?

17,489. Have you got the profit and loss on 1893–94?—Yes, my lord, I will give you that; and you asked me to find out from my own tables how far they tallied. I see they tally exactly, that is to say, the total loss to the State in 1894–95, as given in the Administration Report, is just the same.

17,490. I only mean for that one year—whichever is the latest year—for which you have the figures?—The net loss on railways for 1894–95, according to the Parliamentary return made out Rx. 2,348,489. The Administration Report, of course, divides it in a different way, but it

Mr. Dinshaw Edulji Wacha.

8 April 1897.

comes to the same figures. In the Administration Report it is put down in rupees, and in my own figures, of course, it is in tens of rupees—Rx.; but they both tally.

17,491. Your figures tally with the statement in the appendix to the report which has been published?—Yes.

17,492. (*Sir James Peile.*) But there is a difference. In our Appendix, Table 28, it is Rx. 51,847,746, and you give Rx. 60,689,159; what is the cause of that?—I beg your pardon. My own figures that I gave first are the growth of the loss during the whole period from 1848 to 1894–95. Those are my first figures. Then I reviewed my own figures for 1894–95.

17,493. (*Chairman.*) I think, Mr. Wacha, yours are cumulative figures from 1848, are they not?—My total figures for the 10 years amount to Rx. 14,113,626, to which has to be added the loss on the subsidised railways of Rx. 989,933, making in all Rx. 15,103,589.

17,494. In answer to Sir James Peile's question, perhaps you would look at that return, which works up to the figures which he has stated, Rx. 51,000,000, and which also purports to date from 1848?—Yes, that is Rx. 51,000,000 net charge, revenue and expenditure, but that goes from 1875.

17,495. No; it goes from 1848?—Oh, from 1848?

17,496. I think so, does it not? It is in two divisions?—The net charge from 1848 to 1858 is one, and the second is from 1859–60 to 1874–75, and then it comes to the third part, which is up to 1894–95.

17,497. But I think the Rx. 51,000,000 is a cumulative total?—The Rx. 51,000,000 is a cumulative total.

17,498. Against your Rx. 60,689,159; can you point out how that difference has arisen?—In my former evidence, I stated that, taking some figures of the Railway Committee's table and following them up by the table of the losses incurred, as given in the annual Administration Report of railways for 1895–96, it would be found that the losses from 1848 to 1894 amounted to Rx. 60,689,159; that makes the difference to which Sir James Peile refers.

17,499. (*Sir James Peile.*) Just so; which I cannot account for?—Quite so. The particulars are given there. I have taken the earlier figures from the Parliamentary return, which I daresay is different. I mean from the East India Parliamentary Committee on railways in 1884. There is a table given at page 706–7. I have taken the figures for the guaranteed railways from the said table from 1848 to 1867–68, Rx. 17,643,438; then from 1868–69 to 1879–80; because after 1880 the East India railway account was separated, because it was purchased; therefore I have only taken the other figures for the guaranteed railways at Rx. 15,352,779.

17,500. (*Chairman.*) I think, Mr. Wacha, there is considerable difference between those figures in the appendix and your figures, and, without taking up the time of the Commission in endeavouring at this moment to work out the difference, I would suggest that you should speak to Mr. Jacob, and then you would be able, perhaps, to arrive at the reasons of the difference, which you can put in in a note to your evidence?—I shall have the greatest pleasure in doing so. I can only say this much, that all my figures are also derived from official statements, from Parliamentary returns, and from Administration Reports.

17,501. But you will be undoubtedly able to ascertain the reasons?—Yes, I will be able, with Mr. Jacob, to go through them.*

17,502. What in your opinion are the economic results of Indian railways?—As to the economic disadvantages which have resulted from the construction of railways, the most important is this, that, almost all the capital being subscribed by English capitalists, the entire profits are carried by them from the Indian revenues. About 5,750,000*l.* were thus carried away in 1894–95. Had the Government itself constructed all railways by borrowed capital, the net profits, after interest to the capitalists, would have remained in the country for its better prosperity. The economic fact of an alien rule always draining the resources of the subject country, was entirely lost sight of.

17,503. You have laid a good deal of stress upon what you consider the loss to India by railways; do you draw from that the conclusion that it would have been better to have left India without railways?—I do not mean to say that, but what I say is this, that partly from the economic disadvantages under the system under which Indian railways have been constructed——

17,504. If you had had the choice, may I take it that you would have preferred railroads even with the present loss, as you estimate it, to no railroads and no loss?—Certainly.

17,505. (*Sir James Peile.*) You do not overlook the fact, I presume, that the interest on capital used in making a railway is an exceedingly small matter as compared with the wealth which the railway itself secures to the country through which it runs?—The wealth the railway secures to the country is a difficult question to be answered.

17,506. Is it a difficult question? Take India?—Yes.

17,507. A country which is a great producer of raw produce?—Yes.

17,508. The essential requisite of a country of that kind is to have railways to carry its raw produce down to the sea for export, is it not?—Yes.

17,509. Then surely the making of a railway is the direct way of producing wealth to a country growing produce which it exports?—The produce which it exports does not belong to the country; the produce which it exports all belongs to the English merchants who are the exporters.

17,510. But how do you mean belonging to the English merchants? Do you mean to say the grower of wheat or cotton does not get the value of the wheat or cotton which he exports?—He does, but whether he derives much profit, or whether the grower himself has grown wealthier for it, is a very moot question.

17,511. (*Chairman.*) But you would allow, would you not, that opening fresh markets is an advantage to the grower wherever he is?—If the grower himself is benefited, of course it is an advantage.

17,512. The grower is not obliged to sell; he would not sell if it were not for his advantage?—The condition of the Indian ryot is such that he is obliged to part with the great part of his produce to middlemen, at a great loss sometimes.

17,513. But if fresh markets are opened up, he is almost certain to get a better price for his produce, is he not? It follows almost that, if you have three competitors where there was only one before, the seller must get the benefit?—That would depend entirely upon supply and demand.

17,514. Of course it is assumed that he has a certain amount of produce to sell?—Yes.

17,515. If a fresh competitor comes in, surely the grower must get the benefit of the competition?—But, as the bulk of Indian producers are agriculturists, their position is such that, notwithstanding that fresh competitors come in, they may make a loss instead of a gain.

17,516. (*Sir James Peile.*) How do you prove that? You make that statement; where is the proof of it?—The statement is this: We find large advances, for instance, in the Bombay provinces made by such firms as Ralli Brothers and other merchants to the ryots themselves, before the crops are even grown for the next year's advances, when of course the cultivators take a certain price. They part with their produce at a certain price.

17,517. It may be a very good price?—It may or it may not be; that is exactly a moot question.

17,518. You do not know?—Therefore it is difficult to say who gains by it.

17,519. (*Chairman.*) But that does not touch the point. That would be the case anyhow, as I understand, supposing there were no railroads and no market abroad for this produce; but the fact of opening up a fresh market by improved methods of communication surely must be an advantage to the grower, inasmuch as he gets a fresh purchaser?—Theoretically it may be.

17,520. (*Mr. Naoroji.*) What you mean is, that in the case of India those usual economic results are very much

* My figures were based partly upon the figures given in the memorandum and appended tables, printed as an Appendix to the Report of the Select Committee on East Indian Railways, 1884 (pages 704–709), and partly on the figures given in the Railway Administration Report for 1885–86, pages 28 and 29. I find that of the difference between my figure (Rx. 60,689,159) and the total loss given in Appendix 28 to the Commission's First Report (Rx. 51,847,746) about 44,000,000 are due to the double inclusion in my figures of losses for certain years, largely owing to the transfer of certain lines (the Eastern Bengal, Sind, Punjab and Delhi, Oude and Rohilkhand, and South Indian Railways) from the category of Guaranteed Lines to that of State Lines; while about 4,000,000 are due to the inclusion in my figures of the loss by exchange on capital transactions of Guaranteed Railways from 1848–49 to 1878–79. As regards this last item, I am disposed to think that it should be included when reckoning the total loss which the State has incurred in connexion with the railroads; I find, however, that for the years 1879–80 onwards there has been a net gain on the capital transactions of State and Guaranteed Railways which almost cancels the loss shown above in the earlier years. I do not, therefore, object to the loss to the State in connexion with the railroads being taken at the figure given in Appendix 28.

modified by the condition that a large quantity of produce goes out of the country for remittances for political payments, and for profits of merchants and others?—It does.

17,521–2. And, consequently, the people themselves do not derive that benefit from their produce; that is to say, the whole country does not receive the whole wealth, as any other self-governed country does where the result returns to the people themselves?—Yes.

17,523. (*Chairman.*) But surely that does not touch the point of the opening of a fresh market. There comes, in addition to the old class of purchasers, a fresh class of purchasers. It seems to follow that, as far as you get that competition, it must, in some shape or other, be an advantage and not a disadvantage to the grower?—It may or it may not be.

17,524. (*Sir William Wedderburn.*) Am I right in supposing that your point is, that the ryot is almost reduced to a position of slavery, or serfdom, to money-lenders and others; and, therefore, the additional markets do not help him much more than additional markets would have helped in the slave states of America to improve the condition of the slaves there?—Just so.

17,525. That the trade benefits go to a middle class, and not to the actual producer?—Yes.

17,526. Is that the nature of your argument?—Yes.

17,527. (*Chairman.*) And that is your broad statement affecting all the producing classes in India, that they are so in the hands of the middleman that the middleman imposes upon them what price he chooses? Your statement applies to all the producing classes in India from which you deduce this very sweeping conclusion?—To a large extent.

17,528. What do you mean by "a large extent"?—When your lordship asks me to state definitely and broadly that *all* the producers are so situated, I cannot do that, but I do say that the bulk of the growers in different parts of India are in that condition.

17,529. Is there any evidence in proof of that statement, that the bulk of the producers in India are in that condition? You are drawing a very important conclusion, which is so broad that I would put it to you that it ought to be based on some evidence or on some facts, and I therefore ask whether you are able to give us the grounds upon which you make such a statement as that?—The grounds are the practical experience which we have in the Bombay Presidency, as far as the merchants themselves and the producers are concerned, in reference to cotton, in reference to seed, and in reference to wheat.

(*Chairman.*) At all events, the result of it is that the larger part in your view of the producing classes in India are in no better position in regard to the sale of their produce than the slaves were in America. I am now applying the instance that Sir William Wedderburn did ——

(*Sir William Wedderburn.*) I was rather giving that as an illustration.

(*Chairman.*) But Mr. Wacha accepted your illustration.

(*Sir William Wedderburn.*) Yes, it was as an illustration, not as an absolute analogy.

17,530. (*Chairman.*) But he accepted your illustration?—The position is analogous.

17,531. (*Mr. Buchanan.*) But how far is it analogous? Do you mean to contend that the position of the ryot in India is really similar to the position of the slave in the Southern States? Do you mean seriously to contend that?—Well, it seems so from my own personal experience, so far as my knowledge goes, that the ryots at least in the Bombay Presidency are not making any great advance merely because they produce more and the middlemen take the advantage.

17,532. But the slave could hold no property; that is not true of a ryot, is it?—Well, a slave may not hold property.

17,533. (*Mr. Naoroji.*) The slave is taken care of by his master at least, and he is in the condition of being able to work; in the case of the people of India they are free to work, but they have very little work remaining. First of all, taking the railways; does not the whole profit or the net profit entirely go to European shareholders, because the natives cannot take or have not the wealth and capital to hold shares and to keep any share? And in regard to that profit, therefore, whatever increase, as Sir John Shore said, of produce may take place, under the political conditions the producer himself cannot be much benefited, or rather the profit is very much counteracted by the political and economic conditions of the people. Would you first say whether you agree with me in that?—Yes.

17,534. Then the next thing I ask is this:—the best practical proof is that the effect of the slightest drought, or the very sad condition the people are now in on account of the famine, are themselves a proof that the people must be in a very deplorable condition that they should not be able to tide over a drought, as they always are unable to; and we know that, whenever any drought takes place, famine is the result?—That is one strong proof.

17,535. That is a practical proof of the condition of the people?—Yes.

17,536. (*Chairman.*) Do I understand your view to be that there has been a considerable amount of loss through borrowing for railroads in England, which might have been averted if the borrowing had taken place in India?—Of course, if the borrowing had taken place in India, the profit would have been enjoyed by Indian capitalists themselves.

17,537. But I want to know whether that is your view, that the Government have been wrong in borrowing in England, and that it ought to have borrowed in India?—That would have been a preferable policy.

17,538. Do you think that the money could have been borrowed in India?—That entirely depends on the capital which India is able to give.

17,539. Yes, but you are suggesting that the Government was wrong in borrowing in England, and that it would have been better, if possible, to have borrowed in India for that purpose. I presume that, before you say that, you have considered whether it was possible to have borrowed in India?—Well, latterly only the Government have tried to have rupee loans for railway construction; and, so far as to the two new railways which have been put upon that basis, namely, the Ahmedabad-Parantij and the Tapti Valley Railways are concerned, all the capital has been found by India, 1 crore for the Tapti Valley Railway and a smaller amount for the Ahmedabad-Parantij Railway.

17,540. That does not quite answer my question. The expenditure on railroads in India, has, I think, been Rx. 246,000,000; do you think that that amount could have been provided by India?—If India had had the capital, it could have provided it.

17,541. Yes, but had India the capital?—But the economical condition to which India has been subjected by England for such a series of years, prevents it.

17,542. Pardon me, but that does not quite answer my question. You are criticising very fairly the English Government for the course it pursued in borrowing in England?—Yes.

17,543. And I gather from you that you think it would have been better if they had borrowed in India?—Yes.

17,544. The most important point is to ascertain whether they could have done so, and I assume that you have considered the question whether it was possible to borrow in India, because otherwise your criticism falls to the ground very much. I want to know whether you think that India could have found Rx. 246,000,000 of capital?—That is a point which I cannot answer at once.

17,545. You see it is an important point in the case, because, if India could not, it weakens your position, does it not? If India could not have found the money, I should be thrown back upon the question I asked you just now, namely, would she have been better without the railways at all?—The economical condition of India is such that she would not have been able to provide the capital.

17,546. We are dealing with facts. You are criticising the action of the Government and saying that they would have done better to have borrowed in India. The question is whether they could have done so; and, if they could not have done so, evidently the result must have been one of two things, either that they must have borrowed in England, for which you are criticising them, or they must have gone without the railroads. Now, I have understood from you that the railroads, you think, on the whole have been a benefit, and you would not have gone without them. Therefore, I would ask you, so far as India could not have found the capital, would you continue your criticism of the English Government for borrowing in England?—The railways could have been constructed upon whatever capital was in India and gone on slower; that might have been the case—not so rapidly.

17,547. But on the whole, do you think that India could have found Rx. 246,000,000?—This is a very large question, which I repeat I cannot answer at once.

Mr. Dinshaw Edulji Wacha.

8 April 1897.

17,548. (*Mr. Naoroji.*) Do you not think that on account of the continuous drain, the political drain of the country, the people are so impoverished that they could not have supplied that capital, as the chairman very properly asks, and therefore it is contended that it is better to have it from England rather than not have it at all from the people; but then, the people being out of it, there is this additional economic disadvantage produced, that in addition to the political drain, they are commercially drained as well on account of this new capital coming in; if the people had not been politically drained, they would have been able to supply the capital themselves, and the other addition of foreign capital would have been so much benefit to India; do you not think so?—Yes, that is what I have already said.
